But now that all of the discoveries that the administration text was a reconstruction bill in posse have been made and settled, and the only remaining undemocratic provision, the jail sentence for free press reporting that directly descends from the Alien and Sedition Acts, can be rooted out on the floor, the 1960 presidential maneuvering, which largely evoked the measure, has emerged in full force. The restraints imposed on basic politics by the phillipics against part III by Senator RUSSELL, and by the amendments of those constitutional liberals who saw in the blanket denial of jury trials a momentary forgetfulness of the Anglo-Saxon struggle for the rights of the individual vis-a-vis the State, have passed into the record. The parties, their factions and the politicians, avid for a place on a national ticket, are plain in the forefront of the final phase of the struggle that will determine whether 1957 is to be historic in the movement for equal voting rights, or whether the movement is to remain a pawn in the most cynical game known to American politics for a generation.

WHO DESIRES PROGRESS?

Considering the revolutionary nature of the Senate bill in terms of the southern social-economic order and the fact, nevertheless, the southern senatorial bloc refrained from a last-ditch stand against it by filibuster, the burden of proof of a sincere desire for progress in the equal rights field rests heavily on those who proclaim they would have no legislation at all rather than the bill substantially as passed by the Senate. And if they act and vote as they talk and gain the only success they could have in the circumstances, the defeat of an equal rights legislation whatever, that burden of proof will be heavy on their shoulders.

Some of the Republicans who are asserting this position can be acquitted of the suspicion that they hope thereby to become President or Vice President. This is because the doors to both offices are obviously and irretrievably locked against that personal ambition. But they at least are properly suspect of seeing in an all-or-none stand for the administration's original text which would have arrayed the Executive power behind punitive enforcement or racial desegration in all forms and degrees, a formula to assure control of both the legislative and Executive branches of the Federal Government by Republicans and control of the most populous States, but other Republicans in the group may reasonably hope for places on the national party ticket 3 years hence.

SOME GAIN ADVANTAGE

Several Democrats are in the more fortunate position of serving national ambitions by either routine acceptance of the Senate bill with slight modifications made on the floor or insistence on the House bill or nothing. For example, the Senate majority leader, LYNDON B. JOHNSON, has greatly increased his acceptability to a Democratic convention by the brilliant tactics that were principally responsible for the passage of the first equal-rights bill in this century and for the prevention of a Southern filibuster that made the action possible. By the same procedure, Senator KENNEDY has to some degree insured the surprising Southern support given him in 1956 for the vice-presidential nomination.

Conversely, an extreme Democratic "liberal" can support the administration to the end on the jury-trial issue, knowing this is his only chance for national nomination in 1960 and anyhow the best way to get reelected.

Grave Problems Confronted With Vigor and Ability by Oregon Agriculture

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. NEUBERGER. Mr. President, agriculture in America has been in crisis in recent years, and this has been true of many farm commodities in the State of Oregon. Comparatively few crops raised in Oregon have shared in the price-support program, and relatively few have come under the acreage-reserve phase of the soil bank. For this reason, we of Oregon have had to exert special effort in difficult circumstances to work out programs and planning for the continued survival of much of our agriculture. So that Members of the Senate may know some of these problems, I ask unanimous consent to have printed in the RECORD a thoughtful letter of August 8, 1957, which I have just received from the Honorable Robert J. Steward, director of the Oregon State Department of Agriculture in Salem. I also ask unanimous consent to include in the Appendix of the RECORD the informative and moving testimony of Mr. Warren Farmer, of Nyssa, Oreg., when he testified before the Senate Subcommittee on Futures Trading, August 12, 1957, and demonstrated how onion growers are often exploited unfairly by the practice known as futures trading in onions. This practice damages the grower of row crops.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATE OF OREGON,
DEPARTMENT OF AGRICULTURE,
Salem, August 8, 1957.

Hon. RICHARD L. NEUBERGER,
United States Senate,
Washington, D. C.

DEAR DICK: First, I want to thank you for the fine help you have given us in recent weeks. I have sent on to key people in Baker County your recent findings and recommen-

dations on the Powder River watershed survey, see copy attached.

I spent a couple of days in Jackson County recently and talked to many people there connected with the Fruit Growers Association who were very much encouraged to learn of the favorable action on S. 1314. You and Senator MORSE deserve much credit for effective action on a marketing problem which has serious implications for the economy of that region unless definite steps are planned and taken to reduce last year's fruit pack and to cope with this year's large crop, which is even now moving into refrigerated storage.

Surplus production in crop after crop inevitably brings on marketing problems. It is only in a very few commodity areas that a fair balance of supply and demand exists which is fair to the consumer and at the same time provides a decent standard of living for the basic producer. We often wonder here to what extent we really have overproduction and one question which continually crops up is the extent to which we have maldistribution and underconsumption. Perhaps our attack on the problem should be from three directions: (1) Adequate enforceable controls on production; (2) a realistic measure of consumption based on acceptable standards of nutrition; (3) attack any problem which frustrates effective action in attaining desirable results embodied in points (1) and (2).

Of course, this is an oversimplification of a big problem but it is axiomatic that agriculturists are producing themselves into an economic hole year after year. I was very interested in the recent publication of the Public Affairs Institute which you sent me, entitled "Modernization of the Livestock Industry." I was struck by the truth of their analysis on the interplay of prices and output and the clear indication that the livestock producer operates just in reverse of the prudent businessman. If you can do so handily, I would like to be placed on the mailing list for articles by this institute or similar subjects dealing with the agricultural and livestock economy and with matters pertaining to the conservation and use of our natural resources.

I look forward to seeing you and Maurine when Congress adjourns, and I hope that we can arrange more time for discussion of problems of mutual interest sometime this fall than we have been able to work out in the past. Best wishes.

Cordially,

ROBERT J. STEWARD,
Director, Department of Agriculture.

STATEMENT OF MR. WARREN FARMER, NYSSA, OREG., BEFORE THE SENATE SUBCOMMITTEE ON FUTURES TRADING, AUGUST 12, 1957

Honorable chairman, Senators, and guests, I am Warren Farmer, a grower of onions in Malheur County in eastern Oregon.

This morning there were between 50 and 60 migrant workers picking up potatoes on my place. They probably harvested 4 or 5 acres of potatoes, probably 3 carloads, and I hope they got them up clean and into the packing shed without any wind burn.

My regular help supervised these migrant workers and I only hope they all did their jobs like they would if I were at home.

The reason I left in the middle of my potato operation is that I also have 26 acres of onions to sell and I want to talk to you gentlemen about selling onions.

I represent Malheur County Onion Growers Association and I am one of their directors. I also represent South Western Idaho Onion Growers, and Idaho Growers-Shipper Association including Malheur County. The latter is the official organization of handlers for our district.

If you have had occasion to refer to the record of hearings held by the House committee on this matter of onion futures you will note that Charlie Burns of Idaho Grower-Shippers, Doug McGinnis of South Western Idaho Growers have testified at three separate hearings. Those men didn't have time at all to get away and have asked me to represent their groups. This means that I speak for the total of 400 onion growers and 30 shipping firms.

Now about selling these onions. My crop has been very costly to grow this year. I want to get as much for it as I can. On the basis of my experience last year, it looks like I'll have a tough deal to buck unless we can do something about futures speculation. Last year I started selling onions the first of the year at $1.10 a bag. Figures on onion supplies put out by both the USDA and the National Onion Association made the late market picture look pretty good. At this point I decided to hold for a further market rise and didn't sell for awhile. During this time my neighbor sold his onions, and his best price was $2.50 a bag. This looked pretty good, so I got ready to go again. At about this time there was quite a flurry in onion future sales on the exchange and I found that there was little or no demand for about 10 days. My next sales, the last of February brought me $1.55 a bag and by the time I had cleaned up my crop I got $1.10 a bag. That's a drop of more than $1 for each 50-pound bag. I've been talking about 3-inch onions or what we call Jumbos. The medium sizes were really cheap and some of mine brought me only 10 cents a bag. All this happened while the total onion supplies were less than the normal amount usually sold during the period.

I've told just my experience but I wasn't alone. Every grower went through the same wringer, if he didn't sell out ahead of the futures tragedy.

In connection with the effect that futures trading has on prices we always hear that a grower can get price protection by selling his onions as futures. Here is the way this deal looks to me. It costs me about $300 to grow an acre of onions that will put off about a carload. If I hedge these onions I would have to advance $300 per car in addition to my production costs. Then if the future market should advance I would be required to put additional money to protect my original hedge. This could come at a time when I am having to meet the largest part of my cash expense. It would not be impossible for me to have $1,000 to $1,200 per acre tied up in these onions before I had an opportunity to deliver any of them. I just don't have that kind of money.

Apparently onion growers generally recognize these same difficulties I have mentioned. The Commodity Exchange Authority in its recent report on growers use of onion hedges states that "hedging by growers does not appear to be of such character as to be of importance in the marketing of onions."

I, and all my neighbors, try to grow the most profitable crops we can pick out in order to keep our business going. We figure onions should be profitable. We study the plantings in other districts to try to decide how many we can grow and sell at a good figure. Every year in our district we have a number of growers that put in their onions for fresh market, and then plant an additional number of acres, under contract. These contracts have been provided by operators in futures, and presumably the onions are for trading purposes. I suspect this happens even more in districts nearer the exchange centers.

To us who grow for the fresh market, these look like extra onions, or surplus above the growers best guess as to what the market will take. We don't think the futures operators will eat these onions after they are through trading. Eventually our market onions have to compete with them, and we believe it is unfair competition. It's unfair because these onions of themselves do not have to bring any actual value, but serve pretty much the same purpose as chips in a poker game.

The futures traders upset the onion market in other ways besides encouraging surplus. Some years ago I recall that our local shippers would come and buy onions at the field. Sometimes a shipper would buy up 10 to 100 cars, just before harvest at a definite price. They don't do this any more and the reason, they say, is they can't judge the market trend in terms of onion supply.

Shippers who handle our onions say that their customers won't stock up any more, and where they used to sell several cars, they now are apt to sell part cars. And then only after the main question has been answered, "What did the futures do today?"

The onion growers I know do not believe we need futures trading in this commodity. They believe it is just a disrupting influence that upsets all their calculations of supply and demand for onions. Growers, through their organization in our district, have expressed their desire every time they have met together that something be done to stop this disruption of onion markets by futures trading, and they are unanimous in expressing this desire.

We sincerely ask you members of this subcommittee to recommend passage of legislation that will stop futures trading in onions.

Splendid Work of Veterans Committee of the People-to-People Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. WILEY. Mr. President, my colleagues may recall that on several occasions it has been my pleasure to refer to the excellent contributions which have been made by various of the 42 committees serving under the worthy people-to-people program.

Today I should like to bring to the attention of my colleagues the commendable activity performed by the veterans committee. It is under the cochairmanship of two fine Americans, former commander of the American Legion, Lewis K. Gough; and the famous Eddie Rickenbacker, of Eastern Airlines, and of World War I flying fame.

From July 8 to July 23, under the auspices of this veterans committee, the national commanders of six major veterans organizations made a tour of four countries—England, France, Italy, and Israel. They met with veteran leaders and government officials in each country.

This is the first time that the six great American veteran organizations have met as a group, approved a single program, and put it into operation. The tour was financed entirely from private sources, in keeping with the private nature of the people-to-people program.

It is altogether fitting that ex-servicemen leaders, representing 23 million Americans who have seen honorable service in the uniform of our country, should interest themselves in the people-to-people program as an instrument for sealing the peace. These veteran leaders and their buddies fought hard and sacrificed a great deal for peace and for

liberty. The people-to-people program can mean much in making sure that World Wars I and II and the Korean war were not in vain.

I commend this veterans committee, and I wish it particular success in the period ahead.

I ask unanimous consent that descriptive material which has been sent to me by former Commander Gough, cochairman of the committee, be printed in the Appendix of the RECORD.

There being no objection, the memorandums were ordered to be printed in the RECORD, as follows:

TOUR OF THE SIX COMMANDERS—ACTIVITIES OF THE VETERANS COMMITTEE OF THE PEOPLE-TO-PEOPLE PROGRAM

Cochairman: Capt. Edward V. Rickenbacker, of New York City and Lewis K. Gough, of Pasadena, Calif.

Committee offices: 1608 K Street NW., Washington, D. C.

The organization and operation of this committee marks the first time in history that the six commanders of the major veterans' groups have met as a group, approved a single program, and put it into operation.

Two committee meetings have been held to date. The first, last December, approved a 22-point program for the committee. The second in April, was to report progress.

Major undertaking this year of the committee is the overseas tour of the six commanders who, after their terms of office expire, will form the permanent committee. This trip is financed entirely from private sources. Its purpose is to establish personal contacts with veterans' organizations abroad and to arrange for future cooperation and programs.

As part of the people-to-people program, the veterans' committee has placed CARE bookshelves abroad (each contains 99 volumes of outstanding American literature); organized veterans' pilgrimages overseas (the Legion is sponsoring 1 to Europe and the VFW 1 to Latin America); financed distribution of escapee kits to Hungarian refugees; distributed the booklets Window to America and Peace—A Nation's Record, through veterans' posts abroad; provided Hungarian-American dictionaries for refugees arriving in the United States; and shipped tons of leading American magazines overseas.

It is expected that during the next 2 months when many State conventions are held, endorsement of the people-to-people program will be obtained from individual state departments, thus giving the 22-point program additional impetus. Both the American Legion and the VFW have obtained organizational endorsement of the program with the other four groups expected to secure theirs at the coming national conventions.

TOUR OF THE SIX COMMANDERS—BIOGRAPHICAL DATA

American Legion: National Commander W. C. (Dan) Daniel, 43 years old, home is Danville, Va., a Navy veteran, a personnel executive of Dan River Mills (textiles), a member of the Legion for 12 years; married, has one son.

AMVETS: National Commander Dominick L. Strada (American Veterans of World War II and Korea), 51 years old, from West New York, N. J., 20-year Navy veteran, is superintendent of parks and public property in West New York, a member of AMVETS for 11 years, bachelor.

Catholic War Veterans: National Commander William J. Gill, 30 years old, from Cleveland, Ohio, a Navy veteran, is a United States mail carrier, a member of the CWV for 9 years, is married, no children.

Disabled American Veterans: National Commander Joseph F. Burke, 41 years old, from Bayonne, N. J., an Army veteran who lost his left arm at Monte Cassino, a personnel executive with the Asiatic Petroleum Corp., a DAV member for 11 years, bachelor.

Jewish War Veterans: National Commander William Carmen, 38 years old, from Boston, Mass., a Navy veteran, in the real estate management business, a JWV member for 8 years, married, has three daughters.

Veterans of Foreign Wars: Commander in Chief Cooper T. Holt, 32 years old, from Chattanooga, Tenn., an Army veteran (joined when he was 19), a department store executive and Post Office Department appointee, a VFW member for 12 years, married, has one daughter.

Cochairman of the Veterans Committee, people-to-people program: Lewis K. Gough, of Pasadena, Calif., will accompany the party. He is a past national commander of the American Legion (1953); and now is State inheritance tax appraiser of California.

TOUR HIGHLIGHTS, VETERANS' COMMITTEE, PEOPLE TO PEOPLE PROGRAM, EUROPEAN VISIT JULY 8 TO 23, 1957

FRANCE

Receptions: (1) Union National Des Amputes; (2) Union Francaise Des Anciens Combattants; (3) Danube and Rhine Veterans' Association: (4) French Officers' Club.

Dinner, Cercle Militare: Andre Dulin, Minister Veterans' Affairs; General Ganeval and leaders of 11 veterans' organizations of France.

Fountainbleau: General Valevy, General Grele, Commandant Henze, Central Europe Command.

Anciens Combattants de Fountainbleau (lunch at Fountainbleau for local veteran leaders).

Ceremonie: (1) Laying of wreath and rekindling of the flame at Arc de Triomphe, Paris; (2) laying of wreath at World War I and II Monument at Fountainbleau.

Farewell luncheon: Pershing Hall, for all French hosts met on trip.

Press conference: George V Hotel, final day.

Honors: All on visit made member d'Honneur de L'Union Nationale des Combattants.

ITALY

Reception for the commanders and presidents of the 20 veterans and military organizations recognized by the Italian Government.

Wreath: Tomb of Unknown Soldier—Gen. James Fry (U. S. A.) and Italian General Staff participating.

Press conference: Hotel Grand for press of Italy. Met Ambassador John Zellerbach and head of USIA.

ISRAEL

Reception by 40 veteran leaders of 5 Israeli veteran organizations at Veterans Bank Building (Tel Aviv), auspices of World War II Israeli veteran organization.

Reception and dinner for press and for all veteran leaders of Israel who extended hospitality, at Sharon Hotel (Tel Aviv).

Reception and lunch by veteran and military leaders at Haifa, including press conference (Zion Hotel).

Individual meetings with veteran leaders at Dan Hotel (Tel Aviv). Luncheon by Assistant Director General of Foreign Office Comay, at Jerusalem (King David Hotel).

Individual meetings with Israel officials, Prime Minister Ben Gurrion, Chief of Staff Doyan, Ex C. M. S. Yadin, Director General of Prime Minister's office Teddy Kollic.

Visited Gaza Strip (talked with U. N. and Israeli troops, Elat and Gulf of Aqaba).

Exhibition of captured military and naval equipment (Haifa). Nazareth, Hebrew University at Jerusalem.

Briefed Minister of Defense and Government Veterans' Staff, Tel Aviv. Visited prosthetic limbshop and disabled veterans in their homes and at work.

ENGLAND

Reception: Belgian Embassy (honors English and French veterans with citations). United States veterans invited to attend and participate (Belgian Embassy).

Reception: United States veterans' reception for heads of English veteran organizations (Milestone Hotel).

Wreath laying: Cenotaph, Whitehall.

Press conference and TV broadcast at Milestone Hotel.

IN GENERAL

The members of the committee were gratified at the receptions and receptiveness of the veteran leaders of countries visited. These veterans abroad were genuinely interested in the program of people-to-people contact. That they were curious as to our purposes and objectives was indicated by their questions. Some of the leaders of foreign countries indicated that the idea was not new—Le President of the Union Nationale Des Combattants in Paris indicated that many of the veterans' organizations of France had created the Alliance Atlantique des Anciens Combattants (Atlantic Alliance of Veterans) to reinforce unity between veterans and to improve understanding. A similar organization Lamplighters of the World was mentioned in Rome. French and Israeli veterans have recently visited the United States in the interest of understanding and friendship—but without coordination of such a program as ours.

The attitude of veteran leaders visited can be reflected in the comments of Mr. Nussbaum, president, Israeli Veterans' Organization of World War II (attached).

At each visit the committee met with veteran leaders in the capitals and in the countryside, explaining the purpose of our mission and answering questions. We emphasized the private nature of our visit—separate from government—pointing out that we raised all of our own funds from private sources. We stressed the unity of our great veteran organizations in implementing the program—an innovation in itself. We emphasized that in the interest of understanding we desired to learn more about these people we visited—their aim, objectives, hopes, ambitions, and viewpoints. In numerous cases our hots expresed viewpoint not entirely in line with our—as between repected friends who have confidence and trust in each other. This in itself served to clear the air and gave us an opportunity to correct misunderstandings

We invited all the veteran leaders visited to visit us and some are already planning such trips.

Our people-to-people program was furthered in other than veteran contacts—with the press, government, and military officials, and people we met everywhere.

Language was no great barrier—we found many who could talk English and interpret for us. One of our members of Italian derivation talked to the veterans in Italy in their own language.

Our tour was a beginning. We believe it can be extended upon, dependent upon the means, personnel, and the coordinated follow through by correspondence and other means.

Our United States veteran leaders in some of our post abroad were most helpful and could serve a liaison in the future. The same applies to USIA officials abroad who could assist in details—providing they receive adequate advance notice and briefing from USIA headquarters in Washington, D. C.

The visit was a working visit on a schedule which permitted little time for rest or sightseeing, but the friendship exchanged and the understanding which we believe was fostered, made the effort seem most worthwhile.

Press coverage abroad was favorable, a complete report of the entire visit with publicity articles, pictures, and individual

reactions from abroad and from tour members will be prepared soon.

MEETING OF A DEPUTATION OF THE PRESIDENTS OF THE WAR VETERANS ORGANIZATION FROM THE UNITED STATES OF AMERICA IN THE FRAME OF PRESIDENT EISENHOWER'S DRIVE OF "PEOPLE TO PEOPLE" WITH THE REPRESENTATIVES OF THE WAR VETERANS IN ISRAEL, WHICH TOOK PLACE ON TUESDAY, JULY 16, 1957, AT THE OTZAR-HAHAYAL BANK

At the meeting participated the representatives of all war veterans organizations of Israel, invalids and women brigades.

Mr. Nussbaum received the deputation on behalf of the organizations, saying: "Present with us are the presidents of the war veterans leagues in the United States of America, who represent 23 million veterans. This deputation at whose head stands Mr. Gough, is authorized to lay before us the feelings of a democratic and peace-loving nation. We shall hear from our important guests, what is their wish to tell us in their, and in the names of their organizations. We shall also have the opportunity to express our appreciation and feelings toward them. I would like to say a few words only about my first impression and the experience we all have had in these 2 days which our guests spent with us. It really seems to me that the words 'good will' express everything: searching for a way to truth and mutual understanding, mutual aid, and united fight for freedom and peace. I hope that this visit will advance the reality of the aim of fraternity and peace amongst the nations and peoples."

The Fund for the Republic

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. HUMPHREY. Mr. President, I have been happy to notice lately in the public press that instances of unfriendliness toward, and misunderstanding of, the purpose of the Fund for the Republic have nearly died out. Favorable comment from many diverse quarters on the fund's activities seems to be increasing.

Seven newspaper articles from the following papers have come to my attention: The Nashville Tennessean, the Bethlehem Globe-Times, Washington News, the Denver Post, Hartford Courant, Providence Bulletin, and the New York Times.

I ask unanimous consent that the texts of these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Nashville Tennessean of July 19, 1957]

ANOTHER PROBE OF THE DEEP

A few weeks ago, science launched a probe designed to pluck from the depths of the earth and the breadth of space unknown truths that have evaded mankind from the beginning of time.

The scientists called it International Geophysical Year. Perhaps, with luck and hard work, they will come a little closer to defining the most perplexing mystery of them all: What is life?

Now comes another group of scientists from other fields to launch still another excursion into unexplored territory. This adventure, by political and ethical scientists, is being underwritten by the Fund for the Republic, and the goal is to define some terms almost, if not equally, as evasive as that of life.

They seek the answer to these questions: What is individual freedom? What is justice? What are civil liberties and/or rights? What are they, not in terms of what the Founding Fathers thought, but as they exist today, in modern society?

"The 18th century Constitution structure, with its Federal and State Bill of Rights," says the fund in beginning its study, "was developed for a small, scattered, almost wholly agrarian society. Except for the church, government was virtually the only large, organized institution with significant impact on the individual; and the constitutional guaranties were, naturally, concerned almost wholly with the protection of individual and minority interests against government.

"There were no giant industrial corporations; no trade unions; the modern political party was not even contemplated; mass communications were not in the hands of huge, highly organized and centrally controlled media; the voluntary pressure group scarcely existed. Today, these and other 'big' institutions affect the individual for good and ill as intimately as "big government" does."

The study is well launched. A right to one person is not a right to another in our complex society. And when one person gains what he considers his right, another invariably surrenders a portion of what he just as honestly believes is his right, too.

Rights change. Today we speak of the right to vote and it is a right. It was not always such, even in America. The Founders considered it a privilege and the ballot was never intended by them to become the property of many groups to whom it is a cherished right today.

Abraham Lincoln, the Great Emancipator, strongly opposed extending the franchise to newly-freed slaves and once said it was his personal opinion that only the intelligent should be allowed to vote. The right of women to vote is so new in the world's history as to be considered still in the experimental stages.

The fund is off to an interesting study, to say the least, and one apt to kick up no few disputes before it is ended. The water into which these scientists are plunging is fathoms deeper than a mere ocean floor.

[From the Bethlehem Globe-Times]

THE FUND PROBES A DARK REGION

The Fund for the Republic which usually hits the headlines only when it is in conflict with Congressman FRANCIS WALTER, has launched a survey which may never achieve much publicity but stands to make a substantial contribution toward bolstering the American way of life.

This Nation has advanced far in such complex mechanical matters as splitting the atom and creating nuclear energy, but research has been almost entirely neglected into such basic issues as individual freedom and civil liberty—the forces which frequently have thrown tumult into our society.

A nonprofit organization dedicated to the preservation of our civil rights, the fund has attempted to defend our basic liberties by acquainting the public with individual cases in the hope that an enlightened public opinion would take it from there.

The present project has enlisted the service of 10 distinguished Americans in all relavant fields to go further. These men will go beyond the mere study of the Constitution by endeavoring to find out what problems of its application have arisen through the changes in the progress of the American people.

The experts will, for example, attempt to appraise the effects of the corporation on a free society. They will probe into the relationship between the union and community and the implications for individual rights of collective-bargaining practices, terms of union contracts, and other factors. Such other categories as the common defense and religion in a democratic society will also be examined in similar light.

The Fund for the Republic is financing this inquiry into the remote regions of our way of life without hope of profit or fear of criticism. The results could well have far-reaching effects that may ultimately contribute to our own survival.

[From the Washington Daily News of July 2, 1957]

NEW FUND INQUIRY

(By John Herling)

"Little man, what now?" again becomes the country's most urgent question.

Scientists can worry about the challenges of the Geophysical Year which opened yesterday. What the average American and his family fret about, consciously or not, are the social and anti-social pressures that constantly move in on him—to determine whether he is a man or a mouse.

Putting it in other terms, the Fund for the Republic—created by the Ford Foundation—says it will now "undertake an inquiry into the impact of two major United States institutions—the industrial corporation and the labor union—on individual freedom and civil liberty in America."

Fund president Robert M. Hutchins says that the corporation and the labor union are institutions "which may affect the individual for good or ill quite as intimately as big government does. The United States is now a Nation of employes, with more than 75 percent of the working force employed by the corporations. Almost 16 million workers are members of unions."

The labor union project will be headed by Clark Kerr, chancellor of the University of California. Mr. Kerr is a key figure in industrial relations, with important service on the War, Labor, and Stabilization Boards and various presidential fact-finding bodies.

The industrial corporation project will be directed by Adolph A. Berle, professor of corporation law at Columbia Univeristy and former Assistant Secretary of State.

Basic question which will have to be faced by the consultants on these and other projects will be the effect on the character of the "organization man," the pressures and disciplines which frequently cause the psychological as well as economic entrapment of the individual.

According to Mr. Hutchins, the labor union project will examine the relation between the union and its membership, between the union and the community, the implications for individual rights of collective bargaining practices, terms of union contracts, size of the bargaining unit, and other factors.

Along parallel lines, the industrial corporation project will try to "appraise" the corporation's impact on its employees in certain "traditional" areas: freedom of speech, association, and political activity. Also, hopefully, it aims to develop a comprehensive body of opinions on the proper relationship between employer and employed.

[From the Denver Post of June 26, 1957]

TIME FOR A CHECKUP

"What is a truly free society, and how can such a society be maintained?"

That question has been thrown at the educators and the lay citizens of the United

States. The purpose behind it constitutes two other questions, namely:

"When will the American people make up their minds what they expect from education?"

"Is the American culture exerting a greater impact on education than education exerts on American culture?"

To find the answers to all 3 of these pertinent inquiries, the Fund for the Republic has commissioned 10 eminent citizens to conduct a continuing search for facts about the nature of our society, and of the fundamental issues bearing upon the direction in which we as a people are moving.

The inquiry will fall into five principal categories—studies of communism, maintenance of due process, protection of freedom of speech and belief, education in American traditions and maintenance of equality of opportunity.

In announcing the project, Robert M. Hutchins, president of the fund, said:

"Today social institutions have grown to gigantic size, with consequences the authors of the Constitution could not even imagine. If we are to continue as freemen in a free society, we must find how these developments affect freedom and justice."

Behind all this is the conviction that Americans, who inherited freedom, now have to be educated for it. And that, far more than the material shortages of classrooms and teachers, is the crux of the educational crisis in this country.

The inquiry into both the status and the necessities of freedom, and the search for answers to the questions posed by this situation, offers the 10 distinguished Americans chosen by the fund an opportunity for tremendous service to the nearby present and the further off future of free society in the United States.

[From the Hartford Courant of July 8, 1957]

A STUDY OF UNIONS AND CORPORATIONS

The Fund for the Republic, that independent inquiry agency set up by the Ford Foundation, is going to launch another study. If we may judge from the past, this will also cause some agitation and discussion when the facts are told. This is all to the good. Those who criticize the fund's director, Robert Hutchins, overlook the invaluable role he plays as gadfly in raking over controversial subjects and getting people to think and talk about them. There is too little of that in this age of conformity: too many who "don't want to get involved," the common password of the day.

This new survey will be a study of the effects both labor unions and corporations have on individual liberties. This should be a fruitful inquiry, for it is well known that some labor unions and some giant corporations are working hard to create the mass man whose mind is not his own, and who is dependent on the central pool of authority, the labor boss, or the corporation head, to tell him where he can work and when and how.

In this study the Fund for the Republic could do worse than use the slim volume, "Decentralize for Liberty," by the late Thomas Hewes as a guide book. For Mr. Hewes was a consistent champion of individual rights. In this book he pointed out how big unions, big government, and big industry were all combining to chisel away individual liberties. In pointing this out Mr. Hewes said:

"Today government is not the only potential offender. The real cause for fear, the more insidious and pervasive danger, arises from the behavior of fellow citizens, both individuals and groups, who claim that their acts which on all sides are recognized as injurious to others in fact, are merely exercising perfectly legal rights and are defensible. These acts include effective combination of business and labor in restraint of trade; combinations of business of overpowering size or the same results from associations of business in the same trade; the tyrannical practices of some labor unions, and the many current devices on all sides to restrict production or employment or individual enterprise or all three."

There is no doubt that the fund is again entering dangerous territory. When the facts are again brought out, no doubt there will be bludgeoning from both sides. But honest criticism can be healthy.

[From the Providence (R. I.) Bulletin of June 18, 1957]

WHAT IS A "TRULY FREE SOCIETY"?

The study of pure science is often derided as an impractical and expensive waste of time. Yet, it is only by the understanding of basic laws of nature that dramatic scientific advances are made possible.

For instance, the theoretical discovery by the late Albert Einstein that matter could be converted totally into energy set the stage for the advent of the nuclear age.

Similarly, theoretical studies of the society in which we live can be highly rewarding. The day-to-day problems at all levels, from the scholarly to the mundane, become so demanding of time, thought, and energy that most people never have a chance to take a long, quiet look at where society has come, or where it's going and why.

Therefore, the decision of the Fund for the Republic to direct a major research effort at clarifying the nature of a "truly free society" and how it can be maintained is a welcome one, indeed.

Such an excursion into philosophical definitions might seem as remote from the pressing issues of this day as Einstein's curiosity about matter and energy was to the atomic bomb. Yet the fund's projected study is basic to our understanding ourselves as social and political animals, and so to our very survival.

As Robert M. Hutchins, president of the fund, pointed out, society has undergone revoluntionary changes since the 17th and 18th centuries when the modern concepts of human freedom were being formulated.

Indeed, when civil liberties were defined in the Declaration of Independence and the Constitution, with its remarkable Bill of Rights, the United States was small and life was geared to a sparsely settled agrarian society. Beyond the church, government represented the "only significant social organization." Certainly, there were no such things as the business and industrial colossi, the gigantic labor unions, powerful pressure groups and the overwhelming nature of mass communications that we know today.

Scores, if not hundreds of different pressures and influences are impinging on individual freedoms in ways never even conceived 200 years ago.

Yet, we continue to use the same words to express philosophical values largely unchanged since 1776, with little regard for their applicability or validity in a modern age. And just as a piece of tempered steel breaks with dangerous whiplashing when bent beyond endurance, so society can react with dangerous passions when the concepts by which men live are twisted into cynicism by maladjustment to the social reality.

Competent scholarship is, of course, essential to the success of such a venture, and happily the fund has obtained the services of a group of 10 distinguished Americans to direct the study. If well done, then the project could prove an important bit of philosophical preventive medicine, sparing America from the destructive contradictions of a sort of national schizophrenia.

[From the New York Times of July 19, 1957]

A FREE SOCIETY

The Fund for the Republic is embarking on an important study of one of the great problems facing our democracy: The effect on freedom and a free society of the large-scale organizations and institutions that have grown up in the last half century and that were as unknown to the Founding Fathers as the jet airplane and the atomic bomb.

Big business and big labor, to name two major forces of the new age, inevitably affect our life as a Nation and our freedom as individuals. These new groupings—in industry and in labor, in voluntary associations and in pressure groups—have helped change our society from the relatively simple association that it was to the highly complex network of interrelationships that we see around us. Their profound impact on personal freedom and on the structure of the State must first be understood before it can be properly coped with. In announcing the new study, Robert M. Hutchins, president of the fund, said: "We must find out how these developments affect freeedom and justice. We must discover the basic issues they present."

This basic-issues program is described as a principal part of the present phase of the fund's operations, which began with a grant from the Ford Foundation over 4 years ago. The fund has been spending its money by and large in some exceedingly useful directions despite ill-informed and often irresponsible criticism that has been directed against it. In so doing, the fund has helped strengthen American democracy, and the new study just announced gives every indication of being a major contribution to this end.

Statehood for Alaska and Hawaii

EXTENSION OF REMARKS

OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. BURNS of Hawaii. Mr. Speaker, under leave to extend my remarks, I include herewith several editorials favoring statehood for Alaska and Hawaii.

While I agree with the fact that there is overwhelming sentiment in favor of statehood—with the great majority of the people of the United States and of the Congress in favor—I do not necessarily agree with the conclusions of the editorials as to why statehood has not been granted.

The ascertainment of the blacks and whites—the affirmatives and the negatives—is an easy matter. Explaining the reasons as to why statehood has not been favorably acted upon is not an easy matter.

Opponents of statehood, within Hawaii particularly, have disguised their opposition beneath an appearance of publicly expressed support. Lacking logical reason for opposing statehood and unwilling to place their wholly selfish, shortsighted objections in the open where they would be accorded the consideration they deserve, the opposition has used indirection and subterfuge.

The 85th Congress has given strong evidence that statehood will be of paramount consideration and that Hawaii and Alaska will be admitted as States.

The editorials follow:

[From the Columbia (Mo.) Tribune of July 18, 1957]

THE STATEHOOD BILLS

Action by the subcommittee of the Senate Committee on Territories in approving separate bills for statehood for Hawaii and

Alaska puts the long drawn out controversy over statehood for the two Territories on a more realistic basis. Supporters of statehood for each are inclined to believe that both can muster more support in the Congress individually than jointly, and individual bills make it possible for the national legislators to consider separately the merits and demerits of each cause. The problems are by no means identical.

Hawaii, with its rapid growth in population and the spectacular development of its industry and tourist trade, has achieved many of the requirements for statehood. Developments in communications—Honolulu is only an overnight trip by air from either San Francisco or Los Angeles—have largely removed the objections to statehood because of distance and noncontiguity, and certainly desire of the citizens of the islands to govern themselves within the family of States weighs heavily in favor of statehood.

On the other hand, there are still questions, even in the islands, as to whether the citizenship has reached a maturity of statehood proportions. Hawaii started the surge toward its present status in World War II, and the growing tourist business has done much to replace the trade with departing servicemen as forces there were reduced after the war and after the Korean "police action." But the fact remains that the majority of its citizens are of Japanese origin, and its handling of some unsavory labor difficulties has not been altogether reassuring.

There is little question of the basic loyalty of the Japanese and other Asian portions of the islands' population, there is some question whether the Hawaiian melting pot is far enough along in its processes to seat members in the United States Senate and House of Representatives.

The separate bills for statehood for Hawaii and Alaska will make possible calmer and more realistic consideration of each.

[From the Wilmington (Del.) Journal of July 19, 1957]

POPULAR—EXCEPT IN CONGRESS

If Congress represents the people, why has it stalled for all these years on granting statehood to Alaska and Hawaii? Gallup polls taken over the last decade have shown that about two-thirds of the American public favor statehood, while about one-tenth are opposed. (The rest expressed no opinion either way.) But it is evident that, despite presidential backing of this popular view, Congress has not been strongly influenced by the opinions of the voters.

Perhaps it shouldn't be. If a Gallup interviewer asks an average American for his views on a subject like this, the chances are that he hasn't done much (if any) serious thinking about it. Most Americans have an amiable feeling that Hawaii and Alaska are entitled to statehood, but while they favor the idea they don't really care much either way. In such a case Congress, which has committees to delve deeply into the subject may well be in a better position to make a wise decision.

The trouble with this apologia is that the overwhelming weight of the evidence, at least in our judgment, is in favor of statehood. So we come back to the question: Why?

For many years congressional committee members have enjoyed junkets to Kaikiki, at Government expense, to investigate the question of Hawaiian statehood. Make Hawaii a State, and these junkets will cease. But that is a frivolous reason, not an adequate explanation. In any case, it does not apply to Alaska: Alaskan junkets are not in great demand.

In the case of polyglot Hawaii, moreover, there is considerable opposition from southern Senators, who are not prepared to welcome as a State a Territory where what they call "mixing of the races" goes further than anywhere else under the American Flag. Race politics plays a part in their opposition to Alaska as well. Admit 2 new non-Southern States and there will be 100 Senators instead of the present 96. If the four newcomers vote for civil-rights measures, as seems likely, it will be a little harder for southerners to maintain a filibuster.

But there is northern opposition, too. While the general public, whose views are recorded by the polls, doesn't greatly care either way, there are interests within many States which fear that they might be affected adversely by statehood. And they care enough to make an impression on Congressmen.

These are some of the reasons why the views of the voters have not been readily translated into congressional action.

[From the Woonsocket (R. I.) Call of June 26, 1957]

TIME TO ADD TWO MORE STARS

Flag Day has come and gone, and still there are 48 stars in our flag. But will this be the last year there is that number? That is for Congress to decide, and we earnestly hope that when Flag Day, 1958, rolls around, there will be 50 stars, the additions representing statehood for Alaska and Hawaii.

Forty-five years ago, in 1912, New Mexico and Arizona became States, giving flagmakers an opportunity to capitalize on the situation. For the statistical-minded, it is well to record the fact that the 45-year span is indeed a record. Before that the longest gap was 15 years between the admission of Missouri in 1821 and Arkansas in 1836.

The history of Old Glory shows that in 1794 Congress ordered 15 stars and 15 stripes into the flag, with Vermont and Kentucky having been added to the original 13 States.

Twenty-four years later, Congress overhauled the flag setup, cutting the number of stripes to 13 again in honor of the original 13 States and providing for 20 stars. As time went on, the flag ultimately became made up of 13 stripes with 48 stars in 6 rows of 8 stars each.

Of course, flagmakers are going to have a problem if Alaska and Hawaii become states, for how is it possible to arrange 50 stars in 6 rows? Our suggestion would be for 5 rows of 10 stars each.

But that is not the essential point. The question is whether Alaska and Hawaii merit statehood. It is our belief that both are ready for admission, and that further dilatory tactics by our national legislators would serve no worthwhile purpose.

It is pertinent to note that in 1950 the House of Representatives voted for statehood for both Alaska and Hawaii, and that in 1954 the Senate voted for statehood for both.

Now, all that remains is for the House and Senate to vote favorably at the same session. If there are any good reasons—apart from partisan politics—why this should not be the session that makes history by admitting Alaska and Hawaii we'd like to know them.

[From the Louisville (Ky.) Times of July 3, 1957]

STATEHOOD HOPES AFTER 10 YEARS

A Senate subcommittee has approved separate bills to grant statehood to Alaska and Hawaii.

This is good news. We hope both bills go all the way through Congress, that President Eisenhower signs them, and that two new stars are added to the flag. But we have our fingers crossed.

That the fight has been old and thus far futile was demonstrated by a paragraph in Martin Moore's Looking Backward column Monday. The 10-year-ago section contained this: "The House voted 196 to 133 the day before to make the Hawaiian Islands a State. Action in the Senate appeared unlikely before the next session."

Well, 10 years have passed and that next session has gone into many sessions. And Alaska and Hawaii still are on the outside looking in.

The overwhelming majority of Americans, if the Gallup poll is any indicator, approve statehood for the two Territories. The platforms of both political parties pledge immediate statehood.

Despite all this, despite the fact that at one time or another 1 Territory or the other has seemed on the threshold of admission to the Union, the 2 Territories remain Territories. Their aspirations have been frustrated many times for many reasons. Nevertheless, we still are hoping.

[From the Honolulu Advertiser of July 31, 1957]

STATEHOOD

The Committee on Interior and Insular Affairs has recommended for passage Senate bill 49. This bill would grant immediate statehood to Hawaii. For a number of reasons the action of the committee is significant to the statehood aspirations of the people of the Territory.

Of greatest importance, the committee's action has taken place during the first year of the 85th Congress. This places the bill on the calendar as the first order of business when the Senate reconvenes next January. The misfortune heretofore has been that favorable committee action has come too late in the second session to provide ample time for consideration.

Most encouraging also is the fact that the committee's approval was by unanimous vote. Such a report never before has had such support in a committee of either branch of Congress.

The action of the members in promptly rejecting all delaying tactics, such as a proposal for a referendum in Alaska, indicates that dilatory methods will be nipped in a bud. Apparently the time is past when parliamentary stratagems can prevail.

Of even greater significance was the willingness of the members to face squarely every possible objection to statehood. The presence of subversive influences in our social and economic life, particularly in labor organizations, received recognition and was discussed frankly. The members probably are as well informed on this topic as any other group in the Nation. It is gratifying that they still voted unanimously for the adoption of the report.

This vote is more than an endorsement of statehood. It is a recognition that the people of Hawaii are good citizens in the best traditions of America; that their social and economic development has kept pace with that of the Nation; that their conduct in peace and in war indicates that their aspirations to become a State are just and reasonable, and that every consideration should be given—at this time—to these hopes and aspirations.

How To Wreck a Road

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. HUMPHREY. Mr. President, the June 1957 issue of Sparks, the official

publication of the Minnesota State Automobile Association, contains an article by Richard Tupper, entitled "How To Wreck a Road."

The AAA, as is widely known, has supported roadside protection programs for many years. It does not seek to ban or outlaw roadside businesses or billboards. It seeks reasonable regulation and orderly planning. The article is particularly pertinent to the bill, S. 963, introduced by our colleague from Oregon [Mr. NEUBERGER], which is pending before the Public Works Committee. It may point the way to a solution and a constructive compromise.

I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD and appropriately referred.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO WRECK A ROAD

(By Richard Tupper)

Controversy over billboards and other forms of outdoor advertising has raged ever since the first glad tidings of a liver nostrum were posted on the side of a barn.

Some folks hate billboards with passion, and would ban them forever. Outdoor advertising spokesmen, on the other hand, would have you believe that our entire economy would collapse without these alfresco ads, and, indeed, argue that some of the modern poster panels actually improve the appearance of an otherwise drab landscape.

The basic fault with a billboard is this: its existence indicates a lack of control which often brings roadside blight and a ruined highway.

In the early days, the sole purpose of roads was to serve the people who lived or did business on adjoining property. Later, some of the roads were widened and surfaced, and through traffic began moving over them. These roads performed the dual function of providing service to vehicles, and abutting property owners. Finally, arterial routes were built to move heavy volumes of traffic with safety and dispatch.

But these arteries—most of them—didn't do the job. Traffic, instead of flowing freely, became clogged and jammed. Accidents, deaths, and injuries soared. Even when the highway was widened and straightened, motorists were confronted with the same dismal picture; traffic congestion and a mounting accident toll.

Gradually the truth emerged: you can't maintain the safety and efficiency of an arterial highway unless you protect its roadsides.

The warning was sounded many years ago. As the traffic streams thickened on main routes throughout the land, they were followed by roadside blight. Junkheaps, automobile graveyards, shanties—and signs of every description from the huge 24-sheet poster panels down to the little snipe pointing the way to Paradise Beach. A few dedicated souls raised an alarm over the dangers of this roadside ravaging, but they were pooh-poohed as mere esthetes.

When traffic volumes reached major proportions and accident rates spiraled, an increasing number of engineers and traffic specialists joined in urging some form of roadside control. For, with unregulated roadsides, all sorts of business enterprises sprung up along the highway. Each had two driveways, maybe more. Instead of being grouped sensibly at interchange points, these businesses were strung out along the highway ("ribbon development," it's called), each with its own driveways. As cars slowed down to enter or others pulled out, congestion was produced on the other lanes and traffic often was forced over to the highspeed inner lanes. Crashes and multiple tieups were the inevitable result.

The highway, once the State's pride, had become an offense to the eye and a hazard to all who used it. In desperation, the engineers put up more and more stop lights and that meant the end of the route as an artery. It then became a long city street out in the country.

And it was impossible to widen it any further. With all those businesses crowding the road's shoulder, extra right-of-way costs too much. The only solution is to build a new highway somewhere else with a right-of-way wide enough to discourage both business and signs except at planned locations.

That's the key word—planning. Roadside business is not only necessary; it should be encouraged. There's no objection to signboards in their right place—commercial, industrial, or similar areas. Everyone selling goods or services along the highway should be able to advertise his wares.

The AAA has supported a positive program of roadside protection for over 20 years. It's not a plan to prohibit billboards or kill roadside businesses. It simply gives the highway department authority to regulate the roadside, including points of access, so that orderliness and sanity will prevail in commercial development. With such controls in effect, motorists can enjoy the countryside uncluttered by either poster panel or the cluster of little snipe signs. And along such roads traffic can move easily, speedily, safely.

Roadside blight may be prevented in many different ways. The AAA has published a handbook on the subject giving full details to the experts and technicians tackling a specific problem. One of the most effective solutions involves highway zoning. All major communities provide for orderly development—residential, business, commercial, and so on—through some type of zoning. However, rural-minded lawmakers often are reluctant to accept this principle. Other measures for safeguarding the highway investment include: marginal land acquisition, reservation of protective easements, purchase of advertising rights and use of the State's police power to preserve roadside amenities.

Just what method is best for any particular State or locality should be decided by the experts. In the meantime, we users can tell the people in the legislatures and other political offices that we want our investment in highways safeguarded; that we want no part of our hundred-billion-dollar investment poured down a rathole; that we insist on adequate roadside protection despite the fulminations and machinations of a small but very noisy opposition.

We're going to work in a big way to solve our traffic problem. On the Interstate System alone, we plan to pour a billion and a half barrels of concrete; we'll use up 9 billion board-feet of lumber; we're going to need 9 billion tons of sand, gravel, and stone.

A statistician can have a lot of fun with those figures—making a boardwalk 6 feet wide stretching to the moon, and building a pile of sand and gravel half a mile high, if our slide rule's working right.

But the Interstate System constitutes only a part of the entire roadbuilding effort. The figure to watch is that hundred billion dollars that Federal, State, and local Governments will spend on highways and streets in the next decade and a half. That's a huge amount of money. Put it all in one-thousand-dollar bills and you'd have more than 100 stacks each as high as the Washington Monument.

There'll be fights, bitter ones, before necessary safeguards for this tremendous investment can be written into law. How the battles are decided depends almost entirely upon the highway users. Our weapons are readily at hand—just pen, paper, and some 3-cent stamps. Write to your Senators and Representatives in Congress now, urging protection for the Interstate System. When your State legislature is in session, write to your representatives there. Write to public officials. Write to editors of your local papers.

If enough motorists write enough letters to people in public life, our hundred-billion-dollar investment in a better traffic future will pay off in terms of safer, more comfortable, more enjoyable driving. That's more than a promise; it's a stone-cold locked-up certainty.

Unfair Drain

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting article which appeared in the Daily Evening Item, Lynn, Mass., on August 8, 1957.

The article follows:

UNFAIR DRAIN

Massachusetts is suffering a continual drain on its resources to support Federal projects in other parts of the country, according to a study made by the new Commission on the Audit of State Needs.

The finding is nothing new. It has been known to anyone who has had access to the figures on what we pay out in Federal taxes in this Commonwealth and what we get back in Federal projects or assistance. Lynn's own attorney, Guy Newhall, has repeatedly pointed out the outrageous lack of balance between outgo and income in Federal finances in this State.

The situation is dramatized by the second refusal of the White House only yesterday to aid us—or any part of New England, for that matter—in the drought situation. We pay and pay but when we seek a helping hand from Uncle Sam in an emergency, Washington turns its official back on us.

This State pays $1.34 in taxes to the Federal Government for every $1 it receives in Federal funds. On the other hand, Alabama pays only 36 cents for every dollar it receives and Arkansas gets a dollar for every 31 cents.

Massachusetts ranks 10th in the Nation in Federal tax payments. Last year, we paid more than $2 billion to Washington, but we rank 37th in our return on the tax dollar.

An ironic aspect of the situation is that the projects which are being built in other parts of the country with Federal funds to which we contribute, are being used to build up States which are already competing with us and attempting to take away our industries, capital and engineering, and managerial talent.

Congress has been appropriating more than $500 million a year for the development of river and harbor facilities, but Massachusetts, which pays more than 3 percent of Federal taxes, gets less than half of 1 percent of this money.

There are a number of river and harbor projects for Massachusetts which the Federal Government has authorized, but for which Congress has so far failed to appropriate funds. Congress recently failed to appropriate funds for a flood-insurance program which was strongly supported by almost every New England Representative and Senator.

In such fields as civil aviation, agriculture, and education, Massachusetts has also not

received a proportionate share of Federal funds.

The solution? A more militant, more united New England delegation in Congress, both in the House and Senate, to fight tooth and nail, day in and day out, on the floors of the two branches, in the committee rooms, and in the cloakrooms for more funds. If we accept this unfair treatment passively, we'll continue to get it.

Discourse on a Dictator—Trujillo

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arnaldo Otero, which appeared in the Washington Sunday Star, August 4, 1957:

A FATAL ANALYSIS?—DISCOURSE ON A DICTATOR—TRUJILLO

(By Arnaldo Otero)

The most important document in the strange case of Dr. Jesus de Galindez, Columbia University instructor who disappeared more than 15 months ago, has recently been published in Argentina. It is the book that may have caused the disappearance, perhaps the death, of Dr. de Galindez.

In the book, The Era of Trujillo of the Dominican Republic, Dr. de Galindez lists these charges against the Trujillo regime:

That assassins hired by Gen. Rafael L. Trujillo have murdered political foes outside the Dominican Republic, at least twice in New York City.

That the Dominican Government encouraged the formation of a Communist Party as late as 1946 and that the Government went so far as to offer guaranties to exiled Communists if they would return to organize the party.

That there is no free press, radio, or television in the country. "The problem is not one of censorship," Dr. de Galindez writes, "it is one of asphyxia," a complete monopoly being held by Trujillo and his brother J. Arismendi (Petan) Trujillo.

That elections are fixed and that terrorism is used, when necessary, to take care of any opposition.

That Generalissimo Trujillo adapts himself to the foreign policy of the western countries, even though he may not agree with it. At the same time, he keeps trouble alive in the Caribbean area.

DOCTORAL DISSERTATION

Dr. de Galindez disappeard shortly after he had completed the book, written in Spanish, as his doctoral dissertation at Columbia University.

The material is carefully documented. It is the work of a graduate student who knew he would have to prove to school authorities that his sources were reliable and his conclusions valid.

But the real value of Dr. de Galindez' thesis, perhaps, lies in its dispassionate approach to the controversial subject. His book is the first work of its kind written during Trujillo's 37 years of absolute control that is neither fanatically critical nor fantastically praising.

Dr. de Galindez's task, as he himself proclaims it, was:

"* * * To study, with coherence, the political regime of the Dominican Republic during the 25 years of the era of Trujillo (1930–55). But not so much as an analysis of a country, but of a continental species. The details may vary, but the characteristics repeat themselves from country to country."

This is Dr. de Galindez' story in brief:

Trujillo was a young telegrapher when the United States Marines landed in 1919 to restore order and fiscal stability to a chaotic nation. From a temporary second lieutenant in the Guardia Nacional, he rose swiftly to become a brigadier general of the newly organized national army.

Trujillo held the post of commanding general of the army until the coup of 1930. "It seems that President Vasquez," writes Dr. de Galindez, "never suspected him until it was too late."

President Horacio Vasquez resigned after a coup on March 2, 1930. Trujillo partisans say the general remained neutral; his enemies say he was the brains behind the revolution and that his conduct was a model of treason.

UNITED STATES ENVOY QUOTED

United States Minister Charles B. Curtis is quoted by Dr. de Galindez as writing in one of his reports to Washington:

"Probably in December (1929), Trujillo emptied practically all the arms available from the Santo Domingo (now Ciudad Trujillo) fort and sent them to the Santiago fort. With all certainty he was conspiring with the revolutionary forces from the beginning and never broke his relations with them."

On March 18, 1930, General Trujillo was proclaimed presidential candidate and on May 16 was elected President unopposed.

"Still I have not found any complete and truthful account of what happened toward the end of February 1930 in the Dominican Republic," Dr. de Galindez writes, "and it is doubtful that a serious historical account will ever be found."

General Trujillo emerged from the first elections as the dominant figure in Dominican politics and the confederation that brought him to power. He reorganized the party and got rid of the leaders of the confederation who did not follow him.

"The army was clearly under the power of the Generalissimo and he promptly began to use it to quell any type of disorder," Dr. de Galindez writes.

After his first term General Trujillo no longer tried to share his powers with other elected officials. Even today, Dr. de Galindez reports, he holds undated and signed resignation letters from all elected officials, including legislators and judges. When the dictator wants to get rid of one of his officials all he has to do is to date the "resignation" and circulate it.

Year after year General Trujillo continued his personal power by eliminating parties and party members. According to Dr. de Galindez, some were killed, some brought into disrepute, others eased out quietly into obscurity.

A PERSONAL DICTATORSHIP

"The government of the Dominican Republic is a great farm that belongs to Trujillo," Dr. de Galindez charges, where the constitution, patterned after that of the United States, is only a "facade." His is a "personal dictatorship * * * better yet, a tyranny."

The Trujillo regime also is one of absolute nepotism. His son, Rafael L. Trujillo-Martinez (Ramfis), who was a colonel of the army at the age of 5, will be the next President of the republic. The Generalissimo's brother, Hector B., is now "President."

Dr. de Galindez declares New York City police have enough proof to convict Trujillo men of two murders. These men have fled to the Dominican Republic and vanished.

The first assassination took place on April 28, 1935. Attorney Sergio Bencosme, secretary of war in the Vasquez government, was shot to death when the assassin apparently mistook him for Dr. Angel Morales, the real target. Dr. Morales was one of General Trujillo's presidential opponents in the 1930 elections.

The second New York assassination occurred less than 5 years ago—October 2, 1952. The victim was Andres Requena, a political exile.

"I have in my possession documents from Trujillo sources," Dr. de Galindez writes, "of a deliberate attempt by the Dominican Government for the public organization of a Dominican Communist Party.

"The exiled Communists were urged by the Government to return; and they agreed to it," Galindez says, to cover the bad smell of his one-party system and show his was a democratic government. The party was soon afterwards disbanded as Russian-Western relations became strained.

In his book printed in Argentina by Editorial Americana, Dr. de Galindez asserts the death of Trujillo will bring chaos to the little island because of the absence of political forces and the needed democratic instrumentalities for a new government to take over.

As a sequel to the disappearance of Dr. de Galindez, the Trujillo regime again hit the front pages of newspapers here when an American pilot, Gerald L. Murphy, was reported as having been murdered in the Dominican Republic. Mr. Murphy is believed to have flown Dr. de Galindez out of this country.

In more recent developments, General Trujillo hired two American lawyers—Morris L. Ernst, of New York, onetime aid to Presidents Roosevelt and Truman, and William H. Munson, of Buffalo, a former New York State Supreme Court justice—to make an all-out investigation of the controversial case. The Dominican Republic had previously parried United States efforts to get to the bottom of the affair.

With friendly relations between the United States and the Dominican Republic already affected, the Trujillo regime is now trying to establish its innocence of the fantastic charges to which it has been subjected.

Legislation Pending Before the Banking and Currency Committee of the House

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter from a constitutent who is highly interested in legislation now pending before the Banking and Currency Committee of the House. The letter is as follows:

AUGUST 9, 1957.

Hon. BYRON G. ROGERS,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROGERS: As a stockholder in a national bank, I would like to express my feelings as to the banking bill

now being considered by the banking committee of the House.

Under our present system of electing directors of our national banks, we have majority control and minority representation. The elimination of cumulative voting will mean that majority control will be changed to monopoly control and minority representation as it now exisits will be obliterated. In short, we will take a big step backwards concerning democracy in our national banks.

Cumulative voting is democratic for it gives the public stockholders the right to have representation on the boards of the banks which they own. We need more democracy and less monopolistic power in our banking system. The elimination of cumulative voting puts the bank managers in a position of monopolistic power over the banks which is very detrimental to our banking system.

Will you please see that this letter is put in the RECORD. Thank you.

Sincerely yours,

(Mrs.) RUTH PANKOSKI.

Telephone Directories

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. MICHEL. Mr. Speaker, before reading Mr. F. F. McNaughton's comments on the poor distribution of telephone directories in Russia, I had not realized how much I took for granted the various sources of information that are readily available in the United States. Little do we realize how much we have come to depend upon the diversified information contained in our telephone directories, a directory which is given without hesitation to each subscriber.

Following is the 12th in a series of letters by Mr. F. F. McNaughton, publisher of the Pekin Daily Times:

THE EDITOR'S LETTER

(By F. F. McNaughton)

Just tried a phone call. So, hunted phone book.

In various hotels about the world I have found phone books in various places. Where should this one in a Moscow hotel be?

Ceil says I never can find anything; so I kept hunting.

Since our suite has four rooms, and many cabinets and tables and closets and drawers, I hunted for quite a spell.

Finally I said, "Ceil, I give up, please find the phone book for me."

Usually she takes one quick look, and there it is and has been all the time, right under my nose.

But she couldn't find it.

So down the elevator to the office I go to ask to see their phone book to look up "soandso's" number. They had none.

I went into Intourist. They had none.

Now there is an aspect of Russia that I haven't yet mentioned on this trip. It is secrecy.

In a city almost big as New York or London, only a few people have telephone numbers available.

Evidently they don't aim for just anybody to be able to talk to just anybody else. They want to know who talks to whom, and perhaps what he says.

You know how the volume drops on a telephone when somebody else comes on the line. In each phone talk I've had here in Moscow, I have the feeling that someone else (maybe a recording machine) is on the line. If they had phone books and millions of phone talks, like in a normal city, they never could listen to all the talk.

Maybe it's like reading the mail. We know there is mail for us somewhere here in Moscow—has been for 2 weeks. But they won't give it to us. Probably haven't had time to read it yet.

Dean Acheson on Jury Trial

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. DORN of South Carolina. Mr. Speaker, the so-called jury-trial amendment to the civil-rights bill, as adopted in the other body, will not guarantee trial by jury. The author of this amendment, Senator O'MAHONEY, explaining his amendment during debate on page 11618 of the CONGRESSIONAL RECORD on July 26, declared, "When a court is seeking to secure compliance with its orders, there will not be a trial by jury." Those of us who believe in real trial by jury and constitutional government need no further proof of our position in opposing all civil-rights legislation in this House than the following article by Dean Acheson, former Secretary of State, which appeared in the Washington Evening Star on Wednesday, August 7:

DEAN ACHESON ON JURY TRIAL

It will be a great pity if a chance to advance the civil rights of our Negro citizens beyond anything achieved in three-quarters of a century is lost because liberals do not realize how much has been accomplished by the bill now before the Senate.

It will be a disaster for the country if bitter sectional animosity is aroused by attempting to change the jury-trial amendment to gain something of little or no value. In all respects, save one, opinion is unanimous that the bill in its protection of the right to vote is first class. The argument arises over the requirement that in certain cases a person, before being punished for violating a judge's decree, must be convicted by a jury.

This requirement of a jury trial in cases of criminal contempt is said by some to nullify the act.

Nothing could be more wrong. Those who make this charge usually have no idea what criminal contempt is or what great powers the amendment gives to the judge to enforce his decree by civil-contempt proceedings.

Exactly what are we talking about? Recently the press has carried stories of a registrar of voters who was preventing the registration of Negro voters by opening his office only for short periods when voters could not readily attend and by dilatory proceedings.

In such a case the United States attorney could, under the amendment bring suit and the court could issue its decree ordering proper and effective registration. If his order should not be obeyed, the judge could put those defying him in jail or under continuing fines until they should obey. If necessary he could order that no list of voters not made in accordance with his decree be certified or used. No jury would be required for these enforcement proceedings.

Now let us assume that the registrar has attempted to deceive the judge into believing that he has complied, when he has not. Here is a situation where punishment is called for—not coercion to enforce compliance, but retribution for a wrong. Before this punishment can be inflicted, the defendant must be found guilty by a jury. To say that this requirement nullifies the law is nonsense.

In the first place, it assumes that in some sections juries will not convict, hence retributive punishment will not be possible, hence the law cannot be enforced. I do not believe the assumption that under proper guidance from the court juries will not convict the guilty.

But, even if I am wrong, the real enforcement powers are in the civil contempt proceedings where no jury is required. In the second place it assumes that in a section of the country so opposed to the law that no jury could be found to impose punishments, the same punishments would be meekly accepted if imposed by a judge alone.

This is not only fantastic, but the Federal courts would be destroyed in such an effort.

Finally, it is said that the amendment is so broad that it will impede the enforcement of decrees in other fields—the antitrust field is mentioned. I can't recall any proceeding for criminal contempt in an antitrust case—though there may have been some. But I venture to say that in a proceeding of this sort a jury would be more of a terror to the defendant than to the Government. However, if any difficulties do develop not now anticipated, they can easily be dealt with by legislation.

At the present time, fears expressed about the amendment are unfounded, usually based on misunderstanding, and sometimes insincere. It would, as I said, be a great pity should they prevent an accomplishment of inestimable importance.

DEAN ACHESON.

August 6, 1957.

Employees of Wisconsin Manufacturers Benefit by Expanding American Merchant Marine

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement from Maritime Affairs published by the committee of American Steamship Lines. The article points out the many benefits that are enjoyed by the employees of Wisconsin manufacturing concerns which have been brought about by our ever-expanding American merchant marine.

UNITED STATES MERCHANT SHIPS SUPPORT MIDWEST COMMERCE—EXPORTS CREATE JOBS FOR 1,000 RACINE WORKERS

Of Racine, Wis.'s 14,000 industrial workers, 1,000 owe their jobs to foreign trade and ocean shipping, a recent poll of more than 50 companies shows.

TRACTOR EXPORTS UP

Racine's J. I. Case Co., estimates that 10 to 12 percent of its employees are directly affected by the company's ability to sell to

overseas customers. Foreign markets for its wheel tractors and crawler tractors last year helped lift total United States tractor exports to $390 million, the highest level in 7 years.

Massey-Harris-Ferguson estimates that 25 percent of its Racine-manufactured farm equipment is shipped overseas. American-flag merchant ships help carry its repair parts to more than 100 countries.

MALTED MILK TO BORNEO

Horlock's Corp. has salesmen in Ethiopia, Aden, the Channel Islands, Borneo, and elsewhere. Its malted milk, an invention of its founder, is carried abroad regularly to a score of other foreign nations.

Racine's S. C. Johnson & Co., world's largest maker of wax polishes and allied products for household, industrial, and other uses, owes its success to a host of managerial skills—and a waxy power from a Brazilian palm tree. Ocean-going ships carry tons of this powder, extracted from the fronds of the Carnauba palm, to Johnson subsidiary plants all over the world and to New Orleans and New York for transshipment to Racine.

DEPENDENCE ON IMPORTS

Other imports for which Johnson depends on ocean transportation include shellac from India, sugar cane wax from Cuba and beeswax from West Africa, Portugal, Iran, and Afganistan. American freighters help carry Johnson products to customers in 90 countries.

Racine sells calf weaners to Canada and golf-swing practice devices to Italy and Japan. Other exports include everything from artificial limb parts, hair clippers and tools to puzzles, wrapping paper and insecticides.

"Made in Racine," like that phrase, "Kilroy was here," has been seen in the most unlikely places.

Practically every port in the free world has been visited by American ships off-loading products from this highly industrial city of 80,000.

Jacobsen power mowers, for example, are mowing lawns from Luxemburg to the Bahamas.

Motorists have lamented flats in every language, but have been able to continue their trip thanks to Walker automobile jacks, made in Racine.

Young Radiator Co. eqiupment heats a United States post office on a glacier in Fairbanks, Alaska.

Racine-made lollipop machines are shipped regularly to South Africa; mink ranching equipment from Racine finds customers from Finland to Mexico, Massey-Harris-Ferguson tractors are this month on their way to Hyderabad.

IMPORTS ALSO VITAL

But this is only part of what foreign trade means to Racine—and to all the Midwest—because foreign trade is a two-way street.

Ocean-going ships bring these same companies chromite from New Caledonia; tantalum from Uganda; zinc from Peru; and graphite from Madagascar. None of these plants could operate without steel supplies—and its production is wholly dependent on imports of foreign ores.

UNITED STATES SHIPS REQUIRED

The key word, then, to Racine's industrial success and continuing prosperity is access—access to foreign markets for that extra margin of sales that may mean the difference between profit and loss; and access to foreign sources of vital raw materials.

This access to world markets and sources of supply is guaranteed by the merchant shipping fleet flying the American flag, sailing the Nation's essential foreign trade routes, and stabilizing world freight rates.

H. R. 8002—A Delusion

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. CANNON. Mr. Speaker, the so-called accrued expenditure budget bill, H. R. 8002, is widely misunderstood. It will not bring about any of the beneficent results claimed in its behalf. It will confuse, not clarify the budget. It will not reduce unexpended carryover balances. It will not save money. It will result in more spending, not less spending.

Under leave to extend, I include a letter of July 30 to all Members of the House, signed by 38 members of the one committee of the House that would be chiefly affected by the plan. The letter follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON APPROPRIATIONS,
Washington, D. C., July 30, 1957.

DEAR COLLEAGUE: We are being urged by many well meaning people to pass H. R. 8002, the accrued expenditures budget bill. We think that the bill is bad and ought to be defeated—that the bill would tend to confuse the economy issue and increase Government spending, make it easier to get Congress to grant authority to obligate the Government.

The Appropriations Committee, the committee which would be chiefly affected by the measure, made a study of the accrued expenditures budget proposal (H. R. 8002) and issued a strong report in opposition to it on March 21, 1957. Please note page 5 of House Report 216 of this Congress.

The big argument for H. R. 8002 is that it would eliminate large unexpended carryover balances. It would not do this: It would merely substitute contract authority for appropriations. The Government would still be obligated for the completion of the long-range programs. It would put the Government into installment buying, a practice which in personal operations has led millions of families into overspending.

Under either system, of course, Congress could cancel the appropriation or the contract authority.

H. R. 8002 would delude the people for 1 year, and to some extent for 2 years, into thinking that a lot of money was being saved by the reduction of appropriations and the substitution of contract authority. Such a program would appear quite attractive and painless, but the day of rude awakening would of course come in confusion and frustration. Valuable time in the economy fight would have been lost.

It ought to be obvious to everyone that the only way to cut spending is to reduce appropriations and the granting of obligational authority. It cannot be done by shenanigans and bookkeeping schemes. Substituting contract authority won't get the job done. We tried it once and discarded it.

Generally, in appropriation bills we now fully finance long-range programs for aircraft, ships, and other long-lead-time items. Congress and the country know in advance just how big and expensive the programs are. Under H. R. 8002 we would follow the confusing process of changing the appropriation bills to provide the following: (a) funds to liquidate prior contract authority; (b) funds for the regular annual functions of the Government; and (c) additional contract authority for partially completed programs and for the initiation of new programs.

This would make less effective the work of the Appropriations Committee; it would be confusing to members of the committee and to Members of Congress generally, and it would tend to conceal from the people the fiscal action of Congress because the press would have difficulty in reporting to the people just what was happening to them under this installment-buying-dollar-down-contract-authority hodgepodge. There are other reasons why H. R. 8002 is bad legislation.

There is always room for improvement in any system, but we believe that H. R. 8002 would be a big step in the wrong direction, a step toward confusion and higher spending.

Sincerely,

CLARENCE CANNON; GEORGE H. MAHON; HARRY R. SHEPPARD; ALBERT THOMAS; MICHAEL J. KIRWAN; W. F. NORRELL; GEORGE W. ANDREWS; JOHN J. ROONEY; J. VAUGHAN GARY; ROBERT L. F. SIKES; PRINCE H. PRESTON; OTTO E. PASSMAN; LOUIS C. RABAUT; FRED MARSHALL; JOHN J. RILEY; ALFRED D. SIEMINSKI; JOE L. EVINS; HENDERSON LANHAM; JOHN P. SHELLEY; DON MAGNUSON; WILLIAM H. NATCHER; DANIEL J. FLOOD; WINFIELD K. DENTON; TOM STEED; JOHN TABER; BEN F. JENSEN; H. CARL ANDERSEN; WALT HORAN; IVOR D. FENTON; EERETT P. SCRIVNER; CLIFF CLEVENGER; EARL WILSON; BENJAMIN F. JAMES; GERALD R. FORD, Jr.; EDWARD T. MILLER; HAROLD C. OSTERTAG; FRANK T. BOW; MELVIN R. LAIRD.

The Domestic Lead and Zinc Industry

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. CARNAHAN. Mr. Speaker, I ask permission to include with my remarks a resolution adopted by the city of Flat River, Mo., relating to the domestic lead and zinc industries in our country so vital to our national defense.

I have the honor of representing the greatest lead mining district in the United States, the Eighth Congressional District of Missouri, which mines successfully a low grade of ore and is making plans to handle economically still lower grade resources.

Last year the value of Missouri's lead production was over $40 million. An estimated 4,000 people derive employment from Missouri's lead mining, not to mention the collateral employment opportunities.

There is a grave threat to the survival of the lead and zinc industries in our country. I am convinced from my knowledge of Missouri lead mining, that studies the Government has made and the Interior Department's recommendations for relief, do not exaggerate the need for prompt congressional attention if our lead and zinc industries in the United States are to survive. A sliding scale excise tax imposed on imports of

lead and zinc in my opinion will bring relief which is so urgently needed.

Following is the resolution referred to:

Whereas the city of Flat River, Mo., has been called the lead capital of the world, and rightly so; and

Whereas the economy of the city of Flat River is directly connected with that of the entire lead and zinc industry, inasmuch as the majority of its citizens are either directly or indirectly engaged in the production of lead, or providing services for those so engaged; and

Whereas our community is vitally interested in the entire domestic metal mining industry which is one of our vital natural resources, especially from the standpoint of national defense; and

Whereas the present program of stockpiling of lead and zinc as a national defense measure has been curtailed to some extent: Therefore be it

Resolved by the City Council of the City of Flat River, Mo., That said city council urge the adoption by the Federal Government of such future program or programs as will keep the domestic lead and zinc industry and the entire metal mining industry in a status of economic stabilization and will stimulate the domestic lead and zinc industry so vital to our national defense, and be it further resolved that a copy of these proceedings be sent to our United States Senator and to the Congressmen for the district in which we reside.

Passed this 3d day of August 1957.

J. ALBERT PARKER, *Mayor.*

Attest:

LORELEI WUNNING,
City Clerk.

The 11th of a Series of Articles by F. F. McNaughton

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. MICHEL. Mr. Speaker, mention the name Dior in the United States and most women could give you a lengthy dissertation on his latest style innovations. After reading Mrs. McNaughton's commentary on women's fashions in Russia, it is quite apparent that Dior and other world fashion leaders are not familiar names to the majority of Soviet women.

In view of the close proximity of the adjournment of Congress, it will be my intention to insert two of Mr. McNaughton's columns daily from this point on so that all the avid readers of the CONGRESSIONAL RECORD will not miss any installments of the series.

Following is the 11th in the series of letters by F. F. McNaughton, editor of the Pekin, Ill., Daily Times:

THE EDITOR'S WIFE SPEAKS TODAY

"Appalling."

"Dowdy."

"Like the women in London's east end."

I've read or heard all those descriptions of how the women of Russia dress.

But I think the word is "Indifferent."

They could comb their hair, even if they can't (or won't) buy clothes.

Most of the women I saw had on a short, gathered cotton skirt and a jacket that looked like a man's coat. And their shoes are shoddy. But they do wear hose—cheap, but they are not bare legged.

Speaking of shoes reminds me of a night at the opera. During intermission, an American girl was standing half way up some marble steps. A Russian woman friend whispered to me: "Notice that all the girls in the foyer are looking at those American shoes." Wasn't it John Gunther who wrote that if Marilyn Monroe came down a Moscow street wearing only shoes, people would look first at her shoes.

Russian women don't use lipstick or make-up.

More important, they don't wear foundation garments.

The women in India did not either; but there it did not make so much difference with a pretty silk sari draped about the figure.

But the Russian woman's figure just sags, and fully relaxed, protrudes where it will.

No rich jewels are seen.

Little costume jewelry.

Reasons probably are:

1. Women are dispirited.
2. They work so very hard.
3. The Government does not manufacture nice things for women.
4. Prices are out of reach.

I'd estimate 5,000 women on this trip have envied me my plastic "Rain Dears." They are light, transparent summer galoshes. We have been out in many rains—some of them torrents. I've yet to see a pair of rubbers on a Russian woman. They just trudge ahead through the rain and wade the gutters without rubbers and without umbrellas.

Of course, you do see exceptions. At our hotel last night was a big party, and the women were all nice appearing; probably wives of well-paid technicians.

Paper Presented by Earl L. Struwe, Chief, Economics and Statistics Branch, Division of Irrigation, Bureau of Reclamation, at the Annual Convention of the Western Farm Economics Association, Las Cruces, N. Mex., July 15, 1957

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. ASPINALL. Mr. Speaker, we of the reclamation West have noted the concern expressed that reclamation development might adversely affect our efforts to reduce or eliminate present crop surpluses.

We have had no desire, in the necessary development of our own area, to add to crop surplus problems. We have offered such evidence as was available to show that reclamation development was important to the Nation and that it did not add to our surplus.

To firm up this position, I should like to include with my remarks a paper presented by Earl L. Struwe, chief of the Economics and Statistics Division of Irrigation, Bureau of Reclamation, at the annual convention of the Western Farm Economics Association.

In this paper, Mr. Struwe gives careful explanation of this situation, pointing up the temporary nature of crop surpluses, the inevitable increase of demand, and the small impact on present surpluses of reclamation development.

I would urge Members who have an interest in this subject to take the few minutes necessary to examine this presentation. I believe it will be of interest to all areas of our country. It should lay away the assertion that reclamation development adversely affects other crop areas. The article follows:

PAPER PRESENTED BY EARL L. STRUWE, CHIEF, ECONOMICS AND STATISTICS BRANCH, DIVISION OF IRRIGATION, BUREAU OF RECLAMATION, AT THE ANNUAL CONVENTION OF THE WESTERN FARM ECONOMICS ASSOCIATION, LAS CRUCES, N. MEX., JULY 15, 1957

I appreciate the opportunity of participating in the proceedings of the Western Farm Economics Association. This distinguished organization includes in it many of the top leaders in agriculture. You are looked upon to provide guidance in meeting present-day agricultural problems and in planning for the future. This association and similar groups offer a forum for discussing and testing on the drawing board, so to speak, of views concerning agricultural problems. Many of you men occupy strategic positions and I am mindful that your responsibilities deal not only with current issues and problems but also as they cast their shadows on future developments.

The subject which I have been asked to discuss today concerns the relationship of Federal reclamation to the farm-surplus problem. We have two types of natural resources which I shall describe as depletive and nondepletive. Coal, oil, iron, and other minerals characterize the first type, that is, once removed from the earth and used they are gone forever. The nondepletive resources are land and water, which, if properly managed, will serve us forever.

Irrigation, the fruitful combination of land and water, predates our constitutional form of Government in the United States, having its beginning in the era of the Hohokam Indians, in the vicinity of Phoenix, Ariz., in the period of about 1400 A. D., some 500 to 600 years ago. The civilization of the Hohokam passed and today we find the Salt River Federal reclamation project which continues to use some of the early canal locations.

History relates that Coronado, searching for the Seven Cities of the Cibola, found irrigation practiced in the Rio Grande Valley about 1540. Thus, we are meeting today in an area parts of which probably have been under irrigation for more than 400 years. In 1847 the Mormons launched in Utah what we regard as the era of modern irrigation in the United States. For the next half-century irrigation spread throughout the Western States and by 1900 about 7½ million acres had been developed. The natural flow of the streams had by then been largely over-appropriated and the simple low-cost systems had been built. Pressure for Federal financial and technical aid for further developments in the West culminated in the enactment of the Reclamation Act of 1902 under which, as amended and supplemented, we operate today.

In the 55-year history of Federal reclamation, facilities have been constructed in the 17 Western States for full irrigation service to approximately 4.1 million acres, and supplemental irrigation water to 3.5 million acres. The total area receiving water constitutes about 22 percent of the irrigated land in the Western States.

If each of us were to give our own definition of crop surplus, we might find a number of concepts. I would suggest that our present situation relates in major degree to a quantity-price objective. This notwithstanding, I am perfectly willing to grant that we can and probably do have capacity to produce more of certain crops than can be absorbed in a market at any price. A commodity may be found in surplus under a high artificial-price situation, whereas under a lower price it may be marketed in its entirety.

The term surplus, when used with respect to agricultural commodities, seems to have developed a macabre connotation. Actually, no Nation has ever prospered under scarcity. Under our free enterprise system, we have usually prospered, raised our standard of living and the well being of all of our people as we have increased efficiency and raised the level of production. The Department of Agriculture reports that on the average our agricultural output is only about 5 percent above market requirements. This, bear in mind, is under a controlled agriculture and is stated as an average for all crops. Although we stockpile what is termed strategic material for maintaining the peace and for war, if it should come, should we be willing to risk a hand-to-mouth situation with respect to food and fiber? No nation has ever successfully waged war on an empty stomach, and I suggest that no nation has ever waged a successful peace on an empty stomach either. We are told that one-half of the world's population goes to bed hungry and that about 20 percent of our own population suffers to some degree from malnutrition. If we could but satisfy the full dietary requirements of our own people and bring the production of several crops into proper balance with current needs, the slight surplus would be wiped out.

The determination of the number of people a given food supply can support must be preceded by the answer to the question, "At what living standard?" Shall the American living standard be used as the criterion or shall it be the Asiatic? In approaching this problem, Pearson and Harper calculated population density in terms of grain produced per capita rather than using the more conventional person per square mile standard. These calculations indicated the number of persons who could be supported at varying living standards. The results were startling. In brief, they indicated that world food supplies would be adequate to support an additional 600 million people if all living were reduced to the Asiatic standard. If, on the other hand, it were decided that the European standard were to be adopted, present supplies are slightly inadequate. If, however, the standards now attained in North America were adopted, then the world's present supplies are adequate for only 41 percent of the present world population. Conversely stated, if the living standard of the world is to be increased to the American standard, present food production must be increased by an additional 150 percent. Should we place a blanket condemnation upon the blessing of 5 percent abundance?

The Congress, in attempting to achieve a desirable quantity-price situation has developed legislation which defines the conditions under which a crop is considered in surplus. The Commodity Stabilization Service of the United States Department of Agriculture, has certain delegated prerogatives which it exercises to control the quantity held in Commodity Credit Corporation inventories. These inventories, when accumulated through price support operations closely reflect the magnitude of our surpluses. There are several factors affecting the size of the surplus which are artificially set. By that I mean that free market conditions are not allowed to exercise full influence. One of these factors is exports of CCC stocks; if the surplus stocks are held off the world market for some reason they continue to accumulate as long as domestic production is held at a higher level than domestic consumption. Another artificial factor affecting surplus is the arbitrary determination of what constitutes a normal reserve for emergencies. You see, if that would be raised or lowered, the surplus inventories would vary inversely. There are other factors, but my point is that by mere definition surpluses can be operated or eliminated. It would be perfectly possible to wake up tomorrow and read in the paper of a new set of definitions by which surpluses have been eliminated, cut in half or reduced by any other fraction.

You will recall that during the Korean conflict a high Government official found that the cotton inventory, condemned only a few months before as a gluttonous surplus, had emerged as a strategic reserve.

The price support program of the Commodity Credit Corporation totalled $7.6 billion on July 1, 1957. This included both loans and inventories. Four commodities: corn, wheat, upland cotton, and tobacco constituted 87 percent of the value. Corn comprises 29 percent, wheat 30 percent, upland cotton 20 percent, and tobacco almost 8 percent of the value of all commodities under loan and in inventories of the CCC. It is appropriate, then, that we consider the relationship of the Federal reclamation program to this primary area of the farm surplus problem.

Tobacco is not grown on Federal reclamation projects so we can dispose of that commodity by reference only.

Corn production in the United States averages about 3 billion bushels annually. Commodity Credit Corporation loans and inventories on July 1, 1957, amounted to about 45 percent of a year's production. Corn production on reclamation projects in 1956 amounted to four-tenths of 1 percent of United States production and the estimated amount under support was less than one-third of 1 percent of the value of the 1956 crop under support. This negligible amount is of little significance to the overall problem of corn supply. On the other hand, it is of great significance in local areas where it is consumed in feeding. Many Western irrigation projects are in close proximity to large grazing areas. Corn and other grains produced on irrigation projects supplement and permit better utilization of the 700 million acres of rangelands of the West.

Wheat production in the United States totaled almost 1 billion bushels annually. CCC loans and inventories on July 1 amounted to about 85 percent of a year's production. This represents about 30 percent of the value of all commodities under support. Wheat production on Federal reclamation projects in 1956 was less than 2 percent of the United States production. This minor share of our production can hardly be considered a major contribution to the oversupply of wheat. Wheat is not a good irrigated crop. It is grown primarily to balance a rotation and the product is used largely for local feeding operations.

Instead of contributing to the overall wheat situation, irrigation developments actually tend to alleviate this problem. On the Columbia Basin project facilities are being completed to provide irrigation to fifty to sixty thousand new acres each year. The cropped portion of this area was a dryland wheat area alternating with wheat and summer fallow. Thus about 46 percent of the cropland was in wheat each year with yields of about 20 bushels. On each 100 acres of cropland 920 bushels of wheat were produced. In the early years of irrigation some 10 to 12 percent of the irrigated area is in wheat. Irrigated yields are about double that of dryland cropping and the total production on each 100 acres is about 450 bushels, a reduction of 500 bushels or 50 percent from dry farm operations. This same situation obtains on other projects also. As irrigation becomes established the acreage planted to wheat drops off to 5 or 6 percent.

American-Egyptian cotton, I am told by officials of Commodity Stabilization Service, is in short supply and acreage allotments for 1957 have been approximately doubled. All of this commodity is grown under irrigation, a part of which includes our Federal reclamation projects.

Upland cotton production last year totaled 13.3 million bales. As of July 1, CCC loans and inventories of cotton comprised 20 percent of the value of all price supported commodities. Production on Federal reclamation projects amounts to 5.8 percent of United States production and the estimated amount under support was about 2.4 percent of all cotton under support. The carryover on August 1 is expected to total 11.6 million bales, almost 3 million bales below a year ago. This reflects an active export sales program at competitive prices. Under this program 7.7 million bales have been sold this cotton year as compared to 2.2 million bales in 1955. Domestic mill consumption is expected to account for 8¾ million bales. This indicates a total disappearance of almost 16.5 million bales, which brings me back to my earlier statement that surplus or disappearance is related largely to a quantity-price situaton.

Cotton can be produced under irrigation in competition with other areas of the country. Evidence of this may be observed in the continuing shift of acreage and production westward. In 1930 the West produced 4 percent of the crop as compared with 19 percent in 1956. During this same period the Delta States increased from 26 to 35 percent and the Southeast and the Texas-Oklahoma area declined from 35 to 17 and from 35 to 29 percent, respectively.

Yields tell a story also. Cotton yield for the United States last year averages 409 pounds. This compares with 359 pounds in the Southeast and 269 pounds in the Texas-Oklahoma area. The Delta States averaged 499 and the West 957 pounds per acre. Arizona topped the list with a whopping total of 1,113 pounds per acre. We can well anticipate the West will continue to produce cotton.

Spot surpluses of many commodities have arisen in the West as they have elsewhere. They are temporary in nature and relatively small in magnitude. Government programs have dealt with them in a variety of ways. Beans, potatoes, small grains, and milk can be included among these. Irrigation farming is a vastly resourceful type of agriculture, efficient, productive, responsive to input factors, and market conditions. Its versatility enables it to adapt to profitable, new crop economies, contrasting sharply with the one-crop economy which is dominant in large areas of the country. The contributions that reclamation makes to the Nation's agriculture are on the positive side: efficiency, stability, versatility. Who can contend that these advantages are counter to the general welfare?

The following table summarizes for the principal crops, the relationship of production on Federal reclamation projects to total United States production and the total amount under crop support in 1956.

For an overall picture of Federal reclamation projects we should be mindful that about three-fourths of the irrigated acreage produces forage and grain crops which are fed to livestock in the West. Future livestock needs point to an increase of about 45 percent by 1975. These irrigated oases in the dry grazing areas will contribute significantly to meeting that future need.

The irrigated lands in the Western States, including reclamation-developed lands are important in the Nation's productive capacity for certain crops. The irrigated West

produces virtually all of our apricots, almonds, walnuts, filberts, dates, lemons, figs, prunes, mustard, garlic, and olives. They supply about 95 percent of the grapes and plums, 90 percent of the lettuce and sweet cherries, 75 percent of the avocados, pears, and cantaloupes, 65 percent of the asparagus, 50 percent of the peaches, 37 percent of fresh peas, and more than 50 percent of the commercial truck crops. Much of this production is during the off-season for other producing areas and is highly important to our diet. Winter irrigation in Arizona and California provides 45 percent of the winter and 42 percent of the spring lettuce. It gives us over 80 percent of the early spring and early summer cantaloupes, more than 65 percent of the spring carrots and a large proportion of our supply of other choice protective fruits and vegetables. Many of these crops cannot be grown elsewhere in the country and others are produced under irrigation by reason of efficiency. Climatic hazards are reduced and with the water supply under control optimum rates of fertilizers may be used with resultant high yields.

Notwithstanding our efficient transportation system, it is desirable that our production be dispersed geographically. Some degree of regional self-sufficiency is desirable. The dispersion of the population and industry is being encouraged as a matter of national defense and it logically follows that agricultural production also be distributed geographically.

Throughout our history the population has moved westward. After about 1880 the new frontiers offered little opportunity for agriculture except by intensive production under irrigation. Population and commerce moved westward with irrigation. Irrigation provides the opening wedge in many instances into a normally unattractive arid area. Irrigation farmers are followed by a community of tradesmen, merchants, and other workers who establish stable and prosperous new employment and business opportunities.

The population projections of the Bureau of the Census show that the country will arrive at a population level of 220 million as early as 1975 at its present rate of growth. At this rate we could expect that the population will double again in the second half of the century as it did in the first half of the century, notwithstanding the retarding effects of the depression periods of the thirties.

The production on Federal reclamation projects, of principal crops under the Federal price-support program, as related to United States production and total amounts under price supports, 1956

Crop	United States			Bureau of Reclamation projects				
		Price-support program		Production		Assumed support		
	Production	Amount	Percent United States production	Amount	Percent United States production	Amount [1]	Percent United States support program	Percent United States production
Corn....thousand bushels..	3,451,292	434,729	12.60	13,931	0.40	1,441	0.33	0.04

[1] Data on amount of any crop under price-support loans and purchase agreements is available on a State basis. The proportion of total State production which is under support is applied to the production on Federal reclamation projects to arrive at a calculated or assumed level of support for crops grown on reclamation projects.

These projections point to a tremendous job ahead for agriculture. The land and water resources of the country are definitely limited. Early in the thirties we became keenly aware that productive soil is a national heritage and not an individual good that can be worn out and abandoned with impunity. A dust bowl, a depression, and two wars drove this message home.

Dr. Byron T. Shaw, Administrator of the Agricultural Research Service, ht indicated to congressional committees hat he expects production and market requirements to be in balance in about 1960–63. Also, in projecting the Nation's future production needs the Department of Agriculture starts with the assumption that accumulated stocks of farm commodities will be worked off by 1960. This reflects the transitory nature of the problem.

About a third larger farm output will be needed in 1975 according to the Department of Agriculture, and the annual increases will have to be about 20 percent greater than the phenomenal gains recorded during the postwar period.

Livestock production will need to be increased about 45 percent, and crops about 25 percent. The increase in feed grains may need to be as much as five and one-half times greater than the long-term annual increase. The net effect is that we will require the equivalent of 150 million additional acres of cropland by 1975. What will be the need by year 2000? We are told that highways, industrial users, and urbanization are claiming more than 1 million acres of farmland each year and that only about 30 million acres can be added to our productive base by irrigation, drainage, and clearing. Only one-half of this additional land can be added by irrigation in the West and at the present rate of development of about 100,000 acres per year it will take 150 years to bring this into use.

We should recognize that Federal reclamation developments are a long-term proposition. Project investigations frequently extend over periods of 20 years or more. Following authorization, additional time elapses before appropriations are available and detailed plans and specifications are completed. Thus, many years usually elapse before construction is actually in full swing. Additional years are required for construction. Farm layout and development and the establishment of an optimum cropping program entail further delays in achieving full production. Depending on the size of the undertaking we visualize a period of from 5 to 20 years before an irrigation project is fully developed and producing. It is obvious then that the reclamation program of today is oriented toward the needs of tomorrow.

Reclamation's efforts are directed toward the long-term objectives of efficient and full development of the Nation's resource base. Actually progress has fallen behind indicated needs. Reclamation seeks the same objectives as are being pursued by research agencies of both private industry and the Government. We must maintain our perspective in appraising the long-term requirements for the well-being and security of our Nation.

Voluntary Retirement Assist for Self-Employed

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. WRIGHT. Mr. Speaker, the self-employed people of our Nation are in many respects the forgotten people of our tax laws. The income tax law discriminates against the self-employed on several counts.

One highly significant aspect of this discrimination would be ended by the enactment of the Jenkins-Keogh bill or some substantially similar proposal. While literally millions of corporate employees, from corporation presidents on down, have enjoyed the benefits of tax-free retirement payments by their companies, the self-employed citizens of our country have been denied this privilege.

For several years, the basic Jenkins-Keogh proposal has been pending before our congressional committees without action. It would permit a self-employed person to avail himself, within limits, of this same privilege, which has been extended to executives and employees of corporate enterprises. We now are approaching the end of another session of Congress, and before we reconvene in January, I believe that very serious consideration should be given to the enactment of this legislation.

TEN MILLION AMERICANS

One out of every 17 Americans is self-employed. Ten million of our citizens are included in this category. This 6 percent of our population is in some respects the most crucial segment of the American economy today.

These are the individualists, the entrepreneurs, the modern prototypes of the yankee trader with his bundle of wares and the western pioneer with his dream of the future. The economy needs them if the type of capitalistic society we have known is to endure. They are the venturers, the risk takers, the planners of new enterprises.

WHO THEY ARE

Among their number is the farmer, the small independent businessman, the doctor and the lawyer and the dentist, the architect and the artist, the engineer, and the accountant—everyone who works for himself. The average one of

them provides jobs for several others. They are indispensable to a vigorous, progressive and well-rounded society.

This group of our economy is dwindling. While 50 years ago, 1 of every 6 Americans was self-employed, a highly institutionalized society has left its mark upon their numbers. Today it is 1 in 17. There are fewer and fewer farms, and the average farm is bigger and bigger. The family farmer as a self-sustaining unit is slowly disappearing from the scene.

Recent years have taken a tragic toll of the ranks of our small-business men, the historic wellspring of our economy. It is a strange anamoly that in these times of unprecedented national prosperity, business failures this year will be almost twice the total number of only 5 years ago. Bankruptcies exceed any year since the depth of the depression. It is estimated that almost 90 percent of these failures have been among the small, independent businesses of our Nation.

Tragically, their ranks are not being replenished. Young professional men and graduates of our colleges today are seeking employment, rather than striking out on their own to rise or fall as their own bosses. Security has become a more effective lure than opportunity. Pension plans and fringe benefits are more attractive than borrowing from a bank and assuming the risks of being on their own.

VOLUNTARY RETIREMENT

What can be done about it? Well, at least a part of the answer may be found in the efforts of several of our colleagues to make it less difficult for the self-employed to establish voluntary retirement plans for themselves. This would be accomplished, under the Jenkins-Keogh proposal, by allowing such individuals a temporary tax deferment on a limited portion of their income when set aside for their own retirement.

Actually, this would be no more than is done for other classes of our society. Such tax deferments are permitted under existing law to employees whose employers have established company pension plans which meet the statutory requirements. Substantial tax concessions have been afforded by the Congress for employed people who avail themselves of stock options, retirement programs, and accident-and-health benefits. This has been a good thing. It is producing desirable results by permitting many hundreds of thousands of employees to lay aside something for their own future security.

Why should the same principle not apply with regard to a small independent businessman, a salesman, a professional man or woman? If such a person places money into an approved fund for retirement of an employee, this amount is allowed as a deduction on his income tax. Why, since he is his own employer, should he not be allowed to do this same thing, up to a reasonable limit, for himself? Taxes would be paid on the money in later years, when he draws the benefits—just as the employee pays taxes on that portion contributed by his employer when he actually receives it.

THE PROBLEM

More and more small, independent business and professional people are finding it harder and harder to lay something aside for their own later years. Unlike the larger corporate businesses, they have for the most part no reserves. Legally and from a practical standpoint, the average self-employed person has practically no opportunity whatever to establish any reserves recognized as legitimate by the Office of Internal Revenue.

Such a person is vulnerable to the tides of business. He has no cushion to fall back upon. Taxes take an ever larger share of his earnings. The mounting costs of doing business eat away at whatever profit he may make. If he is in one of the professions, long years of preparation are necessary, and he unavoidably gets a late start. Usually the self-employed person's earning power rises slowly in his first years as he struggles to establish himself. For a few years, if all goes well, he will be at the peak of his earning capacity, and then it will gradually decline. Yet the small-business man, the farmer, the artisan or professional person who markets his own skill cannot depreciate himself as a building or a machine can be depreciated. He can take no depletion allowance on his own waning energies.

The problem of how to plan any sort of protection for his family or retirement for his own later years is a growing enigma of mounting frustration for an increasing number of self-employed Americans who are caught in this squeeze. While the tax laws happily have been written so as to help millions of their fellow citizens to achieve a dignified retirement, these laws incongruously work to discourage any such course on the part of the self-employed.

THE SOLUTION: HOW IT WORKS

The authors of the Jenkins-Keogh bills have proposed a solution. Here is the way it works:

First of all, a self-employed person would be permitted during his productive years to set aside a small portion of his own net income into a restricted retirement annuity or a restricted retirement fund and to exclude these premiums from his gross taxable income.

Second. A limit is placed upon the amount which may be deducted for this purpose in a given year. The bill provides that it may not exceed 10 percent of the person's earned net income, and in no case may it be more than $5,000.

Third. A lifetime limit also is established, providing that in no case may any individual deduct for these purposes more than 20 times his maximum annual contribution.

Fourth. A restricted retirement fund is defined as a trust or custodial account established under a retirement plan. Moneys held in such a fund could be invested only in Federal, State, and municipal securities, corporate stock or securities listed on a recognized exchange, or stock in a so-called regulated investment company meeting the requirements of section 851 of the Internal Revenue Code.

Restricted retirement policies in which a person could invest would include life insurance or annuity contracts except term insurance. This could include both newly issued policies and existing policies. In the case of life-insurance policies no deduction would be allowed for the portion of the premium attributable to the cost of life-insurance protection.

Fifth. Earnings realized from these systematic savings which the bill makes possible would be subject to income tax when distributed to the individual, either as lump-sum payments, annuities, or payments to beneficiaries upon the death of the insured.

Sixth. A special rule would be provided in the case of persons already having attained the age of 50 years when it goes into effect. Since they would be expected to have only a few years in which to build up a retirement fund, the allowable deduction in their case would be increased one-tenth for each year of age over 50 and under 70.

Seventh. The bill contemplates that generally retirement funds would be payable at age 65, with certain exceptions. Payments accruing before this age would be recognized in event of death or disability.

AS COMPARED TO SOCIAL SECURITY

An essential feature of this plan is that it encourages the establishment of pension plans by individuals on a wholly voluntary basis. There is no coercion. Independent business and professional men would be able to participate where they feel that the program is one which fills their own retirement needs.

I realize that many of these self-employed now are covered by social security, while some groups are not. Yet, as millions of pensionless employed people can testify from personal experience, social-security pensions are not in themselves adequate to afford the protection necessary to a dignified retirement. Many persons are ruled out on the ground that they continue to earn more than $100 a month after reaching the age of 65 and are therefore ineligible to receive OASI benefits. Retirement from the role of wage earner is not necessary under the regulations relating to private pension plans.

As a matter of fact, there is a very serious question as to whether indeed it is good for the economy to expect people to retire altogether upon becoming 65. Certainly it is highly questionable as to whether this is good for the individual. Huxley said, "The greatest shock which can be rendered to the nervous system of an individual is the feeling that one is useless," or that there are no longer constructive contributions for him to make to society.

With the gradual, steady increase of life expectancy, we need seriously to reexamine our concepts about retirement. A growing number of our senior citizens have been discovering that a sudden and abrupt retirement after many active years is that worst thing that can happen to them. They still have energies and ambitions and desires to contribute effectively in some productive, though less strenuous and less demanding, pur-

suit. What seems to be needed is not an abrupt enforced retirement, but a gradual tapering off in which the individual, with the benefit of supplemental retirement income, may still engage in somewhat less active but nonetheless satisfying creative work.

Many employed people coming under retirement plans set up through their companies are today enjoying the fruits of their own savings, matched by those of their employers, and are thus finding this type of retirement possible. This bill would provide the same possibility for self-employed and professional people, for whom there are no guaranties nor even any reasonable probability of escape from the vicissitudes of old age which afflict them in exactly the same way as their counterparts who have throughout their active careers been employed.

As a matter of fact, the social-security program is intended only to provide the minimum benefits necessary for a subsistence standard of living. This has been a blessing for countless thousands. Yet what we seek here is to provide a second layer of benefits for retirement and survivorship purposes which will permit recipients to lay aside for themselves an additional buffer, created by their own labors, which will mean the difference between a retirement in dignity and an existence at mere subsistence level.

TAX RELIEF FOR SMALL BUSINESS

We have heard a very great deal about tax relief for small business. Here is one, specific, concrete method by which some help can be extended to the small, independent business and professional people of the Nation, not by placing them in a favored position, but simply by removing the discriminatory provisions which present tax law imposes against them. Executives of our large corporations, technically as employees, can take advantage of the law permitting deductions of amounts set aside by the corporations for their retirement. They are, in fact, doing so. Yet the independent businessman, the sole proprietor or partner of a small business, cannot do this.

When you examine the specific proposals of the Cabinet Committee on the subject of tax relief for small business, you will discover that they are confined to tax relief for small corporations. I have no quarrel with offering tax relief to small corporations when and as we can afford it, but it should be emphatically pointed out that this does not by any stretch of the imagination meet the needs of the small-business men of our country.

The plain fact of the matter is that the vast majority of our small businesses are not corporations. Of the total businesses filing income tax returns, corporations constitute only a meager 7 percent. In the small-business category, corporations represent even a smaller percentage of the whole. At least 95 percent of those legitimately coming under the heading of small business are partnerships or individual proprietorships. Tax relief which was confined to small corporations, therefore, would certainly not reach those who need it the most.

REVENUE LOSS NEGLIGIBLE

Here is an opportunity to provide a service for these small, independent people, and to do so without appreciable net revenue loss to the Government. Taxes deferred while the saving is going on will be paid when the retirement benefits are drawn down. For a few, this will result in a loss to the Government, since the rates of taxation would be somewhat higher on the basis of their total incomes when they are at their peak earning capacity.

Yet the self-employed are not the rich. On the average, they are not even well off. The average income of all persons throughout the Nation is $4,696. Average income among the self-employed persons, surprisingly enough, averages less than half of that figure, or only $2,205. Less than 2 percent of the self-employed had adjusted gross incomes as high as $15,000. More than two-thirds of the people in this category are grossing less than $5,000 a year.

Therefore, it would be wholly illogical to assume that enactment of this bill would open the door to large-scale deductions. On the average, they would probably amount to $100 a month or less set aside by the independent business, farm or professional person for his own retirement in future years.

Without something of this kind, it is going to be increasingly difficult for such people to pursue any intelligent plans for their own futures. Without some such provision in law, and perhaps even with it, we shall continue to see young men and women seeking their futures in increasing numbers with the large corporations.

There shall be a need for enterprising people in the future. There is a need to rekindle the spirit of opportunity in the youth of this country. There is need to make the venture of self-employment attractive, to the end that this Nation may continue to be the land of individual opportunity. I hope the Congress will give serious consideration to these matters at an early date, in order that the self-employed may not continue to be the forgotten people of our tax laws.

Washington Report, August 10, 1957

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Washington Report of August 10, 1957, my weekly newsletter to constituents:

The supplemental appropriation bill, 1958, was passed with many misgivings. Why—only weeks after a new fiscal year starts, for which period every Government agency appropriation had been previously passed—should more money be needed? Eleven departments received additional funds. Also, with logic known only to the Appropriations Committee's leadership, the $1.5 billion military construction expenses were included instead of comprising the usual separate bill.

Of the State Department appropriation of $6 million the greatest furor came over $3.5 million to Israel for club premises, ceramics kiln, and studio building equipment, one-floor addition to a museum's art gallery, completion of a cultural center, a revolving scholarship fund, financing of a postgraduate college building, completion of hostel construction, choir assembly support, construction of a museum, library, music conservatory, concert hall, and Boy Scout camp development, financing archaeological expeditions, construction and equipment of a nursery, summer camp for underprivileged children, a YMCA building, and many others. Some may question if all these are even the function of a local charity like the Community Chest, much less the role of one government providing for another. Many of these projects we do not permit our Federal Government to provide for our own people. So who's looking after our taxpayers' money and for economy and "cut the budget"? Only 82 of us voted to trim out some of the questionable projects.

No other Texan joined me to eliminate $10 million from the $13.5 million additional appropriation to the TVA for more socialized power production, and we lost 158 to 244. Here's an excellent example of the mutual back-scratching—anyone having a Federal project in the works feels it necessary to vote for the other fellow's project. The alleged Southern States righters voted for this greatest boondoggle of all time. It just isn't right for all taxpayers to foot the bill for the favored few to get Government-subsidized cheaper electricity. This in addition to the violence done to the Constitution and States' rights by this big Federal bureaucratic empire of lakes, dams, powerplants, and numerous Government business enterprises like fertilizer manufacture, etc.

Civil rights, now watered down to a Federal right-to-vote law, poses an interesting question and violation of States rights. What happens now to individual States' varied voting standards, property ownership, residence, and the like? Decentralized voting by States has been one of the greatest protections against complete Federal domination.

The Atomic Energy Commission appropriation bill to appropriate $259 million passed overwhelmingly, but only after a spirited debate over the issue of whether Government (public) or private enterprise should build atomic reactors to develop electric power. Happily, the private enterprise amendments won out by a close vote of 211 to 188 and 213 to 185. It was almost a party line vote—Democrats for Government development, Republicans for private. Only 3 and 4 Texans joined me in these votes to reduce Government participation in this program.

The Federal employees' salary bill averaged an 11 percent increase. In view of the 5 percent cost-of-living rise since the last pay boost, the 11 percent seemed high to me, considering also that retirement benefits have been increased by 25 percent in the last year. I voted to increase the pay 7½ percent because I believe a pay increase is warranted at this time. Of course, it's easy to spend the taxpayers' money. In fact, to some there's a little reason to oppose Government spending at any time, particularly when votes back home are at stake. This pay increase becomes particularly objectionable in view of the already huge Government expenditures. First, we must cut out some Government spending before we hastily spend more; otherwise, we must increase taxes or increase the national debt by borrowing and thus, through inflation, further reduce everyone's buying power. This bill increases the Federal payroll $532 million per year. It passed 329 to 58.

This newsletter will be the last regular weekly—with possibly a summary just at or after adjournment. Remember, you have two Senators to inform how you feel. Congress' adjournment is still most uncertain and most political.

Resolution by the House of Representatives of Texas in Tribute to the Late Lorraine Bell Allison

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 13, 1957

Mr. YARBOROUGH. Mr. President, Lorraine Bell Allison, of Corpus Christi, a fine Texan and a great fighter for democracy and decency, is dead.

Mrs. Allison had an innate dislike for political machines which were shot through with corruption.

She helped me in two strong attacks against the Texas political machine. Twice she managed the women's division of our Nueces County campaign; we carried the county both times.

Mrs. Allison passed away on the 10th day of May of this year. She was a great and good friend. All Texas shares my grief at her passing.

The Texas Legislature has adopted a resolution paying tribute to this outstanding lady. The Corpus Christi Voice-Chronicle has also paid tribute to her in an editorial. I ask unanimous consent that the resolution and the editorial be printed in the appendix of the RECORD.

There being no objection, the resolution and editorial were ordered to be printed in the RECORD, as follows:

House Joint Resolution 494

Resolution in memory of Lorraine Bell Allison

Whereas on the 10th day of May 1957, Corpus Christi and south Texas lost one of its most esteemed citizens in the passing of Lorraine Bell Allison; and

Whereas Mrs. Allison was a former member of the State Democratic executive committee, a member of the State advisory council of the Democratic Party, and a long-time member of the Nueces County Democratic executive committee, devoting liberally of her time and abilities to the furtherance of the affairs of the Democratic Party in Texas; and

Whereas Mrs. Allison was instrumental in organizing the Democratic women of Nueces County, and was one of the many fine women who labored diligently to make this organization an effective instrument of public expression in the political life of south Texas, and she was at the time of her death women's chairman of the Democratic Party for the 20th senatorial district; and

Whereas Mrs. Allison was born in Atoka, Tenn., some 60 years ago, attended school in Brighton, Tenn., and moved to Corpus Christi in 1928, after having lived in the city of Houston for many years; and

Whereas she is survived by her husband, H. J. (Al) Allison; a son, Chester R. Jones, Jr., of Corpus Christi; a sister, Mrs. Willie McLester, of Brighton, Tenn.; a brother, Herbert McClerkin, of Greenbrier, Ark.; 3 grandchildren, and 5 great-grandchildren: Now therefore, be it

Resolved, by the House of Representatives of the State of Texas, That we pay tribute to this outstanding lady who has served her party and her country so long and faithfully, and that when the house adjourns on this day it do so in her memory; and that a page in the house journal be set aside in respect to her; and, be it further

Resolved, That a copy of this resolution bearing the seal of the house be forwarded to her husband.

HALE,
FORSYTH,
GLUSING,
WOOLSEY.

The resolution was unanimously adopted by a rising vote.

[From the Corpus Christi Voice-Chronicle of May 16, 1957]

LORRAINE ALLISON LAID TO REST

Last weekend saw the passing of one of south Texas' most colorful women as the Book of Life was closed for Lorraine Allison. Written in this book were many chapters of public service and charitable endeavors; many pages gilded with thoughtful, loving deeds for her friends; a chapter dedicated to helpfulness to her husband and family, care for the sick and helpless and her ardent work for the political life of her chosen party.

The book is closed to Lorraine; no further entries will be made in this life, but it remains to be opened and followed by those who come after for the betterment of society, charity and good citizenship.

Lorraine Bell Allison was born at Atoka, Tenn., September 24, 1896. She would have been 61 years of age in September. Her early education was completed at Brighton, Tenn. She was a lifelong member of the Presbyterian Church. The wife of Al Allison, she was the great-grandmother of five. Survivors are her husband H. J. (Al) Allison, Chester Jones, Sr., Corpus Christi, Willie McLester, Brighton, Tenn., a sister, Herbert McClerkan, Greenbrier, Ark., Chester Jones, Jr., Corpus Christi, Maureen Hall, Corpus Christi, Sally Gatlin, London, England.

Mrs. Allison was widely known in political circles, being a member of the Nueces County Democratic executive board; member of the State Democratic executive committee; member of the Democratic Advisory Council, and the organizer of the Women's Democratic Club of Nueces County in 1954.

During the tenure in office of the late Hon. W. E. Pope, who was the dean of the Texas Legislature, Lorraine Allison was his Austin secretary.

The Democratic Party as a whole will miss her earnest support, and friends from all walks of life will join Lorraine Allison's family in mourning her demise.

The Honorable Nat Patton, an Honored Man in His Native Countryside

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. DOWDY. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD a column from the Crockett (Tex.) Courier of August 1, 1957, by Editor and Publisher W. W. Aiken, a memorial to a former Member of this House, the Honorable Nat Patton:

AN HONORED MAN IN HIS NATIVE COUNTRYSIDE

One by one the Courier editor's true and tried friends are passing away. One whom the Courier editor knew since coming to Crockett 59 years ago passed to the Great Beyond Saturday. Congressman Nat Patton was 8 years younger than the Courier editor, who was 24 years old when he came to Crockett. That would make Nat about 16 at that time. He was not more than that when he first subscribed for the Courier, which he paid for with a cotton sack of peanuts. He came into the Courier office with the sack of peanuts and said that he wanted to subscribe. Without considering the market value of the peanuts, as we liked the young fellow's looks, Nat was thanked for his subscription and complimented for his youthful generosity.

It was in the day of community schools and Nat was under instruction of an English teacher who had come to his community in the early days of Texas as a State. Nat and the Englishman sometimes came to Crockett riding on the spring seat of a two-horse wagon. Often they were gladly welcomed at the Courier office—always welcomed when they came. The Englishman finally changed over to the Porter Springs school and died there. He had been sending the Courier to his wife in England, as it was his intention to return there, but he gave way to a too-long stay in Texas. The Courier editor had some correspondence with his wife after his death, but must now confess that he has forgotten the name.

Nat's first schooling was under the old Englishman as his instructor. Finishing in other schools Nat became a teacher of the Ratcliff school. He taught in other schools before becoming county judge. He next went to the legislature and later to the State senate. He afterward served five terms in the United States Congress. His life, on the whole, was remarkable and patriotic. As a man of the common people, he was fundamentally a champion of the rights of the common man.

He was always able to call people by their first name and to command attention when he spoke. He naturally had a good word for the Courier and its editor whenever we met. He was so well known as "Cousin Nat" that he could be introduced that way and any new acquaintance would know him without further naming. "Cousin Nat" was an acquirement of the early days when many people of the scattered communities referred to their relatives as "cousin." His familiar face and handshake will be greatly missed in our community. Peace to his ashes is the wish of the multitude.

Gov. G. Mennen Williams, of Michigan

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks I would like to call to the attention of my fellow Members an article by Fulton Lewis, Jr., appearing in the Detroit Times of August 7, 1957, which I believe provides much food for thought between now and 1960:

ON GOVERNOR OF MICHIGAN

Michigan's 46-year-old, fifth-term Gov. G. Mennen Williams—"Soapy," to his fellow social registerites in fashionable Grosse Pointe—never has been taken seriously on the national political level, except by Walter Reuther and himself.

In view of the vacuum in the field of potential Democratic presidential talent, however, that could be a dangerous oversight.

Reuther has his Democratic convention delegation neatly tucked in his money-clip, and he delights in making like a king-builder.

Power is a heady potion, and Williams is the mannequin of his personal handicraft. If there ever is to be an opportunity, 1960 is it. And Reuther is not one to pass up opportunities.

Contrary to popular concept, Williams is something more than a pretty and plausible dilettante, amusing himself at the political game.

He represents the combined inheritances of two great cosmetic fortunes of the past—Mennen's and Williams'—and is somewhat the same pattern, in this regard, as the late Franklin D. Roosevelt: well-heeled and thus not suspect of selfish interest.

It is an atmosphere that labor politicians have found effective and useful, and there's no reason to suppose that it could not be again.

The end results of Williams' 9 years in the governorship weave a disturbing damask.

In his year, the per capita tax rate in Michigan has soared to $103.52, compared with $88.95 in neighboring Wisconsin, $71.11 in Ohio, $64.60 in Indiana, and $64.43 in Pennsylvania.

There is no corresponding improvement or enlargement in the measure of State services.

Michigan's GOP Representative ALVIN BENTLEY says that the combination of overtaxation and increasing socialization is driving new industry elsewhere.

When Michigan industres expand, he says, they do so by setting up in other States, and the once magic industrial names of Detroit, Flint, Pontiac, and Grand Rapids are shunned by investment capital.

"For example," he says, "the first 3 months of 1957 saw a gain of twice as many new plants in Ohio than in Michigan, and four times as many in California."

Commerce Department statistics show that from 1947 to 1954, the nationwide gain in industrial employment was 10.7 percent. In Michigan it was 3.6 percent.

The Detroit metropolitan area showed a decline of 2 percent.

In spite of all this, Williams shook existing Michigan industries to their marrow recently, by proposing a 6 percent tax on all net profits of corporations, to finance a 40 percent new increase in State spending.

This would apply to such as Ford, General Motors, Chrysler, and to individual subsidiaries thereof, thus pyramiding into a gigantic grab from the workers' pocketbooks, which is the sole source from which all such taxes must be paid.

The Republican-controlled State legislature turned him down, as he well knew they would.

But over the long pull, a nibbling process will continue, and he will get piecemeal concessions that tend in a continuous direction.

For voter consumption, his pitch is that the schools are undertaught, the school buildings overcrowded, the hospitals inadequate and the existing facilities understaffed.

The big corporations are the only source of big money; syphon it out of them.

If this should be of concern to king-builder Walter Reuther, it is not.

He is unconcerned about driving industry elsewhere, because in the blueprint of his dreams, these industries will all be socialized anyway, and there will be no question of competitive taxes.

The plants will be operated, wherever they may be, by the state. And Mr. Reuther, if possible, will be the state.

This is G. Mennen Williams, as a political reality. Superimpose his pattern on the Nation, and today becomes truly the twilight of capitalism.

Dubious Timidity

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. JOHANSEN. Mr. Speaker, I do not believe that appeasement of our friends tends to strengthen that friendship any more than appeasement of our enemies tends to deter them or their hostility.

For this reason, I am very much impressed by the editorial entitled "Girard Won't Be the Last Sacrifice to Allied Unity," which appeared in the August 10 Saturday Evening Post.

Under leave to extend and revise my remarks, I include the editorial:

GIRARD WON'T BE THE LAST SACRIFICE TO ALLIED UNITY

Leave aside Army Specialist William S. Girard and just how he happened to fire an empty shell case into a group of Japanese civilians, thereby killing a Japanese woman. He may not be the easiest man in the American Armed Forces to defend. But that is not the point. Neither is the relative severity or leniency of American military justice versus the Japanese variety. The issue is whether or not an American's constitutional rights can be waived by his own Government for political reasons. The Supreme Court says they can.

Troops quartered in a foreign land are unpopular at best, and friction or worse is inevitable. What is the Nation's responsibility to these men, who have been drafted and forced to serve overseas in countries which may or may not provide what we consider essential protection for accused persons? Under the status-of-forces agreements we upset the tradition of a century or so, which was that soldiers in foreign lands should be tried by their own commands. But these new agreements at least exempted from foreign jurisdiction acts committed by men under orders.

In the Girard case, our Government waived even this stipulation, despite the statement of Girard's commanding officer that the soldier was on duty and under orders when the incident occurred. There is something unpleasant about the spectacle of the American Government using its vast powers to turn an American soldier over to a foreign country for trial, even providing in advance evidence against the accused man, an American citizen, incidentally, to bolster the case for the Japanese.

In the Girard decision, the Supreme Court goes along with the contention that this soldier must be tried in a foreign court because this will make the Japanese feel better. The constitutionality of the status-of-forces agreement is accepted, but the wisdom of the decision to stretch the agreement to permit the surrender of Girard is left to the discretion of the legislative and executive branches of the Government. The Court, which has continually lectured Congress as to what it could or could not do, is unable to make a determination upon the basic rights of young Americans drafted into the service.

Whatever may be said as to the wisdom of making these agreements in the first place, it seems likely that we shall have to stand by them, now that they have been made. But that hardly excuses the Government for failing to stand by the terms of the agreement and insisting that a soldier should be subject to Army court-martial for offenses committed while on duty.

What will we gain by such timidity? Surely not the respect of the host countries, most of whom fiercely defend the rights of their own nationals up to their ability to do so. They can hardly be blamed if they conclude that a country which pays all the bills, supplies most of the troops, and cheerfully waives the rights of its own citizens is not to be taken too seriously. If we can be stampeded into believing that such concessions are needed to avoid being pushed back to Fortress America, tougher demands are likely to follow.

As for the effect of this episode on the morale of American enlisted men, that phase of the matter is well summed up by the New York Times, which observes that there will be a danger to discipline if troops on duty abroad must constantly keep in mind that they may be brought before a foreign court entitled to pass on the question whether they exceeded their duty or their orders.

Panning the President

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. AUCHINCLOSS. Mr. Speaker, I appreciate very much the opportunity of including with my remarks a thoughtful editorial appearing in the Newark Evening News on August 11, entitled "Panning the President." This editorial is written in excellent taste and I, particularly, call attention to the last paragraph thereof in which the eternal truth is pointed out that the more great men are "slandered by their enemies, the more they are loved by the people." There was a wise man who lived many, many years ago named Solomon and he left for the education of posterity the book of Proverbs contained in the Bible, and in chapter 15 thereof we read:

A soft answer turneth away wrath; but grievous words stir up anger.

The tongue of the wise useth knowledge aright: but the mouth of fools poureth out foolishness.

A wholesome tongue is a tree of life: but perverseness therein is a breach in the spirit.

It seems to me that those who would criticize might well consider the wisdom of Solomon as set forth in the verses quoted above. The editorial follows:

PANNING THE PRESIDENT

President Eisenhower, so long exempt even from partisan barbs, has lately been the target of some uncomplimentary observations, which have reflected on his consistency, his knowledge, his ability, even his integrity and truthfulness. Much of this has come from Congress, a body not notable for the readiness of its Members to concede their own shortcomings.

A man of Mr. Eisenhower's quick temper must be annoyed by this sniping, but even under provocation he manages to avoid the use of the short, sharp words and the replies in kind which criticism drew from some of his predecessors. His is still the soft answer, as he demonstrated in replying to a press conference question about his reaction to the harshness which has been directed at him.

He recalled that President Washington, "the greatest human the English-speaking race has produced," had to endure some pretty rough stuff. Comparing this with the "weak, inconsequential things they say about me," Mr. Eisenhower continued, "I can be quite philosophical about it."

Whether a President rules with a light rein and a quiet voice, like Mr. Eisenhower, or with a hard hand and a tart tongue, like the Roosevelts, he can expect criticism in abundance, much of it tainted with malice.

Presidents never enjoy it, any more than anyone else does, but some learn to take it without loss of sleep or aplomb. Some, on the other hand, suffer acutely and let their misery show. But all, however grudgingly, concede that the rudeness and irreverence of a democracy are elements in its strength.

In a country where self-restraint, moderation, and good manners are not highly regarded, the person of our Presidents is accorded more respect, even veneration, than might be expected. Considering the equalitarian temper of the times, in which not even a young and handsome Queen of England is spared the candor of her subjects, President Eisenhower has good reason to be philosophical.

Besides, he knows of the greatest of his predecessors, that the more they were slandered by their enemies, the more they were loved by the people.

TVA Area Could Be Blighted if Action To Finance Power Production Should Be Much Longer Delayed by Congress

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the Knoxville Journal, Knoxville, Tenn., Monday, August 12, 1957, entitled "TVA Area Could Be Blighted if Action To Finance Power Production Should Be Much Longer Delayed by Congress":

TVA AREA COULD BE BLIGHTED IF ACTION TO FINANCE POWER PRODUCTION SHOULD BE MUCH LONGER DELAYED BY CONGRESS

The United States Senate finished up last week's work with passage of a TVA self-financing bill which, in the refusal of Congress to make further appropriations for power production, was badly needed. If the House will also recognize the necessity for action, a new pattern will have been established that should enable the big power agency to keep up with area power demands.

The Senate bill included two amendments, neither of which work any hardship on TVA. One of these required an additional annual repayment to the Treasury of $10 million, to apply on the Federal Government's investment in power facilities. The second amendment restricted the Authority's power monopoly to its existing area.

As we have said here before, congressional action in providing for TVA's self-financing is not, in fact, to be considered a favor. Rather, it is simply recognition of an obligation which the Federal Government assumed a quarter of a century ago. When the agency was established and given a monopoly on production and distribution of power in seven States the Federal Government assumed the responsibility, so far as citizens in the TVA area were concerned for enabling TVA to provide the power required to serve them.

We hope that a majority of the House will also be willing, in this session, to honor this obligation as the Senate has done. The fact is that if some arrangements for financing additional power production are not soon made the TVA area could be blighted industrially by comparison with the private power territory surrounding it.

Race Relations Here Good

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. DOWDY. Mr. Speaker, the efforts of the left-wing politicians of this Nation to agitate the so-called minority groups have succeeded only to the extent that sensible northerners should be and are aware that segregation and discrimination problems are more acute in the northern centers than they have been in the South for more than a generation.

It has been many years since there was a lynching in the South, 3 were reported in the United States—1 in Boston, and 2 in Chicago—and others unreported in Detroit and New York.

Northern cities suppress news of their race riots and violent incidents, yet such news continues to leak out. At least 2 incidents have occurred in Detroit in the last 2 years; only a few days ago racial violence erupted in Chicago, in which 32 persons were injured and 200 extra policemen were required to bring calm, and in New York there have been several incidents.

Recently, when a proposal was made in New York to outlaw discrimination in apartments, the New York Times changed from its usual tune, and opposed the proposal.

I am proud to say that all southern people consider themselves to be Americans—and they do not hyphenate that with race, creed, or color. Therefore, the agitators have failed to incite troubles in the South; their efforts have been successful in the above-mentioned respects.

In this connection, it is a pleasure for me to insert in the Appendix of the RECORD, a column written by Editor C. W. Rice, of the Negro Labor News, published in Houston, Tex., July 6, 1957, and reprinted in the Lufkin (Tex.) Daily News on July 15, I especially commend this to every person who is not so prejudiced that he cannot see the truth:

RACE RELATIONS HERE GOOD

(EDITOR'S NOTE.—The following is a reprint of the column, As I See It by Editor C. W. Rice of the Negro Labor News, published in Houston Saturday, July 6.)

As I see it, for some time we have been making a study as to the effect that the controversial issue of desegregation has had on the relations between employers and their Negro help. We find that these relations have grown more cordial in Texas with few exceptions.

In the industries and industrial communities of east Texas where Negroes constitute from 50 to 75 percent of the employees, there is a growing mutual understanding of the race problem and greater effort to improve conditions that have heretofore caused racial dissatisfaction.

In nearly every community in this section, we found that the schools have been improved, new buildings, playgrounds erected, better housing and living conditions have been provided.

Police brutality against Negroes has been greatly decreased. In many of the larger communities, we seldom heard integration discussed by either white or colored. Many would say that there has been no race trouble here and we are not expecting any.

As I see it, Lufkin, Tex., sometimes called the industrial capital of east Texas, can be pointed to as an example of how race relations has worked smoothly. Probably no other industrial section of Texas has made more progress in race relations than in this town. New high and elementary schools have been built, good streets, beautiful subdivisions with modern homes, and new churches are in evidence everywhere.

Negroes in industries have good-paying jobs, especially at the Lufkin and Texas foundries, Southland Paper Mill, Angelina Lumber Co., and other industries. Last month, the Negro chamber of commerce that was organized several years ago, moved into its own building. This is the first of its kind that I know of in the State of Texas including such cities as Dallas, Fort Worth, and Houston. All of these achievements have been made possible through the splendid cooperation of white and colored leadership.

The credit for improved race relations may go to the following persons: Ernest I. Kurth, industrial magnate who is president of the Southland Paper Mill and the Angelina County Lumber Co., better known as Mr. East Texas.

Col. Cal Chambers, founder of the Texas Foundries, 17 years ago, has 300 Negro employees and we understand that on the incentive plan, some Negro employees make top wages.

W. W. Trout, president of the Lufkin Iron & Machine Foundaries, whose father pioneered in east Texas industries and founded the Lufkin Foundries, was always a friend to colored people. He gave them large employment in his plant. The young Trouts, Ed and Walter, have followed in their father's footsteps.

Just 11 miles from Lufkin is located the Southern Pine Lumber Co. and some other industries which give a large part of employment to colored people. They have modern schools and under management of young Arthur Temple, the Negro homes have all modern conveniences, even telephones and beautiful churches. Conditions have improved so much until this saw mill community has taken in a city-like appearance.

In these industries throughout east Texas, white and colored work side by side without any friction. Everyone seems satisfied and unmindful of the great racial agitation, which is going on elsewhere.

Prof. D. G. Clever, principal of the Lufkin High School, summed it up correctly when I asked him how many people felt about school integration. He said "we are so busy here improving our own conditions that we don't have time to worry about the desegregation issue."

What has been said about Lufkin and Diboll, can be said about many other cities and towns of east Texas—the traditional Black Belt.

These communities are a jump ahead of many other sections. They realize that a vast change is taking place in the South and have set out to adjust to these conditions on the community levels.

Citizen Award to Walter H. Beam

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a news article which appeared in a recent issue of the Indianola Tribune, Indianaola, Iowa, with reference to a citizen award which was presented to Walter H. Beam, of Martensdale, Iowa:

WALTER H. BEAM WINS FIRST MARTENSDALE CITIZEN AWARD

Walter H. Beam, an employee of the State of Iowa for 43 years and an original resident of Martensdale received Martensdale's first citizen of the year award Monday evening, February 25, 1957.

The award was given by the Martensdale Community Club at a pot luck dinner at the club building and was presented by Mrs. John Powers, master of ceremonies for the program.

President Dwight D. Eisenhower, four former Iowa governors and the widow of a fifth, the late William S. Beardsley of New Virginia, sent letters of greeting to Mr. Beam for the occasion. The ex-governors, all Republicans, were Dan Turner, Robert D. Blue, Leo A. Hoegh and Bourke B. Hickenlooper, now United States Senator from Iowa.

Greetings were also received from Judge Harold E. Davidson, of the 15th judicial district, a longtime friend; Glenn D. Sarsfield, state comptroller and Mr. Beam's former boss and William B. Sayre of Ackworth, Warren County Republican chairman and Emory English, editor of the Iowa Annals.

Mr. Beam was honored for six reasons, Mrs. Powers said. In her talk she listed Mr. Beam's qualities: president of the community club, his work for the Wick field picnic, his election work for the Republican Party, Martensdale pioneer, his work for schools and civic development and over 40 years of service to the State of Iowa.

Mr. Beam is best known as parliamentarian to the Iowa senate, a post he filled with distinction while serving as secretary of the senate for seven sessions, 1925 to 1931 and 1937 to 1941. He also worked between sessions, on six issues of the Iowa code as a proofreader.

Mr. Beam first went to work for the State in 1913 when he became senate file clerk. He then worked his way up the ladder, becoming a reading and engrossing clerk and then assistant senate secretary.

He left the senate in 1942, after 29 years continuous service, when he became an auditor with the State tax commissioner. He then went back to the senate for 1 term in 1945 as assistant secretary before transferring to the comptroller's office, where he audited all State printing bills from 1945 until January of this year. He then left State employment when his job was transferred to the State printing board.

Mr. Beam has also worked for Martensdale since the town was founded in 1913. He came July 27, 1913, to buy grain for a Des Moines firm and has lived there since.

He worked to get the first post office for the new community and he worked day and night for the Martensdale Consolidated School District, which operates the present Martensdale schools. He has also been active in the town's Community Church, and took an active part in building the present building, which was dedicated in 1945.

Mr. Beam has also been active in Warren County affairs. He taught country school 4 years when he first came to the county in 1896 from Warren County, Ill., where he was born and raised and attended school. He was born there September 4, 1875, and taught school before moving to a farm near where Martensdale was to be located later.

He also served two terms as county auditor from 1909 to 1912 and he was a member of the county board of education for 27 years, ending in 1942.

He also served 12 years on the county Republican central committee and he has been a lifelong, active Republican. The letters from President Eisenhower, the five governors and Mr. Sayre all praised his faithful party service.

Mr. Beam married the former Katie Ruth Darling December 28, 1910, at her home in Bedford and the couple have lived in Martensdale even since the town was formed. The couple have 4 sons, George and Charles, of Indianola; Burl, of Martensdale, and Max, of Hamilton, Mass., and 6 grandchildren.

Others on the program honoring Mr. Beam were Mr. Frank Lickteig, Martensdale garageman, who talked on early businesses in town; Mrs. Carl Martens, who talked on early families and homes and the Reverend Virgil Bunjer, pastor of the Martensdale Community Church, who gave the history of the church.

Mrs. Powers also asked club members to think about donating the use of their building for a youth center. "This would do no harm at all as we have the space and just have to utilize it," she concluded.

Utah Plant Is First To Make Gas From Ore

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
Tuesday, August 13, 1957

Mr. DIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

UTAH-MINED ORE USED TO PRODUCE GASOLINE

BONANZA, UTAH, August 11.—An operation unique in the mining and oil industries is mining a solid hydrocarbon, pumping it 72 miles through a pipeline, and making high-grade gasoline and coke from it.

It's the first commercial plant in America to make gasoline from a material other than crude oil.

The system now in operation is a $16-million undertaking of the American Gilsonite Co.

The company mines the hydrocarbon, Gilsonite, from vast deposits near Bonanza in eastern Utah, grinds it up, mixes it with water and pumps it through a 6-inch pipeline to a plant near Grand Junction, Colo. There a refinery melts it down and turns it into gasoline and coke.

The pipeline delivers 700 tons of Gilsonite ore a day to the processing plant. The refinery turns out 275 tons a day of high-grade coke and 54,600 gallons a day (1,300 barrels) of high-octane gasoline.

The metallurgical coke is marketed chiefly in the Northwest for use by aluminum producers.

Gilsonite ore is found in vertical fissures that run for several miles along the earth's surface and may go as deep as 2,000 feet. It is not inflammable, but its dust is highly explosive. There have been disastrous explosions in the mines near Bonanza.

The scientific name of the ore is uintaite. There are deposits of it elsewhere in the world, but virtually the only commercially usable deposits are in the Uintah Basin of eastern Utah and western Colorado.

In 1884 Samuel H. Gilson, an energetic settler, became interested and tried to find uses for it. Local residents applied his name to the material, and the name Gilsonite later became a registered trademark of the Barber Asphalt Co.

The Late Senator Joseph R. McCarthy of Wisconsin

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Ledger, Montrose, Calif., which is a tribute to the late Senator Joseph R. McCarthy. The editorial speaks for itself:

TRIBUTE TO A FALLEN FIGHTER

Every time a great American dies, a little bit of America dies too, if there is no one to step forward and take up the eternal battle that is the price of liberty. Great voids in the fabric of American life were left by the deaths of Robert Taft, James Forrestal, Gen. George Patton, Gen. Waldon Walker, and other great conservative Americans who have died in recent years.

Another great void is left by the sudden death of Senator Joseph McCarthy, who died quietly in the prime of life. He was a devoted husband and father. And he was devoted to the land he had sworn to defend from all enemies, foreign and domestic. Senator McCarthy had laid upon that altar of devotion to country, sacrifices that lesser men would not give: Official popularity, professional career, party leadership, social standing, political standing. But he would not lay upon the altar of political expediency the sacrifices of self-respect, honesty, moral courage, and his sacred honor as a God-fearing American.

Joe McCarthy had been accused of nearly everything, and some believed the accusations. But he could never be accused of being disloyal to his country, or of compromising his position. The charges hurled at him were answered by him, and where necessary, proved. His only sin was to oppose communism with all the vigor he could muster.

On the other hand, the charges he directed at others were answered only with smear. The administration—the administration he helped to put into office—went to great lengths in the notorious McCarthy censure to neutralize his anti-Communist campaign, and to avoid answering the query, "Who promoted Peress?" The questioner was blackballed, but the question was never answered. Who today has the courage to

hurl again the forbidden question that boomeranged on the man from Wisconsin? Who now has the courage to take up the battle where he left off?

The career of Joseph McCarthy is an inspiration for Americans. Of humble birth, he fought his way to an education and to public office. As a fighting marine in the South Pacific, he deplored what he considered to be corruption in Government, and he swore to return to his native Wisconsin and become a Senator.

In the Senate, he devoted his life to fighting the creeping paralysis of communism, only to find that his worst enemies were not the Reds, but those who protected them. His own party, which had used the tremendous personal popularity of McCarthy, MacArthur, and Taft to win the election of 1952, led the counterattack against the man from Wisconsin. The opposition of the New Deal Democrats he expected, but it is safe to say that the crushing censure by his own party hastened his death.

It is sad to see that those same party leaders who did their best to ruin him, added hypocrisy to hatred when they sent messages of sympathy to Senator McCarthy's widow.

And with long faces, his colleagues sat in the Chamber where they had shamelessly crucified McCarthy—the man, in mock tribute to McCarthy—the memory.

In a recent letter to us, Senator McCarthy closed with wishes for good luck and good health. To those who yelped at his heels as he fought a common foe, we wish the same. You'll need both luck and health in your losing fight against communism. And you could use, too, a portion of the brains and courage and fortitude—and devotion to God and country—displayed by a fallen leader, Senator Joseph McCarthy.

When the Next Satellite Revolts

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 13, 1957

Mr. KEFAUVER. Mr. President, many of us have been sorely concerned by what happened in Hungary, and our consciences have been disturbed. The Special Committee of the United Nations, composed of representatives of five nations, in a unanimous report has detailed the ruthless manner in which the revolt was crushed by the Soviet Union, and a legal government, popularly supported by the people of Hungary, was deposed. I think that the peoples of the free world should be now discussing and adopting policies to deal with such future revolts. There is little we can do to repair what has happened in the past. We can prepare for the future. I ask unanimous consent to print an article which I wrote on this subject and which appeared in Western World for August 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN THE NEXT SOVIET SATELLITE REVOLTS

(By Hon. ESTES KEFAUVER, of Tennessee)

(EDITOR'S NOTE.—Senator KEFAUVER served in the House of Representatives from 1939 until 1949, when he was elected to the Senate where he has served since that time. He is a member of the Judiciary and Armed Services Committees. He was the Democratic candidate for Vice President last year.)

There is an ominous silence over Eastern Europe. How long will the calm last?

In Hungary, Soviet repression continues and the trials of the rebels seem about to begin.

Red Poland is balancing on a tightrope. Gomulka, whose antipathy to Moscow has been greatly exaggerated, has relaxed the tension somewhat by loosening the peoples' shackles. He can hardly retighten the screws without provoking a popular revolt that would bring a worse repression. Yet, allowing his restless Poles full freedom (sure to include secession from the Kremlin) would have the same tragic result. How long can his act continue?

Another satellite outbreak anywhere seems almost sure to ignite a rebellion among the East Germans of the so-called People's Democratic Republic.

Already exiled Hungarian leaders are predicting a new revolt in the near future. It could hardly be otherwise. For the Hungarian revolt revealed unmistakably what the West should never have doubted—namely, that the East European peoples reject all forms of communism, national or Soviet, and will settle for nothing less than real freedom. Certainly not all of Mao Tse-tung's promises of a "hundred flowers blooming, a hundred schools of thought contending," will placate the dissatisfied if the condition is that all must be red.

Since the political barometer points to storm, elementary statesmanship would seem to require the governments of the free countries to face this possibility, and singly and collectively decide what, under such circumstances, they are prepared to do when the tempest breaks. Doing nothing could be excused in the case of Hungary on the grounds of surprise. For Westerners to stand idly by and once more wring their hands while brave men (and women and 12-year-olds) die in a cause we claim is ours, would discredit the West entirely. Henceforth no uncommitted people would be tempted to rely upon us for anything.

How, some will ask, can we be sure of anything behind the Iron Curtain? Would we not risk going off half-cocked, and plunging the world through ignorance into the world's worst war?

Let's look at Hungary.

Within the past few months that country has disgorged 190,000 refugees. And we have heard the sounds of that historic uprising, from the wild shouts of a short-lived triumph to the shrieks of terror that died out in a thin radio cry for help.

Now, to eliminate the last uncertainty, a United Nations report indicting the Soviets before the world and its fellow nations in the strongest denunciatory language gives the complete story.

On January 10, 1957, almost 3 months after the initial October revolt began in Hungary, the General Assembly of the United Nations appointed a Special Committee on the Problem of Hungary, composed of Mongi Slim, of Tunisia; Alsing Andersen, of Denmark; K. C. O. Shann, of Australia; R. S. S. Gunewardene, of Ceylon; and Enrique Rodriguez, of Fabregat, of Uruguay.

The Assembly asked the committee to carry out a full and objective investigation af all aspects of Soviet intervention in Hungary by armed force and by other means, and of the effects of such intervention in Hungary by armed force and by other means, and of the effects of such intervention on the political development of Hungary.

In its report, the committee stated that in carrying out the mandate, it studied "a rich documentation supplied by governments and obtained from other sources, while it closely questioned more than a hundred witnesses, representing every stratum of Hungarian society, whose testimony filled 2,000 pages in the verbatim record."

The committee also pointed out that the General Assembly had asked that the investigation be pursued in Hungary also, but the attitude of the Hungarian Government did not allow the committee to carry out this part of its mandate.

The five United Nations delegates saw fit to delete the more gruesome details of Soviet cruelty and barbarism. Yet the report is shocking enough in its blow-by-blow account of the heroic but fruitless uprising of an entire people and its subsequent bloody and illegal repression by the Russians. Even in its unexpurgated edition, free peoples wince to remember how they looked on passively while this was going on, and the United Nations—so prompt and brave in its reaction to Suez—did nothing but vote a series of academic resolutions, which Soviet Russia systematically and insolently flouted.

The essence of the committee's conclusions are:

1. The entire population, excluding only the political police, and including women and 12-year-olds, participated in the revolt.

2. The rebels established a legal government popularly supported by the people of Hungary.

3. Russia intervened, and removed this popular government formed by a spontaneous national movement, and neither aided nor abetted from the outside.

4. The government put into power by the Soviet did not at the time, and does not now, have the support of the people of Hungary.

5. The situation in Hungary today is as bad or even worse than at the time of the revolt. The people have no personal freedom and are completely under the yoke of the Soviet communistic dictatorship.

A CONGRESSIONAL VIEW

A previous special report on the subject of Hungary by the House of Representatives' Committee on Foreign Affairs gave the world additional background information about what happens when a satellite nation defies Soviet Russia.

Here is a summary of some of its observations and impressions:

The catastrophic Hungarian revolution of October 23 caught the free world totally unprepared, and subsequent events clearly show the Soviet Union is determined to go to any and all lengths to maintain its empire of enslaved peoples by the most brutal forms of armed subjugation and repression, when permitted to do so. Its policy toward the satellite nations is one of ruthless colonialism and overlordship of both human and natural resources without parallel in modern history. Because of this knowledge now broadcast without equivocation or doubt to the world, it might be difficult if not impossible to prevent free world volunteers from moving in to counter Soviet aggression should another satellite nation revolt.

A third detailed report made by the International Commission of Jurists in The Hague in April of this year has this to say in summary:

Soviet intervention in Hungary clearly constituted aggression, if it took place without Hungarian permission, according to the Soviet definition of the word "aggression," the relevant part of which (art. I) reads as follows:

"In an international conflict that state shall be declared the attacker which first commits one of the following acts: Invasion by its armed forces, even without a declaration of war, of the territory of another state; bombardment by its land, sea, or air forces of the territory of another state or the carrying out of a deliberate attack on the ships or aircraft of the latter; the landing or leading of its land, sea, or air forces inside the boundaries of another state with-

out the permission, particularly as regards the length of their stay or the extent of the area in which they may stay."

Permission to station Soviet troops in Hungary is given by the Warsaw Pact of May 14, 1955, provided it is "by agreement among the states, in accordance with the requirements of their (the signatories of the Warsaw Pact) mutual defense."

So the world now has proof positive and authentic background information on how the Soviets acted when a satellite nation revolts. It also has the dismal evidence of how the rest of the world behaved in the face of such action as a direct result of lack of foresight in planning a policy of action in the wake of such a revolution.

The revolt of Hungary may have been a dangerous crisis wherein extreme prudence can be understood if not approved.

But it was nonetheless what the House of Representatives subcommittee called "the lost opportunity of our generation." For the United States administration, which had for years emphasized the need for the "liberation of East Europe," to fall back on "reliance on moral pressures" was a retreat that verged on a surrender. But neither the American nor his European colleague showed any stomach for positive action.

Nor did the United Nations.

In fact, the double failure of the North Atlantic Treaty Organization and the United Nations to give positive help to the Hungarians was one of two things. Either it was the acknowledgment of Russia's "right" to dominate the Warsaw Pact area (a revival of the 1944–45 American alibi that the U. S. S. R. could properly claim "friendly neighbors"), or it was a confession that Western devotion to freedom is a punier thing than Western fear of being involved in another major war.

Give the Western peoples credit. They wanted to help. I have never seen my own fellow Americans or Members of the United States Congress so universally disturbed by any world crisis as they were by the Hungarian revolt. I trust in this world of the stiff upper lip that it would not be melodramatic to say I heard women weep and saw usually cheerful men walk around with a stunned solemnity in those days immediately following the Hungarian revolt. I have never seen shame and horror so universally written on the faces of my countrymen.

And I heard them ask over and over * * * what can we do?

The thing is, they didn't know what to do. Many were ready to spring into action as volunteers along with the Hungarians.

And the United States administration, preoccupied with the events around Suez, gave no lead. For 4 days, October 23 to 27, it did nothing. Then, having summoned the United Nations, it limited itself to strictly verbal condemnation of Soviet aggression. To all of which the Kremlin paid not the slightest attention. Indeed, to underline their contempt for world opinion, Russian leaders suddenly threatened to obliterate Paris and London with guided missiles.

President Eisenhower later announced that Americans cannot have one law for their friends and another for their enemies. Indeed, it would have been enough if he had treated our enemies, the Red Russians, with the same severity he showed toward our much-provoked friends—France, Britain, and Israel. Instead, some suspect the administration of whistling in the dark. While talking bravely, it was actually preoccupied with preventing the revolt from spreading from Hungary to other captive peoples. This might have made liberation a fact, but it would not have contributed to that relaxation of tensions with communism which the President had steadfastly pursued. And it would have made a caricature of the previous American policy of urging the captive peoples to settle for some form of national communism, rather than demanding the same amount of freedom as Americans consider their own birthright.

Ninety percent of the Americans would, in my judgment, have been prepared to follow wherever the administration led. But the Hungarian crisis came at a peculiarly awkward moment. With a national election less than 2 weeks off, the people were absorbed in domestic politics. They were also understandably confused by the simultaneous Suez affair. And finally, one must admit, they shared the administration's fear of provoking the U. S. S. R. into starting a major war. These reasons were obvious at the time, and contributed to the general atmosphere of impotence.

Yet, looking back, I am convinced the main cause of the West's paralysis was quite simple—lack of a united plan of action by the NATO powers.

For years these countries had simply ignored paragraph 2 of the NATO treaty urging amplification into economic and political fields. Yet the recent recommendations for strengthening NATO by the Three Wise Men were almost insignificant.

KEFAUVER'S RESOLUTION

As far back as 1949, I introduced a resolution requesting the American President * * * "to invite the other democracies which sponsored the North Atlantic Treaty to name delegates, including members of their principal political parties, to meet in a convention with similarly appointed delegates from the United States and from other democracies as the convention may invite, to explore and report to what extent their peoples might further unite within the framework of the United Nations, and agree to form, federally or otherwise, a defense, economic and political union."

This my colleagues never allowed to get out of committee, but it has been discussed in various sessions of Congress and, at one time or another, has had the support of about 40 percent of the Senators and House Members.

Without going nearly so far, the NATO governments could easily have amplified and deepened their understanding. On the basis thereof, they could have made appropriate plans for dealing with crises of almost any type, in any part of the world.

Instead, nothing.

Or rather * * * nothing but the Hungarian debacle, with its frustration and subsequent dangers. For, in my opinion, the dangers of not intervening on behalf of freedom may in the long run outstrip the danger of intervention.

Now in my judgment, the time has come to end the period of Western equivocation and find out just how far the American and other governments are willing and able to agree upon a policy for action both now and when the next satellite revolts. Here is what I propose:

First, immediate measures.

The tragedy of the Hungarian revolution, and what it has meant in the crushing of human beings and their love of liberty, should be kept alive continually before the people of the world. Its horror should remain a constant reminder of what is behind the facade of the Soviet Union. It should not be forgotten in the confusion of various statements from various representatives of the United States Government and the governments of other nations.

The three reports to which we have already referred, especially the UN report, should be circulated as widely as possible. These reports should be continually and persistently referred to for the next 5 years in the United Nations.

When the United Nations General Assembly reconvenes, it should demand that the Soviet Union explain why it should not be expelled if it continues to violate the resolutions of that body.

The Kadar government, by virtue of the United Nations own report, does not represent the Hungarian people, and should therefore be immediately expelled from the world organization.

STOP EXECUTIONS

The U. N. should take immediate steps to stop the execution of 2,000 Hungarian patriots who have been sentenced to death. A resolution unanimously passed by a conference of lawyers organized by the International Commission of Jurists at The Hague, March 2, 1957, reports as follows:

"This conference * * * is of the opinion that the laws and decrees of the authorities in Hungary violate human rights in failing to provide the minimum safeguards of justice in criminal trials which are recognized by civilized nations, particularly for offenses punishable with death, in that they fail to provide in every case for an impartial tribunal; define offenses in vague terms open to abuse in interpretation; give the accused no proper notice of the charge preferred; do not allow adequate time and facilities for the accused to prepare his defense, to call witnesses, and to instruct counsel on his behalf; do not always provide an effective right of appeal or effective procedure for clemency.

"Deplores the secrecy in which almost all the criminal trials in Hungary have been conducted since November 4, 1956, and regrets the refusal of the authorities in Hungary to allow impartial legal observers to trials which are of concern to lawyers of all nations."

The United Nations should immediately create a permanent military force ready for action in all future cases of naked aggression.

And what should NATO do?

First, at their next meeting, the NATO parliamentarians should urge their respective governments to negotiate immediately a common plan of concerted action when the next satellite country revolts. We—for I am one of them—should set up a watchdog committee to see that our several governments get busy immediately and do not stall for fear of "provoking" the U. S. S. R. For unless there is such a common policy, a repetition of the Hungarian debacle is inevitable—with even worse consequences. Action by some, inaction by other NATO governments, will not do. Nothing could be worse than, say, positive action by Britain and France, inaction by the United States and West Germany—or the other way around. Once NATO as NATO has accepted such a common policy, it should broadcast it to the world, thus letting everybody know that the U. S. S. R. cannot expect to commit rape a second time with impunity.

A 6-POINT PROGRAM

Now my suggestion for the planks of such a policy.

To begin with, monetary and physical help for the refugees of the last time is mere salve on a deep wound. The gaping sore of peoples condemned to slavery is a festering wound and its healing must include disinfection and, if necessary, surgery.

1. The NATO countries should seek to have the U. N. Assembly instruct the Secretary General in advance to issue in the Assembly's name to an aggressor country whose troops cross an established frontier an immediate warning to desist.

2. The Secretary General, in case of noncompliance within 24 hours, and without further authorization, should send into the attacked countries U. N. civilian observers with their own transport, regardless of any protests by the aggressor.

3. The NATO countries should immediately summon the U. N. Assembly and when it convenes, consider the opportunity of sending a previously constituted U. N. military force—if any—to assist the country attacked.

4. At the same time, the NATO countries should ask the Assembly to recommend that

the members take complete economic and political sanctions against the aggressor, including an embargo on all shipments and future trade and the breaking of diplomatic relations. In case the Assembly refuses, the NATO countries should undertake these sanctions independently.

5. The NATO countries should publicly reserve the right as nations to come to the accumulative defense of any sovereign people that invites assistance against attack.

6. The NATO countries should move quickly to grant diplomatic recognition to any government that manages to achieve the start of a success in an armed uprising against Communist tyranny. They should not wait—as in the case of Hungary—and then merely refuse to recognize somebody's stooge.

Such measures would be legal insofar as they would be either in defense of the U. N. Charter or justified by other international laws. They would not, under these, be acts of war. However, they might cause a war if the Kremlin decided it would prefer its own total destruction to any relinquishment of territories or victim peoples.

The East European satellites are of value to the Kremlin in two ways: as cows to be milked for the benefit of the U. S. S. R. and as a glacis lying before the Soviet fortress (militarily and ideologically). They are of little value as a source of military contingents since the peoples would leap at the first opportunity to desert. In case of war, satellite manpower would doubtless be shanghaied into Soviet factories or put to guard remote stretches of railroad track in central Asia.

Short of an attack upon them, it is extremely unlikely that the Kremlin benficiaries of a spoils regime will risk their own position and the total destruction of world communism rather than lose control over rebellious peoples whom it cannot hope to keep forever unless the West disintegrates or surrenders. But against the risk of war, the West must weight the risk of any further nonintervention in defense of its principles. For these are the most precious capital on earth.

A House Divided

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jaime Potenze which appeared in the Commonweal of March 1, 1957:

A HOUSE DIVIDED
(By Jaime Potenze)

When someone from the United States refers to South America he usually adds an adjective which connotes suffering or pain, disgrace or property. With the exception of the tourist agencies, which present a world that simply does not exist, made up of Cuban rumbas, Brazilian sambas and Peruvian bullfighters, most intelligent allusions to South America are tinged with pity.

To balance Habana's nightclubs, one can find the wretched workers of the tobacco and sugar plantations. If in Bolivia there is a Patiño married to a real Bourbon princess, there are also slaves who sleep in beds that are always warm, because as soon as one returns from the mines for his rest another leaves for work—all so that Aramayo and Hochshild "tin barons" can go on losing fortunes in the glamorous international casinos.

It is true that the Modern Art Museum of São Paulo is perhaps the most important in the world, thanks to Mecenae Matarazzo, but it is also true that there are thousands of Negroes piled up in rotten shacks in Rio de Janeiro's "morros," within a few blocks of the Copacabana Palace Hotel, with its lavish floor shows. * * * Yes, the naked truth is that in every country in South America one can find violent contrasts, the most violent the imagination can conceive. People know this. What else do they know?

"The Americas are a free and united world," we held. Well, we are fed up with that refrain. The Americas are "sister nations," but almost all disdainfully ignore everything about their neighbors right up to the type of government in power. And this blindness comes from the fact that most of us really do not care a hoot about what's going on in other nations of the Americas. If we hear that in the Dominican Republic the picturesque "Generalissimo Doctor" Trujillo has built a palace for his son Radames and appointed him general at the ripe age of nine, we simply laugh. When German Arciniegas points out that in 31 years there have been 22 presidents in Paraguay, we shrug our shoulders.

Let's be frank about it. I am a native of Argentina. We Argentines, and our brothers north of the border, have no real solidarity with our American neighbors. We know superficially that there have been Aztec and Mayan civilizations, that Chilean wines are exquisite, that Uruguay is America's Switzerland, and we accept as natural the fact that generals, generalissimos, or field marshals govern these tough lands. It is true that we tear our clothing because this is so, and that we support unhesitatingly a Haya de la Torre (of whose aims we know nothing). Or we are ready to express our solidarity with any movement claiming to represent anti-imperialism (although we are not sure of the real meaning of imperialism), and words like Indo-America have a celestial sound to our ears (although if we temper our enthusiasm we find it is an idea no one can accept). But real understanding and solidarity do not exist.

Richard Dyer, an American correspondent, summed up the Quitandinha Conference in 1947 with a sentence which was more than a wisecrack. On the day before the conference started, he sent a cable to the effect that due to the number of delegates who had arrived the whiskey supply of the Copacabana Palace Hotel was used up. And this is not surprising. The delegates had little else to do. At the conference the only mission of the "yes men" of Latin America was to assent to the dictates of the delegation of the United States of America.

There were, it is true, a few exceptions to this generalization. Argentina was one, but by the grace of God and not because of the principles of the men who then governed us. In Quitandinha, the goal was to consolidate peace; the distinguished delegates of South America knew that this was possible only through their support of the country which had strongly supported all the dictatorships south of the border. In 1942, for example, Ambassador Avra Warren handed the illiterate Trujillo a diploma of doctor honoris causa from the the University of Pittsburgh. And if Perón had wanted it, I am sure that Ambassadors Messersmith, Bruce or Nufer would have gladly given all the doctorates available, with Dwight D. Eisenhower—acting on the advice of Brother Milton—giving his blessing. Why not: If the Christian Democracies of Germany and Italy bestowed medals on Raul Apold, Perón's press secretary, justly called the Argentine Goebbels, there is little reason to suppose that other regimes would not grant a doctorate to Perón or any one of his gang.

The pattern of Quitandinha has been followed at almost all the Pan-American conferences. I say "almost," because the Caracas one, in 1954, was marked by an incident that few people remember. Costa Rica, which is the only Christian democratic country in America, simply refused to attend that conference because of the general lack of democracy in the Americas. Costa Rica was right. How could a representative of such a decent and democratic nation discuss democracy and freedom with men appointed by tyrants? Why should it lend its prestige to another farce? President José Figueres said "No," but he was the only one.

South America is today, for the most part, a conglomeration of tyrannies governed by men who know that as long as they put their natural resources at the disposal of the United States, nobody will bother them. This and official anticommunism guarantee that "American unity" will have no embarrassing fissures. But things would not have to be this way. If cooperation could really rest on the foundation of Pan-American spirit, the United States could be an important factor in the development of the countries south of the border. But things do not work out that way today.

Uruguay, for example, is one of the "democratic bulwarks" of the continent, and has been always a close friend of the United States and a stanch supporter of the principles so dear to Pan-American conferences. The backbone of Uruguay's economy is wool. However, when certain businessmen in the United States asked Washington to impose a special tax on Uruguayan wool so that little brother from the River Plate could not compete with them, Congress agreed. Apparently the economic policy of nations in such matters is still dictated by expediency.

Unfortunately, policy in this area seems to be dictated solely by the importance attached to the countries involved, and that importance is measured in material terms. When Costa Rica refused to attend the Caracas conference, the gesture went almost unnoticed because it is a small nation which counts only from a moral point of view. If Argentina had been reluctant to go to Caracas, however, things would have been different, and for obvious reasons. The latterday honeymoon between President Eisenhower and Perón, after all, was largely due to the fact that our oilfields can be important in the Pan-American economy, and the fact that our reserves in cattle, wheat, and corn are also enormous. Factors like these things are inclined to make people listen. But who listens to little Costa Rica?

Basically, many of us in Latin America feel that the trouble stems from the policy of the United States. This policy supports tyrants and flouts Latin American opinion. Witness the army of doctors who flew to Nicaragua from the United States to help the late Dictator Somoza after he had been shot. No one, certainly, would want to say that killing Somoza was a good thing, but there is little sympathy with Eisenhower's gesture of sending at least 3 planes full of specialists to the stricken dictator.

Furthermore, if United States officials want to understand Latin America, it would be wise for them to study a little Spanish psychology through the ages, instead of banking on platitudinous slogans. When for reasons of its own the United States did issue a blue book against Perón, it intervened in precisely the wrong way. All the South American countries promptly supported the new David who was threatened by Goliath, and the victory of Perón was thus due in large measure to the blindness and stupidity of the State Department. In the same way, when Ambassador Peurifoy's wife was quoted in Time for her poems on the Guatemalan situation while her husband was serving there as a United States envoy (and at the same time backing the rebel revolution), there was widespread disapproval in Latin America. If there is one thing we do not want, it is this kind of North American interference in our affairs.

South America has moral as well as material resources. We feel that this fact is being ignored. South America is something more than rumbas, congas, tangos, and parakeets. We feel that this too is being ignored. To establish real friendship between the United States and South American nations mutual understanding is indispensable. You must not think of South Americans as illiterate slum-dwellers; we must not think of you as being Negro-baiting money-grabbers. The truth of the matter is that we do not know each other well, and that generalizations are therefore dangerous and misleading.

If bigotry could be laid aside, and if the United States would put into effect in her Pan American policy the principles enunciated in official speeches, we could be very good friends. Trujillo, Rojas Pinilla, Batista, Stroessner, and Pérez Jiménez are not representative of the best of South America. The United States did a wonderful job in helping to sweep totalitarianism from Europe. We wish the United States would remember that South America belongs to the civilized world, too.

Women In Our Nation's Politics

EXTENSION OF REMARKS
OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by one of our outstanding Congresswomen, the Honorable COYA KNUTSON, of Minnesota, before the convention of Democratic Women's Clubs held recently at St. Petersburg, Fla. Mrs. KNUTSON is a valued member of the House Committee on Agriculture and is highly esteemed by her colleagues. I am delighted to have this opportunity to share Mrs. KNUTSON'S interesting speech with Members of the House and others who read the CONGRESSIONAL RECORD:

SPEECH BY CONGRESSWOMAN COYA KNUTSON, NINTH DISTRICT, MINNESOTA, BEFORE CONVENTION OF DEMOCRATIC WOMEN'S CLUB, ST. PETERSBURG, FLA.

Madame Chairman, distinguished guests, and fellow Democrats, your chairman has suggested that I talk with you today about the part that women can and do play in our Nation's politics.

The subject is one of my favorites and I gather, from your attendance here, that it is a favorite subject of yours too. The men have been knocking over the ten-pins of our civilization long enough. Women will have to set them up again.

Historically, women have waited a long, long while for an articulate voice in our country's politics. Indeed, it will be only 40 years come 1958 since, and under a Democratic administration, she was accorded that right. So I was amused by the observation of a Republican bigwig after the last election. He was complaining that the loss of the Congress to the Democrats, despite the phenomenal popular appeal of President Eisenhower, indicated a serious lack of Republican political strength at the precinct level. He hoped, he said, that the women of the country would set matters aright. His diagnosis was so right. But why he thought the women of the country would pull his Republican chestnuts out of the fire escapes me. Unless, poor innocent, he thought that all women, being indubitably virtuous have, naturally, been Republicans since birth.

But this isn't necessarily so.

However, the Republican was right about one thing. He recognized that women—women's votes—are a formidable force in politics. Why? The fact of the matter is that we've been actively engaged in politics ever since man came out of the cave and was content to stay home nights. How else do you suppose the lawns get themselves mowed, leaky faucets fixed, fences repaired, Johnny's toys and baseball mitt picked up, the trash put out, the dog given his run, the dinner plates scrubbed and the children put to bed without too much remonstrance from the lord of the manor if woman were not a fairly smart politician. In the "do-it-yourself" lexicon, man's genius may be to analyze, take apart, explore and expose; but after the pieces are strewn all over the living room floor it's usually women's job to see to it that everything is picked up and put together again.

How to pick up the political pieces? How to mend the "leaky faucet" of Party responsibility, the "broken toys" of our friendly relations with other countries? How to settle "arguments between the children" of the world, and restore order and peace "in the household of the nations?" These are our present, pressing problems. Our home-trained and experienced skills, our womanly instincts and feelings, our native organizational abilities, channeled to the larger purpose, can do it. As one old beat-up campaigner, I would like to give you a few hints and suggestions—and more important—encouragement.

First: Their deep feeling for humanity makes women most effective campaigners. Let us remember we have wielded a heavy political club even though ours was not the place in the spotlight. The many women's organizations have left their indelible impressions in almost every phase of life. We may not fully realize the part we have played in politics. As often in the past, we have not received credit for the part we play in molding the thoughts and lives of our children. I feel that with the march of political time, the place of women in politics becomes more and more clear cut.

Women, the mothers of the generations, the bearers and supporters of the race of mankind, must do the job of discovering new, better and permanent solutions to the pressing social and survival problems of this age. We must study the problems, know the issues, provide the imaginative solutions. We must, logically, for example, lead the way out of the national lethargy and complacency about the dangers of continued testing of the world-consuming potential—the hydrogen bomb. As Dr. Albert Schweitzer, one of the greatest living men, says "We're committing a folly in thoughtlessness. We must muster the insight, the seriousness and the courage to leave folly and to face reality." Where there is a doubt as to the danger from fallout and from the death-dealing, cancer and mutation producing gamma rays, the decision must be made in favor of the doubt, not, as Mr. Eisenhower and Mr. Straus would have us do—minimize these possibilities and pretend they don't exist. We cannot brook the attitude that would permit the possibility that our children or our children's children will be monsters, idiots, bone-cancer ridden, suffering, or destroyed. We must take the lead. You and I must demand that our President (who, though he seems quite unaware of this dreadful responsibility, is solely responsible for making this decision) shall know of this universal demand that he take the initiative in leading the world out of this terrible darkness, this terrible danger.

We should use our peculiar gifts and capacities, our feminine understanding and warmth. We are the people who, by our very makeup, are physically and emotionally geared and committed to the loving care for the children and other helpless ones who need us. It necessarily follows, it seems to me, that the logical political home for women is the Democratic Party which has always been the party of the people, devoted to the interests of the people, the helpless and the unfortunate. Our party has always taken the lead in social reform, in providing for the needy and the ill. Moreover, our party's entire political philosophy is based upon the one most important premise that a healthy economy is the solution to social problems, and this is the principle upon which all Democratic legislation is based.

If we increase the number of consumers, business is automatically increased. If we increase purchasing power in the hands of each individual, business will expand to meet that demand. Our tax base grows. All these imply the need for an adequate farm program, adequate legislation to clear slum areas, to build schools and to take care of our aged among many others. A fair income to our farmers provides the base for purchase of items produced in the cities. Slum clearance and attendant programs develop citizens with incentive for better life. They do not become burdens on society and shiftless heads of families. Schools promote the training of minds, our greatest national resource, the medium for development of all other national resources. Our fast growing numbers of older people provide a wonderful opportunity for full play of our economic imaginations, to provide security and continued adequate purchasing power during the retirement years and at the same time utilize any possible overproduction.

These problems are all in the forefront of Democrats' minds. By contrast, as Mr. Stevenson pointed out last year, "It is a revealing reflection on the sense of values of the present administration that it has had a staff of 40,000 people working on the problems of the Nation's business concerns and exactly 9 people (with a budget of $65,000) working on the problems of our 15 million senior citizens. And when the President announced—with much fanfare and fine words, that he was setting up a Federal Council on Aging 'to review existing programs within the Government' and to 'make recommendations,' I couldn't help thinking how consistently the corporations get action from this administration, while the people get only conferences, councils, commissions, and confabs."

These unfortunate people, like all those on fixed incomes, are most vulnerable to inflationary pressures. The administration's money policies are directly contrary to our people's interests. When the Patman resolution for a congressional investigation of high interest rates by the Federal Reserve Board came up I was quite disturbed by the pressures exerted against it.

This resolution provided for a routine investigation by the Congress. I felt that if labor as a whole gladly accepts an investigation of the teamsters, certainly the Federal Reserve Board could stand an investigation. To me, the hard money and high interest rates negate the administration's theoretical efforts to prevent inflation. Inflation results, among other things, from inadequate production to meet demand. Industrial expansion and increased output of goods to meet demand are the principal deterrents to inflation. Expansion can only be achieved if credit is available at low interest rates. Since high interest rates and hard money restrict expansion the administration's policy merely feeds the inflationary pressures. Economic theories and practices change constantly. During the Feudal Age, those who engaged in banking operations and interest charging were held in contempt, although

their services were widely used for financing of feudal wars. Today, those who engage in banking practices are among the most respected of our citizens. Only a few short years ago, installment buying was frowned upon as improvident. Today, installment buying and commercial credit are the very foundation of our free economy. Consequently, I believe, and the Democratic Party believes that interest rates should be based upon the needs of the economy and the interest needs of the people. As such, the policies of the administration, which are not in the interests of the people, could very well stand an investigation by the Congress—the watchdog of the taxpayer's interests.

So much for the issues. I have named but a few to which women can devote their attention.

Second. I would like to say that women in politics have their own special techniques for promoting their candidates. There is ample printed material to assist with the mechanical details of block organization, educational registration and get-out-the-vote programs, and the like. And each of us has worked out our own do's and don't's. But I would like to give you a few additional ideas. It is an axiom that demonstrated interest engenders interest. You remember the successful advertising campaign put on a few years back by a hosiery manufacturer—incidentally, the company's only advertisement: "One woman tells another." If a large number of women in a given community become interested in politics, greater interest is instilled into the average woman. One significant factor in my first campaign was the large percentage of women who turned out in my district. My campaign manager, one of the county chairmen, fully cognizant of the potency of organized women, capitalized on this by developing Democratic women's clubs in all the villages in his county. One village with a population of only about 400 has now an active Democratic club of over 10 percent of the women and it is still growing.

There are several reasons for the effective part women can play in politics. Women have the time and the will (primarily because of their concern over the welfare of their families and their future) and the downright fortitude and patience which enable them to perform cheerfully the grinding, but fundamental, political chores of doorbell ringing, envelop stuffing, and coffee making ad nauseum. I turn an unbecoming shade of green when I contemplate the quantity of coffee I have drunk in the past and—horrors—the amount I shall have to consume before I die. However, coffee hours (and all the attendant chores) have become one of the political facts of life. Two of our outstanding Democrats in the Congress have categorically stated—and I second this—that they owe their political success to the coffee hours, the talks face to face with neighbors of the untiring little woman who brews the stuff and asks her friends in to meet the candidate. Coffee hours, in town after town across the country, have replaced the soap box which is usually on a cold, windy, snowy, hot, or otherwise uncomfortable corner in front of the drugstore and not conducive to easy and pertinent give-and-take political discussion.

I remember one Congressman who made the statement "Give me 10 good women and I won't need any men in my campaign." This indicates the value many elected officials place upon women. As much as possible we should encourage all people, regardless of political faith, to devote time to their political parties. (The political education on the facts of life can come later.) Sitting on hands accomplishes nothing, politically or any other way, except to warm the hands.

Third. We can well be proud of the part women played in the development of our country and in the capabilities we possess in the field of politics, both as to ideals and as to campaign techniques. But there is one additional consideration we should bear in mind always. Women in politics, particularly, should conduct themselves in such a way that they do not stand out as women. This probably sounds like a contradiction of everything I've said so far. On the contrary, this is the only way in which we can be effective. I have been quite aware of this during my experience in Congress.

As a Democrat, I am proud of my women colleagues. Congressman IRIS BLITCH is noted for her good looks as well as her background in the legislature in Georgia, and for her experience in the drug business and farming. She has been successful in the passage of watershed legislation and is a member of the Public Works Committee. GRACIE PFOST, the Congresswoman from Idaho, served five terms as treasurer of Canyon County and owned her own real-estate firm before coming to Congress. She is now widely known as "Hell's Belle," because of her eloquent and forceful espousal of a high Hells Canyon Dam.

Congresswoman MARTHA GRIFFITHS was an outstanding judge in Detroit. Congresswoman L. K. SULLIVAN maintains one of the most efficient offices on the Hill and is one of the most respected members of the Banking and Currency Committee and the Marine and Fisheries Committee. Her special interest during her service in the House has been on consumer problems. Foreign affairs is the specialty of another outstanding and highly esteemed Congresswoman, EDNA F. KELLY, of New York. Congresswoman KATHRYN GRANAHAN, of Philadelphia, Pa., elected to complete her late husband's term, then reelected on her own merit, has a wide and extensive background in social service and civic work, and continues in Congress her efforts on behalf of a better, safer, and healthier world, and has particular concern for all people's welfare. Oregon has contributed a valued Congresswoman in EDITH GREEN, a former teacher with an outstanding background in the educational organizations of that State. She serves on the Education and Labor Committee—and the legislation she has introduced shows her special concern over problems in areas of health, education, and public welfare. Congresswoman ELIZABETH KEE of West Virginia, widow of the late chairman of the House Foreign Affairs Committee, is continually aware of the needs of her district, parts of which are depressed agricultural and coal-mining areas. She is a valued member of the House Committees on Veterans' Affairs and Government Operations, with a special and sympathetic interest in disabled veterans and the physically handicapped citizen. They are all outstanding women leaders. This brief description is indicative of the wide range of interests and the diversity of background to be found among these Democrats. It also shows the different avenues by which one approaches active political life.

However, to get back to my point, for all the diversity of our interests and activities there is one thing we have in common—our conduct in the House. We have, apparently, subconsciously, arrived at the same conclusions as to the atmosphere we want to create. My feminine colleagues and I are the soul of consideration and go out of our way to avoid personality clashes.

In addition, we avoid speaking on every subject under the sun, purely for the sake of talking. For example, we avoid making speeches on the floor of the House, except where issues affecting our constituents or the national interest require them. Whenever we find it necessary to make political speeches, we try to make them outside of Congress. For my part, I find I have the best results from working with my male colleagues on a personal basis. If I speak to a fellow legislator, explain a given problem carefully and individually, he will usually help all he can.

I recently found a set of comparisons which illustrate some of the problems we women contend with in the popular imagination, probably stemming from the stresses and strains of our changing status over the course of the last half-century:

"If he doesn't marry, he's a bachelor, a glamorous word. If she does not marry, she's an old maid.

"What he hears at the office is news. What she hears at the bridge club is gossip.

"If he runs the family, he is the head of the house. If she runs it, she wears the pants of the family.

"In middle-age he is in the prime of life, or the peak of his career. At the same age she is no spring chicken.

"If he is an easy spender, he 'Does not deny his family anything.' If she does not count the pennies, she's a poor manager and extravagant.

"If he keeps an eye on her at a party, he is an attentive husband. If she sticks close to him, she is a possessive wife.

"If he hasn't any small talk, he is the quiet type. If she hasn't any she is just dumb.

"If he is oversolicitous of her, he is a devoted husband. If she is oversolicitous of him he is henpecked.

"When it's his night out, he's out with the boys or at a meeting. When it's her night out, she's at a hen party."

It is perfectly true that these are instinctive characterizations and are what you might call "holdover aspects of the double standard." However, as a result, if possible, we must avoid any actions that would permit of characterizations of this type or bolster any such diehard opinions. We have to be better than good and maintain always a positive, frank, impersonal yet friendly attitude toward everyone, without irriation or taking personal offense. We should never exhibit aggressiveness, or any of the other eager-beaver characteristics which lead to a charge of egotism or limelight seeking. In short, like Caesar's wife, we must be above reproach. Hard lines, but that's the way it is. And these considerations are as important in your precinct work as in mine.

Above all, my friends, talk to everyone, your friends, your neighbors, your servicemen, your children's teachers, your minister. Talk politics, talk issues, talk plans. Constant emphasis on issues, problems, facts, will leave a subconscious but indelible impression and stir the interests of all those with whom you come into contact.

My dear ladies, one would almost think that I am suggesting that you "get out there on the field and save the game." Well, for your information, that is exactly what I am suggesting. You are the new and potent force in politics, and if I have managed to put a little steel in your spines and a little pride into your hearts as to your capacities and your potential, I have been successful in my mission. I am reminded of the zookeeper, who, after years of effort, had managed to cross a tiger and a parrot. Asked what in the world came from such a combination, he replied, shakily, "I don't know, but when he talks we listen."

Postal Wages Too Low

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mrs. GREEN of Oregon. Mr. Speaker, during the past few weeks there has been

a great deal of discussion concerning H. R. 2474, the postal pay-raise bill, which passed the House by an overwhelming majority July 23. This bill is scheduled to come up in the Senate this week. Many Republican Members of Congress and even a few of the Democrats are predicting a Presidential veto for the bill because they say the increase would be inflationary. The Oregonian of Portland, Oreg., printed a very good editorial last week with reference to postal wages being too low. It certainly paints a true picture of the financial predicament of the faithful and conscientious postal workers of today. I ask unanimous consent to have this editorial from the Oregonian printed in the RECORD at this point.

POSTAL WAGES TOO LOW

Postal clerks, carriers, and other employees got about a 10-percent wage increase in 1951. They got an 8-percent increase in 1955. Since postal wages have slipped behind those in many other Federal agencies, and far behind wages in industry, the post office is having a rough time keeping younger employees. The turnover is too great for efficiency. Some older workers are leaving for greener pastures. The post office is not so attractive as a career service as it once was.

The House of Representatives has adopted H. R. 2474, providing a $546 annual across-the-board cost-of-living increase for postal employees. This amounts to about 12 percent, but is by no means too generous. There is talk that the Senate committee, which has been considering a separate bill, may go along with the House to expedite the legislation.

The possibility of a Presidential veto has been raised. Although post-office employees consider themselves on the tail rather than the head of inflation, and we think they are right, Postmaster General Summerfield has said the increase would be inflationary. But why single out postal employees to hold the line, when wage adjustments are being made in other departments and the price of steel has boomed $6 a ton?

The view that post-office wages should not be increased unless there is a comparable boost in mail rates and charges is untenable. Congress sanctions a $600,500,000 annual deficit in the post office because it is politically afraid to increase rates. But employees cannot in justice be made the scapegoat for political timidity, or for any more tenable reason for subsidization of the Federal mails. The House postal pay bill should be adopted in the Senate, and it should not be vetoed by President Eisenhower.

What Do Minneapolis People Think on Major Issues?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. JUDD. Mr. Speaker, in recent years I have annually prepared and sent to each resident of my congressional district whose name was listed in the telephone directory, a questionnaire dealing with some of the major controversial issues facing Congress and the Nation. The response to this year's questionnaire, totaling almost 9,000 replies, has been most gratifying and informative.

It was my plan to report a compilation of the replies earlier in the present session. In fact, May 1 was established as a cutoff date and complete tabulations were made. But when hundreds of additional replies continued to come in, it seemed advisable to retabulate. This has considerably delayed the public report, but the trends in the thinking of the people of my district were quite plain by last April.

At least a third of those replying took the trouble to add constructive comments. Many said that on certain questions a straight "yes" or "no" answer was not fully descriptive of their view. I recognize fully that on a complicated issue it is not possible to phrase a short question in such a way that a "yes" or "no" answer will express exactly what one believes. But even so, the person's reaction of approval or disapproval in general, tells me a lot and is very useful.

This is the same problem a Congressman has to resolve when he votes on a complicated bill. How often I wish I could vote, say, 70 percent for and 30 percent against a bill. But I can vote only "yes" or "no" as if it were all good or all bad. The decision has to be made on whether I think the good features are sufficiently good to justify accepting the bad or less good along with them.

Highly significant is the consistency with which residents of the Fifth Minnesota District are in fairly close agreement on most issues regardless of partisan affiliation. This is particularly true with respect to foreign policy questions, but carries over to a surprisingly high degree on most major domestic issues. For example, a large majority of the members of both parties as well as of independents believes that postal rates should be increased to pay more of the costs of operating the postal service, and that Government aid to farmers should not be increased.

Considering the recent magazine articles and radio and TV programs emphasizing waste or failure in our foreign aid programs, it is important to note overwhelming support in all groups for the basic objectives of our mutual security programs to assist friendly nations in the struggle against world communism. The rank and file are properly concerned about the trees, but they do not lose sight of the forest.

The replies show clearly that the two uppermost concerns of our people today are our national security and our economic stability. They recognize that the menace of world communism is the No. 1 issue of the 20th century: National defense—the threat from without—ranks first in concern. Communism in Government—the threat from within—ranks second. The economic stability of our Nation is next, as shown by the fact that reducing the Federal budget, reducing taxes, and reducing the national debt rank third, fourth, and fifth.

The replies make plain the desire of the people for greater economy in governmental expenditures. And, I might add, this desire has brought results in Congress. I have received much less mail this year urging new spending than in any of my 15 years in the Congress.

Yet, by no means do people desire to abolish or curtail established assistance programs, such as social security. They show, however, a growing awareness of the costs of these programs and ask that a real justification be made before we further extend or expand them.

What the people want now, the replies demonstrate, is a thorough reappraisal of our social security system in terms of today's conditions. Many failed to realize, when social security was begun in the depression years, that it was not designed primarily to provide for employed persons the income necessary to an adequate living standard in their later years, but rather to get older persons out of the labor market and thereby spread the number of jobs. To accomplish that end the original law provided that a retired person would lose his benefits if he earned more than $14.99 a month. But now there is no such need to save jobs for younger people. The economy needs the skills or labor of all, including the elderly. There is no need to penalize them for the good American virtue of industry. They are happier as well as better off if they can work and earn for a few years longer.

Furthermore, they need the additional income because they find that they cannot live on the retirement benefits they receive. Too, many had been led to believe that social security would take care of all their retirement needs and did not save as formerly or make other provision for their old age. Their payments into the fund were never adequate to provide annuities of the size they need—especially since continued inflation has reduced so drastically the purchasing power of those annuities. Much clear thinking, reevaluation and numerous adjustments are necessary in this area if the confidence of our people is to be retained.

Distinctly evident in the replies is the tendency of rank-and-file people to have less confidence than some of our officials in their ability to make any lasting and beneficial arrangements with the leaders of Communist nations—be they Russian, Chinese, or Titoists. The people can tell the difference between right and wrong; they put principle ahead of expediency. They know that the Communist form and philosophy of government is incompatible with human freedom and with our own way of life; therefore they are not too optimistic about negotiations with leaders of Communist governments. They put more trust in sticking to our principles than in deals with oppressors. My own conviction is that history will prove the people more realistic in their appraisal than many supposed experts have been.

It is interesting to note the overwhelming and bipartisan support for increased postal rates to pay the cost of the postal service, and yet the very great difficulty in getting the Congress to pass this type of legislation.

Civil rights is of greater concern to the people of the fifth Minnesota district this

year than it was in last year's questionnaire, as would be expected in view of recent public discussion of this issue in Congress, the courts, and news media.

Low farm prices are of less concern than they were last year. Probably this is accounted for by the leveling off in farm price decline, and in many instances, substantial increases in farm prices under Secretary Benson's long-range farm programs.

May I also say that I am personally very grateful for the appreciative remarks a good many added about my work as their representative in the Congress. Naturally I like to hear that, but I also value and welcome the criticisms expressed by some. Wherever there is dissatisfaction it is helpful to know it, so that my views or actions, if in error, can be corrected; or if the criticism results fom misunderstanding, my position can be better explained.

Mr. Speaker, these are but a few of the observations and reflections suggested by the response to my questionnaire this year. The replies indicate careful consideration and thought. They deserve equally careful and serious study.

The survey follows:

OPINION SURVEY—FIFTH CONGRESSIONAL DISTRICT, MINNEAPOLIS, MINN., 1957

Do you consider yourself:

	Number of replies	Percent of total
Democrat-Farmer-Labor	737	8
Republican	4,956	57
Independent	3,015	35
Total returned	8,708	100

FOREIGN POLICY

1. In general, do you approve the way the Eisenhower administration is handling our foreign relations?

	Yes	No	No opinion
In Europe?			
All	75.5	16.9	7.6
Democrat-Farmer-Labor	47.4	42.9	9.7
Republican	86.3	8.5	5.2
Independent	68.0	24.6	7.4
In the Middle East?			
All	63.6	28.1	8.6

Republican	53.2	33.4	13.4
Independent	49.2	37.2	13.6
Yugoslavia?			
All	43.0	42.1	14.9
Democrat-Farmer-Labor	46.5	40.9	12.6
Republican	43.6	41.1	15.3
Independent	41.1	44.2	14.7

4. Do you favor changing our laws to permit barter of farm surpluses to Communist nations?

	Yes	No	No opinion
All	42.1	49.5	8.4
Democrat-Farmer-Labor	39.3	52.9	7.8
Republican	40.3	50.9	8.8
Independent	45.7	46.3	8.0

5. Do you think Congress should authorize admission of a greater number of refugees from Communist-dominated countries?

	Yes	No	No opinion
All	30.8	62.7	6.5
Democrat-Farmer-Labor	29.1	66.4	4.5
Republican	30.9	62.4	6.7
Independent	31.1	62.1	6.8

DOMESTIC POLICY

6. Do you favor Federal financial aid for construction of public schools:

(a) If the amount of aid to a State is determined only by the number of school-age children in that State?

	Yes	No	No opinion
All	29.9	56.6	13.5
Democrat-Farmer-Labor	45.0	40.3	14.7
Republican	26.1	60.7	13.2
Independent	32.7	53.6	13.6

(b) If the amount of aid takes into consideration also a State's resources and the effort it is making with those resources? (A "no" answer to both (a) and (b) will indicate you are opposed to Federal aid.)

	Yes	No	No opinion
All	59.6	31.9	8.5
Democrat-Farmer-Labor	73.7	17.1	9.2
Republican	56.4	35.9	7.7
Independent	61.3	29.2	9.5

7. If you approve Federal aid for public school construction, do you favor inclusion of a provision barring aid to States that maintain segregated school systems?

	Yes	No	No opinion
All	37.0	40.6	22.0
Democrat-Farmer-Labor	47.1	44.8	8.1
Republican	33.5	39.7	26.8
Independent	40.4	39.3	20.3

8. Welfare programs such as social security, old-age assistance, unemployment and disability compensation, etc., have been expanded substantially during recent years, with corresponding increase in costs. Do you favor further expansion of these programs?

	Yes	No	No opinion
All	55.2	38.9	5.9
Democrat-Farmer-Labor	84.0	13.0	3.0
Republican	47.1	46.9	6.0
Independent	61.5	32.1	6.4

9. In general, do you believe the Congress should provide greater financial assistance to farmers than they are now receiving?

	Yes	No	No opinion
All	15.1	78.5	6.4
Democrat-Farmer-Labor	39.3	53.7	7.0
Republican	9.8	84.5	5.7
Independent	17.9	74.6	7.5

10. Do you think Congress should increase postal rates to reduce the estimated Post Office deficit of $650 million instead of paying the annual deficit by taxes as at present?

	Yes	No	No opinion
All	75.4	19.9	4.7
Democrat-Farmer-Labor	72.9	23.7	3.4
Republican	75.5	19.9	4.6
Independent	75.7	19.2	5.1

11. Do you think Congress should repeal the provision under which some States have banned compulsory union membership clauses in labor-management contracts?

	Yes	No	No opinion
All	21.7	68.1	10.2
Democrat-Farmer-Labor	50.5	38.4	11.1
Republican	14.7	75.7	9.6
Independent	26.1	62.7	11.2

12. Do you think Congress should pass legislation requiring Federal registration and regulation of labor union pension and welfare funds?

	Yes	No	No opinion
All	85.3	9.3	5.4
Democrat-Farmer-Labor	77.7	16.7	5.6
Republican	88.1	7.1	4.8
Independent	82.2	11.5	6.3

13. Do you think Congress should increase substantially the limitation of $1,200 which a person receiving social security benefits can earn without losing those benefits, even

though such increase would require larger payroll deductions for social security?

	Yes	No	No opinion
All	86.4	35.8	7.8
Democrat-Farmer-Labor	65.7	27.8	6.5
Republican	55.3	37.2	7.5
Independent	56.0	35.5	8.5

14. Do you favor continued development of Wold-Chamberlain Field as the major airport for commercial flying in the Twin City area?

	Yes	No	No opinion
All	78.9	15.4	5.7
Democrat-Farmer-Labor	78.4	17.8	3.8
Republican	80.3	14.1	5.6
Independent	76.8	17.0	6.2

15. Please number (1, 2, 3, 4, 5) in order of their importance the five domestic issues which cause you greatest concern today:

	All	Democrat-Farmer-Labor	Republican	Independent
National defense	16,683	1,243	9,767	5,673
Communist influence in United States	12,256	850	7,739	3,667
Reducing taxes	11,834	840	7,178	3,816
Reducing the Federal budget	11,778	444	7,815	3,519
Reducing the national debt	10,199	463	6,717	3,019
Civil rights	8,314	945	4,065	3,304
Corruption in Government	8,041	729	4,234	3,078
Federal bureaucracy	7,900	207	5,253	2,440
Cost of medical care	7,824	828	3,783	3,214
Provision for eldery people	7,294	801	3,774	2,719
School construction	7,188	935	3,421	2,832
Labor-management relations	7,043	416	4,459	2,168
Slum clearance	3,627	493	1,573	1,561
Low farm prices	3,561	545	1,757	1,259

NOTE.—Totals weighted: 5 points for 1st, 4 points for 2d, 3 points for 3d, 2 points for 4th, and 1 point for 5th.

The Lead-Zinc Crisis

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. DIXON. Mr. Speaker, it is important that the Members of this House recognize the fact that unless some action is taken soon to stabilize the domestic price of lead-zinc most of our remaining domestic mines will be forced to suspend operations. Such action will adversely affect thousands of American miners and their families.

Last week the Committee on Ways and Means heard testimony from some of our Nation's leading industry authorities who clearly predict disaster for the domestic lead-zinc industry under present circumstances. One of these witnesses speaking for the entire industry was Miles P. Romney, of the State of Utah, who is manager of the Utah Mining Association. I am having Mr. Romney's graphic statement inserted in the RECORD at this point for the information of the Members of Congress:

STATEMENT OF MILES P. ROMNEY, MANAGER, UTAH MINING ASSOCIATION

I graduated with a degree in geology from the University of Utah and did postgraduate work at Columbia University. My practical experience in mining covers 25 years, principally in the Western States, working in the capacities of miner, geologist, and mine manager. As manager of the Utah Mining Association I represent Utah mine operators producing 10 percent of the Nation's lead and zinc, about 25 percent of the Nation's copper, and substantial quantities of other minerals and metals, including uranium, molybdenum, vanadium, potash, tungsten, fluorspar, iron, coal, gypsum, limestone, etc. Recent oil and gas discoveries have elevated Utah to major status in terms of reserves and potential production.

Due to the necessity of limiting the number of witnesses, I will attempt to present the case of Western States to the committee on the subject of the hearing.

The 11 Western States since the end of World War II have annually produced from 50 to 60 percent of the total domestic mine production of lead and zinc. In 1956 they produced 56 percent of the totals of each metal.

In the critical period since mid-1952 economic pressure on domestic mining of lead-zinc has forced the closing of all but the lowest cost, most efficient, highest grade and better financed operations. Domestic mine production of lead and zinc in 1956 was but 81 and 79 percent, respectively, of their postwar, best productive years (1950 and 1951, respectively). Those surviving the low price and inflated-cost experience of the past 5 years have made strenuous efforts to survive through mechanization, revamping of mining methods, elimination of exploration and long-range development, and by resorting in many cases to selective mining of higher grade ore, a practice which wastes both investment and ore reserves.

In marked contrast, the 1956 domestic consumption of slab zinc and new lead had increased 28 and 8 percent, respectively, over the averages of 1947–49. In the same period worldwide mine production increased 59 and 42.5 percent, respectively; and imports of new zinc and new lead increased 111 percent for zinc and 50 percent for lead.

The low level of existing duties, as recognized by the 1958 lead-zinc investigation of the Tariff Commission, an investigation initiated by this committee, has been a substantial factor in permitting a continued flow of excessive imports. The resulting depressed prices of lead and zinc have forced mine shutdowns, curtailments and elimination of most exploration work for replacement of reserves.

Every mine is marginal at a given price for metals. American mines have been marginal to foreign production since 1952 largely because our American miners enjoy an American standard of living through the highest wages, the most inclusive fringe-benefit programs and the best working conditions in the world. Most of those now operating would not be marginal in foreign areas.

One western operator tersely illustrated this point when he said:

"My mine is not marginal because of its ore, it's marginal because of its being located in the United States."

With lead at 16 cents and zinc at 13½ cents for the full year of 1956, 4 of the 5 major lead-zinc mines in Utah lost money. New Park Mining Co., at Park City, Utah, reported a loss of $113,840 in 1956. A statement to this committee shows an additional loss of $6.29 per ton of ore mined at present prices of 14-cent lead and 10-cent zinc.

The issue at stake in the proposed sliding scale import tax for lead-zinc is related directly to economics of mining ore. All costs beyond direct mining costs, including cost of milling, smelting, refining, marketing, and the transportation cost related to each are deducted from the prevailing price of the metal before the miner is paid for his ore. The statement of the United Park City Mines Co. to this committee indicates that the mine receives about 61 percent of the market price of lead and 27 percent of the price of zinc for the metal content of the ore it sells. This return is called "net smelter return," i. e., that amount of the price which is left for payment to the miner after the above cited costs are deducted.

Lead and zinc prices in 1956 averaged almost of the same as for the 1947–49 period. However, a review of the factors of cost in 1956 as compared with 1947 shows a 79 percent increase in miner's base wage, 48 percent increase in cost of blasting powder, 80 percent increase in steel (base for tools, equipment, and many mining supplies) and a 57 percent increase for mine timber. Freight charges on lead bullion shipped to market from western plants has increased 96 percent over 1947 freight costs and that on slab zinc is up 99 percent.

The costs of milling, smelting, refining and marketing and transportation related to each, have increased proportionately with mining costs. For example, in 1947, a ton of lead ore containing 15 percent lead sold to a lead smelter on a 16 cent price would have a net smelter return value to a certain western mine of $31.48 per ton. In January of 1957 the same ton of ore at the same metal price would have returned to the same mine only $19.61, only 62 percent of the net realized in 1947. The net smelter return in January 1957, was 3.96 cents per pound of lead less than in 1947. The decrease in net smelter returns on zinc for the same period has been in the same proportion.

The impact of the depressed price—inflated cost, economic squeeze has been reflected in decreased domestic mine production of lead and zinc. Two specific examples will serve to illustrate for the West. Utah mills and smelters have traditionally served as buyers of ore from many independent mine producers in the adjacent and nearby States of Colorado, Arizona, Nevada, Idaho, Montana and California. In 1949 those mills and smelters purchased ore from out-of-States mines from which 49,000 tons of lead and zinc metal were recovered. In 1955 but 7,000 tons of those metals were recovered from such ores, representing a casualty among independent operators of some 42,000 tons. Tons are cold figures. The figures, on lost jobs, lost investment, distressed communities and general discouragement with mining as a vocation and an investment field are difficult to document, but would be realistically warmer. The total domestic mine production loss in 1956 was 145,000 tons of zinc and 83,000 tons of lead-compared with peak, postwar years production records.

The records of the Utah State Tax Commission shed further light on the casualty list of smaller independent lead-zinc operators.

Twenty-three operators appeared on Utah property tax rolls in 1949, 14 of whom produced less than 10,000 tons of ore each, but who made an aggregate production of 26,068 tons. In 1955 such operators reached a low ebb, there being only 4, and they produced a total of only 1,791 tons of ore. Major operators, producers of 10,000 tons or more, dropped from 9 in 1949 to 5 in 1955. Of those 5, 2 more have closed since the price drops in May of this year. One had produced lead-zinc continuously since 1909, the other for at least 25 years.

Economies of western States are heavily dependent on raw materials, production and sales. They export minerals and metals in exchange for the goods they don't produce—

goods which come from other areas of this country. Our ratio of manufacturing to raw materials production is far below the Nation's average. We don't manufacture cars, or refrigerators or watches or cotton fabrics, or radios and TV sets, or drugs, or furniture, etc., etc., but we do buy a substantial quantity of those items with the American standard of living wages, salaries and business incomes dependent on mineral and other raw material production. We are firmly convinced that a dollar paid for metals produced in the United States ultimately buys far more American produced goods than the dollars spent for foreign produced metals. Dollars spent in America for American metals not only buy American goods but also pay their full share of American taxes.

I have tried to arrive at some practical appraisal of the direct tax producing potential of the domestic lead-zinc mining industry. However the number, the variation and the complexity of tax applications forced me to give up. I can but call attention to a few facts.

Individual income is taxed at about 30 percent of its total by local, State and Federal Governments. Wages on lead zinc mining in 1956 therefore produced about $20 million of such tax income.

Federal income taxes of about $9 million would be paid if the industry were sufficiently healthy to earn an average of 1 cent of taxable income per pound of metal produced. Very few companies have paid Federal income taxes on lead-zinc production since 1952.

Utah property and production taxes on lead-zinc mines were about $570,000 in 1949. In 1954 they were about $362,000. The direct tax loss in this taxable bracket was $200,000, not a big loss in today's astronomical figures, but $200,000 that other Utah taxpayers had to pay. There were similar losses in tax income to the State from sales tax, corporate franchise taxes and the many hidden taxes on the supplies, equipment and utilities, normally consumed by the mines. The Federal transportation tax of 3 percent amounts to some $325,000 per year on western produced lead and zinc.

The total tax impact of the industry is substantial and the tax losses over the past few years of depression in the industry have been painful. Particularly to western and other communities which rely in substantial measure upon tax income from mining to sustain community services.

Mr. C. E. Schwab in his statement for the Emergency Lead-Zinc Committee urged that import taxes on lead and zinc be set at levels which would maintain domestic prices at 17 cents for lead and 14½ cents for zinc, the peril-point price levels stipulated for application of the proposed import taxes. We firmly support that position and offer the following data to substantiate industry's need for such prices.

In the statement of the New Park Mining Co. to this committee a loss of $113,840 is reported for 1956. Prices throughout the year were 16 cents for lead and 13½ cents for zinc. That loss was equaled 1 cent per pound of metals produced. At 17-cents lead and 14½-cents zinc that company would have broken even in its 1956 operations; or would have traded a dollar's worth of ore for a dollar's worth of labor, supplies, services, and tax obligations.

The United Park City Mines Co. in a statement to this committee itemizes a loss of $176,745 in the 16-month period from January 1956, through April 1957, when prices remained at 16 cents lead and 13½ cents zinc. They show that a 1-cent increase in lead and 2-cent increase in zinc prices would have enabled them to break even or realize a very slight profit.

In other words those two properties would have about broken even at the 17-cents lead and 14½-cents zinc peril-point price levels.

The United States Tariff Commission in their report of April 1954, to this Committee on the Investigation of Lead and Zinc (Rept. No. 192, 2d series), give data on profits of lead-zinc mines in table L. Z.-5, page 228. Companies reporting profits to the Tariff Commission for the first one-half of 1953, representing 79 and 56 percent of the domestically produced lead and zinc, showed a 5.3 percent profit. (Whether operating profit or net after tax liabilities is not stated.) Prices during that period average 13.324 cents for lead and 11.35 cents for zinc—24.674 cents total lead-zinc price.

Weighted averages of the increases in base wages and in the cost of basic mine supplies from 1953 to 1957 show an increase in mine production cost factors of 23.3 percent. The total lead-zinc price of 24.674 cents for the first half of 1953 thus equals about 30.423 cents at present cost levels. However, the miner now receives a lesser amount of the metal price because of the increased cost of smelting, refining, marketing, and transportation. The increases in such costs, charged to the miner, amounted to about 1 cent per pound of zinc and about 1 cent per pound of lead. This loss of 2 cents in the combined net smelter return, added to the increased cost of operation, indicates that the miner needs 32.423 cents today to be equal to his position as determined by the Tariff Commission in mid 1953. The Tariff Commission, after investigating the condition of the lead-zinc industry at that time, found the industry being damaged by excessive imports and recommended substantial increases in the import duties on lead and zinc.

The Emergency Lead-Zinc Committee has prepared an 18-page summary of the Tariff Commission's findings and recommendations on the lead-zinc case. With the chairman's consent I would be pleased to offer that summary for the record of this hearing.

Lead-zinc mines have closed since the drastic drop in metal prices in May 1957 in the Western States of California, Montana, Utah, Colorado, New Mexico, Nevada, Washington, Idaho, as well as in several Midwestern and Eastern States. Curtailments have also been made in the production from other properties. The present prices of 14-cent lead and 10-cent zinc forced by greatly excessive foreign supplies, have placed in jeopardy the backbone of our domestic lead-zinc mining industry, i. e., those mines which have managed to survive the uncertain and largely unprofitable conditions prevailing since early in 1952.

Utah and western operators join the rest of the lead-zinc industry in urging passage of import-tax legislation. We believe the industry proposals, as to peril points and import-tax applications, contained in testimony presented to this committee by Mr. C. E. Schwab, chairman of the Emergency Lead-Zinc Committee, will accomplish that end and respectfully urge the committee to favorably consider those proposals.

Significance of the Gluck Appointment

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the Foreign Service of the State Department is today, in the name of economy, turning aside scores of young men and women highly trained to devote a lifetime to the diplomatic service of this Nation.

It is characteristic of this administration's approach to the critical problems of our world that, at this particular time, a dress salesman who cannot pronounce the name of Nehru, and one of whose two vaunted qualifications for the post was that he never got into trouble with the FBI, has been named Ambassador to one of the most sensitive nerve centers in southeast Asia. There is no way to measure how many millions of dollars must be spent for propaganda and foreign aid in the hope of persuading the people of this area that, although our Ambassador does not know, the American people do know and, more important, care, something about them. Mr. Gluck may learn how to pronounce the name of India's famed Prime Minister, but in the process the American people will have paid a staggering sum for his tuition.

I ask unanimous consent to insert in the RECORD the following editorial from the Oregon Journal of August 6, 1957, concerning the significance of this appointment:

PEACE DEMANDS OUR BEST MEN

Considerable furor has been raised in recent weeks over the impending fight between Pete Rademacher, champion Olympic boxer but still a rank amateur, and Floyd Patterson, professional heavyweight champion who has demonstrated a deadly power with his fists.

The concern is justified. At best the so-called fight could turn out to be an extremely poor exhibition. At worst, it could result in injury or death, something that has happened too often in recent years.

While we exhibit considerable concern over a prize fight between an amateur and a professional, we seem content to put our diplomacy in the hands of men who, prior to appointment, have shown neither interest in nor aptitude for the job of representing us abroad.

The fact is, for years both political parties have used top diplomatic spots as a haven for party members with money and time on their hands.

In years past this system resulted in no great harm and occasionally it has produced excellent diplomats. Today, our diplomacy is a dominant force in the battle for world peace. Particularly delicate are our relations with countries which are experiencing the birth pains of freedom and a raising nationalism, such as those in Asia.

Similar danger exists in the Central and South American countries. They are extremely touchy about domination by or condescension from the big brother to the north.

In each of those areas we fight a continuous battle for men's minds against the ever present Communist threat. The Russians are hard-headed, hard-fisted diplomats—professionals in every sense of the word.

Into this type of breach we, all too frequently, throw rank amateurs whose sole qualification is that they can afford to take a diplomatic post and that they "want to do good" for the country.

Two recent developments illustrate the point. The first is Maxwell H. Gluck, Ambassador-designate to Ceylon, who did a consummate job of fumbling when questioned by the Senate committee.

Secretary of State Dulles attempted to excuse him by saying that if America were to limits its selection of envoys to Ceylon to those who know the premier's name (Bandaranaike), we should have a very limited choice.

Knowledge of the Premier's name is a minor item. What Gluck exhibited was a monumental ignorance of Ceylon, the Far East and foreign affairs in general. President

Eisenhower has suggested Gluck has the capacity to learn. That is interesting, but in the meantime newspapers in Ceylon have dubbed him "I don't know Gluck" and suggested he would do well not to accept his post.

In Cuba, our Ambassador, after 11 days of diplomatic experience, made remarks which has led the government bloc in the Cuban congress to demand his recall.

The Ambassador, Earl E. T. Smith, is a wealthy former New York stockbroker and former amateur boxer at Yale whose qualifications for United States representation in Spanish-speaking Cuba is a knowledge of French and German and the fact that he has traveled extensively.

Perhaps Gluck can learn and perhaps Smith's remarks which offended Dictator Batiste were justified. Children have the ability to learn and occasionally truth emerges from the mouths of babes, but no one so far has suggested diapers as the prime requirement for a diplomat.

Excellent diplomats have come from the nonprofessional ranks, but the time is past when they can learn on the job. They must be prepared, either by personal background and interests or by some type of inservice training, to step out on the right foot from the moment they are first considered for diplomatic duties.

It has been said that the history of our time will be written in Asia. Let the pages not show that we failed merely because of ignorance or carelessness.

Jerome K. Kuykendall

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. DINGELL. Mr. Speaker, the appointment of Chairman Jerome K. Kuykendall to the Federal Power Commission is before the United States Senate for confirmation.

Chairman Kuykendall during his tenure of office as Chairman of the Federal Power Commission did absolutely nothing to protect the consumers' interest and devoted his entire time and effort to serving the vested interest that he was charged with regulating. He is unfit for any office, especially that which he seeks.

A number of very important charges were leveled at him during a hearing before the Senate committee which heard his case. These cases were included among others, and I will only summarize briefly:

First. The fact that he has traveled around the country at the expense of the oil and gas companies which he was charged with regulating.

Second. That he made misleading representations to Congress in 1954 when he declared that the now defunct Dixon-Yates power contract was fair and reasonable to the Government, and suppressed criticism of the contract by the Federal Power Commission's Bureau of Law.

Third. That he is consistently, constantly, and unfailingly giving the gas companies precisely what they want in rate cases. Indeed, unless the claims of the gas companies were vigorously contested by the consuming interests he probably gave the gas companies whatever they wanted. In the recent matter of the Olin Transmission Corp., Mr. Kuykendall said, "Olin was a bit lucky here because I don't think their case was contested like it could have been."

Imagine entrusting the consumers' interest to a man of this sort, who thinks so little of the consumer that he makes an award to a gas company merely because the matter of consumer interest is not pressed vigorously enough.

Fourth. That he has permitted electric and natural-gas companies to use fast tax writeoff certificates as tax-free dividends to enrich supposedly regulated utilities and to gouge consumers.

Fifth. That he admitted in the House Committee on Interstate and Foreign Commerce that he called "secret" meetings of representatives of the gas industry to draft the present natural-gas bill, and that he actively participated in that endeavor, plainly aimed not at protection of consumers but rather at enrichment of the large natural-gas producers.

At this time, Mr. Speaker, I insert into the RECORD a copy of a letter sent by me and four of my colleagues, the Honorable THADDEUS M. MACHROWICZ, the Honorable JOHN E. MOSS, the Honorable B. F. SISK, and the Honorable CLEMENT J. ZABLOCKI, detailing a still further reason why his appointment should not be confirmed, the opinion in the case Catco matter.

Mr. Speaker, I hope very sincerely that the Senate of the United States will not permit this tool of the vested interests to pass upon the consumers' problem and that his nomination will be denied confirmation by a resounding vote.

JULY 18, 1957.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee, Senate Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: Since several of the undersigned appeared to testify against the confirmation of Chairman Jerome K. Kuykendall of the Federal Power Commission, certain matters have come to our attention which we feel should be considered in connection with his confirmation. It is our feeling that these matters furnish additional grounds for withholding confirmation of Mr. Kuykendall to the Federal Power Commission for another 5-year term. It is our hope that you will include this letter in the record of the hearings.

Our opposition to Mr. Kuykendall's nomination is based on his disregard of, and lack of sympathy for, the obligations, duties, and responsibilities placed upon the Federal Power Commission by the Congress of the United States in committing to that Commission the preservation of the public interest in the development of the Nation's resources and the protection of consumers of electric energy and natural gas against exploitation at the hands of the electric and gas companies under the Federal Power Commission jurisdiction and control.

Mr. Kuykendall's disregard of, and lack of sympathy for, his obligations, duties, and responsibilities as a member of the Federal Power Commission is self-confessed. Testifying before the House of Representatives Committee on Interstate and Foreign Commerce during hearings on H. R. 6790, a bill to amend the Natural Gas Act to deprive consumers of natural gas of effective protection against exorbitant gas rates, which bill Mr. Kuykendall enthusiastically endorses, Mr. Kuykendall was questioned about the Commission's recent decision in the Olin Gas Transmission Co. rate case. In that case the Commission granted Olin an increase in rates based in substantial part on an allowance of the field value of its own produced gas which exceeded Olin's actual cost of gas production by 100 percent. In excusing the windfall granted Olin and the very favorable disposition of other issues in favor of Olin, Mr. Kuykendall offered the incredible explanation that "Olin was a little bit lucky here because I doubt that their case was conducted like it could have been" by Olin's customers. If it had been contested more vigorously, he testified, "we might not have had substantial evidence to support a finding that this was warranted."

This is shocking testimony from a public official. Candid, to be sure, but nonetheless shocking and revealing. It reveals a callous disregard for his responsibilities which renders him totally unfit for the position to which he aspires and a fundamental failure to understand the Commission's proper function and the reason for its existence. Obviously, the Commission's responsibility to protect the consumers against excessive rates imposed upon the Commission by the Federal Power and Natural Gas Acts does not vary with the degree of opposition that may prevail in a given case from the customers of the pipeline company and cannot be made to depend upon it. The Commission's obligation exists and persists in every proceeding, at every stage, in the same degree, regardless of the degree of participation of the customers. The Commission, which includes its expert staff of technicians and lawyers, owes its existence to the fact that consumers are unable to protect themselves adequately against the utilities that are well able to take care of themselves, having the resources and the wherewithal to retain experts to present the utilities' point of view. How can consumer interests be entrusted to him.

One might conclude from Mr. Kuykendall's testimony with reference to the Olin case that he welcomes and encourages intervention of customers. But this is not the fact, for under his leadership the Commission's attitude toward intervention has been much less liberal and in the courts the Commission has opposed review of its orders at the instance of consumer-intervenors on technical grounds more than it ever did prior to his leadership of the Commission.

There was a time when the Commission rarely objected to review of its orders on technical grounds. Rather, it welcomed review. Today, however, the reverse is the case and the major reversals suffered by the Commission in the courts when consumer interests have managed to overcome the technical obstacles and secured review of Commission orders explains the Commission's greater preoccupation in recent years with efforts to block court review by consumer interests.

There was also a time when review of Commission rate orders in the courts found the Commission and consumer interests defending the Commission's rate orders against attack by the regulated utilities. Today, however, review in the courts finds the Commission and the regulated utility stand shoulder to shoulder against the consumer interests which have had to invoke the aid of the courts to secure fulfillment of the Commission's responsibilities.

The Commission's dereliction of its responsibilities under Mr. Kuykendall's leadership has become so grave that it has produced the remarkable spectacle of a regulated utility protesting the Commission's failure to protect the consumers against exploitation and calling upon the court to "act as a guardian of the public interest."

In a brief filed with the United States Court of Appeals for the District of Columbia Circuit, Mississippi River Fuel Corp. declared:

"In sum if the prices paid by a pipeline company to nonaffiliated producers are to be accepted as sufficient in themselves to form the basis for future decisions in determining the fair field, market, or commodity value of pipeline-produced gas for ratemaking purposes, the consuming public—represented here by Mississippi—is being deprived of even the minimum protection to which it is entitled under any criteria of ratemaking. An affirmance of the Commission's order and examiner's decision will put a stamp of approval upon a method affording a pipeline company self regulation of the price of gas produced by it or an affiliate. The correction of this patent error is of crucial important if an effective system of regulation is to be maintained."

* * * * *

"In this, it need only be pointed out that the Commission has a positive duty in this respect, a duty entrusted to it by the Congress under the Natural Gas Act. That duty is to protect the consumer interests against exploitation at the hands of private natural gas companies, or to protect consumers from excessive rates. That duty is not discharged by inaction of the type which counsel for the Commission endeavors to explain in his brief.

"This is not the first time, even in recent years, that this court has been called upon to act as guardian of the public interest when this and other regulatory commissions have been derelict in their duties in carrying out congressional mandates."

* * * * *

"Apparently, unless the Commission's functions are to fall into a condition of regulatory desuetude, this vigilance on the part of this court must continue. No better example of such a necessity can be found than in this case."

On July 8, 1957, the court of appeals vacated the Commission's order and remanded the case to the Commission for the performance of its duties. *Mississippi River Fuel Corp.* v. *Federal Power Commission*, F. 2d , No. 13199.

Mr. Kuykendall's leadership produced the recent unconditional surrender of the consumers to the mercy of the producers in the CATCO certificate proceedings involving applications by four producers from which the proceeding derives its short name (Continental Oil Co., the Atlantic Refining Co., Tidewater Oil Co., and the Cities Service Production Co.) to sell a large block of gas from their leases off the coast of Louisiana to Tennessee Gas Transmission Co. at an initial price of 22.4 cents per thousand cubic feet until November 1, 1962, which thereafter would escalate by 2 cents per thousand cubic feet every 4 years until the contracts for sale expired.

First, by order issued April 22, 1957, the Commission said:

"* * * The record shows that the 22.4-cent price is higher than Tennessee Gas is paying under any other contract. It is this price, with the provision for escalation, to which the interveners have made vigorous objections in exceptions to the presiding examiner's decision, which would grant a certificate without a rate condition attached to it. They contend that if the rate were allowed to stand it would establish a higher price plateau in a new area to the detriment of consumers.

"The record contains insufficient evidence or testimony, however, on which to base a finding that the public convenience and necessity requires the sale of these volumes of gas at the particular rate level here proposed. The importance of this issue in certificating this sale cannot easily be overemphasized. This is the largest reserve ever committed to one sale. This is the first sale from the newly developed offshore fields from which large proportions of future gas supplies will be taken. This is the highest price level at which the sale of gas to Tennessee Gas has been proposed.

"These factors make it abundantly evident that, in the public interest, this crucial sale should not be permanently certificated unless the rate level has been shown to be in the public interest. (See Cities Service Gas Co., Signal Oil & Gas Co., 14 F. P. C. , opinion No. 288, Nos. G-2569, G-2570 November 28, 1955, affirmed as *Signal Oil and Gas Co.* v. *F. P. C.* 238 F. 2d 771 (C. A. 3), certiorari denied 353 U. S. 923.)"

* * * * *

"The contracts between Catco and Tennessee Gas provide November 1, 1957, as the date for commencing service, and in order to comply with the leases and the Louisiana Shelflands Act, production should commence by 1958. To meet this schedule Tennessee Gas must build its underwater pipelines before the onset of the season of bad weather. In view of this total situation we are disposed at this time to grant temporary certificates to Catco for the sale of gas and to Tennessee Gas as requested by it for its proposed 107 miles of connecting pipelines. At the same time, we shall remand the Catco proceedings to the presiding examiner to determine at what rates the public convenience and necessity requires these sales to be made if permanent certificates are to be granted to these companies upon final disposition of their applications."

This disposition of the case did not, however, satisfy the appetite of the producers. They threatened to cancel their contract for the sale of the gas unless the Commission issued a permanent certificate for the sale at the intial price of 22.4 cents per thousand cubic feet.

The Commission then yielded to the demand for a permanent certificate in its order issued May 20, 1957, but insisted that protection of the interests of consumers required that the producers agree to an initial price of 18 cents per thousand cubic feet, "the highest price presently being paid by Tennessee Gas for the purchase of any gas produced in the Southwest area." As a further concession to the producers, however, the Commission agreed in advance to permit the producers to file for an increase in that rate, even to the 22.4 cents per thousand cubic foot price, and to suspend the proposal for only 1 day although the Natural Gas Act provides for the suspension of a rate increase proposal for a period of 5 months in order to maintain the status quo while the Commission has some opportunity to investigate the reasonableness of the proposal.

This concession, of course, literally reduced to lip service the Commission's avowal of concern for the protection of the consumer interests. But even this was not enough for the producers. They demanded a permanent certificate with no strings attached. By order issued June 24, 1957 the Commission, therefore, abjectly surrendered its public responsibility and issued a permanent certificate at the initial price of 22.4 cents per thousand cubic feet, although it had previously loudly proclaimed, and the fact remained, that the evidence could not support a finding to support the issuance of a certificate on this basis.

This was too much for Commissioner Connole, who dissented. Protesting the abandonment of public responsibility he said:

"The record is plain that the controlling reason the parties refuse to submit their contracts to regulatory review in the manner found to be necessary in the public interest is their preference for a proceeding in which the burden would be on the Commission to establish that the rate was more than reasonable. They flatly refuse to submit to one in which the parties would be required to show only that the rate was required by the public convenience and necessity. No citation of authority or reference to regulatory theory is needed to demonstrate that the burden of showing the public convenience and necessity requires a proposed service at a particular price level is on the party seeking to take advantage of the proposed service and not on the tribunal before which the case is to be made. Under the unique conditions found here, the critical importance of that decision is indisputable."

* * * * *

"The decision of the majority is justifiable only by the evil consequences of the loss of these reserves to the particular pipeline which is a party to the contracts. Such evils would, in the opinion of the majority, exceed the gain to follow from the proof that the public convenience and necessity does not require the sale of this gas at proposed rates.

"In my opinion, the consequences of abandoning our position will be more serious than their effect on this particular sale. Whether by design or accident, the issues in this proceeding now transcend the close limits of the original hearing. At stake is the question whether the Commission should hold a position which it has determined is in the long run public interest, or whether it should abandon it when confronted with allegations that short run injury to one segment of the industry and consumers might result. Where the issue is reduced to this simple statement, the answer is clear."

* * * * *

"As concerned as I am for Tennessee's customers, I am more concerned for the whole body of consumers on all transmission pipelines for whose protection we are responsible. And as deserving of preservation as I believe those particular orders to be, I believe the principle that Federal regulatory orders should not be changed by threats of abandoning public responsibility is even more important.

"On balance, and in view of the expansion of the issues beyond those originally contemplated by this docket, I believe it more important to the public interest to preserve the Commission's authority to make lawful and necessary orders than it is to preserve these contracts as written. The right to maintain valid orders against allegations of urgency, the importance to the consumer of the Signal Oil doctrine, and the right of all consumers for protection against unreasonable initial rates outweigh the potential damage to the consumers of Tennessee Gas Transmission which might flow from maintaining the position I urge here.

"While dissenting may appear to serve no useful purpose, the damage to consumer and to the public interest, to the regulatory process, and to the future of the interstate natural gas business as it is given me to discern it, would be such under the majority decision that, inevitable as that decision may appear to be, I am left no choice but to protest it by filing a dissenting vote."

It is true, of course, that Mr. Kuykendall's name does not appear on the final order issued Monday, June 24, 1957, since on that date he was no longer a member of the Commission, his term having expired the evening of June 21, 1957, the preceding Friday. He did, however, participate in the oral argument on June 12, 1957, and was in attendance at each of the series of Commission meetings from then through the meeting which took place on Friday, June 21, 1957, at 3 p. m., with the exception of the 10 a. m. meeting on June 19. The only other meeting at which he was not present during which the Commission could possibly have considered this Catco decision was on June 24, at which time the Commission made the formal vote on this last surrender to the big oil companies. It is interesting to note that on that date, June 24, the Commission met at 9:30 a. m. and at 11:30 a. m.

e final form of the very lengthy order was ot only completed but was approved and as mimeographed for distribution to the ess and public. A long dissenting opinion Commissioner Connole was also drafted, ed and reproduced. On the basis of these cts it appears reasonable that discussions the Catco matter must have been held uring this interim period in which Chairan Kuykendall was not only present acording to the Commission's minutes, but ost probably participated actively. It is so fair to infer that he must have played a art not only in the consideration by the ommission of the necessary preliminary rafts but in the acceptance of the Commison of the final form of this last giveaway his term, which was so much in keeping ith the tenor of his leadership in the preous two decisions of the Federal Power ommission on this same Catco matter, and other similar giveaways such as Hells Canon, Dixon-Yates, and the Olin case.

One may also fairly wonder, in the circumstances, why no order was forthcoming hile he was still a member of the Commison. We respectfully suggest that the pendncy of the hearings on his confirmation ay have had something to do with it.

At any rate, Mr. Kuykendall should be ompelled to justify his actions in these pecific cases which have arisen since the ate of the formal hearing on his confirmation, and which so flagrantly constitute complete, abject and dismal surrender of he consumer interest and the Commission's esponsibility to the very people who are to e regulated by the Federal Power Commission.

These are but a few of the horrible examples. There are others. The record of Mr. Kuykendall's administration of the affairs of the Federal Power Commission during his term which has recently expired, in our opinion, shows his unfitness for continued service as a member of the Commission and we, therefore, urge that the committee disapprove his nomination.

Very sincerely,

JOHN D. DINGELL,
15th District of Michigan.
THADDEUS M. MACHROWICZ,
1st District of Michigan.
JOHN E. MOSS,
3d District of California.
B. F. SISK,
12th District of California.
CLEMENT J. ZABLOCKI,
4th District of Wisconsin.

Atomic Energy Bill

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Monroe (Mich.) Evening News of August 8, 1957:

ATOMIC ENERGY BILL

When the House of Representatives killed the so-called Gore bill in July 1956, it was a signal victory for the development of atomic energy by private industry. But now a bill of similar intent which would put the Government headlong into the atomic energy development field has been reported out by the Joint Atomic Energy Committee. It is expected to face a hot fight in the House and Senate, and well it should.

Basically the bill provides for the Government to take over development of atomic energy. In this respect it is almost a direct contradiction of the Atomic Energy Act of 1954, which invited private enterprise to work with the Government in this vast new field.

The Republican Members of the Joint Committee issued a minority report which pretty well sums up the philosophy of the committee majority in approving the bill. "The privately owned reactor has been as effectively eliminated as if it had been wiped out of the Atomic Energy Act of 1954," they said. "The general approach * * * is this: 'We cannot do enough to help the public-power groups. On the other hand, we must do everything possible to discourage the private groups'."

In another section of its report, the minority pointed out "To revert to a federally controlled atomic power program is a step backward, not forward. It is a big, fateful step, and it may be difficult to turn around and start walking in the right direction again after the mistake has been realized."

This is the bill in which public power advocates have taken their latest shot at the Enrico Fermi Atomic Power Plant at Lagoona Beach. While authorizing the expenditure of some $58 million neither requested by the Atomic Energy Commission nor approved by the Bureau of the Budget for Government-controlled atomic powerplants, the committee majority eliminated the $4,200,000 the AEC had requested for research and development for the Fermi plant. This is necessary to enable the AEC to fulfill the terms of its contract with Power Reactor Development Co. for the Lagoona Beach reactor.

In its majority report accompanying the bill, the committee said: "The committee does not approve the requested authorization for preconstruction research and development work and waiver of fuel use charges in connection with the reactor project of the Power Reactor Development Co."

The committee minority labeled this "a flat and flagrant misstatement as to the intent of the members of the committee." The minority contended it was the understanding that $1,500,000 included in the bill for research on fast-breeder reactors could be applied on the Fermi project, if the AEC so desired.

"The Commission is fully authorized to use any of the funds authorized by * * * this bill, or any other funds available to it, to fulfill its obligations under this (PRDC) contract, and should do so," the minority contended.

We do not put too much stock in reports that PRDC might cancel the Fermi project if the AEC is prevented from fulfilling its research obligation. We believe PRDC would pay the relatively small amount involved itself. As Robert W. Hartwell, PRDC assistant general manager, told the joint committee little more than a month ago:

"Quite frankly, PRDC thinks that, when a group of companies has already spent or obtained firm commitments for the expenditure of over $60 million for research, design, and construction of a nuclear powerplant and has actually started erection, it is an argument born of desperation to say that the companies will not or cannot raise several more million dollars should that prove to be necessary."

This is only one of the provisions in the bill which will, or should, be thoroughly hashed over as Congress itself begins consideration of this vital atomic-energy measure.

"Ten Years After"—Barbara Ward Jackson Speaks Out on the Marshall Plan

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mrs. BOLTON. Mr. Speaker, all over this great country of ours we have learned to respect a very charming English woman, brilliant author and economist Barbara Ward Jackson. It would seem particularly pertinent for us all to be aware of her considered judgment upon a decade of the Marshall plan. It is with pleasure that I include in my remarks an excerpt from her speech before the Alumni Association at Harvard University on June 13, 1957, which appeared in the August issue of the Foreign Service Journal:

TEN YEARS AFTER—IS THE VISION VANISHING?
(By Lady Barbara Ward Jackson)

The Marshall plan proved that men need not be, as Marx proposed, prisoners of their own most narrow material interest. It showed that no limits need be set to the imaginative generosity of freemen.

How, after a decade, shall we read its profit and loss account? Some of the effects have been enduring—the upward physical surge of Europe goes on. It is Western Europe that has grown and prospered while Soviet exploitation and Communist superplanning has kept Eastern Europe in penury and despair. The hope of a wider political unity in Europe, first sparked by the Marshall plan, has not flickered out, and this year could bring the first foundations of a common market. The United States has sustained the practice of foreign aid and Congress now seems likely to accept the salutary principle of aid planned on a sustained basis and linked to long-term purposes. All this is a great gain and to measure how great it is we can recall the end of the decade after the First World War, when with depression, unemployment, and despair, the world was already preparing for Hitler, for Japanese militarism, and for renewed conflict.

But in spite of these real and sustained gains, I would not say that today, 10 years after General Marshall's great speech, the alliance of free men stood in as hopeful a posture. No great enterprise unites us now. We maintain a defensive alliance within NATO, but as history has always shown, nothing dissolves so quickly as defensive coalitions—and at this moment while Khrushchev steals the headlines over disarmament, NATO is in fact disarming itself with little mutual consultation and certainly no quid pro quo from the Russian side.

Politically, the alliance had by last autumn drifted so far apart and confidence and understanding had dwindled to such a pitch that the tragedy of Suez became possible. Anyone coming from Europe must candidly report that distaste for the Atlantic association is widely expressed. In fact, one distinguished American statesman, questioned about the alliance on his recent return from Europe, replied: "There isn't any." While this may be too extreme, what is certain is that the distrust, the envy, the fear of American power and competition—which are inevitably given the nations' relative strengths—are now unchecked by any opposite sense of working with America to achieve any larger purpose and of experiencing first-

hand the energy, the vitality, and the imagination which America can bring to any high task it proposes to itself.

The trend, therefore, is now towards a disintegration of the Atlantic community. The work begun by General Marshall still persists. But it is growing weaker and unless it is renewed, the political cooperation of free men—that vision of a new method and a new purpose in world diplomacy—will vanish as surely as did the union between the Greek states before Persia or the Italian cities before the Spaniard. The drift in human affairs is against cooperation and we are in those slack and dangerous waters now.

But at least we are not as badly off as we might have been 10 years ago. Then one could have despaired of free coalition of nations ever uniting in time of peace to achieve some great and constructive aim. Today at least we know it is possible and we know, from the Marshall plan, some of the preconditions of success. If we wish to restore our alliance—and who, in view of Communist strength and ambition, can think the need for it any less?—we know what we have to do. The lessons of the last 10 years are not lost. The book is open, if only we will read.

In the first place, our aim should be our own, not dictated by Communist pressure, not evolved as a countermeasure, but springing from the positive needs of our society and taking the initiative in meeting them. Ten years ago, General Marshall declared that the policy of free men was not directed against any country or any doctrine but against poverty, despair, and chaos. They were the international enemies then—they are the enemies now. But we are no longer fighting them together.

Secondly, the enterprise should not be the monopoly of any one nation. Those with most wealth and strength cannot abdicate the duty of leadership but the essence of the Marshall plan was that American aid, given to a cooperative group of powers, called out their efforts and energies in equal measure. Today, when these economies are largely restored, they can participate as givers as well as receivers. The cooperation could thus be more complete. But the essential point is joint, not unilateral, action.

Last of all, our joint work as free nations ought to aim, as the Marshall plan aimed and succeeded, in going beyond the conventional, national limits of our traditional economy and diplomacy. In 1947 the crisis facing Europe could only be solved by America's disregarding the conventional limits set to international buying, selling, trading, and lending and by Europe setting aside the narrow bilateral political inhibitions under which each nation separately had been trying to drag itself up from the morass.

If we look for the preservation of our alliance in these terms, I do not think we need look far for the kind of concrete constructive programs which would meet what one might call the Marshall criteria. Take, for instance, the issue of the common market in Europe. Valuable as it can be, it could also become a means of division, setting up that political chimera—a third force—and splitting the free world straight down the Atlantic Ocean. But why should not Europe's efforts be paralleled by joint efforts to develop a low tariff area—if not a free trade area—for the Atlantic community as a whole? Such an effort would need a new attack upon the problem of convertibility and would require a high, progressive overseas investment program to ensure that lowered tariffs and wider competition could be eased by expanding markets elsewhere. But again, there is no shortage of such possible areas of investment.

India and China have both reached a crucial stage in their 5-year plans. In both, rising population and the drift to cities are endangering the investment targets set in the plans. For India, the pressure is particularly heavy upon the sector demanding foreign exchange. If the Atlantic powers at this time jointly underpinned a part of India's essential investment, the Indians could forge ahead of the Chinese and show all free Asia that development without compulsion, backed by Western capital, gives the answer of growth, hope, and ambition whereas communism is caught in its own contradictions.

Asia is not the only possible field for an imaginative program. All west Africa is within sight of independence and this area, bulging out into the Atlantic, may be the first arena where Africa's unforced allegiances are tested. France is urging its fellow-Europeans to invest there. Such new states as Ghana are in search of capital. Wide international schemes for Saharan development could be one factor in pacifying north Africa. No, it is not shortage of potential areas for imaginative investment that is impeding western plans. It is the fading away of all idea that exceptional policies are still necessary in our continuously exceptional, revolutionary, and indeed catastrophic world.

For this surely is the root of our trouble, 10 years after the Marshall plan. We have lived with the mushroom cloud and the falling strontium, with Communist brutality and the agony of subject peoples, with death and disaster, until, in some way, we have managed almost to accept our universe in these terms. While the gates of hell swing ajar, we turn away our eyes and conduct our affairs almost as though the staid patterns of limited 18th century diplomacy and sovereignty were still relevant. In the Marshall plan, for once, the Western World had a concept and achieved a program which in some measure met the extreme challenge, the extreme strangeness and newness of our atomic age. But since that time, we have done little but coast along on its declining momentum and that momentum is nearly spent. Today our world is no less revolutionary but we have almost created—as we did between 1919 and 1929—the illusion of normalcy.

The illusion is as deadly now as it was then—indeed, more deadly now that the stake is literally the annihilation of the human race. The old ways lead to the old disasters. Today we need for very survival to revive the vision of the Marshall period and think, work and plan together in enterprises adequate to our revolutionary world and worthy of the energies of free men.

Happy Birthday, Herbert Hoover

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FARBSTEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News on the occasion of the 83d birthday of former President Herbert Hoover:

HAPPY BIRTHDAY, HERBERT HOOVER

(By Harry H. Schlacht)

Tomorrow we shall honor Herbert Hoover on his 83d birthday. We wish him many, many happy returns of the day. Every liberty-loving American will place a wreath of affection at the feet of this great statesman, patriot, and gentleman.

When future historians survey the character and achievements of our ex-President, they will find them rising like a huge mountain above the undulating plain of humanity. His virtues will grow brighter. His name will be written larger with each passing year.

The life story of Herbert Hoover is a romance of adventure, of indomitable energy and courage, of real training in the school of life. He was the son of an Iowa village blacksmith. He was orphaned at the age of 7. His life symbolizes the fact that America is another name for opportunity.

He is one of the rare constructive thinkers along political and economic lines today. He is one of America's best informed statesmen on world problems which have a vital bearing on our Nation. His vision and imagination, his Yankee grit and fearlessness. His vast knowledge of world affairs, his genius for organization, saved the world during World War I from a wave of anarchy and unbridled revolt that threatened civilization.

For the first time in the history of mankind America became her brother's keeper, without expecting any reward, without any selfish motive, without any thought of gain. Herbert Hoover interpreted the heart of America to the world. He translated the idealism of America into humanitarian service.

There is scarcely a nation that has not been aided by Mr. Hoover in behalf of America. He has brought America to the world. He has raised American prestige and moral influence for universal peace, for international understanding, for international good will. Herbert Hoover's place in history is secure.

May the poorest lad in our blessed land learn from the career of Mr. Hoover that poverty is no bar to the triumph of the free spirit. The avenues of the citadel of our strength and posts of honor are open to universal competition.

The freedom-giving institutions of our land call to the highest honors her children from the workshop, from the city and from the farm. The ranks of American eminence have come from the humblest origin.

When the future paints the picture,
And the angels set the time,
There will be a master artist
Who will paint a form divine,
When with deft and hallowed fingers
He will write upon the scroll
The name of Herbert Hoover,
A great American soul.

May God be with you—Herbert Hoover—now and forever.

Address by United States Senator Edward Martin of Pennsylvania, at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States Held at Harrisburg, Pa., July 10–14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10–14, there were several outstanding addresses delivered by prominent officials of the

Federal Government in keeping with the theme of the encampment, Defense Means Freedom.

On July 12, 1957, the following address was delivered by United States Senator EDWARD MARTIN of Pennsylvania:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN OF PENNSYLVANIA, AT THE 38TH ANNUAL ENCAMPMENT OF THE DEPARTMENT OF PENNSYLVANIA, VETERANS OF FOREIGN WARS, AT HARRISBURG, PA., JULY 12, 1957

It is a great honor for an old soldier to be invited to address this outstanding organization of real Americans.

Your patriotism has been tested on foreign battlefields. You know what it means to face the enemies of our Nation in the hellfire of war. Sustained by loyalty and devotion to American ideals you have been willing to sacrifice everything that this Nation, under God, may live in honor, peace, and freedom.

The welfare of our country is always uppermost in the hearts and minds of the veteran. For that reason I want to discuss frankly with you some of the dangers confronting our Nation.

But first, let us look back with pride at the background of the United States. Let us review the magnificent achievements which in less than 200 years have converted a savage wilderness into the world's greatest stronghold of industrial and agricultural production. Let us be thankful that we have advanced to the highest cultural and spiritual levels ever attained by any similar area in the whole world.

The history of America is a glorious story. It tells of toil, sacrifice, and heroism. It tells of victory produced by a people whose hearts and minds were aflame with the spirit of liberty and independence.

It tells of those courageous patriots who met in Philadelphia more than 180 years ago, and pledged their lives, their fortunes, and their sacred honor to establish a new Nation. For the first time in all the world, government recognized the Divine origin of man's inalienable right to "life, liberty, and the pursuit of happiness."

For the first time a government was based upon the sound principle that governments derive their just powers from the consent of the governed.

The story of America is the story of George Washington, Benjamin Franklin, Thomas Jefferson, Abraham Lincoln, and all the dedicated statesmen of each generation.

It is the story of the heroes who offered their lives for independence at Lexington, Bunker Hill, Valley Forge, and Yorktown. It is the story of Gettysburg, New Orleans, the fields of Mexico, and Admiral Dewey at Manila. It is the story of Chateau Thierry, the Argonne, the Normandy Beaches, Iwo Jima, and the frozen hills of Korea.

There is no story so glorious in all world history. It should be told and retold, over and over again, in our schools and colleges from the pulpits and lecture platforms, in meetings of fraternal and patriotic organizations, in labor meetings, political rallies and every other place where Americans assemble.

Therefore, it is most appropriate, in a meeting such as this, to consider the situation confronting the United States.

The course of history has placed upon the American people the responsibility for peace and progress in the world. The United States stands as the one strong barrier against the Communist conspiracy to dominate and enslave the entire world.

We must not allow ourselves to be lulled into a false sense of security by the mask of friendliness now worn by the masters of the Kremlin.

Recently there was broadcast into millions of American homes an example of Communist propaganda more flagrant than anything ever before attempted.

It was a brazen attempt to convince American listeners that Soviet Russia has no evil designs against the free nations of the world. We were told that the Russian dictators seek only friendship and peaceful coexistence.

Yes, my fellow Americans, the Communist boss talked of peace but real Americans were not fooled. The record denies their words.

The civilized world will long remember the ruthless slaughter of men, women and children by Communist tanks and machine guns in crushing the Hungarian revolt of 1956.

Yet those guilty of this monstrous crime—those responsible for the wholesale execution of Hungarian freedom fighters—ask us to believe that this time they are sincere when they talk of peace. The record shows that the Communists have sabotaged every effort for peace and will continue to do so.

Their fundamental objectives have not changed. They have not abandoned their unholy ambition to destroy all human freedom.

Those of you who heard that broadcast will recall the prediction that the grandchildren of Americans living today will live under a socialistic system.

That was a grim warning that must not be ignored. It calls upon us to be constantly alert to the dangers of Communist influence here at home. We must fight disloyalty with every legal weapon at our command, and if our laws are not strong enough they should be made stronger.

You are all familiar with the decision of the United States Supreme Court made about a year ago, which held that the Federal Government has exclusive jurisdiction in the field of sedition and subversion.

This decision struck down laws enacted in 42 States and Territories under which those guilty of subversion could be prosecuted and punished by the State.

I believe that each State should have the right to combat sedition within its borders. I believe each should have the right to punish not only those who seek forcible overthrow of the State but also those who would overthrow the Nation by force.

More recently several other decisions of the Supreme Court have greatly weakened the Federal Government's legal drive against Communists and subversives.

I have no cirticism of the Court. We are a nation of law and under our system no individual is denied equal justice. But I repeat if existing law is not adequate to deal effectively with disloyalty it is the duty and responsibility of Congress to enact legislation strong enough to do the job. I can assure you that Congress is taking steps in that direction.

Now I would like to direct your attention to some other dangers that threaten America.

First, inflation. Since 1939, the purchasing power of the dollar has dropped to less than 50 cents.

One of the most difficult functions of a free government is to maintain a stable currency. At the same time it is one of the most important objectives of government. Inflation has the power to crush any economy upon which it fastens its grip and thus it can destroy a nation. In fact, more great nations have been destroyed by inflation than by invading armies or destructive bombs. A nation destroyed by a military force can rebuild itself, if the people have the spirit and the will to work, but a nation where incentive of the individual is destroyed has very little chance of recovery.

Inflation damages all with fixed incomes and inflicts severe hardship on millions of our people. The person who lives on a pension, social security, or interest on savings cannot escape the evils of inflation. There are now in the United States more than 16½ million on social security, corporation, and Government retirement, veterans' pensions, veterans' survivors benefits and military retirement pay. Many are widows and orphans. Continued inflation is a threat to the many millions of savers in the United States, the owners of bonds, owners of life insurance policies and savings accounts.

Second, big government and government doing things that we should do for ourselves. More than 7 million now work for the 3 levels of government, at an annual payroll of $40 billion.

The vast expansion in the size and cost of government at all levels is leading us away from the ideals of the Founding Fathers. The people are constantly demanding more and more services and many believe that projects paid for with Federal funds do not cost them anything.

The cost of State and local government has been increasing more rapidly than the Federal Government. The tendency toward more and more expensive government by taxes and borrowing must be stopped or we will drift into creeping socialism.

It has been proposed that consideration be given to a new division of the functions of government and a new allocation of taxes to perform those functions. President Eisenhower in a speech delivered to the governors' conference at Williamsburg, Va., on June 24, called upon the Governors to join in an effort to return certain responsibilities to the States.

Several years ago I suggested that national defense, foreign affairs, rivers and harbors and banking and currency be Federal functions with income taxes, import duties and liquor and tobacco taxes to furnish the Federal revenues. The States would build the roads, provide higher education, administer penal and correctional institutions and conservation with estate taxes, sales taxes and the gasoline tax to furnish them the money. Local government would provide police power, sanitation, courts and public schools and have as its tax source real estate, admissions, mercantile and wage taxes. This is just a brief outline but I am sure that such a plan would mean a big saving for the taxpayers.

Third, too much private and public debt. Never before in the history of the world have any people owed so much as we owe today. It should be a matter of deep concern to every one of us that the American people now owe a total of more than $800 billion in gross private and public debt. This is an average of about $4,700 for every man, woman, and child in the Nation, or about $18,800 for the average American family of four persons.

Net corporate debt went up from $92½ billion in 1946 to $208 billion at the end of 1956.

People have been buying out of tomorrow's paycheck. At the end of 1945 individuals owed less than $6 billion which in 1956 had increased to $42 billion.

Net State and local government debt has increased from $13½ billion in 1945 to $42.7 billion at the end of 1956 and has greatly increased since that time.

Fourth, moral decay among the people. Great armies and great navies will not maintain a nation's strength where the moral courage and patriotic fervor of its people are permitted to decay. Every student of history knows that great nations of the past have gone down to destruction when the moral fiber of the people was undermined by greed and corruption.

Fifth, too little interest in government. Unfortunately, there are too many misguided Americans who do not understand and do not appreciate the real meaning of America.

They do not seem to realize that our system of free government places upon each

citizen an equal share of responsibility for our security and our progress.

Good citizenship is the basis of patriotism. That is why I am constantly urging every individual to take a more active, intelligent and patriotic part in government.

I bring these dangers to the attention of this great organization of veterans because your patriotic service entitles you to leadership in civic responsibility.

We pray that America may never turn away from its historic mission—to defend liberty, to oppose oppression, to stand against injustice and to support the aspiration of all men of good will for a world of peace and freedom.

We hope and pray for the day when all nations will lay down their arms and live in brotherhood under God.

But until that happy day dawns we must be prepared to defend the God-given freedom that we hold sacred.

Eternal vigilance is still the price of liberty.

Real Motive for Opposition to Reactor Plant Evident

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Ann Arbor (Mich.) News of August 8, 1957:

REAL MOTIVE FOR OPPOSITION TO REACTOR PLANT EVIDENT

The thin veneer that has covered one of the real objectives of those opposing the construction of a fast breeder atomic reactor near Monroe wore through the other day at the Washington hearings. The United Automobile Workers and other unions have contended they are opposed to the plant in the Lake Erie shore marshes because they fear it will not be safe. The builders point out that the Government will never allow a reactor to operate unless it can pass safety tests.

It has been clear from the start that major opposition to the project of the Power Reactor Development Co., a group of private firms engaged in atomic power research, comes from Federal power advocates. They prefer to see the Government deeply involved in another line of endeavor, another tax-free operation like TVA.

It is easier to gain popular support, however, by raising the issue of safety.

At the hearing the other day, an attorney for the unions protesting the construction permit for the plant, questioned the AEC general manager about an AEC order setting the price paid for plutonium. The UAW attorney contended an illegal subsidy was planned in the price to be paid PRDC for plutonium produced as a byproduct of the Monroe plant.

The AEC examiner conducting the hearing ruled that this was a matter for the Senate-House Atomic Energy Committee to determine and its legality a subject for the courts. It seems to us he might properly have asked also what that has to do with the safety of the Enrico Fermi reactor.

The point raised appears to be one the congressional committee will not overlook. It already has struck a blow against private atomic power research by eliminating from an AEC bill an allocation of $4,200,000 in research funds for the group building the Monroe plant. It is all right for industry to put millions into such an experiment and fight a legal battle at the same time, but apparently it is wrong for the Government to invest less than a tenth as much as a group of private companies are willing to risk.

It is about time for Congress to say whether it is sincere about encouraging private industry to enter into the atomic power field in competition with Government, or whether its purpose is to strengthen that monopoly.

Strength With Economy Fixed as Objective for Navy Plans

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. WILSON of California. Mr. Speaker, in his speech last week before the Institute of Aeronautical Sciences meeting at San Diego, Navy Secretary Thomas S. Gates, Jr., made a frank exposition of the Navy's policies and plans for the future.

Secretary Gates' background as a naval officer in World War II and his subsequent service as Under Secretary of the Navy, has admirably qualified him for his newly assigned duties as civilian head of the Navy. He is quietly and effectively leading the Navy at a time when it faces tremendous transitional changes.

An editorial outlining a portion of Secretary Gates' recent remarks was featured in the San Diego Evening Tribune of August 8, 1957. I ask unanimous consent to include this editorial as a portion of my remarks.

The editorial follows:

STRENGTH WITH ECONOMY FIXED AS OBJECTIVE FOR NAVY PLANS

An enlightening restatement of the United States Navy's role and plans has been made in recent days, part of it in San Diego this week when Navy Secretary Gates spoke before a meeting of the Institute of the Aeronautical Sciences. The meeting was a part of the National Naval Aviation Week program.

Briefly stated, the Navy proposes to achieve the maximum strength possible without waste.

And industry must make its contribution "at absolute rock bottom prices," Gates emphasized.

Gates spoke against a backdrop of national and international statements upon defense problems.

Britain has done some reappraising of its own position, and its conclusions have a pertinence for the United States defense planners.

The British experts believe Russia's long-range submarine fleet is a greater menace to their country than are the big bombs. The bombs could be dealt with promptly, and perhaps the nuclear phase of a war with Russia would be over in 3 weeks.

But with not less than 350 submarines, Russia could starve the islands out during the succeeding 12 months, it is feared.

It is here that the United States Navy finds one of its greatest probable roles. As Gates pointed out here, it will be the duty of the Navy to be "a big brother bolstering a faltering ally."

It is primarily naval power that must keep the seas open.

In order to do this, Gates believes the Nation's defense organizations should be directed under the concept of the Joint Chiefs of Staff.

Referring to this recently in a Boston address, Gates said he is opposed to "such nonsense" as a merger of the Army, Navy, and Air Force into a single service. He said that those urging such monolithic unification are "wholly uninformed and (are) looking for easy answers to a gigantic problem."

This opposition to a Prussianized command is supported by a statement in Congress recently by Senator LEVERETT SALTONSTALL, Republican of Massachusetts.

In introducing a paper by Col. James D. Hittle in the Marine Corps Gazette for inclusion in the CONGRESSIONAL RECORD, SALTONSTALL said:

"This article very effectively discusses the fundamental military, political, and historical reasons why the United States-developed defense organization is superior."

Hittle's paper strongly opposed the idea of a single control for the defense forces, arguing that nations which have followed this system have been defeated by other nations following the joint-chiefs plan of direction and planning.

The nature of the Navy's function directs that it be a member of a "well-balanced team in which [each] component does that for which it is best fitted," Gates said.

As a member of that team, he said, the Navy would have:

"Carrier-based air attack against objectives which threaten our control of the seas.

"Seaplanes based on mobile supporting ships.

"Surface and submarine-launched guided missiles."

These three groupings of power will have these objectives, Gates said:

"To provide military, economic and political links across the seas of the Free World, and to deny corresponding linkage to the Communist bloc.

"Second, to use the ocean areas as a springboard for offensive operations, and as a vast maneuver area for the defense in depth of ourselves and our allies."

In San Diego and overseas, the roles and the need of a strong United States Navy in defending the Nation and the whole Free World against a deadly menace thus have been clearly stated.

The Nation and the Free World cannot afford to imperil that defense by any such gamble as a one-man command in the Pentagon instead of the present balanced Joint Chiefs of Staff.

Civil Rights Compromise by Trusting the Congress

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. RADWAN. Mr. Speaker, the civil rights issue can be compromised by both sides trusting the greatest institution of all time, the Congress of the United States. I submit herewith an editorial which speaks for itself and which appeared in the Buffalo Evening News, Buffalo, N. Y., on August 9:

CIVIL-RIGHTS COMPROMISE?

The civil-rights issue of 1957 is not yet settled by any means. Although both the Senate and House have passed a bill called H. R. 6127, to protect the civil rights of persons within the jurisdiction of the United States, the bill which the Senate has sent back to the House is the merest shadow of its former self.

What the House will do with it seems to be anybody's guess. The logic of the situation calls for an attempt to iron out differences in the two versions in a Senate-House conference committee. But the differences to be resolved are immense, and the area for possible compromise is narrow.

From the viewpoint of civil rights alone, two points are beyond debate: (1) the Senate version represents a far punier effort to protect the civil rights of persons within the jurisdiction of the United States than does the House version; but (2) even the Senate version would mean some advance for the cause of civil rights, and is clearly better than nothing.

There is a complicating element, however, that can't be minimized: The Senate, after drastically narrowing the bill to apply only to the right to vote, then gratuitously broadened it again to restrict the injunctive powers of the Federal courts by guaranteeing a jury trial to any person accused of criminal contempt—not only in right-to-vote cases, but in antitrust and every other kind of case.

The question which thus faces the President, if Congress sends him the Senate version unchanged, is whether this inching advance for civil rights is worth signing into law, at the expense of possibly crippling one of the traditional powers of the Federal judiciary.

He has not indicated yet whether he would sign or veto, but he has made very clear his hope that the jury trial amendment, at the very least, will be narrowed to apply only to right-to-vote cases.

How much more of its own original bill the House can realistically expect to hold out for we can't be sure. The South was so happy to settle for the detoothed Senate version that five Senators from the States of the old Confederacy actually ended up voting for the bill. Whether the House's insistence on toughening it up a bit would kill any civil-rights enactment is something the conferees will have to consider with care.

The House and the administration will probably be willing enough to accept everything in the Senate bill except the jury-trial amendment. If there is any room for compromise here—beyond the White House insistence on limiting it to right-to-vote cases—it still seems to us to be along the line suggested by Buffalo's Representative RADWAN before the Senate acted.

His proposal is that the jury trial be accepted for right-to-vote cases, but only on a 3-year probationary basis. After that, the jury-trial clause would expire unless Congress reenacted it. Instead of starting out on the premise that southern juries are not to be trusted to do their duty, his proposal would start by trusting them and giving them 3 years to demonstrate that the trust, on the whole, was well placed.

The real issue, after all, is whether this bill to protect the voting rights of United States citizens is going to be made a mockery by the refusal of juries in the Deep South to enforce Federal court injunctions. If it is, then we can be sure that the clamor for a more effective guaranty of the right to vote will be intensified in the next few years. So every jury in a right-to-vote contempt case will be in the spotlight of national public opinion either way. What the Radwan amendment would do is serve notice in advance that the jury-trial clause will expire automatically if it is openly used to thwart the right to vote.

Questionnaire to 11th District of Missouri

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MOULDER. Mr. Speaker, several weeks ago, I submitted a questionnaire to the rural, star route, post-office boxholders and to all persons listed in the telephone directories in all cities and towns of the 11th Congressional District of Missouri. I am pleased to report that 14,414 people have answered the questionnaire to date. I appreciate the fine response to the questionnaire and I am gratified to say that the people of the 11th District of Missouri are intensely interested in their Government and are willing to take the time to participate in it by expressing their opinions and advice to their Representative in the Congress.

The following is the questionnaire and the results, first in the actual figures and second in percentages:

1. Would you rather balance the budget and reduce the national debt than cut taxes? Yes, 9,565 (67.2 percent); no, 3,518 (24.7 percent); no opinion, 1,160 (8.1 percent).

2. Do you favor Federal aid for school construction? Yes, 7,584 (53.4 percent); no, 5,771 (40.7 percent); no opinion, 843 (5.9 percent).

3. Do you favor extending the Federal minimum wage and overtime hour laws—$1 an hour minimum—to retail stores and service establishments? Yes, 7,595 (53.4 percent); no, 5,093 (35.8 percent); no opinion, 1,541 (10.8 percent).

4. In the operation of the Post Office Department there is presently an annual deficit of approximately $464 million. Do you favor an increase in all classes of postal rates to: (a) Make the Post Office Department self-supporting? Yes, 7,418 (52.8 percent); no, 3,555 (25.3 percent); no opinion, 3,085 (21.9 percent). (b) Make a substantial reduction in the deficit? Yes, 5,633 (39.9 percent); no, 1,937 (13.8 percent); no opinion, 6,517 (46.3 percent).

5. If it requires a social-security tax increase, should the social-security retirement age for men be lowered to 62 (as now provided for women)? Yes, 6,945 (45.2 percent); no, 6,420 (45.4 percent); no opinion, 768 (5.4 percent).

6. Do you favor an increase of old-age assistance benefits? Yes, 8,549 (60.4 percent); no, 4,232 (29.9 percent); no opinion, 1,369 (9.7 percent).

7. Last year we adopted the farm soil-bank plan (costing $1.2 billion annually) to pay farmers for taking certain farmlands out of production to reduce farm product surpluses. (a) Do you favor this program? Yes, 3,371 (24 percent); no, 8,656 (61.6 percent); no opinion, 2,015 (14.4 percent).

(b) Do you favor the Eisenhower administration of this program? Yes, 3,045 (21.1 percent); no, 7,586 (52.6 percent); no opinion, 3,783 (26.3 percent).

8. Do you favor Federal regulation of labor union welfare funds? Yes, 9,767 (68.2 percent); no, 2,546 (17.8 percent); no opinion, 2,001 (14 percent).

9. Do you favor right-to-work laws which provide that a worker does not have to join a union to hold a job? Yes, 10,600 (75.1 percent); no, 2,954 (20.9 percent); no opinion, 564 (4 percent).

10. The President's annual budget asks for $4.4 billion for foreign military and economic aid ($2.6 billion for military aid and $1.8 billion for economic aid) for and during the next fiscal year. Do you favor this? Yes, 4,215 (30.9 percent); no, 7,133 (52.4 percent); no opinion, 2,278 (16.7 percent).

11. Do you approve President Eisenhower's general foreign policy? Yes, 4,951 (36.6 percent); no, 6,353 (47 percent); no opinion, 2,219 (16.4 percent).

12. Do you favor admitting more immigrants, including refugees from Communist-dominated countries, as permanent residents? Yes, 2,548 (18 percent); no, 10,094 (71.4 percent); no opinion, 1,504 (10.6 percent).

13. Do you favor the admisison of Alaska and Hawaii as States? Yes, 10,861 (79.6 percent); no, 1,370 (10.1 percent); no opinion, 1,406 (10.3 percent).

Atomic Powerplants

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Adrian (Mich.) Daily Telegram of August 10, 1957:

ATOMIC POWERPLANTS

A $58 million program to build Government owned and operated atomic powerplants is recommended by the Joint Congressional Atomic Energy Committee. The bulk of the appropriation would go to build a duplicate of the Calder Hall reactor, Great Britain's first atomic powerplant. The Atomic Energy Commission says we have no need of such a plant because reactors already being built in this country have greater economic promise.

The recommendation for an atomic reactor program, putting the heavier emphasis upon Government ownership and Government operation, was adopted by the Democratic majority of the committee. Included in the proposal is one calling for the Government to supply funds for five small reactors to serve rural electric cooperatives and municipal power stations. Also in the recommendation is a substantial reduction in Government funds that would aid the building of atomic powerplants by private industry. Clearly the Democratic majority of the committee wants Government control of atomic electric power. And that is a form of socialism.

There are strong reasons to doubt the need for any large-scale Government construction of atomic powerplants, and certainly more reason to doubt any need for rushing into it. America is not short of fuel for steam production—either from oil or from coal. A fuel shortage is the reason why Great Britain is rushing atomic powerplant construction. Any large-scale atomic plants built in the United States now are bound to produce steam at a much higher price than from available types of fuel.

America's real need is to continue research of the type that numerous public utility and manufacturing concerns are beginning under the Government, industry partnership instituted by the Atomic Energy Act of 1954. One such plant, financed by a combination of private companies, is under construction in Monroe. Several others are also on the way, including one in the Pittsburgh area and another near Chicago. These are pilot plants

aimed at finding the cheapest and most efficient ways of developing atomic power. If and when such undertakings show methods by which atomic power can be made truly competitive with, or cheaper than power from other sources, only then, will the spending of great sums of money for large-scale atomic installations be warranted.

And when that time comes, there will be no need for the Government to use taxpayers' money to build the plants. Private capital will provide it, and do it eagerly.

The recommendations of the Joint Congressional Committee are slanted toward getting the Government in on the ground floor of the atomic power business and keeping it there.

Col. John R. Donovan, Jr., a Tragic Loss

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. PHILBIN. Mr. Speaker, many people in Massachusetts and throughout the country were greatly saddened recently to learn of the untimely passing of Col. John L. Donovan, Jr., United States Air Force, retired, who for some years had resided at Quincy, Mass. He was a close friend, and I am deeply grieved by his demise.

Colonel Donovan had a distinguished, inspiring career. A graduate of Harvard College, where he stood out for his brilliant scholarship and his athletic prowess as an outstanding football star, John Donovan was a man of many parts and many interests.

At the time of his death, he was a high and very capable official of the General Services Administration at Boston, and previously served with the Veterans Administration in that city. His government service was conspicuous for great ability, efficiency and devotion to duty. Yet it was only one facet of the busy life of this most striking personality, who moved in many spheres of life.

The interests of John Donovan covered the widest range. He was active in a host of societies and organizations. To each, he brought unbounded enthusiasm, commanding mental powers and tireless energy.

John Donovan was a natural leader who inspired the confidence and trust of the people. He was brilliant in his conceptions, and once he decided upon a course of action he vigorously pursued it until it was successfully completed. He was a born organizer and his activities covered unceasing efforts and contributions in religious, patriotic, charitable, civic, military, and political programs.

He was intensely interested in the problems of youth and from early in life took effective leadership in the guidance, assistance, and counseling of innumerable young people. He worked wholeheartedly under the Commonwealth of Massachusetts in activities to better and improve the lot of the disabled, the handicapped, and less fortunate brothers.

Devoutedly religious, he rendered unselfish service and furnished superb direction to a number of laudable, organized groups of his own religious faith—a faith which he embraced with unfaltering love, devotion, and loyalty throughout his life.

Prior to his association with the Government, he was prominently identified with political affairs in the city of Boston and the State of Massachusetts, and his advice, counsel, and help were eagerly sought by many candidates, who rose to high public stations. I can recall and acknowledge from a very grateful heart the magnanimous support and effective assistance which he rendered to me early in my political career and which was so helpful in enabling me to advance in the public service.

John Donovan was a dedicated and zealous patriot. When World War II came, he immediately rallied to the great cause of country and served with rare distinction in our great Air Force. At the time our American forces invaded France, Colonel Donovan was assigned with our expeditionary units and had the great honor of raising the American flag above the towers of the City Hall at Paris.

One of Colonel Donovan's most brilliant accomplishments was his work in organizing and leading the Air Force Reserve unit at Boston following the war up to the time he became physically disabled not long ago.

I had the privilege at one time of visiting with and addressing this very remarkable unit. I was profoundly impressed by its personnel and esprit de corps. I came away convinced that it was the finest Reserve unit I had ever seen. Its roster read like a list of Who's Who in the business and professional life of New England. This was one of Colonel Donovan's greatest prides and greatest achievements. He was heartbroken when his physical condition required him to withdraw from its activities, because it was so dear to his heart. And well it may have been. I doubt there is another Reserve unit like it in the country. It is a monument largely to the vision, ability, and hard work of John Donovan.

Colonel Donovan has passed to his heavenly reward at the very crest of his powers. He leaves a rich legacy of devoted service to his country and his fellow man. He will long be remembered for his amiable personality and his constructive achievements, high character, and purpose.

Loving husband and brother, warmhearted, generous and devoted friend, public benefactor in many fields, loyal servant of his country in war and peace, Colonel Donovan leaves a deep void in the lives of many that can never be filled. His memory will long remain green to bring inspiration, hope and faith for those who strive for a better nation.

I join in mourning the loss of a dear, admired friend and an able, generous counsellor, and extend to his bereaved family, his gracious wife, who did so much to encourage, help and sustain him, and his loyal sisters who were ever a source of encouragement and assistance, most heartfelt sympathy. May they be comforted by the Almighty to bear their irreparable loss with true Christian reconciliation.

And may he find peace and rest in his eternal reward.

U. S. S. "Ranger"

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. VAN ZANDT. Mr. Speaker, on Saturday, August 10, 1957, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, delivered the following address at the commissioning of the Navy's new aircraft carrier, U. S. S. *Ranger*. The address should be of real interest to Members of Congress.

ADDRESS BY ADM. ARTHUR RADFORD, CHAIRMAN OF THE JOINT CHIEFS OF STAFF, AT THE COMMISSIONING OF THE U. S. S. "RANGER," NORFOLK, VA., AUGUST 10, 1957

Captain Booth, Secretary Gates, distinguished guests, ladies and gentlemen, we are gathered here today to place in commission, a new aircraft carrier—a sister ship to U. S. S. *Forrestal* and U. S. S. *Saratoga*. The name she bears is legend in American history. She is U. S. S. *Ranger*, and the Armed Forces of the United States welcome her with pride.

In all, seven previous United States naval ships have carried the name *Ranger*. The first was an 18-gun frigate in the Continental Navy. The seventh was a World War II aircraft carrier. This long line of *Rangers* spans our entire history from the birth of our Republic to today. Each was a great ship in her time. Each did her part in helping to protect our country.

Now we are to commission this new *Ranger*—the eighth one. She carries on a great tradition where the last *Ranger* left off. I am sure that her crew feels the proud influence of her predecessors as she takes her place in the Armed Forces of today.

In fact, I wish all former *Ranger* commanding officers and their ships' companies could be with us to see this magnificent ship. If they could, they would be awed by her speed, her size, her power, her seaworthiness, and her varied equipment.

But former *Ranger* commanding officers and ships' companies would feel more than awe for her size. They would be impressed with the way in which this ship embodies the latest in design, concepts, and weapons. They would sense the great strength she brings to all those who cherish the ideals of liberty which she is being commissioned to protect.

In a few days, I relinquish to my successor the responsibilities of the Chairman of the Joint Chief of Staff for continuing the development of our military strength. Based on my long military service plus my experience as Chairman I would like today to leave with the *Ranger's* captain and crew—and with their teammates in all our Armed Forces—some suggestions for the future which I believe will be helpful in further strengthening our great military team.

As a consequence of rapid progress in technological developments and in the power of modern weapons certain fundamental changes have occurred in national and military thinking and planning. But I can

cover only a few in the limited time available.

One of the great lessons of the past decade is that no longer will the United States be afforded an opportunity to mobilize and rearm after the outbreak of a general war.

Stemming from this basic fact the United States has adopted as national policy the placing of primary reliance, in event of general war, on a strong retaliatory capability.

It is obvious that certain requirements must be met if our overall retaliatory capability is to be meaningful. It must be adequate, it must be ready for immediate application, and it must be able to avoid being neutralized by enemy action at the outset of general emergency.

Under conditions short of general war, our forces must be able to handle adequately situations varying from cold war to limited aggressions. With consideration for budgetary limitations, our planning, therefore, should be such that the forces which we have for general war contain within them the elements and the flexibility to handle situations short of general war.

Now, how does the *Ranger* fit into this picture?

First, it is a floating moving, fighting, self-contained airbase whose power can be projected a great many miles overseas and into an enemy's territory. This ship, together with her sisters, provides a high degree of dispersability to the Navy's contribution to retaliatory power.

Second, it is a flexible unit of the fleet, usable under all conditions ranging from cold to general war. The versatility of her aircraft and weapons will permit her to engage in a wide variety of tasks on the sea, above it, below it, and on land—wherever threats to our freedom of the seas are to be found. It is up to her crew to see that her capabilities can be exploited to the maximum.

I would like to stress at this point that the characteristics which will make the *Ranger* a valuable element of the Nation's fighting power do not come about automatically.

Let us take readiness, for example. Readiness is often thought of as a willingness to answer a call to the colors. In that sense nearly every able-bodied man may be said to be ready to respond to his country's call in its day of peril.

But the readiness of which I speak is much more than a willingness to answer the call. It is the product of knowledge, and knowledge is but another name for knowing how. It requires training, and training is practice and practice and then more practice. It also requires being well equipped and well supplied.

In other words, readiness is the ability to do your job instantaneously when and where called upon, and to do it better than the enemy. Under the conditions which I have outlined, it is apparent that we must place increased reliance on our active forces. These forces must be truly ready forces.

Next, I would stress mobility. Insofar as I can foresee, we will continue to require mobile ready forces, available in forward areas, or which can be deployed rapidly to forward areas.

Too often we think of mobility as being merely a question of rapid transport of personnel and materiel by air. Thinking along this line is shortsighted in that it does not consider all of the problems involved. For instance, air transport requires an air base network complete with terminals, refueling and repair facilities, weather and communication services, housing and messing facilities; and each part of this network requires considerable logistic support in itself.

I do not mean to imply that we do not need air transport—we do. It is vitally important—but a surfeit of it cannot solve all our problems. We also require an across-the-board kind of transport which gives us the ability to deploy effective units rapidly over distances long and short, and to move supplies and equipment to points near or far—all in order to place a destructive firepower at the right time and at the right place to do the most damage to an enemy.

This aircraft carrier you see before you is an example of mobility which has been proved in combat. It is the mobility of sea-air power. Here is one ship we combine the attributes of mobility and self-sufficiency with great defensive and offensive striking power.

Finally, as an all-inclusive requirement, I would list Armed Forces "teamwork." I regard it as one of the most basic, fundamental facts of life in modern warfare.

The armed services have much in common. We speak the same language. Each has vital roles to perform. Together, we have common objectives, and we share many traditions. We have fought together in many battles, and we are greatly indebted to each other.

In essence, we are a land-sea-air team, all subordinate to a single authority—all serving under the same flag, the flag of the United States—the same flag the first *Ranger* fought to protect.

And so I come back to this great ship—U. S. S. *Ranger*. In her, and in the captain and the ship's company, the American people should find readiness, mobility, and teamwork—all rolled into one.

The commissioning of this ship is a tribute to the large number of great Americans who have a part in developing and maintaining the unified fighting strength of the armed services—not the least of whom was James Forrestal, who quite literally worked himself to death in the process, and for whom the first of this series of attack carriers was named.

It is a tribute to the men of America who are dedicated to maintaining freedom—men who are convinced that control of the oceans, and the airspace over the oceans, must never be relinquished to an enemy.

We welcome this fine ship with her gallant name—U. S. S. *Ranger*. As she joins the fleet and sails to the far ends of the earth, she will take with her the American flag as the symbol of freedom and protection. She will be a major addition to the means whereby we extend our national power in defense of peace.

Captain Booth: With this destiny before you, both Mrs. Radford, who had the great honor of christening your ship, and I wish you and each member of your crew the best of success.

A Bill To Allow School Teachers an Income Tax Exemption on the First $3,000 of Their Salary

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. SIMPSON of Illinois. Mr. Speaker, I have today introduced a bill which would allow all accredited schoolteachers an income-tax exemption on the first $3,000 of their salary. It seems to me teachers and instructors, because of low salaries, are harder to obtain than classrooms.

This exemption, which is equivalent to a salary increase, can well be the contribution of Federal aid to education, and without any Federal control. It would relieve local taxing bodies of any tax increase in order to obtain teachers at higher salaries. Some States have a minimum teacher's salary, which in Illinois is $3,200.

The estimated number of teachers in the United States for 1956–57 is as follows: Elementary schools, 751,490; high schools, 426,560; college instructors, 1955, 298,910; almost 1½ million.

In introducing this bill this late in the session, I am hopeful the Ways and Means Committee will consider some such proposal when that committee holds hearings this fall on next year's tax bill.

There is a precedent for this kind of legislation in the additional exemption for all over 65.

Buffalo's Contribution to the Treasury

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. RADWAN. Mr. Speaker, under leave to extend my remarks, I submit herewith a letter from the Buffalo, N. Y., Chamber of Commerce which speaks for itself, but I will add only that the tax figure quoted in the letter is in many cases higher than the total collections from some of our States.

The letter follows:

BUFFALO CHAMBER OF COMMERCE,
August 6, 1957.

The Honorable EDMUND P. RADWAN,
House Office Building,
Washington, D. C.

DEAR ED: Mr. Eugene C. Coyle, Jr., district director of the Internal Revenue Service, reported on August 1 that Federal taxes paid in the Buffalo district during the fiscal year ending June 30, 1957, reached the recordbreaking total of $1,013,101,581.

Topping the billion-dollar mark for the first time, this enormous contribution made directly to the Federal Treasury by Buffalo businesses and individuals is one indication that the Buffalo area is progressing and prospering.

Consequently, I am calling this matter to your attention in the hope that you may effectively use it in convincing Washington officials that, when it comes to Federal improvements, the Buffalo area has been receiving relatively small consideration in Federal appropriations. In 8 years, for example, we have been granted only a total of $5,791,000 for the approved $14 million harbor-deepening program. And I can assure you that this sorry neglect of our harbor improvement needs has not been the result of our lacking of making those needs known in Washington. Since you have ably and forcefully supported our program, I know that you have been equally disappointed.

The United States Army Corps of Engineers is now making a survey to determine where best to deepen Buffalo's outer harbor to make it ready for oceangoing ships that will want to come into our port after the St. Lawrence seaway is open. This survey, of course, will prove meaningless and a waste of Federal funds unless adequate appropriations are made to get on with the job once the survey is completed in early fall.

Consesquently, we recommend that an effort be launched immediately further to impress upon Washington officials the urgent need for granting Buffalo its rightful share of Federal-financed improvements. We are only asking that this area be treated fairly and equitably in a reasonable ratio to the high amount of taxes it contributes to Federal revenues.

I send kindest personal regards.

Sincerely,

CHARLES C. FICHTNER,
Executive Vice President.

Tuna Import Regulation

EXTENSION OF REMARKS
OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. KING. Mr. Speaker, I have referred from time to time over the past several years to the increasingly difficult problems arising from the twin desires of increasing trade with Japan and keeping our tuna fishing industry not only alive but in a thriving, prosperous and growing condition.

I find it necessary to report that neither of these desires is being fully met under the present law and its administration. Once again the price of albacore to our fishermen has dropped, this time to a level lower than any time prior to World War II. The distress felt in the albacore fleet is keen and current. This is reflected in the number of vessels engaged in the albacore tuna fishery which this year has reached hardly a third the number which were engaged in that fishery so short a time as 6 years ago.

The purse seine fleet which makes the town of San Pedro and the port of Los Angeles a primary fishing port of the Nation has recently had the price for its bluefin tuna catches reduced by another $20 per ton from an already unprofitably low level. It was notified this past week by one of the major tuna canners that no yellowfin and skipjack tuna would be accepted by it for the indefinite future. The cumulative economic effect of these past 8 difficult years on that fleet is indicated by the fact that no new tuna purse seiner has been built in that length of time and whereas 125 purse seiners were engaged in the tuna fishery as short a time as 6 years ago, only 51 were so engaged this year.

The bait boat fleet which makes San Diego a primary fishing port of the Nation, normally provides 70 percent of the total annual domestic landings of tuna in the Nation, and provides a major part of the raw material for the great tuna canning industry of Terminal Island, has been affected even more seriously by the events of these last several years and even days. The fleet has decreased from 214 vessels to 153 in the past 6 years. Only nine new vessels have been constructed in that length of time, and the fleet now averages 12 years of age. At the present time 40 vessels containing 8,000 tons of frozen tuna in their holds are lying in San Diego Bay. For 2 months the vessels of this fleet have had to wait 20 to 30 days before they could unload their catches, and it is now apparent that these delays will stretch out to 40 to 60 days as the summer progresses. Prices are down a quarter from what they were even 3 years ago and it is evident that the present critical situation in the market will drive these already unprofitably low prices down yet further.

These adverse reactions from the steadily increasing flow of tuna imports, primarily from Japan, have been aggravated substantially by the general inflation which has been taking place in our domestic economy and which has had the effect of steadily increasing the cost per ton of production by our domestic fishermen and boat owners.

While the distress in all branches of our domestic tuna fishing industry has been increasingly painful and sharp it should not be thought that this has resulted in absolute peace and prosperity in the Japanese tuna fishing industry. The contrary has been the case.

Certainly one of the objectives of our country's foreign trade policy as it affects our ally Japan, is to increase her dollar earnings in this country. While the volume of tuna imported from Japan has continued to increase steadily, the actual dollar earnings by Japan from its tuna exports to the United States has trended downward steadily for these past 3 years. Obviously this part of our trade policy is not working well.

This has been reflected by major adverse movements in different branches of the Japanese tuna industry. In 1955, the Japanese canners were forced to dump a considerable amount of canned tuna on the world market at less than their cost of production. In 1956 the Japanese frozen tuna exporters were forced to dump about 14,000 tons of frozen albacore on this market at about $100 per ton less than their cost of production. This action produced such distress in the Japanese industry that the Japanese Government has been brought to making basic changes in its legislation governing the tuna export trade.

This year the price received by the Japanese albacore fishermen has been a little less than half what it was the year before and the distress which has been felt in turn by the Japanese tuna canner, and then by the Japanese frozen tuna exporter, has now been transmitted to the Japanese fisherman.

It must not be thought that the two governments have avoided cognizance of these problems. The Japanese Government has from time to time over these several years established check prices and voluntary quotas over the various tuna commodities in its export trade in an effort to mitigate or eliminate the gyrations of price and volume which afflict this trade. These steps have been unavailing. The political forces arising from the various branches of the Japanese tuna industry and the economic forces arising from the interaction of the several tuna commodities upon each other's markets in this highly competitive trade have been too great to give these programs of the Japanese Government sufficient permanence or strength to meet the problems.

In 1955 the crisis was so bad in the United States tuna fishing industry that the White House established a task force composed of the Departments of State, Commerce, Interior, Labor, Treasury, and Defense to examine into the problem and make recommendations for its alleviation. The study was completed and a number of recommendations short of import controls were made.

The domestic tuna industry actively followed up each of these recommendations during the remainder of that year and during early 1956. All of the recommendations were found to lead into blind alleys and one of the reasons for this was found to be a lack of authority and direction within the executive to implement the recommendations. As a direct outgrowth of this discovery a number of us who are particularly interested in the welfare of the domestic fisheries introduced legislation designed to establish a policy for the domestic fisheries and to provide an agency in the executive competent to implement the policy. As a result the Fish and Wildlife Act of 1956 was enacted into law and the carrying out of these functions in the executive have been undergoing the reorganization prescribed by that law for the past year.

Beneficial results have already begun to flow from this new legislation to several branches of the domestic fishing industry and it would appear that it will turn out to be a milestone in the Nation's handling of its commercial fishing problems. But that law has not prevented a continued sharp deterioration in the tuna trade for the reason that the troubles of the tuna trade arise from basic anomalies in the treatment of tuna commodities under the tariff act and under the Reciprocal Trade Agreement Act.

Having seen all other recourses exhausted over these past several years to bring our tuna fishing industry to a healthy condition and to regularize our tuna trade with Japan in a manner beneficial to both nations I have drafted and introduced legislation that will strike at the heart of the matter by amending the Tariff Act of 1930 and by directing the President to take certain actions under the authority given to him by the Reciprocal Trade Agreement Act.

What the bill will do may be described as follows:

First. Section 2 (a) provides that the importation of all tuna in whatever form—canned, frozen, discs, loins, or whatever—shall be limited to 200 million pounds per year when converted to a round weight basis, or 35 percent of the average of the apparent annual consumption of tuna in the United States, whichever may be the larger quantity.

The actual situation for the past 2 years, and it appears likely for this year too, has been that the total amount of tuna imported into the United States when converted to a round weight basis, has varied between 200 million and 207 million pounds per year. The apparent annual consumption of tuna in the United States last year, when converted to a round weight basis, was between 620 million to 640 million pounds. Accordingly 200 million pounds of imports

would be about 30 percent to 31 percent of the apparent annual consumption of tuna. However, the consumption of canned tuna in the United States has been increasing steadily and when an average is struck over the past 5 years 200 million pounds will be found to be about 35 percent of the apparent annual consumption during that period.

Thus this bill does not intend to reduce the imports of tuna from Japan or from other countries as to actual volume. It accepts the status quo with respect to volume.

Nor does this bill attempt to restrict the share of the domestic tuna market that is now enjoyed by the foreign producers. Since the market for canned tuna has consistently increased over the past 20 years at a rapid rate, and is predicted by competent authorities likely to continue to so increase for the indefinite future, the effect of this bill will be to permit the foreign producers of tuna to continue to send in approximately the same volume of tuna that they now do, and as the market in this country increases the actual volume which the foreign producers can send in will increase so long as it does not exceed 35 percent of the total market.

What this section of the bill does do to aid our domestic fishing industry is to guarantee to it 65 percent of this market and permit it to plan for a stable future. In view of the wide spreading penetration of Japanese tuna fishing vessels under the sponsorship of the Japanese Government into the eastern Pacific, the Caribbean, the Atlantic, as well as throughout the tropical and subtropical Pacific and Indian oceans, this absolute safeguard is required by our industry.

Second. Section 2 (b) defines terms used in the act.

Third. Because of the numerous tuna commodities that enter world trade, and their varied treatment under our trade law and in trade agreements, it is necessary to deal with them in two groups—those commodities that are not cooked or canned and those commodities which are so prepared and preserved.

Section 3 (a) of this bill deals with the former category. Principally affected is frozen tuna in the round but also affected are frozen tuna which have, in the parlance of the trade, been gilled and gutted, and also fish which have been filleted and frozen but not advanced so far in their manufacture as to be cooked. This section provides three levels of treatment for this class of tuna commodities:

a. Up to a limit of 50 million pounds per year, or 5 percent of apparent annual consumption whichever is the larger, these commodities will be in a duty-free status.

The reasons for this provision are various. In the first instance there is a small quantity of tuna produced by several Latin American neighbor countries for the United States market. The quantities are not large either severally or together and the cost of production is such that these imports on a duty-free basis do not create disturbances in this market. The practical effect of this provision will be to provide for the growth of these small fishing industries in our neighboring countries or at least to place no impediment upon that growth.

In the second instance there are small tuna canneries on the east, west and gulf coast of the United States too far distant from the center of domestic tuna production to be able to rely upon it for their raw material and which rely wholly upon imported frozen tuna. The net effect of their operations do not materially disturb the domestic market. The practical effect of this provision will be to assure them a continuance of their foreign source of supply or at least not interfere with it.

In the third instance the product of the domestic albacore fishery has not been sufficient in the last few years, because of the distressed economic condition of the industry, to provide all of the raw material required by the United States market for this sort of canned tuna. This provision, taken together with the provision instructing the Secretary of the Treasury to provide individual quotas for the different species of tuna on a historic basis within this duty-free quota, will protect our albacore fishermen from sudden surges of cheap albacore into their market, while protecting our small canner's source of raw material and providing an adequate volume of this sort of tuna for the market.

b. Up to a limit of 140 million pounds per year, including the 50 million pounds of duty-free frozen albacore provided for above, or 15 percent of the average apparent annual consumption of tuna in the United States whichever is the larger, frozen tuna shall bear a duty of 3 cents per pound.

This is approximately the amount of frozen tuna which has been imported in each of the past 2 years and is anticipated this year. Since this rate of duty will not be prohibitive the present volume of frozen tuna being imported will not be lessened. However, the provision of this duty will protect the price received by our domestic tuna fishermen and raise it somewhat above its presently depressed low level. This is the only way in which the domestic tuna fishery can be headed in the direction of becoming the vigorous growing industry it once was.

c. Any frozen tuna above 140 million pounds per year, or 15 percent of apparent annual consumption whichever is the larger, will bear a duty of 6 cents per pound. This rate of duty is intended to be prohibitive and in the generality of years will be so. Only when there is an abnormal glut of tuna abroad will it be not prohibitive.

The intent of this provision is to throw the other 60 million pounds of tuna provided for under section 2 of the bill into the cooked or canned form of imports. Since this is approximately the level and proportion of these forms that have been imported in recent years the effect of this provision will, like other provisions of the bill, be to stabilize the market, protect the status quo situation and provide for the rational growth of the market, the domestic industry and the import trade alike.

Fourth. At the present time there are four tuna commodities imported in the cooked or canned form. Three of these are products that have arisen not from the natural demand of the market but have been developed to take advantage of loopholes in the tariff law. Three of the four commodities bear different duties and are involved in different trade agreements.

Tuna canned in oil bears a duty of 35 percent ad valorem under the trade agreement with Japan.

Cooked frozen loin tuna and tuna discs bear a duty of 1 cent per pound under the General Agreement on Tariff and Trade by reason of coming within a basket category in the Tariff Act.

Tuna canned other than in oil bears a duty of 12½ percent ad valorem under the trade agreement with Japan.

The confused situation of the tariff treatments of this class of tuna commodities, and the generation of these three artificial tuna commodities, by the tariff act itself, has been one of the most important factors in keeping the United States tuna market continually disturbed and in inducing a distressed condition in the domestic tuna fisheries.

The function of section 3 (b) of the present bill is to establish a definite uniform tariff base for all cooked and canned tuna commodities at the duty rate now paid on the primary commodity in this category, tuna canned in oil, which is 35-percent ad valorem. While this section will not alter the tariff rate on the principal tuna commodity in the United States market it will contribute in a major manner to stabilizing the canned tuna market in the United States protecting the earning power of tuna imports, and providing for the prosperity of the domestic tuna industry.

Fifth. Section 4 (a) provides for the entry into effect of various provisions of the bill.

Sixth. Section 4 (b) provides that no duty imposed by these amendments shall be collected in violation of any international obligation of the United States and directs the President to renegotiate any international obligations necessary to carry out the purposes of the act.

Mr. Speaker, our domestic tuna fishermen are in a critical stage of distress. This is harmful to the economy of these west coast port cities. The effect of this is to create disturbance in our friendly relations with our good ally, Japan. The earning power of Japanese tuna exports to this country is declining, and the trade in tuna is an important part of Japan's dollar-earning capacity. The tuna industry in Japan is not much less disturbed by these factors than is our own domestic industry. I am hopeful that the bill which I have introduced will go a long way toward mending the basic causes of these difficulties. I am mindful that there can be no positive action on this bill until we reconvene in 1958. In the intervening months, however, the appropirate executive agencies can provide the necessary technical studies upon which appropriate changes in the proposed bill might be based. I am informed that the Bureau of Commercial Fisheries of the Department of the Interior is already well advanced on such studies and that the United States Tariff Commission is

about to engage in bringing up to date its studies on this complex subject.

I have also been mindful that there are different views in the different branches of the domestic industry as to how these matters may best be handled. I am hopeful that those several interests may be able to use this bill as a basis for composing any differences that may so exist among themselves during the months of the summer recess.

If these several lines of actions can be advanced by the executive agencies and the industries, Mr. Speaker, I should hope that the Congress would be in a position to enact legislation of this nature next year that would be at once beneficial to our domestic economy, our foreign trade, and improved understanding in our foreign relations.

Earning Civil Rights

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD one of the most pertinent editorials I have read on the civil-rights issue. The editorial, which is entitled "Earning Civil Rights," appeared in the August 9, 1957, issue of the Lakeland Ledger, a daily newspaper published at Lakeland, Fla.

So much has already been said on this issue, but here are the words of a Negro bishop, who, in speaking to the national convention of African Universal Church and Commercial League, Inc., in Louisiana this week, brings to the attention of his own people some of the most significant facts in this issue. I hope that every one of my colleagues will read this editorial so that they, too, will be cognizant of the words of good sense he spoke and will give thoughtful attention to them. The editorial follows:

EARNING CIVIL RIGHTS

A Negro bishop from Harlem who was born in Georgia delivered an address in Louisiana this week that commands attention. Civil rights was his subject and his audience was the national convention of the African Universal Church and Commercial League, Inc., of which he is head.

"No laws and no group of lawmakers can give the Negro or anyone else civil rights," he said. "Rights have to be earned from within a man. What they are calling rights is a pacifier.

"The Negroes who see this clamor for civil rights as something substantial are people who look to someone else to do the things they must do for themselves if they are to have them. The Negro must earn respect if he is to have it.

"There are a million Negroes in Harlem. Yet not a single toothpick factory or any kind of business is owned by a Negro. You have to come south to find a Negro owning anything.

"We believe that the white man must be the controlling factor in his own destiny and the black man must be the controlling factor in his destiny. This is the only way the Negro can be a first-class citizen of America."

The bishop who thus expressed himself talked good, solid commonsense that is reminiful of the attitude Booker T. Washington had, and it deserves thoughtful attention, especially in the North, where so many radicals who do not know the South are trying to solve the South's complex problem.

The cloud-riding do-gooders in the North who constantly point the finger of accusation and scorn at the South ought to do something about the plight of Negro citizens in such centers as New York, Chicago, and Detroit before they concentrate on long-distance improvement of the South.

Lyndon Johnson, One of Ablest Leaders in Senate's History

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. BROOKS of Texas. Mr. Speaker, it has often been repeated that a prophet is without honor in his own country. This may be true in many instances, but I am happy to say it is not the case concerning Texas and its distinguished native son, Senate Democratic Majority Leader LYNDON JOHNSON.

I would like to call to the attention of the House an editorial published August 5, 1957, in the Dallas Times Herald which expresses the admiration we all feel for our fellow Texan's outstanding abilities as a leader of Democrats and his concern for all Americans everywhere:

JOHNSON'S AMAZING LEADERSHIP

Senator LYNDON JOHNSON, of Texas, continues to demonstrate his skill, tact, and statesmanship as Democratic majority leader in the Senate. His masterful handling of the controversial civil-rights bill has been particularly outstanding.

The task of a majority leader in the Senate is never easy, but in the case of Senator JOHNSON it is particularly complex because, though his party has a majority in both Houses of Congress, there is sharp division in the ranks on many crucial issues. Furthermore, a Republican is in the White House.

Senator JOHNSON has the two-pronged task of leading the Senate along the course of constructive legislation and of preventing a split among the Democrats that might prove ruinous to the party.

When the so-called civil-rights bill came from the House bristling with thorny provisions that some Democrats strongly favored and others bitterly opposed, the majority leader was on the spot. A desperate filibuster seemed unpreventable.

Senator JOHNSON desired not to kill the bill but to divest it of provisions that southern Democrats could not accept and that were clearly out of line with the Constitution. But Senator KNOWLAND, the Republican leader, was confident he could force the bill through intact, a filibuster notwithstanding.

The bill was reduced to nothing more than a right-to-vote measure, and when the conclusive Senate action on the trial-by-jury amendment came up, only 9 of the 48 voting Democrats rebelled against JOHNSON'S leadership. KNOWLAND rounded up 33 votes, but saw 12 of his Republicans line up with the JOHNSON side. It is generally conceded that the Texas Senator is one of the ablest majority leaders in the Senate's stormy history.

Peeler Presents Grain Sorghum Plan During 22 Commodity Groups' Meet

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. ROGERS of Texas. Mr. Speaker, I rise today to request unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD the text of a statement made by my good friend, R. G. Peeler, of Hereford, Deaf Smith County, Tex., presented before a recent meeting of 22 commodity groups, meeting in Washington. The insertion is from the Hereford (Tex.) Brand, printed August 3 and edited by Jimmy Gillentine.

At this Washington meeting Mr. Peeler represented the Grain Sorghum Producers Association of which he is president. As a conscientious farmer from the Texas Panhandle, Mr. Peeler has been an outstanding layman working to improve American agriculture.

The studied comments of Mr. Peeler are concerned with the need for some positive action by the Government toward solving the problems now besetting the farmers producing grain sorghums. The plan for action which is suggested by Mr. Peeler is both responsible and reasonable.

The statement follows:

PEELER PRESENTS GRAIN SORGHUM PLAN DURING 22 COMMODITY GROUPS' MEET

The increase in efficiency gained by the American farmer since 1940 is saving the consumer eight to ten billion dollars a year, declared R. G. Peeler in a statement during a meeting of 22 commodity groups in Washington this week.

Peeler, Hereford farmer and president of the Grain Sorghum Producers Association, said that agriculture is the only segment of our economy doing anything toward stopping the inflationary spiral of the cost of living.

He presented an appeal to change Federal farm laws to treat grain sorghum and other feed grains on the same basis as corn, and urged adoption of a program to divert cultivated land from production without payment.

Complete text of his statement is as follows:

"We are a commodity producers group organized in October, 1955, for the purpose of promoting grain sorghums as a feed grain and for industrial purposes. Our organization serves an area which produces 60 percent of the Nation's grain sorghum. Needless to say it is a basic commodity of this region.

"Grain sorghum is recognized today by livestock feeders and industrial users to be equal to corn pound for pound in practically all respects. There is no feed grain in America today whose popularity is spreading as rapidly as grain sorghum. It is even gaining a strong foothold in the old Corn Belt where many farmers plant their corn crop to be placed in Government loan and plant

grain sorghum to use in putting the fine finish on their hogs and cattle. The strongest evidence of its rapidly spreading popularity can be found in production records of the past 10 years. In 1947 there were 96 million bushels of sorghum grain produced in the United States. Compare this with the 1957 forecast of 500 million bushels. An acreage increase of 49 percent over 1956 still further emphasizes this fact. Grain sorghum acreage is greater than 4 of the 6 basic crops but the principal point of importance is 2 out of every 5 acres of cultivated land in the United States is feed grains. All feed grains should be treated alike according to their feed value equivalent.

"We recognize that each commodity has special problems but it is high time we got together to work out some of the differences within our farm groups and above all present a united front to the other 87 percent of the American people.

"It is indeed a sad state of affairs when the American farmer, through the media of national magazines and big city newspapers, is pictured as a whining parasite who is bleeding our national treasury white while the rest of the taxpayers nobly bear the burden. Furthermore, while this dismal picture is being painted for our urban friends, the Secretary of Agriculture adds certain negative highlights which do nothing to improve our posture. The American farmer is saving the consumer $8 to $10 billion annually by his increased efficiency since 1940. He is the only segment of our economy who is doing anything toward stopping the inflationary spiral of the cost of living.

"The Grain Sorghum Producers Association has a farm program which it wishes to present for your earnest consideration. You will note that the outstanding feature is that all commodities are supported at the same level. We feel very strongly that the idea of supporting one commodity higher than another is indefensible. We would like to add that a high percentage of our membership have allotments of wheat or cotton or both. All commodities are related as to use and one commodity cannot be dealt with without affecting another or others.

"You will also note that we have provided for a percent of the cultivated acres to be retired from production. This is to prevent acreages diverted from the basic crops causing a surplus of non-basic ones. This plan will solve the surplus of feed grains quickly as it would take 50 million acres of feed out of production with a 15 percent layout, or 70 million acres with a 20 percent layout.

"There would be no discrimination among farms, as each farm could have the same percentage of price-supported crops. Land values would not be determined by the allotments but by true value of land.

"It would have the effect of treating all feed grains alike and would take corn off the basic list. A corn farmer would have up to an 85 percent allotment of total tilled acreage. This program would be effective, fair, easy to administer, inexpensive and a farmer could not beat it. It is our contention that the combination of uniform support for all commodities plus the retired acres would within a very few years eliminate the need for allotments and bring about a flexibility in our farm management impossible under any Government control program used up to this time.

"The American farmer, like the rest of the various segments of our economy, can only prosper when his business is expanding and he is getting a fair return for his labor and capital outlay.

"The Grain Sorghum Producers Association does not like Government controls and support programs anymore than anybody else but with the rest of the American economy continually inflated by defense and foreign-aid programs, the cost-price squeeze is fast reaching the breaking point for the farmer.

"SURPLUS REDUCTION FARM PLAN

"1. No farm will be permitted to plant more than approximately 85 percent of total cultivated acres in price-supported crops, leaving approximately 15 percent in nonrevenue layout acreage.

"A. No payment will be received by a farmer for nonrevenue layout acreage.

"B. No grazing or cash crop will be permitted on nonrevenue layout acreage (fallow or soil building crops permitted).

"C. Nonrevenue layout acreage must be rotated yearly.

"D. Nonrevenue layout percentage can be increased or decreased yearly by the Secretary of Agriculture within limits set for by law, according to supply of nonbasic crops (feed grains, soybeans, cotton seed, noncommercial corn, etc.).

"2. Cross-compliance will be in effect.

"3. Farmers will be permitted to plant price-supported nonbasic crops in case of drought, hail, or flood on basic crop acreage.

"4. Marketing and acreage allotments will not be used on price-supported nonbasic crops as nonrevenue layout automatically reduces acreage.

"5. Program voluntary (in that it must be approved by a national referendum each year, and then is mandatory).

"A. Penalty of 50 percent of parity for noncompliance.

"6. In exchange for no pay on nonrevenue layout land, farmers will receive 75 percent of old parity for presently price-supported crops (basic and nonbasic).

"7. All crops now supported will be supported on the same parity formula.

"BENEFITS OF THIS FARM PLAN

"1. The layout land could be increased or decreased yearly by the Secretary of Agriculture to meet supply and demand within limits established by Congress.

"2. No payment on the layout land would be received by the farmer, as this is his offer in return for a minimum floor for presently price supported basic and nonbasic crops.

"3. Farmers in many instances would take their layout acres out of the basic crop allotment. This would help reduce the surplus of these commodities.

"4. This plan is flexible and takes care of hardship cases (hail, flood, drought).

"5. This plan would not penalize the farmer who is already summer fallowing his land.

"6. Compulsory rotation would prevent the farmer from permanently laying out his least productive land.

"7. With no payment to the farmer for layout land, this plan would help balance the budget and cause less resentment by taxpayers, as a farmer would not be receiving payment for not producing crops.

"8. This plan could be effective immediately upon referendum and give strength to farm credit, both in the banks and through FHA.

"9. Easy to administer under present set-up.

"10. Each basic crop problem subject to Government change in future without affecting this program.

"11. This program would eliminate the problem of diverted acres increasing surpluses.

"12. Adoption of this plan would eventually eliminate allotments."

Our Friends in the Philippines

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. ROGERS of Texas. Mr. Speaker, I am honored to commend to the Members of the Congress a group of articles and editorials which appeared in the July issue of Bataan magazine, and part of which I insert in the RECORD today. These interesting and informative articles deal with our friends in the Philippines under the dynamic leadership of President Carlos P. Garcia. In order to predicate properly the splendid treatment of this interesting subject, I insert a brief biographical sketch of the able author who is editor and publisher of Bataan magazine and a noted authority on Far Eastern-American affairs. Dr. Yap is also the editor of Know Your Congress, an informative and historical publication which contains photographs of the 531 Members of Congress of the United States together with feature articles dealing with the activities of the Congress.

The matter follows:

THE AUTHOR, DR. DIOSDADO M. YAP

Dr. Yap was born in Baybay, Leyte, Philippines. He attended primary and secondary schools there and then came to the United States for his college training. He graduated with honors from Crane College where he took an active part in student affairs, and then attended the Northwestern University Law School and the Lewis Institute in Chicago.

In 1930 he attended George Washington University, from which he received his master of arts in education the following year. His doctrine was awarded in 1935. In addition, he has the degrees of bachelor of science, master of science, bachelor of laws, doctor of education, doctor of pharmacy, and doctor of laws.

Dr. Yap was among the first authorities on the Far East to tour the Army camps for the War Department. Soon after the Pearl Harbor incident he was commissioned as expert consultant to the United States Secretary of War to visit the encampments and lecture to the officers and enlisted personnel on all phases of the Far Eastern countries and of the war in the Orient, with special reference to American-Philippine relations. In less than 3 months he spoke to approximately a million men.

Dr. Yap was formerly publicity officer and researcher for the Resident Commissioner of the Philippines to the United States. He was also director of the Philippines Information Bureau, managing editor of the Philippine Journal, and technical staff member of the Joint Preparatory Committee on Philippine Affairs. At present he is publisher and editor of the Bataan magazine and chief of the Washington bureau of the Manila Chronicle.

He is author of History of Higher Education in the Philippines, and of numerous articles on the Far East for different American publications. For some years he has been American correspondent for leading

Philippine papers and a radio commentator on far eastern affairs in Washington, D. C.

He has made repeated trips to the Orient, traveling through China, Japan, India, Pakistan, Hong Kong, and his native islands. His long study of the problems of the Far East and his association with its leaders qualify him to speak with authority. Dr. Yap is a speaker of the highest ability. His command of English is flawless.

CARLOS P. GARCIA: SYMBOL OF FIGHTING FILIPINOS

(By Diosdado M. Yap, editor and publisher of Bataan)

When President Sergio Osmeña, of the Philippine Commonwealh, arrived in Washington on the eve of President Roosevelt's fourth inauguration, he was accompanied by a man who was new to America and to whom America was new. Yet, in a few short weeks, the man has come to mean much to Americans and Americans come to mean more to him.

The man is dark-faced, gray-haired, lithe Carlos P. Garcia, one of the last men to be sworn in as a senator in the Philippines before the Japanese closed in with their blackout of freedom, and one of the first men in the islands to relight the victory torch.

Few men are privileged to escape unscathed the adventures that have characterized Mr. Garcia's existence since the Japs landed on Bohol in 1942, the province of which he had been governor for many years before he became senator on December 30, 1941—22 days after Pearl Harbor, which is viewed as December 8, in the Philippines.

Like many other valiant Filipinos, Senator Garcia received a plea to surrender. The pleas of the Japanese fell on deaf ears, and so the fight was continued.

GREAT QUALITIES OF LEADERSHIP

But then, few men have the leadership qualities that have brought Mr. Garcia through. Long before the Jap invasion called forth his qualities of heroism, the people of Bohol, Mindanao, and eastern Leyte had recognized his great qualities of leadership.

After having practiced law in those regions only 2 years, he was elected representative of the third district of Bohol, and reelected in 1928 and 1931. In the latter year he ran for the office of Governor of Bohol, winning by a 14,000-vote majority.

He was reelected in 1937 and in 1940. It was the first time in the history of the province that any man had been elected three times successively.

FAKED FRIENDSHIP FAILED

The Japs moved into Bohol in the spring of 1942. At first they tried their policy of apparent friendship, but the mask quickly fell off and the Filipinos recognized that the Japs were real enemies indeed.

Senator Garcia, although a marked man by the Japs, started the first outbreak of the guerrillas in Bohol in August 1942, and 4 months later he and his men controlled 34 towns out of the 36 in the province.

He united the command of the guerrillas on November 2, 1942, and organized a new civil government on January 9, 1943, by which time the last Jap had been kicked off the island, or killed.

By February of 1943, President Manuel Quezon and Senator Garcia had been able to establish communication, and, shortly thereafter, President Quezon approved the printing of 2 million pesos emergency notes (Philippine currency) to maintain guerrilla operations and civil government expenditures.

JAPS REINVADE BOHOL

For more than 20 months this civil government operated, the people of Bohol feeling only indirectly the Jap yoke that hung around the neck of the Philippine Islands as a whole.

Then, on June 25, 1944, another D-day came for Senator Garcia and his faithful guerrilla followers. The Japs reinvaded Bohol and overran the entire province. All of the guerrillas either had to escape by boat to other islands, or hide in the bush. The resistance continued, but it was most ineffective in this period, due to the overwhelming numbers of the enemy.

However, the Japs began to withdraw later in the summer, and, by October 20, when the American and Filipino troops under Gen. Douglas MacArthur landed at Leyte, the Bohol guerrillas were able to report that they were retaking town after town.

Senator Garcia says that when he left, although no Americans had landed, except for brief stays, there was only one town on Bohol controlled by the Japs—Tagbilarian.

ACCEPTS WASHINGTON POST

Senator Garcia himself was in Hilongos, Leyte, when D-day came for the Americans and Filipinos. He was promptly summoned by President Sergio Osmena to Tacloban and asked to serve on the Filipino relief and rehabilitation commission. He accepted his new commission, agreeing to come to Washington with President Osmena.

Since then, he has come to believe in the American wonderland of which he had heard so much. Just 48 hours after he and President Osmena left Tacloban, they were in San Francisco—a journey that only 10 years ago would have required more than a month by fast steamer.

From there, they went to Florida for tropical inspection and for other reasons, and thence to Washington, where Senator Garcia has been in the limelight of constant work, social activity, and publicity.

PEOPLE SYMPATHETIC TO GUERRILLAS

Shortly after arriving in Washington, he was asked by the Office of War Information to make a radio speech beamed to the Philippines and the Far East. In that address he paid tribute to the memory of the American people and declared:

"I find that the heart of this great people overflows with genuine—even passionate—sympathy for that mighty resurgence of our national spirit called the Philippine guerrilla movement. * * *

"The mighty spiritual forces of the world gravitate in our favor. We have every reason to wait with unshakable faith that America will never fail us."

Senator Garcia's early life is that of a typical Filipino leader who rose from a poor family to a place of great leadership . Born on November 4, 1896, only a couple of years before Emilio Aguinaldo and his brave fighters decided to lay down their arms and cooperate with America, young Carlos Garcia was educated at a high school in Cebu and attended Silliman Institute. He graduated magna cum laude from National University where he was valedictorian of his class.

He was admitted to the bar in 1923. A member of the Nationalista Party, headed by the late Manuel Quezon, he entered politics actively in 1925, winning the first office for which he ran. In politics, he took an active part in every battle of wits in recent years and, although he was not always on the winning side, his friends admired him and his political enemies respected him always.

Following is the text of the recording by Senator Garcia mentioned above:

"My fellow countrymen of the Philippines, it is indeed with deep and glowing satisfaction that I greet you from the United States of America. You will wonder how I could really feel any satisfaction at all when I am conscious at all times of the appalling misery and utter economic prostration of our country resulting from the rapacity and vandalism of the enemy. But I find here that the American people remember with undying admiration the Filipino soldiers who fought side by side with their brave American comrades in those glorious Thermopolae of freedom and democracy called Bataan and Corregidor.

"I find that the heart of this great people overflows with genuine—even passionate sympathy for that mighty resurgence of our national spirit called the Philippine guerrilla movement.

"I see in Washington, in this great Olympus of democracy, an American Government headed by a President truly worthy of the 20th century, sincerely and seriously committed to the task of liberation and then rehabilitation of the Philippines. Hence the depth and fervor of the emotion and satisfaction that seize my soul upon addressing you tonight.

"My message to you tonight, especially to my comrades in the guerrilla movement is: On with the fight to expel the invaders and oppressors of our land. Have faith in the ultimate triumph of justice and democracy. America will never fail us.

"SOME SERVED SATAN

"When we decided in the darkest hours of our history to start the guerrilla movement in the Philippines, we knew that some of our fallen national idols, in a vain attempt to salvage a tarnished prestige, abandoned us and served the enemy. Others, seduced by the glitter of power, or position, renounced loyalty, honor, and convictions and became fanatic collaborators. Still others, the faint-hearted, shrunk from the immensity of the obstacles in our path. It was clear that the goal of the guerrillas lies beyond mountains of sacrifices and across oceans of blood and tears.

"Everything around us was fearfully dark and gloomy. The disasters of Bataan and Corregidor were too real to be forgotten. Within a few miles of us were concentration camps where the heroes of Bataan languished in slow agony, deprived by the enemy of adequate food and medicine. The air was full of Japanese propaganda—sugar coated and seductive—although between the lines it was clear that the real aim was to undermine our loyalty and our national ideology. Then, after the first outbreaks of the guerrillas we began to taste Japanese brutality in its nudity. We began to witness with the vividness of a nightmare vision executions en masse, hangings, reprisals, robbing and defiling of homes, sacking of towns, and other atrocities without name in any civilized language.

"SPIRIT STEELED BY OPPRESSION

"But the spirit of the nation, far from being broken, was instead steeled by oppression. There was born, during this long night of humiliation, and in the abyss of disaster, a new national credo. It is, that the Philippines shall rise again, and the way is to fight to the finish. The way to national salvation is through fighting to victory with the eventual help of America. Despite the collaborators' lingo of genuflexion, the enemy is still our foe and accepting their control and collaborating with them is treason in any language.

"Thus, the Filipino nation, crushed and outraged, betrayed and looted as she was, could still unite in the supreme will to conquer. For 3 long and stormy years in a thousand skirmishes we fought and prayed, suffered and hoped. We staged an epic struggle for freedom, written with the very lifeblood of true and brave sons of the Philippines.

"With us stood and fought and died Americans also. We resolved to fight on with the deep conviction that we owe it to our loyalty to the American flag and to our own. You determined to fight, convinced that it was the only course of honor and the only way to win the vital issues of freedom and democracy for us and for all other peoples. We decided to fight on because it is our duty of loyalty and gratitude to help the American war effort in the Pacific. We knew the American Army of Liberation someday would come to redeem us from the abyss of subju-

gation. We always knew the American people learned of our refusal to submit to Japan, knew of our resolution never to collaborate with her, knew of our monumental decision to fight Japan everywhere and any time. And we knew the heart of the great American people was with us in the abyss of distress and in the glory of triumph.

"ASKS NO DOUBTING BY FILIPINOS

"And now that the irresistable American forces of democracy have returned to our shores and have blasted the Japs out of Leyte and are smashing their way back to Manila, now that the mighty forces of freedom have unshackled France, Poland, and other countries that have fallen under the jackboots of Hitlerian domination, now when victory is in sight, and the radiant dawn of a better day is breaking in the eastern horizon, there can be no doubting on our part. There can be no flagging. There can be no renunciation.

"But then after the glory of victory, what? Better than anyone I know your frightful shortages of food and clothing, money, and other necessities. President Osmeña realizes the fearful economic prostration of the nation and the urgency of instant relief. This is why he came to Washington? "What about all these?" you will certainly ask. My answer is: Wait, America will not fail us. America will never permit that victory will result in nothing but an empty word inscribed on medals and monuments to heroes.

"VICTORY WILL BRING SAFEGUARDS

"The American people and all true democrats of the common man in this war, the ideas which will pervade the peace must be great enough for the whole of humanity. Realistic statesmanship everywhere recognizes that the crowning glory of victory in this war will consist in creating a universal system in which and by which the liberty, economic security, and dignity of the individual of all peoples and nations and states, great or small, are safeguarded and guaranteed.

"The greatness of this war consists in having revealed in the lightning and fire of battle to the nations not only their material solidarity but also the absolute necessity for spiritual unity. In battlefields and in factories, among leaders and followers alike, among the oppressors and the oppressed, among victors and vanquished, over and above racial prejudices, hatred, and egoism, a mighty surge of aspiration is sweeping toward the attainment of a common, interracial, international ideal.

"President Roosevelt, the greatest advocate of international cooperation, reiterated his hope for a lasting peace and his adherence to this goal when he said in his fourth inaugural address: 'The greatest fact to remember is that the trend of civilization itself is forever upward. We have learned to be citizens of the world, members of the human community.'

"CALLS FOR WORLD ORGANIZATION

"You are fighting and suffering for our independence. We fought for freedom and justice, and the right of individuals and nations to self-determination. We fight for a lasting peace that will afford us national social security. We want a world organization which will establish in every sphere lasting social, economic, and spiritual solidarity and mutual help among nations.

"Fellow countrymen: The overwhelming majority of the American people subscribe to and believe in all these principles. President Roosevelt is exerting his utmost in a sublime effort to realize these for us and for all nations.

"The mighty spiritual forces of the world gravitate in our favor. We have every reason to wait with the unshakable faith that America will never fail us."

NEW LEADER IN MANILA

President Carlos P. Garcia, of the Philippines, knows how it feels to have the moon and the stars fall on him. The tragic death of President Magsaysay which catapulted Mr. Garcia into the Presidency at Manila sent him to President Truman's Memoirs to study the similar transition of authority that occurred in this country in 1945 on the death of President Roosevelt. Mr. Garcia's countrymen, too, are conscious of this historic parallel, and it is heartening to hear them report that Mr. Garcia, a quiet man without much of the dramatic in him, is rising to the occasion as Harry Truman did.

Mr. Garcia's friends admit that he lacks the genius for reaching the hearts of the people that President Magsaysay had in rich abundance. But he has a good grasp in realities. He has identified himself with the ferment of freedom, independence, and improved standards of living that is felt throughout the Orient. And he sees that the greatest hope for attainment of these aims so vital to all the peoples of Asia lies in close friendship with the United States. Like his predecessors, he speaks with profound thankfulness of the freedom the United States gave to the Philippines and of the influence that example has had on the whole Orient. So he makes continued partnership with this country the cornerstone of his foreign policy.

In both the foreign and domestic spheres Mr. Garcia is seeking to carry out the policies to which Magsaysay was dedicated. Following the Truman example, he is also making a fight for election in his own right in November. His emergence as an able successor to the venerated Magsaysay is a salutary demonstration of the strength of Philippine democracy—(Washington Post).

MAGSAYSAY'S WORTHY SUCCESSOR

After the death of Ramon Magsaysay fear was expressed in many quarters here in the United States that there may be a political upheaval in the Philippines, that his policies may be abandoned, that communism may again rise to power, that there may be a disruption of the constitutional processes.

None of these happened. The reason is simple. The duly elected Vice President of the Philippines took over. And Carlos P. Garcia has all the qualities of leadership necessary to meet the emergency and all the experience in government needed to carry on the functions of a head of state with dignity and competence.

President Garcia is a seasoned public official. He has gone through the mill of public service. He started as governor and did a remarkable job. He became a member of Congress and was one of the best we ever had in the lower house. He was elected senator and was reelected several times because the people saw in him an able parliamentarian, a superb orator and debator, a true servant of the nation whose integrity of character is irreproachable. He became Vice President in his own right and the number of votes that he received was such as to show beyond the shadow of a doubt that he was the people's choice. The defeat that he administered to his opponent for the Vice Presidency was so decisive he won overwhelmingly in the very province of Mr. Jose Yulo (who is now the candidate of the opposition for the Presidency against President Garcia.)

During the entire term of the late Magasaysay, President Garcia held concurrently the office of Secretary of Foreign Affairs. It is important to remember this fact. Magsaysay entrusted to Garcia the conduct of our foreign affairs. It is no disparagement of the late President to say that foreign affairs was not his forte. He had to depend on a man in whom he could trust. Garcia was the coarchitect of the policy of close friendship with the United States. There need be no fear, therefore, on this score. And it is because by conviction Garcia believes in the United States as the world leader that is the exemplar of democracy and freedom, and this he has proved beyond doubt in the more than 3 years that he was Secretary of Foreign Affairs under Magsaysay.

President Garcia is a convinced anti-Communist and antineutralist. As Secretary of Foreign Affairs he has directed the policies of our United Nations delegation. His utterances against communism are on record. His decisions in the Department of Foreign Affairs against communism are clean cut. His pledge when he assumed the Presidency that he would pursue Magsaysay's anti-Communist policy was no idle promise. Recently in signing a bill passed by Congress outlawing the Communist Party in the Philippines, he made a statement that was hailed by Members of the United States Congress and by the American press as "a state paper of the highest value to democracy" and President Garcia was properly called "the able successor of President Magsaysay."

In that statement he said:

"I have signed into law the bill outlawing the Communist Party in the Philippines.

"With this law, our people have not only officially made the fight against communism a matter of national policy but we have also acquired a potent weapon in the fight against subversion.

"Successful as we have been in breaking the backbone of armed Communist resistance, we find ourselves seriously handicapped in countering effectively the more insidious activities of Communists who have ostensibly forsworn violence and sought expediently the protection of the very laws of the land which they seek to destroy.

"Thus, even with our success in the military field the congressional committee on anti-Filipino activities after conducting the most comprehensive and authoritative study made on the problem of communism in our country, concluded that communism remains a real and continuing threat to the national security. It is to the credit of this committee that the bill outlawing the Communist Party was conceived and recommended. It is, likewise, to the credit of the champions of civil rights in Congress that necessary safeguards were made such that the legitimate exercise by citizens of their rights shall remain inviolate. What the present law punishes is not dissent nor heresy but subversion and conspiracy.

"Communist sources, as well as the evidence of our own experiences, establish the fact that the objectives of communism are the destruction of our social, political, and economic system, and their replacement by a foreign and godless ideology guided and directed from abroad. Those same sources, as well as our experience, establish the Communist means of achieving these objectives as including armed force, sabotage, espionage, and the many sinister forms of subversion. Far from contenting itself with seeking victory, as do other political minorities, by legal democratic process, Communist doctrine flatly denies the possibility of legal success and prescribes criminal conspiracy as its orthodox tactic.

"Under the circumstances it is clearly the right and the duty of this Government to invoke the policy powers of a sovereign state to protect itself and the institutions entrusted to its care from criminal attack.

"The passage of this law reaffirms the position which our Government has taken, and will take, vis-a-vis communism: A firm, unequivocal, and uncompromising stand against freedom's most odious and implacable foe.

"In this vigorous and reasoned counteroffensive to Communist aggression, I feel

that we are serving the cause of the free world as well as our own best interests. If our neighbors can derive benefit or guidance from our experiences and approach, we will have made a substantial contribution to the peace and security of this area.

"I assure lovers of freedom and democracy's friends everywhere that during my incumbency as President of the Republic of the Philippines, I shall not only see to it that the anti-Communist program of my illustrious predecessor, Ramon Magsaysay, will remain intact, but I shall also push it through with the same dedication and with unrelenting vigor."

Like Magsaysay, the innate honesty of President Garcia is a legend in the Philippines. After all the years in public service, he does not even own a home in Manila. He is a poor man and is proud of it. He cannot boast of a sugar plantation because he is one of the few public officials whose name never appeared in the list of debtors to the Philippine National Bank. He never took advantage of his official position to borrow money from the Government bank without adequate collateral. This is one of the reasons why the people have faith in him and why they consider him, as they considered Magsaysay, one of them. He is with the poor because he is of them. Any effort to propagandize sugar barons as belonging to the masses will have an empty ring because the people know, as they unerringly did with Magsaysay, who is really their guy.

President Garcia's patriotism is his greatest asset. When the Japanese overran the Philippines, that was the time to test the patriotism of our politicians. The opportunists immediately showed their colors. Why not collaborate with the enemy, enjoy the perquisites of public office, ride in limousines, make hay while the Japanese sun shone, anyway the Americans may never return, and if they do, it can always be said that it was in the interest of the civilian population that some good Filipinos should protect them from above. President Garcia was no opportunist. He was offered high positions by the Japanese. He refused. He preferred to starve in the mountains and help the resistance movement. He showed that he was not a fair-weather friend of the United States. He demonstrated with deeds his loyalty to democracy.

This is the man who took over where Magsaysay left off. This is the man who with his actions since he became President has shown that he wears the Magsaysay mantle. There are many aspirants to that mantle. Political propaganda will try to manufacture new leaders who will claim that they are the heirs to the Maysaysay tradition. Let us not be deceived. Let us judge them by their past record and by their deeds. With such a yardstick, Carlos P. Garcia emerges as the man who has earned the people's confidence to continue being their leader the next 4 crucial years.

MESSAGE FROM GARCIA

In the face of Supreme Court decisions on domestic communism, the action taken by Philippines President Garcia stands out impressively.

President Garcia signed into law a bill outlawing completely the Communist Party in his country.

This may have come as a surprise to Americans who thought the Philippines no longer were troubled by the Communist menace.

But as Mr. Garcia said, though they have broken up armed communism, "we find ourselves seriously handicapped in countering effectively the more insidious activities of Communists who have ostensibly forsworn violence and sought expediently the protection of the very laws of the land which they seek to destroy."

In such fashion apparently the American Communists have beguiled the majority of our Supreme Court Justices. The Communists disavow violence, conspiracy or ties with Moscow. And the High Court seems to regard them as no more menacing than just another political party with dissenting views.

From long and bloody experience, the Filipinos know better. Their conclusion as President Garcia puts it, is that "communism remains a real and continuing threat to the national security." Communism's worldwide aims are indivisible, wherever the area of their operations, whether in the Philippines or the United States.

"Communist sources, as well as the evidence of our own experiences," says President Garcia, "establish the fact that the objectives of communism are the destruction of our social, political, and economic system, and their replacement by a foreign and godless ideology guided and directed from abroad."

In outlawing the party, all necessary safeguards are taken for preservation of Philippine civil rights. As pointed out by the able successor to the late President Magsaysay—himself an ardent champion of the democratic processes—"the legitimate exercise by citizens of their rights shall remain inviolate.

"What the present law punishes is not dissent nor heresy but subversion and conspiracy."

So speaks a leader wise in the ways of the Communists.

Jewish War Veterans Question Constitutionality of Discriminatory Dhahran Airbase Agreement

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. TELLER. Mr. Speaker, we fight for vindication of a profound American tradition when our efforts are directed to combating all forms of discrimination, whether based on religion, color, creed, or belief. This American tradition is not only an internal source of strength but a beacon of hope for all the world, and substantially accounts for our international prestige.

The present administration has sullied this glorious tradition in recently confirming an agreement with Saudi Arabia by which soldiers of the Jewish faith are excluded from the airbase at Dhahran. As usual, the Jewish people are not alone in this disgraceful episode of discrimination. Chaplains representing all faiths are obliged to perform their religious services surreptitiously. Insignia and other identification of the clergy of all faiths may not be worn or displayed at the Dhahran Airbase.

The Jewish War Veterans of the United States adopted a resolution in May 1957 in which the Dhahran Airbase agreement was condemned as an unwholesome departure from American instincts and traditions, and the constitutionality of this oil-motivated agreement was questioned.

On Tuesday, September 17, 1957, Constitution Day, the New York State Jewish war veterans will hold a conference at the Wall Street Synagogue from 6 p. m. to 8:30 p. m. at which Department Commander Hyman Bravin will preside. The main purpose of the conference will be given over to questioning the constitutionality of the Dhahran Airbase agreement. The discussion will be led by one of our most active figures in Jewish, fraternal, civic, and political affairs, Jacob Padawer, department judge advocate of the Jewish War Veterans of the United States. Mr. Padawer, a noted lawyer, will dissect the constitutional infirmities of the Dhahran Airbase agreement, and he will also expose its violation of basic American principles and traditions.

The September 17 meeting of the Jewish war veterans at the Wall Street Synagogue has large current significance, and Mr. Padawer's presentation will be of great public interest, because its celebration of Constitution Day will be accompanied by warnings that we must practice what we preach if our ideals are to be respected at home and abroad.

Ernest R. Breech

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MOULDER. Mr. Speaker, following is the text of an address delivered by Ernest R. Breech, chairman of the board, Ford Motor Co., at the commencement Exercises of Lebanon High School, Lebanon, Mo., on Friday evening, May 17, 1957:

As I listened to the splended introduction given me by Superintendent Heagerty and the nice remarks by Judge Curtis tonight, amid these hometown surroundings, the names and associations mentioned seemed familiar, of course. But tonight, they seem a long way off and part of some other person's life, not mine.

I deeply appreciate the honor which you have paid me tonight. No honor, no title could mean more to me than this wonderful tribute from the people of my hometown.

One of the pieces of advice that I give to successful young men who are commencing to get their first publicity is: "Never let yourself believe the flattering things that you hear or read about yourself." You will remember, in Shakespeare's Hamlet, the advice of Polonious to his son: "To thine own self be true." Nothing will keep one more humble than always to know himself, particularly his own weaknesses and his own shortcomings. I have always felt that there are two kinds of individuals in this life: Those who grow with added responsibilities and titles and those who merely swell. They are readily distinguishable to all of us.

There is no such thing as a self-made man. Every individual—to a degree, at least, inherits from his parents his physical characteristics, his mental capabilities, yes, even his disposition. In childhood, environment, both family and community environment—is equally important, with these inherited characteristics, for any potential accomplishments that he or she may attain in future life.

There are, however, many other contributing influences that make it possible for a person to live a good and rewarding life. A very important influence is being lucky enough to get a lifetime partner who will always be a real help. You don't have to concern yourselves with this just yet. I was lucky in this respect. I married a young lady from Lebanon, who had much the same background as I, and with whom I had common interests. She has shared in all the disappointments and successes, sorrows and joys that have come to me over the years. She has never lost her common touch and her very deep appreciation of the real things in life—the family, the home, friends, and the church. But, at the same time, she has always carried her share of ever-widening spheres of responsibility with great credit. And let me add quickly that she has always been a great balance wheel as far as I am concerned.

I have jokingly referred to her for years as the chairman of my board. Maybe I've overdone it, because when a cartoon appeared recently in the Saturday Evening Post of a good wife saying to her husband, "Now, don't adopt that chairman-of-the-board tone with me," several friends clipped the cartoon and mailed it to me.

I have known for some time that this would be a difficult address for me to make. As you might guess, my job has made it necessary for me to talk to all types of audiences on a variety of occasions. But relatively speaking, those—all of them—were impersonal audiences. Here tonight, in the place of my birth and my childhood, amidst all the scenes and associations of my youth, with many dear friends and relatives present, I find it difficult to speak impersonally.

Every time I come to Lebanon I relive those happy, carefree days when, for me, the world consisted primarily of Lebanon and Laclede County, Marshfield and Rolla—where we played baseball and football—and, occasionally, the big city of Springfield.

As I walked to school from our home on Madison Avenue, I often tried to visualize just where I would be only 20 years hence, which then seemed a long way off.

I read Horatio Alger's books—as many of them as I could get—and my knowledge of the big cities was limited to his description of life in the New York or Chicago of that day and age.

It is difficult to realize, but it has been 43 years this month since my brother, Earl, and I received our high-school diplomas at the graduation exercises in the old Opera House. My father got home early that night from the blacksmith shop so he could clean up and change to his Sunday suit. He and mother and our sisters sat proudly in the audience, as so many of you parents are doing—with such justification—here this evening.

I am sure that, to those of you in this year's graduating class, 1914 seems like a long time ago—only slightly more recent than the days of the Roman Empire or, perhaps, the signing of the Declaration of Independence. To many of us, it was only yesterday. Only the tremendous changes and the greatly improved standards of living that have come about make it seem a long time ago.

There were only 21 boys and girls in our graduating class; tonight you number some 180. Lebanon was then a town of only 3,500 persons. Not only has Lebanon grown, but the high school and the number of young people taking advantage of today's wonderful educational opportunities have grown manyfold.

I have just seen a copy of your annual, the Magnet. There are about 65 football players listed on the combined A and B teams. In my day, with unusual persuasion, we were able to muster only 13 on the total squad. That didn't give us many substitutes, in case someone got hurt. One just couldn't afford to admit that he was hurt. He had to keep on playing. No two members of the team had sweaters or football pants that matched. It was up to us to furnish our own. Comparatively, the situation was the same with the number of boys playing baseball and basketball. However, with the exception of Springfield, our competitors were in much the same fix. So, competitively, we had a pretty good record. I doubt, with all the material that you have available today, that I would have been able to make even the B team. But, in my day, I was the quarterback on the first and only team. So—for me, at least—there were some advantages in not having too much competition in numbers.

We had a good town baseball team then, too. I wonder how many here tonight remember Charlie Moneymaker as catcher; Dallas and Owen Vernon as pitchers; Drew Donnelly at first base; Herman Grossenheider at second, and Pat Hannigan at third base. I played shortstop. Deacon Joslyn, Mart Hufft, and Brick Barrows in the outfield. Well, believe it or not, that was a pretty good team. We proved it 1 year when we played the St. Louis Browns a post-season game. It took them 13 innings to beat us 1 to 0. I can still hear us urging our home run hitter, Deacon Joslyn, to slam one over their heads in the outfield.

In those days, the principal entertainment on a Sunday afternoon was to go to the railroad station, and meet No. 4 or No. 3, as these passenger trains stopped in Lebanon. In fact, a lucky event to which I have already referred really had its beginnings because of that custom. I saw a young lady get off the train one Sunday in September, dressed in a pink dress and accompanied only by a little dog on a leash. When the train pulled out, Ralph Hughes and I kept a safe and comfortable distance behind her as we followed her to the home which her parents had rented so that she might attend high school here. Occasionally one of us would whistle and say "Me for the pink." She never gave us a tumble, that afternoon, but obviously, I didn't give up.

At that time, there weren't more than 25 or 30 automobiles in Lebanon and there wasn't a single paved street in the town. I shall never forget seeing Chick Bantley drive the first automobile into Lebanon, with its rubber-tired buggy wheels, along about 1910. Then Mr. Brown got a steam car and spent all his spare time trying to keep it running. And Mr. Heavener, who ran a store in town, a few years later joined the elite class by buying a model T Ford.

Automatic heating had not yet been invented, nor were there all of these fancy indoor plumbing devices with which most of you have grown up. I think if we'd had a choice between a car and a bathroom, most of us would have insisted on the car first and let the bathroom go until later.

There were no electrical refrigerators then, no television sets, not even a radio. There was, of course, the great entertainment medium of those days—the silent movie. There was very little opportunity to earn the spending money to buy a ticket to the silent movie of that day.

We had to plant the gardens in the spring, saw the wood for the stoves in the fall, milk the cow and take her to the pasture and, in my brother's and my case, go to Dad's shop whenever he called us, to put some new tires on a buggy or a wagon. But in those days, these weren't necessarily paying jobs. They were some of the routine work each of us contributed to the family commonweal. On Saturdays my first real job consisted of running the cash register at Red Morris' barber shop, now "City Barber Shop," for which I received 75 cents a Saturday, 7 a. m. to 9 p. m. Later, I made as much as $1 each Saturday, working for Steinberg Bros. Clothing Store.

In fall and winter, I trapped rabbits and sold them before going to school. During vacation the jobs were even more sought after. One year I was fortunate enough to get a job washing bottles at the Magnetic Bottling Co. for $2 a week, and the next year I got a real promotion. Along with Harland Hoppock, I was made "bottler," at $3 a week; and, incidentlly, it was no 40-hour week.

So, in one way or another, we managed to keep busy—and we learned many important lessons that, later on, were to stand us in good stead. For instance, with such early experiences in the background, you can never get to feel that the world owes you a living; you know how to appreciate each added reward for your efforts.

I have many other lasting memories of those high school days and the great influence that teachers like Miss Bowdle, Miss Philbrook, and Miss Jessie Burley had on my life. I remember very well in Miss Philbrook's Cicero class, which consisted of about seven students, what happened when she asked for a modern cussword for "O Te Deum." I won't name the individual, but he really gave her a word which shocked her. We finally compromised on a less literal translation.

I know that you, too, will have many pleasant memories of your years in Lebanon High School which will stay with you all your lives.

To the men in the class of 1914, at least to me, the greatest opportunities ahead seemed to lie only in the professions of teaching, medicine, and law. At that time I knew nothing of the tremendous opportunities in such fields as mechanical and electrical engineering or research, with their great promise of a vast, new world.

Business administration as a profession was equally unknown. True, we could take a so-called business college course and become a bookkeeper or a stenographer. But businesses, at that time, were run primarily by owner-managers, and there were very few large companies directed by professional managers, as there are today.

Because of family financial limitations, I couldn't go to college the first year after graduation. I was fortunate enough, however, to get a job at the A. G. Phippeney General Merchandise Store.

I shall never forget one experience I had clerking for Mr. Phippeney. All the farmers and their wives knew Joe Breech the blacksmith, and many of them had seen me around my father's shop. I was completely stumped one Saturday when a farmer's wife walked into the crowded store and asked to look at some counter pins. Undaunted, I pulled out a drawer and placed it up on the counter. It was filled with every type of pin that we had in the store. She immediately shouted so as to get everyone's attention in the store, and cried out, "Joe Breech's boy doesn't know the difference between a counter pin and a safety pin." More experienced hands than mine came to my rescue, bringing forth the counterpanes, or bedspreads, for which she was looking.

Because of slack business in the next spring, I was laid off. Not having any unemployment insurance or supplemental unemployment benefits in those days, I had to find something to do in a hurry. Having been mailed a catalog on the Dodge automobile, I immediately went to work on my father to let me go to Springfield and try to get a franchise to sell Dodge cars out of his blacksmith shop. It was a tough thing to sell my father, but he finally consented, and I talked Doc Wetzel in Springfield into letting me have a hand at selling Dodge cars in Lebanon. Our stock consisted of one car—and that was a demonstrator. I had no trouble in getting people to take demonstration rides, but I had a tough time selling any automobiles.

Then something happened which I have often said was the good Lord's own doing. I heard that Dr. L. E. Meador of Drury College was in town asking for me. We met on Main Street, and I sat down on the curb with Doctor Meador and listened to his persuasive talk as to why I should enroll in Drury College the coming term. They were prepared to give me a tuition scholarship. I went to Springfield and saw Dr. A. P. Hall. He assured me that I should be able to find employment on the campus to assist me in paying for my room and board.

I went to Drury for 2 years, and I shall always be indebted to Doctor Meador and others at Drury for the broader outlook on life which those 2 years at Drury gave me.

Thus far, I have taken the liberty of addressing myself to all of you here tonight, hoping that the graduates might find some inspiration by my reliving a few early experiences that many in this audience have shared. Now, however, I want to direct my remarks primarily to you, the class of 1957.

Let me tell you what I see in store for you from where I sit, provided you consider this occasion as only the commencement of your education.

I want to talk to you about the future, your future, and about this world that you are destined to inherit in just a few short years. You are at that wonderful stage in life where there are many paths before you, where you may choose freely the career you will follow and the life you will lead in the years ahead. Let me urge you to set your sights high, make big plans and act boldly, to make the most of the magnificent opportunities that are yours today for the taking.

Above all—and I cannot urge this upon you too strongly—do not make the mistake of wasting your opportunities in an endless search for security. You are coming to maturity at a time when a great many people are preoccupied with the pursuit of security, without recognizing that there is only one real security, namely, one's own capabilities.

You are coming of age in one of the most difficult and yet one of the most exciting and challenging periods in history. You are moving out into a new world, both literally and figuratively—a world that is vastly different from what anyone might have expected only 15 years ago. It offers you more of almost everything—jobs, knowledge, material comforts—than it has ever offered any generation before you. At the same time, it will demand more of you than it has ever demanded before.

One of the most urgent demands of this age is for brainpower. No matter what career you ultimately choose, an important part of your success will depend upon your basic education in the liberal arts. The only real shortage in our country is the shortage of trained people—in the professions, in government, and in business. In industry alone, we are today waging the greatest talent hunt of all time. We are in critical need of scientists, engineers, managers, highly trained technicians of all kinds. In other words, although we may be long on horsepower, we are definitely short on brainpower.

Let's go back a few years, to a time when you were about to enter school. Most of you know by now the story of that dramatic coded telephone message that was sent from Chicago to Cambridge, Mass., on December 2, 1942. The message was very brief: "The Italian navigator has landed in the new world." The "Italian navigator" was of course Enrico Fermi, the leader of a small group of nuclear physicists who had been working in an old squash court under the football stands at the University of Chicago. The "new world" was that vast, mysterious region that had never before been penetrated by man—controlled nuclear fission.

In 1942, that message—telling fellow scientists in Cambridge that the Chicago team successfully had taken the first steps in solving the mysteries of controlled nuclear fission—might have meant very little to me. In 1955, as a member of an advisory panel to the United States Congress which was to study the impact on our economy of the peaceful uses of atomic energy, it came to mean a great deal more.

In the next 20 years, atomic energy will gradually bring about dramatic changes in your way of life. For one thing, atomic power can and should be an important resource for the generation of electricity, but large sums of money and years of effort will be spent to bring atomic power to a point where it can be used effectively and widely in this country on a basic competitive with present fuels.

By the use of irradiated isotopes, atomic energy has made possible some most important advances in medicine and public health, especially in the diagnosis of many ailments, and as an improvement over the X-ray in the treatment of cancer. As a new tool in agricultural research, atomic energy will enable the farmer to specialize, diversify and better deal with his worst foes—weather, pests and disease. Progress in the use of these new tools will be limited only by the availability of young men and women trained in their handling and use.

I could cite many more possibilities—atomic propulsion of ships and military aircraft, for example—but there is not time for that here. My point is that there is so much work to be done, so many scientific and engineering ideas to be explored and exploited, that it almost defies the imagination. Every new idea or discovery opens up many new avenues to be followed by trained, inquiring minds.

Out in California, there is a subsidiary of our company known as Aeronutronic Systems, Inc. That name is made up of three words aerodynamics, nucleonics, and electronics, which gives you some idea of the kind of work that goes on there. In that organization are brilliant young scientists who are almost literally out of this world—pioneering man's conquest of space. As chairman of the board of that company, I have been privileged to follow closely the work of those men. I wish that you, too, could hear them talk of launching space satellites, of sending rockets to the moon in order to learn more about our universe.

These young men and women of science are today's pioneers, pushing outward the frontiers of knowledge and creating the new ideas upon which our progress will be based. But there are far too few of them. In this age of science, there is an insatiable demand for young men and women with such inquiring minds. How many of you will go on to such careers in science?

Another great need of our times is for men who can organize and direct the efforts of others in a common enterprise. An idea isn't useful until it has passed the blueprint stage and has gone into production. That calls for capital and equipment; but more importantly it calls for able managers who can give overall direction and leadership to the enterprise.

Industry is finding it difficult to secure enough of these managers—men with broad and diversified education and experience to integrate the efforts of others.

This need for managers is not limited to the technical or production phases of industry. In all of our operations—accounting, sales, purchasing, industrial relations—we are constantly on the lookout for those men and women who can get things done through skillful management of human and material resources.

I could suggest no more challenging or rewarding career for any of you than business management as it assumes growing and greater responsibilities in our industrial society.

I don't mean to give the impression that it is only industry that is searching vigorously for educated, trained young people today. Far from it. Government, too, is in need of many more men and women of the kind I have just described. In addition, Government also seeks people skilled in the social sciences, languages, international relations, and public administration. The caliber of our government at Federal, State, and local levels is dependent upon the people who fill its responsible positions. It is a wide-open field for those with education. And, might I add, that Government has become the biggest business in the world.

It does no good to talk of expanding our Nation's brainpower or of upgrading the level of education in this country unless we have an adequate number of capable teachers at the elementary, secondary, and especially the college levels. It has been estimated that our elementary and secondary schools will need 16 new teachers between now and 1965 for every 10 now teaching. In other words, we are going to need 60 percent more teachers than we now have below college levels. In our colleges, the need is even greater. The expected growth in college and university enrollments over the next 10 years will call for approximately twice as many professors as those teaching today, plus many more researchers of all kinds.

To put it another way, the number of new teachers that will be required over the next 10 years could reach nearly 2 million, or more than one-half of all the people who will be graduated from college during that time. This is one of the great dilemmas of our society, and at the same time one of the great opportunities for the young men and women—and especially the young women—of this class.

How many of you will enter that noble profession?

Time does not permit me to cover the hundreds of other fields that are open to you for a full and rewarding life. You, yourselves, have thought of many others, I am sure: Scientific farming, nursing, and hospital administration, and for young women—the noblest of all careers—being a good mother and homemaker, and becoming a civic leader as well.

I hope that your education and training will not end at Lebanon High School. All of you will learn that education is not a gift to be handed you by someone else. It is something that you yourself must gain through your own efforts.

Even if circumstances should make it impossible for you to complete your formal education on a full-time schedule, I should like to remind you that the cooperative courses and night-school courses of our universities and colleges are available to all who are willing to put forth the extra effort—that distinguishing characteristic of those who are determined to succeed.

Full attainment of a rewarding life will not come easily. I shall always be indebted to Dr. Bacon for his inspirational commencement address to our class of 1914. His theme was Ad Astra Per Aspera—To the stars through bolts and bars—as he translated it literally. May I renew that theme tonight—43 years later—as the rule and guide for your lives.

Nor is education a process that can ever be allowed to stop. Learning is a never-ending process. Do not be afraid to take on responsibilities greater than you feel prepared to handle at the time. In that way a person keeps growing intellectually so that he or she will be prepared for still greater responsibilities ahead.

It is not only desirable but necessary that we maintain and, if possible, increase our Nation's industrial and technological supremacy. But it is equally imperative that we as people possess the brainpower, the knowledge and understanding, to eliminate from the world, in time, the possibility of war. This is a task in which every one of you can share.

Finally, I urge you to hold fast to those wonderful qualities of mind and spirit that are the heritage of every son and daughter of Lebanon. You have learned, I am sure, to believe in God and to understand that there are spiritual as well as material values in this world.

This may be the final opportunity that I shall have to speak to an audience in the place of my birth and childhood. It is appropriate, I think, for me to say some things that I do not say to other audiences. May I say them now?

Yes, the Lord has been good to Ernie Breech. I have repeatedly asked for His help and His guidance—not just that I might achieve material success—but to give me the intelligence to make the right decision, to do what He wanted me to do.

Thus, at several critical periods in my life, the course I have followed has not always been of my own choosing. But ultimately it has turned out to be the right course—not alone for my own benefit, but for that of many other people.

So I urge you young people to place reliance on the limitless spiritual resources at your command. It is my hope that in future years you, too, may say, as I do so often:

Thank you, dear Lord, for letting me be born in America with its great heritage of freedom; for letting me grow up in a fine community like Lebanon, a part of the grassroots of America; for my God-fearing parents who taught me the real values of life, and for my own understanding and loyal family.

Thank You for the opportunities of life that You have revealed to me.

Thank You for all my blessings.

President Carlos P. Garcia of the Philippines

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. ROGERS of Texas. Mr. Speaker, I request unanimous consent to insert further articles from the July issue of Bataan magazine edited by Dr. Diosdado M. Yap. These include the following editorial concerning President Carlos P. Garcia and an article by this distinguished President regarding the true friendship and partnership which exists between our great and free countries:

CARLOS P. GARCIA, PRESIDENT OF THE PHILIPPINES

The fourth President of the Republic of the Philippines is Carlos P. Garcia, who took his oath of office on March 18, 1957. He succeeded the late Ramon Magsaysay who, along with 25 others, died in a flaming plane crash on a mountain in Cebu Island on March 17, 1957.

Under the constitutional provision the former vice president was sworn into office on March 18 by supreme court chief justice, Ricardo Paras. His oathtaking assured a smooth continuity of administration in the 10-year-old republic.

In a brief informal address, President Garcia promised to "carry on the massive program of the Magsaysay administration" and said there would be no sweeping changes in the government.

"I can hardly say a word on this occasion. I can only tell you I shall carry out every item of the Magsaysay program to its full realization."

President Garcia is a convinced anti-Communist. On May 7, 1954, the day Dienbienphu fell, he delivered an address in which he said:

"The Philippines is keenly aware of the perils of Communist aggression from without as well as of the Communist subversion from within. Asian nationalism has nothing in common with communism."

After receiving news of Magsaysay's death, Garcia immediately flew to Manila from Canberra, Australia, where as chief Philippine delegate, he was attending the Third Council of Ministers meeting of the Southeast Asia Treaty Organization. Magsaysay was elected President of the Republic on November 10, 1953, on the Nacionalista Party ticket with Garcia as vice president.

President Garcia was born on November 4, 1896, in the town of Talibon, Province of Bohol, 1 of the 13 provinces which constitute the Visayan group. His father was Policronio Garcia, who was mayor of Talibon for four terms, and his mother was Ambrosia Polistico, both deceased. As student, President Garcia attended Talibon Elementary School, Cebu High School, Silliman University and the Philippine Law School. He was always at the head of his class. He won the Carlock medal, Cebu High School oratorical contest, and the Hoeson gold medal, Philippine Law School oratorical contest. The President was a Malcolm 4-year law scholar. He graduated valedictorian of the Philippine Law School in 1923, and passed the bar in the same year, 1 among the first 10.

He was a public schoolteacher for more than 2 years. He served as congressman for 2 terms; as Governor of Bohol for 3 terms; and as senator for 3 terms. He became minority floor leader of the senate in 1946. He resigned in 1953 as senator after his election as vice president. As senator he was chairman of the advisory committee on government reorganization, and the subcommittee on Japanese reparations. He was a member of the senate electoral tribunal and commission on appointments, the senate committee on foreign relations, finance, public works, national defense, and revision of laws.

After the war he served as Philippine delegate to the World Conference To Draft the United Nations Charter and in the same year, 1945, he was sent to Washington in connection with Philippine rehabilitation and war damage claims. In 1950 he was delegate to the Inter-Parliamentary Union Conference in Dublin, Ireland. After returning to Manila, he attended the 1950 Southeast Asia Conference held in Baguio City.

In 1954 he was chairman of the Philippine delegation to the Geneva Conference for Korean Unification. He served as chairman of the Southeast Asia Treaty Organization Conference in Manila in September 1954. Since 1955, he has regularly served as chairman of the Philippine delegation to the Council of Ministers meetings of the Southeast Asia Treaty Organization. With all these multitudinous duties for his people, he has served as Secretary of Foreign Affairs with credit and distinction.

Newspaper reporters voted him as one of the most outstanding and most useful senators from 1949 to 1953.

During the war he was hunted for 3 years by the enemy. Three times he narrowly escaped capture by Japanese soldiers after refusing to surrender in May 1942. On Christmas Day of 1943 he received via submarine a letter from the then Commonwealth President Manuel L. Quezon, Washington, D. C., confirming and approving the guerrilla government in Bohol and the resistance movement in the area of which he was an adviser.

As vice president he concurrently held the secretaryship of foreign affairs.

In an address on February 14, 1957, he told the Supreme Council of the Ancient and Accepted Scottish Rite of Masonry of the Philippines thus:

"The Philippine Republic immediately upon her regaining independence set down as a cardinal and fundamental policy the preservation and maintainance of close Philippine-American relations and the continuing effort to improve the same. Consequently, we alined ourselves with the democratic nations of the free world under American leadership. We continue to fight side by side with the other members of the free world, to make freedom, democracy, and justice the common patrimony of all countries and peoples of the world. It is our unalterable determination to pursue this policy as long as divine providence from whom we received the blessings of freedom and democracy will continue to guide the destiny of our country. As long as the basis of Philippine-American relations will continue to be that of equality, mutual respect, and national dignity and justice, so long will the Philippines and this United States of America stick together."

A well-read man, President Garcia's reading habits incline him to philosophy, poetry, history, and economics. He has attained recognition as a poet in the Visayan language. His favorite diversion is chess.

He is married to Leonila Dimataga, a pharmacist of Opon, Cebu. They have one daughter, Linda, who has a bachelor of arts degree from the University of the Philippines.

THE PHILIPPINE-AMERICAN PARTNERSHIP IN DEMOCRACY

(By Carlos P. Garcia, President of the Philippines and Concurrently Secretary of Foreign Affairs)

Twenty years ago on November 15, 1935, we established the Philippine Commonwealth, and our flag, the glorious flag of our forefathers, was raised upon its masthead to wave thereafter side by side with the American flag over this land we love. That was symbolic of the Philippine-American friendship, which, having arrived through the acid test of the Second World War, will endure, I hope, across the surging centuries of time.

But you and I, and perhaps generations and generations of Filipinos yet sleeping in the womb of time are beneficiaries of the happy Philippine-American relation. How, then, can I speak of it without being carried away from impartiality by the mighty emotions of love and gratitude to our benefactor?

We won our long-cherished independence in peace and by pacific constitutional processes freely granted us by the free will of a free people. It is unique. It is unprecedented. Theretofore "no star ever fell from an imperial diadem except through force and at the cost of torments of human blood." It is to the deathless credit of Philippine-American friendship the essence of which are love of, and faith in each other, that the consummation of our supreme national ideal was achieved by the fullest cooperation of Americans and Filipinos. And it is to the undying glory of Philippine-American relations that the transcendental event of the granting of Philippine independence by American voluntary act had produced tremendous benefits to humanity. Because the pattern set here resulted in the independence of India, Pakistan, Burma, Ceylon, and Indonesia. The cycle started here was global in proportions and it has now reached the shores of Malaya, Africa, and will yet touch all lands and races until the complete acceptance of the principle that peace and freedom are indivisible, and that the world cannot attain peace half slave and half free.

Let the muse of history set down to the credit of Philippine-American relation that

a new morality in the dealings of nations, especially between dominant and colonized peoples has been inaugurated. The event of our independence has shaken the foundations of empires and brought new hope to the benighted millions still denied of freedom. Because of Philippine independence, the mighty powers of the world have come to realize that the irresistible march of freedom around the world is a divine decree that no human power can stem or subdue. Such, my friends, are some of the revolutionary effects of Philippine-American relation, worthy to be recorded on the imperishable tablet of time.

DEMOCRACY IN THE PHILIPPINES

But my friends, if we Filipinos were to answer the question: What is the greatest product of Philippine-American relation as far as the Filipinos are concerned—the answer would be spontaneous and resounding. And it is: the implantation of democracy and the democratic way of life in the Philippines.

In the thrilling saga of our fight for independent nationhood, the story of the development of Philippine democracy is central motiff and constitutes inspiring reading. The cornerstone of Philippine democracy was laid down from the beginning of the American regime by extending to Philippine citizens the Bill of Rights. Thus, the Filipinos began to love America as they started to enjoy freedom of worship, freedom of speech, thought, and conscience, freedom from unwarranted search to guard the sanctity of the home, freedom from unwarranted arrest with the right of habeas corpus, freedom from expropriation of one's property rights without just compensation, freedom from testifying against self, and all other rights that are now consecrated in article 3 of the Philippine Constitution.

Taking cognizance of the fact that these sacred rights of the citizens must be effectively enforced, the American regime instituted here sweeping judiciary reforms and established the greatest bulwark of democracy, the Philippine supreme court. It was composed of a majority of American justices but headed by the greatest living Filipino jurist of the day, Don Cayetano Arellano. Great American and Filipino statesman-jurists gave the Philippine supreme court the stature and equal to the best in the world. Such justices as Arellano, Mapa, Araullo, Torres, de los Santos, and others, contributed to make the Philippine jurisprudence a rich mine of wisdom, uprightness, statesmanship, and profound legal lore. Such great American jurists as Justice Moreland, Carson, Malcolm, Johnson, Street, and others, made the Philippine jurisprudence a massive monument on which stands and will stand for many centuries the beacon lights of justice, liberty, and equality.

AMERICAN STATESMANSHIP

It is our good fortune that American statesmanship long realized that democracy will only work effectively and successfully where there is an intelligent public opinion. We can only expect to find courage, vision, and dynamic leadership in Malacanang; integrity, dedication to public welfare and loyalty to public trust in Congress if the electorate is enlightened, educated, and highly principled. Realizing all these, the American regime in its earliest days instituted sweeping reforms in the Philippine educational system designed to afford every boy and girl of this country elementary education and enable them to understand their rights and duties, not as American citizens, mind you, but as Filipino citizens. Coeducation was instituted throughout the country, even over the objection of many. Social distinctions were obliterated in the classrooms and education was no longer the exclusive privilege of the rich and the powerful. Thus, education became the masterkey to the implantation of democratic institutions, democratic practices, and democratic processes in the Philippines. Thus, the róots of the democratic way of life went deep into our national soul that now no earthly power can take it away from us.

The University of the Philippines, now no doubt one of the world's highest institutions of learning, was later established to be the capstone of the Philippine educational system. It was later followed by many other private universities and colleges that now the Philippines can claim to be the intellectual capital of the Orient.

By the implantation of a democratic system of education in the Philippines, the avenues to fame and success were opened equally to rich and poor alike. The star of hope began to shine on the roof of the poor man's cottage. A new horizon was opened to the vision of the poor man's child. The gate of opportunities to rise and grow were swung open equally to all, breaking down the barriers of social exclusivism. Thus, democracy in the Philippines grew in strength and power and depth year by year. And now, it is a mighty part of our national soul.

DEMOCRATIC GOVERNMENT ESTABLISHED

Immediately upon seeing the spread of education fairly into the masses, another stride in popular and democratic government was taken in 1907, when the Filipino people were allowed to elect their representatives to Congress. That body was then called the Philippine Assembly composed of 81 members, elected from congressional districts all over the Philippines. Composed as it was of men chosen directly by the people themselves, the Philippine Assembly immediately became a powerful legislative chamber through which the nation voiced its ideals and aspirations and realized their burning desire for progress. So the first speaker thereof, Don Sergio Osmeña, of Cebu, rose as the brightest star in our political firmament, and by popular acclaim he became the leader of the Filipino people. He remained in this exalted position from 1907 to 1922. He was at the same time the president of the ruling political party, the Nacionalista Party during the same period, with Manuel L. Quezon and Rafael Palma as cofounders. The main plank of the Nacionalista Party platform was enunciated in an atmosphere of complete freedom. It said: "Immediate, absolute, and complete independence for the Philippines." This platform swept over the country like wildfire and a complete renascence of the spirit of ninety-six seized and thrilled the national consciousness. Philippine nationalism was again in gorgeous bloom.

The friendly and understanding American regime, far from suppressing or throwing cold water on this nationalistic effervescence, hailed and encouraged it. William Howard Taft, then the Governor General, conveying the sentiment of American President Roosevelt, used this occasion as an opportunity to drive deeper the foundations of democracy in the Orient. The American way received new and greater popular acclaim and plaudits not only in the Philippines, but throughout the entire Orient. America thus became the hope of the colonized peoples in the entire Orient. In the heart of the benighted millions of Asia, America was hailed as the redeemer.

With the heightened momentum of nationalism in the Philippines, the wheel of progress in all aspects of the national life turned faster and faster. Our trade with America zoomed by leaps and bounds. Prosperity spread not only in the upper stratum of Philippine society but deep into the masses. Agriculture and industry experienced a sudden rebirth into new and vaster horizons. America gave all sorts of stimulus and encouragements to the economic development of the Philippines alongside the broadening of political autonomy.

The monumental task of building up Philippine democracy acquired increased momentum with the boundless enthusiasm of the people. Reforms followed one after another in rapid succession. In 1916, the Jones Act was passed by the American Congress, giving us greater autonomy, Filipinizing both houses of Congress and all positions of the Government, except the Governor General, Vice Governor General, and justices of the supreme court. Then came the Independence Act of 1934 first called the Hare-Howes-Cutting and later the Tydings-McDuffie law. It authorized the establishment of the Philippine Commonwealth for 10 years as the last transition period toward independence. And the same act fixed the date of granting us our long-cherished national freedom on July 4, 1946.

ACHIEVEMENTS UNPARALLELED

This long line of achievements, political, economic, cultural, and otherwise, realized in three decades, is unparalleled in history. They can only be wrought by love and faith. And love and faith were the outstanding elements in the Philippine-American partnership. The cordial Philippine-American relation was tested in two world wars and emerged through them stronger and deeper than ever before. After World War II, new evidences of American love and faith flowed into the records. And you will pardon an abuse of your indulgence in recalling some of these eloquent testimonials of the mutual love and faith that make up the essence of Philippine-American friendship.

You will recall that our country became the first major casualty of the Second World War in the Pacific. Such hitherto impregnable bastions as Bataan and Corregidor fell into the hands of the Japanese invaders after an epic resistance in which Americans and Filipinos fought and fell side by side under the shadow of the Philippine and the American flags. Thereafter, the Japanese conquered and occupied the Philippine territory, but never the heart of the Filipino people. The occupation of the Philippines was brutal, ruthless, and cruel. But 3 years thereafter, or to be more precise on October 20, 1944, the American Forces of Liberation, led by the greatest statesman-soldier of this age, Gen. Douglas MacArthur, landed on Leyte with one determination: to redeem the Philippines from Japanese bondage. This he accomplished almost with the speed of lightning. By February of 1945, he restored the Philippine Republic back to its seat in Manila. America gave profusely of the blood of her noble youth to liberate us from Japan, not for herself to keep, but for the Filipinos themselves, because on July 4, 1946, America relinquished sovereignty over the Philippines as she promised and enfranchised us as a sovereign independent country. You will search in vain in the history of the world for any precedent of that noble action. This glorious act of American magnanimity and magnificence shines like the brightest star in the historical firmament of the whole world.

But this is not all. We were granted our independence in fulfillment of a solemn American pledge, on the exact day it was promised, regardless of the situation and circumstances at the time. Then we were yet buried under the wreck and ruin of the most devastating war that ever cursed mankind. Our public coffer was empty, our national economy destroyed, our manpower seriously reduced, our morality tainted and corrupted by the brutality and misery of war. And on top of that, we were faced with the new responsibilities concommitant with our independence. No country has ever assumed an independent national life in the midst of greater adversities and difficulties as the Philippines. I can say that at that time we could count on nothing except our faith in ourselves, that with the new instru-

ment of freedom that we regained, we can master these adversities, however great. But we also could count on American love and faith.

AMERICAN ALTRUISM

America did not fail us. She could not bear to see the infant Philippine Republic fail after she had nurtured it for 50 years. So she poured billions of dollars to keep us going at that critical stage. She helped us rebuild our towns and cities, rehabilitate our economy, restore peace and order, rebuild our educational and cultural institutions, and advance our health and social services. She has even helped us to build for ourselves a little name and prestige in the international field by helping us reestablish our foreign trade and foreign credit and even make friendly relations and alliances with other countries. She has agreed to revise the Bell Trade Act that has been shown to work serious handicaps and impairment to our economic independence, thereby enabling the Philippines to be an effective factor for democracy in the Far East. In the spirit of helpfulness to insure our territorial integrity from foreign invasion, she has entered into a mutual defense pact with us, and as a consequence thereof her naval and aerial might stand guard to defend us from foreign invasion. My friends, all of these are superabundant proofs of the fruitfulness and beneficence of the Philippine-American friendship.

So it is only but the irrevocable logic of history that President Magsaysay's foreign policy to maintain and further improve Philippine-American friendship and partnership received a categorical and resounding approval by the Filipino people in the last elections. The President, in giving full support to the enunciated policy of the United States to prevent the fall of Formosa into Communist hands which eventually will lead to the swallowing up of the Philippines and southeast Asia by the giant Communist octopus, was only interpreting with unerring fidelity a profound sentiment of the Philippines. The critical voices that opposed these foreign policies of President Magsaysay which are unaltered and inalterable policies from our first President Quezon to the last were drowned in an ocean of votes in the last elections. The leadership of President Magsaysay stands!

My friends, let me conclude. The Philippine-American relation's greatest benefit and blessing to us, as I said, is democracy, whose foundations are justice, liberty, and equality. On this day that we celebrate this friendship let us renew our pledge to defend that democracy and preserve it as the most precious heritage we can bequeath to our posterity. Let our hearts awaken to a renewed devotion to freedom and high resolve to defend it with our lives. Let our unswerving determination be to keep the stand of the Philippine Republic as free equal of the United States on the rock of Philippine-American partnership and keep it "growing in stature, wealth, and power, loved and revered by her citizens, honored and respected abroad, and the cherished home of contented free men."

Suggests a Way To Cut the National Debt

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a letter from my good friend and constituent, J. Kesner Kahn, which was published in the Chicago Daily News under a 4-column heading in the department on the editorial page devoted to letters from readers. The letter follows:

Perhaps we should wonder why government isn't bigger and more expensive than it is. After all, the bigger Federal departments get the higher the pay of the department head.

The bigger and more expensive a Federal-aid project becomes, the higher is the pay of the bureaucrats who administer it.

Thus everything encourages big, expensive government.

Why not change all of this by creating incentives for Government officials and employees to save money for us?

Why not a cost savings bonus where 5 percent of all savings, under budgeted amounts, is given to those who make the savings?

For example if the State Department saved a billion on foreign aid, and that shouldn't be difficult, then $50 million would go into the "kitty" for State Department employees and officials and would leave $950 million in the pockets of the taxpayers, nearly $17 per taxpayer.

J. KESNER KAHN.

CHICAGO.

The Cotton Problem

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Cotton Problem," which appeared in the May 23, 1957, issue of the Cullman Tribune, Cullman, Ala. The editorial is as follows:

THE COTTON PROBLEM

With cotton acreage decreasing in Cullman County, it's interesting to have a national viewpoint of this important farm product.

From an editorial about cotton in the May 20 edition of Life magazine is the following—"Do you know that:"

"The technology of growing cotton has been so perfected that the man-hours required to grow a bale of cotton have dropped since 1930 from 260 hours to 108, and the average yield per acre has risen from 157 pounds to 409 today?

"The most efficient producers—mechanized farms on flat lands ideally suited to irrigation and cotton culture, as in Arizona—can produce up to 1,108 pounds per acre?

"From start to finish, cotton culture is now chemically or mechanically controlled—high-yield seeds chemically treated to resist molds and insects are machine-inserted into ground prepared by soil looseners and nutrients, nourished by a dozen varieties of chemical fertilizers; the sprout fed with nitrate pellets, and sprayed with insecticides, and the boll defeafed with chemicals?

"This technology has become so increasingly efficient that no matter how much acreage allotments are cut back under the crop reduction program the crops keep right on increasing?

"Cotton culture is so successful and efficient that 17.5 million acres now yield more production (14,725,000 bales in 1955) than was grown on 43 million acres in 1930?

"The really successful cotton farms—the big mechanized ones and the good medium-sized farms, which still produce most of our cotton—could surely get along without help, eventually, if the industry was put on a basis of free competition and our prices left to find their own level. The business would quickly thin down to efficient operators, who could produce all the cotton really needed, and at a profit. Yet the Government last year laid out $1.4 million in crop loans to one of the biggest of all these corporate cotton industrialists, Mississippi's Delta & Pine Land Co., a British stock company.

"This program is causing cotton to strangle itself to death. When the consumption of everything else in this growing land has been rising cotton has been standing still by comparison. In 1930 it made up 85 percent of all fibers used by Americans; last year it made up only 66 percent. The sales of synthetic fibers have soared by 1,000 percent—from 1 pound per person to 10 pounds, while cotton rose only from 21 pounds to 26, or about 25 percent.

"Does any of this make any sense? We don't think so. And it emphasizes the underlying nonsense of a large part of the farm program, on which Congress this week is debating the spending of another $5 billion—one-sixth of the whole nondefense budget, going to an industry in which only 7.3 percent of all Americans now make their living."

Up East where Life is published the growing of cotton is not a problem. Here in Alabama, the planting and harvesting of this agricultural product is important to many people. And the Tribune is for subsidizing the small cotton farmer, as well as protecting the large American manufacturers with a reasonable tariff and the industrial workers with wage-hour laws.

Airborne Division Association Supports Cordiner Report

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. ANDERSON of Montana. Mr. Speaker, I have pending in Congress my bill, H. R. 8305, to change the method of computing basic pay for members of the armed services, to provide term retention contracts for Reserve officers and for other purposes. Substantiating my desires for passage of this legislation is a resolution approved by the 82d Airborne Division Association at its recent annual convention in Cincinnati. This organization of 56,000 veterans stressed the need of retaining persons with scientific, professional, combat leadership and management skills necessary to maintain a deterrent power. This substantially is in line with the Cordiner report concerning which I am happy to note the President now has reversed his position and is favoring implementation of the report.

I am urging that hearings be held on my bill, H. R. 8305, and other similar bills as soon as we return to congressional sessions next January. This will be necessary so that we may soon en-

joy the greater efficiency and economy that will result in a more effective defense.

The resolution of the 82d Airborne Division Association is as follows:

Whereas the Military Establishment is desperately in need of a means for attracting and retaining persons with scientific, professional, combat leadership, and management skills necessary to maintain a deterrent power; and

Whereas the Armed Forces do not presently have the means to compete for trained personnel urgently needed for the defense of this country, and a significant factor in their inability to do so is the inadequacy of the present compensation practices now in use to bring military pay more in line with the pay standards of industry, and to offer greater reenlistment incentive for highly trained personnel: Therefore be it

Resolved, That the Congress of the United States be urged to take favorable action to revise the existing pay structure now in use in the Armed Forces, along the lines proposed by the Cordiner Committee; and further

Resolved, That inasmuch as the parachute is a most hazardous form of transportation into battle, it is recommended that the hazardous duty pay scale, as provided by the Cordiner report, be applicable to all paratroopers as well as to the submariners of the Navy and the fliers of the Air Force.

Rejection of the Ainsworth and Farwell Irrigation Districts

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. MILLER of Nebraska. Mr. Speaker, it is a great personal disappointment not only to me but to the folks living in the Ainsworth and Farwell areas of Nebraska to learn that the conference committee on the public works appropriations bill failed to include funds to get two worthy reclamation projects underway—the Ainsworth irrigation district and the Farwell irrigation district.

These projects, fully approved by the Department of Interior and Bureau of the Budget, were stricken from the bill by the House committee. They were put back into the bill by a Senate committee and approved on the floor of the Senate. The conference committee then struck them out.

These are sound projects. They are feasible projects. They are needed projects. They would be a great investment in the future of America.

There seemed to be only two reasons advanced against their inclusion in the bill:

First. That the Bureau of Reclamation failed to make an adequate presentation of the merits of the projects;

Second. That the Nebraska Legislature had passed resolution No. 10 in which Congress was asked not to pass new grants-in-aid programs.

Mr. Speaker, the resoltuion had rather wide publicity. It was placed in the CONGRESSIONAL RECORD. Comments extended across the country relative to the action of the Legislature. Some newspapers carried big headlines, Nebraska Wants No More Federal Aid. That was not the meaning of the resolution at all.

Now as to the first complaint, I want to point out that I agree the hearings showed a very poor presentation of the case by the Department of the Interior. Some of this testimony was vacillating, not at all positive. However, I would further point out the projects do have legislative approval. They do have full approval of the Department of the Interior. The projects do have the approval of the administration and were budgeted when funds were requested. In all fairness, funds for these sound projects should have had the immediate approval of Congress.

Now as to the resolution which seemed to dampen the ardor of some of my colleagues in regard to Federal money for Nebraska, it is quite true the Nebraska Legislature passed a resolution against new grants-in-aid programs and asked that such existing projects be reexamined. Here is the potent paragraph in the resolution:

Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 68th session assembled, That the Federal Government refrain from enacting new grant-aid programs and reexamine all such existing programs and end or reduce their costs wherever possible.

The resolution in no way referred to irrigation projects such as Ainsworth and Farwell. These are not grants-in-aid programs. They fall within an entirely different category. They follow the pattern of the wise men of vision who founded reclamation more than a half century ago.

It would seem that the resolution provided a rather flimsy excuse for removing from the appropriations bill projects that have met all legislative and Bureau of the Budget demands.

The people of the Ainsworth and Farwell areas had formed legal irrigation districts. They had signed repayment contracts. They had met all the demands of the law in their efforts to get water to their parched land.

It is a little difficult for me to understand why a single resolution by the legislature should be the governing factor in rejecting funds for projects which will repay their cost, a resolution in no way related to these projects, a resolution with which the people involved in these projects had nothing to do.

Of course, Nebraska, like other States, participates in a great many grant-aid programs. Some of these require matching by the State. Others are outright grants. I believe the record will show that Nebraska last year participated in 65 various types of Federal-aid programs. The total amount allotted to Nebraska last year was $56,237,891. Some of these programs are fine ones. Some should probably be curtailed. Others were available in which Nebraska did not take part. But I emphasize again such programs are totally unrelated to irrigation.

Now, Mr. Speaker, it is not always easy to find the full facts when conferees meet behind closed doors. However, I am told that when this appropriations bill was considered, tempers were rather high and it would seem that emotion dulled the senses of good, honest, reasonable men sitting in that conference. Perhaps this long and very fatiguing session of Congress had its effect in shortening the conference to such an extent that full consideration could not possibly have been given to individual projects.

It must have been so or these men could not have avoided coming to the conclusion that the Ainsworth and Farwell projects do have merit. If they had given only casual attention to the language of the resolution against new welfare programs, that resolution could not possibly have carried enough weight to be the determining factor against the development of good, sound, feasible irrigation projects which are of vital importance to the people of the State of Nebraska.

The Ainsworth and Farwell projects are two of the best in the entire Missouri River Basin. They would pay back, over a period of years, most of the moneys invested in them. The projects carry only about 4 percent of nonreimbursable funds for flood control and fish and wildlife benefits.

The Ainsworth Irrigation District is designed to bring water to 34,000 acres of land. The Farwell Irrigation District is designed for 52,500 acres which in conjunction with the Sargent Irrigation District, now under construction, would irrigate a total of 68,700 acres. These projects would bring the glow of agricultural prosperity to areas which have been stricken with drought year after year. They would bring new hope, new ambition, new wealth to the fine people who populate the two areas.

Mr. Speaker, we are now considering a conference report. It is not possible to offer an amendment to make it concur with the bill passed by the Senate which included the two Nebraska projects. Were it possible, I would want to take that course, but the rules seem to prohibit that procedure.

I can only hope, Mr. Speaker, that when these two projects come before the committee next year for consideration that a better presentation can be made by the Bureau of Reclamation and that Congress will have placed the Nebraska resolution in its proper perspective. These projects will stand the closest scrutiny of the appropriations or any other committee. Such scrutiny is invited. The projects will stand up.

Mr. Speaker, in a few days we will be passing a bill for foreign-aid appropriations. At this time I cannot help pointing out that in that foreign-aid bill there is probably 30 times as much money for projects all over the world as is needed for the two projects in Nebraska.

Remember, too, that money is gone forever. It will not be paid back as would be the case with Ainsworth and Farwell.

I was disturbed and dismayed a few months ago when I had a report compiled for me showing the expenditures of our money for reclamation, irrigation, flood control, and power projects overseas.

I found that in a period of about 8 years, ending last December 31, our cost for such projects was $355.8 million for

197 projects in 46 countries. That is a lot of money to be spending all around the world at the very same time our good people at home are standing helplessly by while a burning sun in a rainless sky destroys their crops.

Mr. Speaker, I consider the Ainsworth and Farwell Irrigation Districts an investment in the great resources of a great America. The projects are sound. The people have met all the legislative and budget demands.

In a spirit of commonsense, the people should not be prevented from bringing together the two great resources that are needed to raise food for your table and mine—water and land.

Attached is a telegram which came from the directors of the Farwell irrigation district:

GRAND ISLAND, NEBR., *August 13, 1957.*

Hon. A. L. MILLER,
Washington, D. C.:

Understand public works appropriation bill will come up today or tomorrow for a vote in the House of Representatives. Our people are extremely disappointed that conference committee saw fit to leave out an appropriation for the Farwell unit. Surely, the determination of our people to have irrigation development, as evidenced by the formation of a reclamation district, an irrigation district, and the signing of repayment contracts, should not now be frustrated by a single resolution of our State legislature, over which they have no direct control. It is a black day for us to have had years of hard work be held for naught by actions of others who are in no way connected with us. Our people have the utmost confidence in your leadership, and, frankly, we firmly believe we are entitled to have you exert every act at your command to have this irrigation development now, not in the future. We have fulfilled every demand made on us by all Government agencies including Congress itself. The matter now rests with you and your colleagues. To be sure we feel justified, and are hopeful of your efforts on our behalf.

Peter I. Badura, President; George R. Semler, Vice President; Rudolph Manasil; Martin Sack; Ray Lewandowski; Harold Grint; Marvin Price; Alvin Chriastensen; Arnold Krogh; Steve Smith; Anders Nielsen; C. S. Lukasiewicz; C. P. Shaughnessy, Attorney; the Loup Basin Reclamation District, and the Farwell Irrigation District.

Army Missiles Program Held Back by Unrealistic Limitations

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. ANDERSON of Montana. Mr. Speaker, the 11th annual national convention of the 82d Airborne Division Association was held this year at Cincinnati, Ohio, and in conclusion, passed a resolution which should be of interest to every person in Congress who is interested in the Nation's defense. This airborne division association represents a group of 56,000 veterans whose courage and fame in time of war is unquestioned. They served with distinction, and faced realities forthrightly. Now, faced with unresolved world tensions, they point realistically to some of the major problems confronting the Nation, among which is the policy of the Department of Defense concerning the Army's missiles program and airborne transportation.

The 82d Airborne Association's resolution reads as follows:

Whereas the veterans of America's first airborne division are fully conscious of the serious world situation, and feel that it is not only their privilege, but now it is their duty to express their opinion regarding the future of our Army and the survival of our country; and

Whereas we can foresee an important need for increased development of greater mobility, flexibility, and higher concentration of firepower within our Armed Forces; and

Whereas the Army, with its increased mobility and striking power stationed in strategic locations, is a major deterrent to aggression, and the role of the Army in any future wars will be decisive: Therefore be it

Resolved by this convention, That the limitations imposed on the Army by the Department of Defense regarding Army missiles, limiting the range to 200 miles, be re-evaluated to be more in line with the rapidly changing concepts of future warfare; further be it

Resolved, That the airborne forces be supplied, as an integral part of its tables of organization and equipment, with the types of aircraft such as helicopters, convertiplanes, and the C–130 aircraft, necessary for the accomplishment of its missions.

I sincerely hope that the new Secretary of Defense, Mr. McElroy, will review present unrealistic limitations on Army's missiles, which restrict them to a range of 200 miles, and on Army's planes, holding them to a load limit of 5,000 pounds, as decreed by Secretary of Defense Wilson. Unrealistic controls such as these pose a threat to our national security.

Aviation Corporation of America

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. DINGELL. Mr. Speaker, 1,200 workers employed by the Aviation Corporation of America—Avco—at its New Idea division plant have been on strike more than 16 weeks. It has meant great sacrifice for the workers and for their union. But the union is as solid today as it was when the strike began.

The union has continued because the workers involved are fully convinced of the justice of their demands. The New Idea division has always brought a substantial profit to Avco and there is no doubt that the company can afford to meet the wage standards generally prevailing in the steel industry.

Avco is listed by Fortune magazine as the 121st largest manufacturing company in America. It had sales of $350 million in 1956. Its assets total $181 million. Yet, this firm pays a substandard wage at its struck plant at Coldwater, Ohio—a wage more than 50 cents an hour below that paid by other organized companies in the industry.

This is the basis for the strike and the reason it has gained solid support from the workers at Coldwater—this, and the medieval policy of Avco. Despite the fact that a pension plan generally is recognized as a standard working condition by America's large industrial companies, there is none at Avco's Coldwater plant and the company refuses to grant one. Although the idea of supplemental unemployment benefits has been accepted by major steel-fabricating companies, this idea is too advanced for Avco.

A decisive part of big industry has recognized the justice of cost-of-living clauses guarding the buying power of their employees. This has not been the case at Avco, which even today offers what is at best only an inferior clause making a mockery of the whole idea of worker protection against inflation.

The union shop had existed at Avco for years, but now, in retaliation against the strikers, the company is seeking to destroy all union security at its New Idea plant. Avco wants a long-term contract. The union is agreeable to a 3-year contract to insure stability for all. The company offers a package increase over that period worth only slightly more than half the gains accepted by other major fabricating firms as fair and reasonable.

In a telegram sent to Mr. H. W. Lacey, industrial relations director for Avco at the struck Coldwater plant a week before he died, Red Davis informed the company that when "Avco manufacturing decides to agree to a fair wage structure, a seniority provision in the contract that actually gives Avco employees protection against your sharpshooting tactics, and grievance procedures that we have always had at New Idea, and that protects the incentive employee, then you can have a new contract in a matter of hours."

These facts involve a matter of economic and social justice for these citizens of Ohio, and the Nation, but they also involve an important matter of public policy.

Avco manufacturing retains its advantageous position in American industry today largely because of Government contracts. Despite the strike and the company's refusal to pay wages equal to those of its competitors, Avco has been guaranteed a profitable operation by the taxpayers, millions of whom are union members.

During the current negotiations at Coldwater, Avco management there informed United Steelworker negotiators that its workers have no need for the prevailing industry wage or pensions because they are, after all, little more than country bumpkins who will only spend the money foolishly. Yet this company which views American citizens with contempt has had no hesitancy in accepting the defense business of those same citizens.

On July 2, the New York Times announced that Avco had been awarded a $111 million contract for the development of a nose cone for the Air Force's hydrogen bomb carrying ballistic missile. The Wall Street Journal's account of this

transaction pointed out that it was the largest peacetime Government contract awarded to this company and that it is in addition to more than eight millions of previous research and facilities contracts.

An enlightened social policy is as much a part of the defense of our free America as the H-bomb and possible more so. It will do us little good to defend ourselves with H-bomb development if, in the process, we permit the destruction of free collective bargaining by antiunion employers emboldened and supported by Government sudsidy coming in the form of negotiated defense contracts.

It is time for the agencies that let out our defense contracts to recognize that an enlightened labor policy by employers should be as much a requirement as efficient engineering. Certainly employers who persist in paying substandard wages or in maintaining poor working conditions in any part of their operation have no right to Government contracts on the same terms as fair employers. Certainly, Government money should not be used to subsidize employers seeking to impose substandard contracts upon workers, as in the case of Avco.

Government policy in this whole area will benefit if this situation is carefully examined. It may well be that the provisions of the Bacon-Davis law are being disregarded by permitting Government contracts to be given to employers paying less than the prevailing wage to their employees.

Why Does the Administration Continue To Ignore the Cordiner Report?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. UDALL. Mr. Speaker, the sensible military pay proposals contained in the report of the Cordiner Committee have been given increasing attention in the press and in the Congress recently. Replacing the present "Methusaleh" pay system by the Cordiner plan's pay-for-merit system would improve our Defense Establishment while saving, by 1962, perhaps as much as $5 billion a year. In view of the continued failure of the administration to accept this plan, it becomes necessary to ask again, as does the following editorial from the August 2 edition of the Northern Virginia Sun, the question: Why does the administration continue to ignore the Cordiner report?

The editorial is as follows:

PROPER PAY FOR THE MILITARY

The Senate's last minute action late yesterday afternoon in voting an appropriation bill for the Defense Establishment may have prevented a payless payday for thousands of Pentagon employees. But it was a small achievement.

It did not face up to the compelling problem of designing and adopting a modern, sensible, and fair compensation plan for the thousands of employees, both military and civilian, in our defense services.

Two years ago there was reason to hope that the administration understood the nature of this problem. Against a background of promises to reduce the drain which the requirements of defense were exacting from our economy, the President appointed the Cordiner Committee to make a thorough study of the question in the light of modern technology.

After 14 months of work, the Committee published a report.

But what has happened?

The recommendations of the Cordiner Committee have been largely overlooked. The whole point and thrust of the report have been studiously ignored or misunderstood. Why?

Two weeks ago, the Sun, in an editorial, reported a current rumor that the Eisenhower administration was giving the report a polite brushoff because it was wary of its political implications. Anyone reading the report carefully, would be bound to ask himself: If these recommendations were adopted, would the draft any longer be necessary?

Yet, rumor had it, the Eisenhower administration did not want to admit that the Democratic presidential candidate could have been right last November in suggesting that the draft might no longer be the best way of mobilizing the manpower to operate the intricate and sensitive machines of mid-20th century warfare.

Our editorial was inserted in the CONGRESSIONAL RECORD by Senator SYMINGTON, who has fought valiantly but so far without avail, for the adoption of the Cordiner report—or, if not its adoption, at least for a serious explanation from the administration as to why it has treated the Cordiner Committee, which it created, as thought it were a self-constituted pressure group of irresponsible zealots.

So far, however, the administration has kept silent. It has not only taken no step to scotch the rumor, if scotchable it be, but it has failed to give a satisfactory reply to the powerful economy arguments which the report contains.

Mr. Cordiner has stated, not only in his report but over national television, that, based on the estimates of Pentagon experts, the full adoption of the report's recommendations would save the Government more than $5 billion by 1962. Nobody has attacked this statement frontally, but Mr. Charles Wilson, the Secretary of Defense, has written that he is "not in position to confirm these estimates since they depend greatly on the conditions assumed."

Yet, as the Army-Navy-Air Force Journal points out in a recent issue, since Mr. Cordiner has asserted that the figures were "compiled by the Defense Establishment itself and not by members of the Committee," Mr. Wilson's scepticism must mean that he is unsure of the figures compiled in his own Department.

Mr. Cordiner, it is to be noted, went farther than predicting a $5 billion saving. In his personal opinion, he asserted—and the personal opinion of an industrialist of his stature who has spent over a year studying the problem is worthy of considerable respect—the estimate was understated.

Meanwhile the draft continues, erratically, unevenly—perhaps unnecessarily, perhaps not. The administration, which should be able to tell us, maintains a chill and slightly embarrassed silence.

Meanwhile, increasingly larger numbers of our graduates from the military schools—from West Point and Annapolis, for example—are emigrating from the Armed Forces to the greener pastures of private business, as soon as they have served their obligated period of time.

Meanwhile, we continue to depend for our defense basically on Armed Forces which are grossly underpaid and manned by an officer staff grossly underpaid.

We, the richest country in the world, enjoying our greatest prosperity, pay our recruits $78 a month for the first 4 months, then $83. Is Canada so much richer? Canadian privates, under legislation just adopted, will receive $110 a month.

Canadian colonels will get $730 a month, while United States colonels will receive $665.20 base pay for over 16 years service.

Maybe all this is necessary if the administration is to make a record of budgetary saving that can lead to tax reductions in the election year of 1958. But to us it seems not only foolish but dangerous.

The leaders of our businessmen's government, we feel sure, would never put up with such nonsense in their private activities. They would never tolerate a rate of turnover such as prevails in our citizen's army. They would know without being told that that was not only an inefficient but a ruinous operation.

If that be true of private business why isn't it true of our public business, of the most serious, hazardous, critical business that we shall ever face—the defense of our western way of life, of ourselves, of our children in this most critical period of the Christian era?

Isn't this a question worth asking? And shouldn't the administration give us an answer?

Sense of Freedom Makes a University Great

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. O'HARA of Illinois. Mr. Speaker, it is with a sense of stimulation that I have read the address of Chancellor Lawrence A. Kimpton at the 274th convocation of the University of Chicago. There is no other place in all the world where there is more stimulation in the eternal quest for knowledge than in the lecture halls and on the campus of the University of Chicago, which is a vibrant part of the dynamic district that four times has honored me by selection as its Representative in the greatest deliberative body of the world. Chancellor Kimpton's address, reflecting the spirit of the University of Chicago and the sense of freedom that helps make a university great, follows:

SENSE OF FREEDOM MAKES A UNIVERSITY GREAT

One of our large metropolitan newspapers recently ran a surprising series of articles rating the universities of the United States. It has been amazing how much interest and controversy it produced. Education seems to rank right along with the Federal budget and atomic fallouts in public interest.

Even more amazing was the thorough and systematic job done by the reportorial staff. One somehow thinks of reporters as being accurate enough in giving and even slanting the news but as possessing no special wisdom and insight on matters of higher education.

Of course, all of us disagree with details and even exact ratings, and I for one believe that universities 2 and 3 should have been a little farther down the line. I would insist that our own university is at the very least No. 2 instead of 4, and in more euphoric

moments I am convinced that we are the very best. When last year the Ford Foundation gave only 9 universities their top grant of $5 million, I reasoned that it went to Harvard because it is the oldest, to New York University because it is the largest, and to us, of course, because we are the best.

In any case, whether judged by the world's greatest newspaper or by the world's wealthiest foundation, you are being graduated from one of the very finest universities in this country, and I congratulate you. And for the parents may I add that your tuition was well spent, and I hope you are as satisfied as we with the product.

This series of articles has led me to ponder the essentials of a great university, and, since I freely admit that I inherited one rather than, like our founding president, William Rainey Harper, created one, I have been led to further deliberation on the problem of how a great university is kept great and even made greater. I would hope that you, trembling on the verge of becoming alumni of this great university, would share this interest and concern of mine, for you as holders of a degree from the University of Chicago become in some real sense holders of this trust. Part of our future stature will depend on what you do and how you perform. But, however much you do and however well you perform, your distinction alone cannot forever guarantee that of your university.

There are a few essentials for keeping a great university great, and I shall mention them quickly, since they must be assumed. A great university possesses, holds, and attracts great men, who are productive in their research and stimulating in their teaching. It also possesses, attracts, and holds—sometimes for an unconscionable time—superior students who are eager and able to learn. It is significant that those State universities listed within the first 10 have the power to select their students and are not required to accept everyone who somehow succeeds in acquiring a high-school diploma. It is the scheming politician, not the thoughtful educator, who produces that perversion of democracy by which all must be entitled to enter the highest portals of higher education.

It is clear, too, that a great university needs money and a lot of it. You will be hearing more about this little matter as alumni, and I venture to say that hardly a week will pass when you will not receive communication intended to be provocative and remunerative. And please do not stint in your response. We need money, and I hope and pray that we deserve it.

Finally, a great university should have adequate physical facilities properly to do its teaching and research. Magnificent buildings do not produce a great university, and we all know of institutions where the intellects do not approximate the architecture. But scientific research today needs elaborate instrumentation, and the productive scholar cannot manage with a 5-foot shelf. I feel, too, that our Gothic adds dignity, seriousness, and even inspiration to our university. I can only add as I glance over the ratings of the top few universities that an urban environment seems to help. It plagues us all, of course, with the enormous problems that have been visited upon our cities since the turn of the century; but a rural retreat, for all its bucolic beauty, does not seem to stretch and stimulate the minds of men.

All these essentials must be present, they are the sin qua non of the great university. But there are many institutions that possess some or almost all of these characteristics and yet remain without distinction. These are the tangibles of the great center of learning, but, as in most other things, it is the intangibles that ultimately make the difference. A great university is a spirit, a mood, an atmosphere, that somehow transcends men and money and materials, although it is not easy to specify these immaterial things that transmute the baser metals into gold.

The first intangible that one always feels around a great university is a sense of freedom. It is not a postured, self-conscious thing, and one rarely hears the word on a great campus. Those who shout freedom loudest are generally those who are concerned to express their own unorthodoxy and deny the privilege to others. The freedom of a great university is as natural as the air, and no amount of shouting will produce it. The scientist and the scholar pursue their research in whatever direction it leads them, with no other motive than the discovery of truth itself. But it is also a disciplined freedom, except that the discipline is imposed by the facts and by the character of the scholar. The fancy fellow who announces a discovery prematurely or the casual inquirer who does not bother to check all the evidence is in deep trouble. The pervasive air of freedom does not countenance stupidity or casualness or error unless it be honest error. And freedom always carries with it the obligation to tolerate, indeed to protect and nourish, those viewpoints that are different. It is the research worker who is different and unorthodox who discovers new truth.

Industry is learning this the hard way. Personnel officers are so careful to obtain the good organization man, the kind who fits in happily with the routines of the office, that the new and significant can hardly happen. I do not mean that we have to cherish the deviant, the odd-ball, simply because he is this way, but I come very close to recommending this. A university that has no oddities is not a great university, and occasionally it should discipline itself in freedom by embracing and supporting a weird one just for his weirdness.

A great university is also characterized by a particular kind of relationship to the society of which it is a part. If the role of a university is to meet the immediate or fancied needs of its community, as some professional educators would have us believe, then it becomes functional, vocational, and ultimately degraded, producing only useful gadgets and artisans and tradesmen. On the other hand, if the university is so cloistered that its teaching and research are without any relevance to the real needs of men and women, it is without impact and import. It is a fine line we walk, in careful suspension between heaven and earth, seeking out, with Plato's philosopher-king, the clear form and beauty of the eternal ideas, but ever mindful of the shadows they cast upon the walls of the cave.

And, third, the great university must be efficient in an atmosphere of magnificent inefficiency. It must have an administrative structure instantly responsive to communication and productivity, and its administrators must rival those of industry in their ability to make quick, hard-eyed, and correct decisions. Yet all this structure and these people must be subordinated to a set of human and humane values that have nothing to do with efficiency and may seem to run counter to it. An economical university must be prepared to throw money away on things that do not seem to matter. It must be ready to make the big mistake, suspecting all the time that it is a mistake. It must insist on the dignity and rights of every man when often he is without dignity and deserves no rights. There was a member of this faculty who was to be dropped for incompetence at the end of his contractual period, but through a secretarial error he was made a full professor with tenure. And he was unaware to the day of his retirement of this phenomenal "goof." A big university is big, for it has found that the petty meanness of immediate efficiency must yield to those larger human values that produce an ultimate efficiency.

The fourth thing that one always feels on the campus of a great university is an air of excitement, and I must say we have this in great abundance at the University of Chicago. A distinguished professor we were trying to hire recently told me he would not dream of coming here because he would be so overstimulated that he would never get anything done. But if occasionally we lose a man on this account, we gain and retain many more.

The quest for truth, like the chase, must be accompanied by baying hounds and tingling blood. And all this means at least two other things. The great university must be young, though this need not refer to chronology. It must be young in its ways and young in its thinking. It does not hurt to have a lot of kids around to help produce this spirit, but even the old in age must be young at heart. And, what is more, an exciting university is not a particularly happy or well-adjusted institution. The great university, if it could be personalized, would be a fit subject for the psychiatrist's couch, and yet it would lose all its greatness if it were tortured into adjustment through analysis. It must always retain the excitement and rebellion, the maladjustment of youth, if it is to retain its quality. I have no idea where the general public gets the notion that behind the walls of ivy all is peace and quiet. A week without a revolution is a lost week, and if you do not believe it, look at the lined face and harassed eyes of the bedeviled administrator of one of these distinguished universities. For several reasons it would be fitting to call them "mental institutions." But sedation is for sissies, and in the great universities chaos must continue.

There is a final characteristic that is a part of a great university, and I find it peculiarly difficult to put into words. The great university has a sense of direction, but you have to watch this one. It should not know too completely and too finally where it is going. There are no accurate road maps in the traveling that the mind must do, and any university that knows exactly where it is going is going no place. The final goals and ultimate objectives of education should be constantly redefined in the process of trying to realize them. A great university cannot be static; it is either moving forward or it is going in reverse. In the process of moving forward it must have a general sense of direction, but this has to be kept very general indeed.

There are many roads that lead to Rome, and Rome always turns out to be a very different place from what you thought and also a place that is only a pause in the journey. The neat blueprint of a curriculum, the exact formulation of the objectives of a scientific experiment, and the final meaning and value of a program in the humanities are things that never happen in a great university. I do not mean, of course, that, like Leacock's hero in Gertrude the Governess, we should ride madly off in all directions, but the direction that we go, like the navigation of a ship, is subject to constant adjustments for wind and tide and magnetic deviation. And the voyage, all the way along, takes on new and unanticipated meanings and values, and the destination is always beyond the last horizon.

These are intangibles that make and keep a university great. And perhaps they differ only slightly if at all from the basis things that make life itself significant and productive. A life without freedom is intolerable, and personal freedom deeply obligates one to respect the rights and dignity of others. It is a good thing to have your roots in the solid earth, but leaves should seek the sun and air. The good life, too, is a big life, quick and efficient in accomplishment but only in a larger context of human values. And life, if it is to be worth living, must be a great excitement, renewing itself end-

lessly with the new. The happy and successful man remains forever young, with all the enthusiasm and discord and rebellion of youth. I am sorry for those who have completely defined the ends of life and the means for attaining them. It is good to know where you are going, but it is an unhappy thing ever to arrive. And the scene along the way must change and evolve day after day as progressively you redefine and reevaluate the objectives of living. All this may be a good reason for calling your university your alma mater. Its life, if it remains a great university, should be your own.

Save Grange Headquarters

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. GRIFFIN. Mr. Speaker, I have introduced a bill to prohibit any Government agency from acquiring or using the National Grange Headquarters site here in Washington without specific congressional approval.

The bill is a companion to a number of bills introduced in the House and to S. 2696, introduced in the Senate by Senator POTTER. The bill would require the Administrator of the General Services Administration to withdraw the declaration, heretofore filed in United States district court, taking title to the Grange Building and lot, and would require him to take such other action as may be necessary to restore title to the National Grange of the Patrons of Husbandry.

Title was taken by the Government to the entire block known as Jackson Square, in which the Grange lot is situated, with the notable exception of the Decatur House which surrounds on the west and north the relatively small rectangle—50 by 70 feet—occupied by the 7-story Grange Building.

I have tried to view this matter objectively. Based upon information which has come to my attention, I believe Grange Master Herschel D. Newsom has justification for saying that because of its juxtaposition with Decatur House, destruction of the Grange headquarters building is not necessary in order to permit erection of the planned Federal office building.

Furthermore, present plans for the proposed new office building to be erected in Jackson Square indicate that the new building will not occupy any of the land now owned by the Grange. It appears that the Grange site will only serve as lawn area for the new building. In light of the important economy drive now in force, I do not think taxpayers would approve an expenditure of $150 to $200 a square foot to provide for grass and flowers.

Certainly the National Grange property, purchased in 1941 with funds raised through the activities of more than 7,000 local Grange organizations, should not be sacrificed merely to provide lawn space.

I believe that the Members of Congress should keep in mind also that the Grange Building, in addition to its own national offices, houses the National Council of Farmer Cooperatives, the American Institute of Cooperation, National Agricultural Research, Inc., Farm Roads Foundation, and Washington offices for more than 30 farm publications.

Certainly, this building is now serving very important and worthwhile public purposes which are in the interest of agriculture, the American farmer, and the Nation generally. I therefore urge my colleagues to give all possible support to proposed legislation which would save the National Grange headquarters building from destruction.

Let's Save the Old War-State-Navy Building

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks I include herewith a letter of protest I have written to Mr. Robert V. Fleming, Chairman of the Presidential Advisory Commission on Office Space, in the matter of the Commission's recommendation that the War-State-Navy Building be razed. My letter and the material referred to in the letter follows:

AUGUST 9, 1957.

Mr. ROBERT V. FLEMING,
Chairman, President's Advisory Commission on Presidential Office Space, General Services Administration Building, Washington, D. C.

MY DEAR MR. FLEMING: It is with much regret that I read the recommendations of the Presidential Advisory Commission on Office Space to tear down the old War-State-Navy Building and erect upon the site a modern, functional building.

Frankly, I cannot understand the lack of appreciation of traditional value that this exemplifies. There are very few buildings left of this architectural design, which represents a very definite period in the building of America. Some call it the "Grant era," others remind us that it really has a French second empire style. Comparable buildings are considered to be the Luxembourg Palace, the Louvre in Paris, and in our own country, Philadelphia's City Hall.

Passing it the other evening I was struck with a sense of its beauty that I had not before appreciated. Why in the world should we want to destroy everything that sings our history, to reduce ourselves to a monotonous modernity, I cannot understand.

The $6 million it would cost to destroy the building might certainly be well used for cleaning it and altering the interior to a more useful arrangement of the rooms.

I protest, as strongly as it is possible for one person to do, what I consider ruthless destruction of one of the most perfect examples of French renaissance architecture in the United States. Tied in as it is with our history, how can we give consideration to its destruction.

Attached is a collection of quotations from published material regarding the building which, while not organized in article form, do describe the building's beauty, utility, and architectural significance.

Hoping that the Commission may find it possible to reconsider their recommendations on this matter, and with all good wishes, I am,

Sincerely yours,

FRANCES P. BOLTON,

QUOTATIONS FROM PUBLISHED MATERIAL REGARDING THE PRESERVATION OF THE STATE-WAR-NAVY BUILDING

A. B. Mullett's $12 million design was described as "an almost perfect specimen of architecture * * * the interior has been constructed in a very magnificent and yet entirely substantial manner." As the Federal Government grew, the War and Navy Departments moved to buildings of their own, the State Department remained here until after World War II.

American mansard was considered the perfect style to express the dignity of Government at every level. The United States post office, the State university, the county courthouse, the city hall, and the township hall—all were crowned with mansard roofs and often had towers with mansards of their own. For some years A. B. Mullett, supervising architect of the United States Treasury Department, held a virtual monopoly on the design of major Federal buildings; he preferred the French Renaissance manner with row upon row of pillars and columns. The mansard roof itself took many shapes, its slope could be straight, or concave, or convex, or both combined in an S-curve. The dormer windows might be rectangular or pointed and gabled or round-like portholes. Some large roofs even featured a double row of dormers, one above the other.

The massive 5-story building, containing 566 rooms leading off 2 miles of corridors, stands at 17th and Pennsylvania Avenue, as a tomb or a monument to an architectural phase—depending on the architect one talks to.

Admirers laud the structure, fathered by Treasury Architect A. B. Mullett, as a worthy remembrance of times past. The opulent structure, French second empire in style, is a reflection of American interest in 17th century French architecture.

The columns, pilasters, pavilions, pediments, and rusticated basement are harmoniously assembled into a careful piece of architectural design. Comparable buildings are the Luxemburg Palace and Louvre in Paris and the Philadelphia City Hall.

The porch block constitutes a central pavilion that is articulated; that is, it gives an indication of what's inside. The porches are emphasized by superimposed orders of columns, with the first three stories being Doric style and the fourth, Ionic. The porches narrow as they ascend.

Each vertical strip of windows, from ground floor to top, reflects the sublety of design that avoids dullness. Over each window in the strip is a different pediment or eyebrow—curved, segmental, triangular, and so forth.

The paired pilasters or flat strips at the corners give the feeling of strength to the building. They are a variation from free-standing columns.

Each facade has receding and projecting planes to break up the surface and avoid monotony. The high rusticated (in grooves) basement, for example, offers a variation.

Some way must be found to make the present old War-State-Navy Building more useful. It would be a discredit to our foresight to replace this important architectural example with a new building which would be contemporary for another few years.

Many people also question the appropriateness of the classic marble buildings on Con-

stitution Avenue, with their own share of cluttering columns, but none considers demolishing any of these.

Why then tear down one of the really interesting buildings in the city, to replace it with something that will sink into its surroundings better?

Contrast contributes much to the character of Washington, and buildings such as the old State and the Smithsonian serve to throw the White House and the Mall into sharper relief.

Let us have a sense of tradition, and even of humor. Let us keep Washington from becoming a monotony of modern efficiency. Save this wonderful period piece.

This building is classed by Henry Russell Hitchcock, of the Architectural Historians Society, as one of the two most important 19th century structures standing in the Federal City. The other is the Treasury Building.

Three most interesting and beautiful buildings in Washington stand side by side: State-War-Navy, White House, and Treasury. All the more interesting and beautiful because each is different.

All that the fine old State-War-Navy Building needs is a good scrubbing to restore it to its original classic beauty.

This beautiful building of French Renaissance, which so long housed our State, War, and Navy Departments, would be the pride of any other capital city in the world. The mere mention of its destruction is enough to make our great statesmen, generals, and admirals, who occupied it, cry out from the grave in protest.

At the recent convention here of the American Institute of Architects, many of its most distinguished members, including Ralph T. Walker, of New York, who received the institute's "special centennial medal," strongly opposed the contemplated destruction of what is, perhaps, the finest building of its type in the United States, and a landmark in Washington since it was completed in 1888.

It is a striking commentary upon today's inflationary market that it would cost nearly as much to tear this building down in 1957 as it cost to build it in 1875–88, the price then being $10,038,482.42.

While taste has changed since its erection when it was considered the finest building in Washington, it is still just as impressive in design and scale as it was then, and its granite steps and columns and details are unblemished by 80 years of weather. With its superposed orders and mansard roofs and towers, it is a monumental example of Second French Empire architecture, simplified to suit the hard stone.

Its ample, ornate corridors and curved, cantilevered staircases are impressive. Its offices are spacious with high ceilings and decorative cornices and window embrasures. All appears in perfect repair.

A PLACE FOR PRESIDENTS TO WORK—COST: $32 MILLION

A plan is afoot to change and enlarge the White House.

The goal is to give the President enough office space, for the first time in more than 100 years.

Ike backs this plan. But there's opposition, too. A Washington landmark would have to go.

It is going to cost at least $32.8 million to give future Presidents the space they need to house their staffs.

That simple figure offers an idea of the size to which the job of being President has grown. It is a figure arrived at by a special Commission—including Members of Congress—that just completed a study of the White House.

This amount, the commission says, would provide offices outside the White House big enough to meet needs for Presidential offices for at least the next 50 years. The new construction, the Commission adds, can be done in a way to preserve and enhance the traditional appearance of the President's home.

Details of the Commission's plan were first reported in the March 8 issue of U. S. News & World Report.

Today, President Eisenhower's staff of about 1,500 people is jammed into cramped offices in the east and west wings of the White House, and in the 70-year-old State, War, and Navy Building, across the street from the west wing.

Arrangements are "outmoded, overcrowded, inefficient," according to the study Commission's report.

STANDING ROOM ONLY

The President's staff secretary shares 1 room with 4 other people. The appointments secretary's office is too small to hold enough chairs for visitors; some must stand while they wait. Mr. Eisenhower's press secretary has a news ticker in a washroom. Desks and files and stacks of documents are scattered through corridors, the basement, the attic.

It's a situation that has been getting worse and worse since 1800 when the White House was first occupied. All early improvements, the Commission notes, were made "without any consideration" of the President's office needs.

When original offices on the first floor became too crowded, some activities were moved up to the second floor. Cabinet meetings also were transferred to the second floor, close to the President's study. As years passed, secretaries, officials, and visitors who had to see the President increased—and privacy of the President's living quarters declined.

By 1902, the situation was so bad that President Theodore Roosevelt, unable to get support for a plan to create permanent office space, built a temporary office west of the Executive Mansion.

Now, 55 years later, the temporary office is known as the west wing. It was completely rebuilt in 1934, by President Franklin D. Roosevelt. An east wing also gobbled up for offices, was added in 1942.

In 1946, President Harry S. Truman tried to enlarge the west wing to relieve congestion, but Congress impounded the money after protests mounted.

Mr. Truman then took over the State, War, and Navy Building, renaming it the Executive Office Building. Some thought that that solved the space problem, yet in 10 years it has become more acute than ever.

In the study commission's view, for 157 years the problem of giving the President office space has always been dodged, never faced. Only makeshift improvements have been made. Meanwhile, elsewhere in the Government, great office buildings such as the Pentagon were being put up for all the other Departments and Agencies—which take orders from the President.

A permanent cure? Heart of the commission's plan is to tear down the old State, War, and Navy Building and replace it with a modern structure, 3 or 4 stories high and in keeping in size and character with the White House.

In the White House itself, the west wing offices would be torn out and replaced with spacious living quarters for visiting dignitaries. The east wing would be made over to include an entrance for large social functions; an art gallery and museum. But outward appearance of the White House would be little changed.

The opposition. Proposed destruction of Old State has created opposition to the commission's plan. To some, the venerable building is an architectural monstrosity. To others, however, including the powerful Speaker of the House, SAM RAYBURN, Democrat, of Texas, it is a historical edifice worth preserving.

The man who lives with the White House space problem, President Eisenhower, is sentimental about Old State, too—but, for the comfort and efficiency of future Presidents, he is backing any solution that will get more office room and preserve the White House as a home for Presidents and a shrine for all Americans.

Looking Back and Looking Ahead at Jamestown

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 13, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the text of a significant address delivered by our colleague, the Honorable WATKINS M. ABBITT, on the occasion of the Appomattox Area Day, at Jamestown, Va., August 5, 1957.

The address follows:

It s a great privilege and high honor for me to be here today to participate in the celebration of the 350th anniversary of the establishment of the first permanent English settlement in America.

I am sure that many of us fail to realize or to appreciate the significance of that occasion. It is hard for us to visualize what it has meant to the development of the Anglo-Saxon civilization. Here were planted the first seeds of the greatest Republic ever to exist in the world. They could have hardly begun under a greater disadvantage. At that time, there was considerable rivalry for the settlement of the New World. Spain and Portugal had been allotted this New World territory by Pope Alexander VI in 1493, with the western coast of North America going to Spain. Spain subsequently protected her claim by establishing settlements in Florida. She had also attempted to establish colonies in Virginia but it was a complete failure.

It was in this historical context that the British began to establish rival colonies of their own in North America. The British, being mostly Protestants, considered it important that Protestantism, preferably the Protestantism of the church of England, should gain a foothold in America. Historians also agree that economic motives were important in the settling of Jamestown. I think we can agree today that the determination to establish an English colony in the New World sprang from religious and economic motives.

In the early 1600's there were hard times in England. Many people were out of work. There were many young sons of nobility who had no title, had no trade, and were without means of livelihood. There were also many people of substantial means who desired to establish in the New World a colony with which the mother country could trade, where its young people could go to find opportunity as well as to spread the Christian religion.

It was under this atmosphere that private individuals banded together in 1606 and secured from King James a charter authorizing the company known as the Virginia Company of London to establish colonies in North America in the area lying between the present locations of Philadelphia and Wilmington, N. C. Finances of the enterprise were entirely the responsibility of the investors and not the government.

While the colony was at the outset under strong royal control, the original impetus

and the responsibility of its success came from private enterprise. In other words, the establishment of the colony was not being undertaken by the government but rather it was being carried on by those great individuals in England who had dreams of a great future for the mother country by establishing in the New World colonies which would permit the expansion of trade and religion on the part of England.

I am sure that they had no idea of the great future in store for civilization as a result of their efforts at colonization. Their motives, however, were inspired by patriotism, piety, and profit.

We are all familiar in a general way with the details of the settlement of Jamestown, the hardships, the perils, and the disappointments encountered by the settlers. We are familiar also with the fact that gradually those settlers who were able to survive overcame and conquered the hardships and slowly expanded the colony, with the help of new arrivals, into a permanent, self-sustaining territory. A new trail was being blazed and there was no past experience to point the way.

Little did these first settlers and their immediate successors realize the trail that they were actually blazing.

Here in this colony was nurtured and born the spark of liberty and freedom. The first trial by jury in America was held at Jamestown soon after the first settlers landed. The accused was Capt. John Smith who had been put under arrest on a charge of attempted mutiny before the colonists had landed. Smith's enemies among the Jamestown authorities had planned to return him to England, at the time of his accusation, for trial but Smith demanded his rights under the Magna Carta and demanded a trial by his peers. On June 20, 1607, the trial was held and the jury acquitted Smith. We see that from its very inception, the colonists were determined to protect the freedoms and privileges of the individuals so far as they could under the existing circumstances.

The settlers of Jamestown naturally brought with them their own British traditional notions of government and law. In addition, they were far removed from the seat of government and it made them yearn for self-government, liberty of action and recognition of the dignity of the individual. We are familiar with the fact that here in this little colony at Jamestown was established in 1619 the first representative legislative body in the Western World and the first General Assembly of Virginia consisting of the Governor, the council and the house of burgesses. From then on until the Colonies were freed from England at the close of the Revolutionary War there was a constant struggle between the Colonies on one side and the Crown on the other. The Colonies struggling to secure freedom and the Crown to compel obedience to its will including taxation without representation. We will not attempt to go into the great struggle for freedom and the hardships overcome by the Colonies in establishing this great Nation of ours. Suffice it to say, our forebearers came here and carved out of the wilderness a great Nation. They had to fight every step of the way. There was a constant uphill battle against tyranny, oppression and the desire on the part of the mother country to extract part of its livelihood from its Colonies. Our great Nation has come a long way since 1607. Since those brave, courageous and hearty settlers set foot on this sacred spot, much has been done to achieve freedom and liberty for the people of the great Nation.

First, our freedom was obtained from England. It was done at the cost of great sacrifices in life and material wealth. Patriots fought, bled and died that men might be free, that individual liberty could be had in this country. We had the Declaration of Independence given us as the pole star to guide this little country in its fight for freedom.

Following that, great statesmen and scholars of that time produced the Constitution of the United States, the greatest document ever conceived by man. It guaranteed to the people their liberties and freedoms. It guaranteed to the States their sovereignty. All of this flows from that little seed planted in this hallowed spot by those settlers 350 years ago. Our Nation, from then until now, has grown into the mightiest nation on earth. We have the greatest civilization ever known to mankind. We live in a land of plenty.

The National Government under the Constitution started out to be the servant of the people. It was so created and it was never intended that the people would be the servant and vassal of the Government.

It is time now that we pause, take stock, and ascertain in which direction we are now headed and try to determine where we will land if we continue our present course.

In the past few years, the Government has grown so fast and become so large that the people are in grave danger of losing control over it. We have created a huge Frankenstein monster whose power, if allowed to continue to grow, will gobble up its creators. Our people have been so busy accumulating material wealth and trying to get advantages from the Government that they have failed to realize how big our Government has become and how dangerously close we are to losing the birthright and heritage that has been ours for generations. We are raising up a generation who is being taught to look to the Government for their needs, desires, and wants rather than to rely upon their own individual ingenuity and self-help.

Our people must realize that there is no such thing as Federal handouts. The Federal Government cannot give us anything until they have first extracted it from the people. The people never give up their liberty but under some delusion. Many of our people have been deluded into believing that the Federal Government can solve all of their problems without cost to the taxpayers and can carry their burdens and obligations on its shoulders without cost. Nothing is further from the truth but so many people believe in this philosophy that our Government has gone a long way toward a centralized, all-powerful dictatorship. This trend must be stopped in the foreseeable future if we are to retain our republican form of Government and preserve the rights and freedoms of our people.

We fail to realize this country was founded on private enterprise. It has become great because of individual initiative, determination and hard work on the part of citizens who have not in the past depended upon the Government to look after their wants, needs and desires. We have remained free because the people were willing to do for themselves, to work hard to get ahead, and had a determination to remain free.

There are some in this country today, and their number is not small, who are determined to nationalize, federalize, and socialize this country of ours from one end to the other. They desire to make of this great Nation a socialistic, welfare state. The time is at hand when the people of America must choose up sides. They must make a determination as to which course we shall pursue. This is an opportune occasion for the people to rededicate themselves to the cause of liberty, freedom and the concept of Government held by the Founding Fathers of this great Nation. Many of our people do not begin to comprehend or realize that a great battle is raging throughout the Nation today. Insidious forces are at work endeavoring to weaken, to break down, to change our form of government, and to wreck our way of life as we know it. They desire to concentrate all authority in the National Government. They are making an all-out effort to put the purse strings of the Nation directly under the control of the Federal bureaucracy.

Our people and the Nation as a whole fail to see the significance or importance of this conflict. They do not believe that a conspiracy is afoot against the rights and privileges of our people and the sovereignty of our States. What we are fighting today is not just a recent movement or a small operation. It has been building up for years and years. It has behind it some of the most wicked forces presently inhabiting this earth. The battle has become of such momentous importance, the stakes so high, and the outcome so vital, that I shudder to think what will happen to our people if we lose the conflict. Make no mistake, our very way of life is at stake.

The creeping socialistic invasion of State and local power by the Federal Government must be stopped before it turns this Nation into an all out socialistic welfare state. The hour is already late and unless our people awaken and realize the seriousness of the situation, we will soon see our way of life taken from us and the liberties and freedoms that were wrought out for us by our forebearers devoured by the octopus-like Federal Government that we have allowed to be established.

In the very recent past, we have seen the judicial arm of the Federal Government attempt to strike down the customs, habits, mores, and traditions of our people by usurpation of authority that they never had, authority that was specifically retained by our Founding Fathers for the people themselves and the individual sovereign States.

That was just one of many such incidents when the judicial branch of the Federal Government has, by usurpation of power and authority, attempted to amend by judicial decree the Constitution and by judicial fiat write into legislation the personal, political philosophy of the individual members of the Court. This same Court is gradually taking over the legislative and executive functions of the Government.

It is interesting to note that only last week the members of the American Bar Association held their annual meeting in England. While there, the members of the bar association, including members of the Federal judicary, dedicated a memorial to the Magna Carta, that great instrument which 2,000 English patriots wrested from arrogant, truculent King John in the year 1215. This instrument has been hailed by many historians as the first statement and source of many human freedoms in English civilization. It was the first solid achievement in the struggle for liberty in the English speaking countries.

I pray that the judicial branch of the Federal Government will stop digging the grave and erecting a tombstone over the liberties and freedoms of the individuals and the sovereignty of our States. I say to you in all candor that this is being done step by step and will be carried through unless the citizens of this great Nation arise to the occasion, fight off this octopus-like arm of the Federal Government and demand a return to the concepts of constitutional government where the dignity of the individual is recognized, the sovereignty of our States preserved, and the private-enterprise system continued.

It is indeed discouraging to observe that the spirit of self-reliance so dominant among our early leaders is becoming more difficult to find today. It is alarming to note that principle is being sacrificed too often for the sake of political expediency. The lure of a welfare state has caused many to surrender their liberties. Many of our people forget the duties and obligations they owe as citizens of this great country of ours. It is so easy to look for security rather than to stand upon principle.

Apparently, there are those in the Congress and executive branch of the Government who have joined hands with the judicial branch in an effort to take from our people the liberties and freedoms guaranteed them under the Constitution.

I have reference to the so-called civil rights legislation now pending before the United States Senate. This legislation is the most obnoxious, evil, liberty destroying proposal that has been before the Congress in our time. It strikes at the very heart of the liberties and freedoms of our people and the sovereignty of our States. It is an attempt to strike down with one stroke of the legislative pen the theory of our very form of government itself.

This legislation is intended to deprive the people of this great country of many fundamental rights that our forefathers guaranteed to them by the ratification of the Constitution.

The legislation, as passed by the House of Representatives, strikes down the right of trial by jury. It does away with the sovereignty of our States. It takes from our individuals their right to be tried in the local courts. It sets up a small Gestapo under the direction of an Assistant Attorney General who will be the political hatchet man of the administration in power. It allows our people to be dragged from the four corners of our country and brought before an agent of the Federal Government without a formal charge being placed against them and without knowing who instigated the investigation. If enacted into law, it will be the beginning of the end of our very way of life and of democracy itself in this great country of ours.

This legislation is intended to establish law by injunction. It permits the Attorney General to make of the local Federal judge the administrator, the prosecutor and the executor of the functions of the States and localities, particularly the operation of the schools, transportation system and other public recreation activities.

These are but some of the evils of this legislation. The most shocking part of it all, however, was the part played by a large segment of the press and other news media in keeping from the people the true facts about the so-called civil rights legislation. Large segments of the press, radio and television commentators failed and refused to give the public information and news dealing with the civil rights legislation.

Now the iron curtain of the news media has finally been broken down and the northern press is carrying the true facts about this iniquitous legislation. As a result of the long debates, the people at last are becoming aware of the evils that are contained in this legislation. I have hopes that when the people awaken to the dangers confronting them they will rise up and demand that this legislation be killed.

I realize what a dreary picture for the future of our Nation has been painted in what I have had to say but I say to you, in my opinion, it has been a true picture. America is at the crossroads. Our people are on trial today. It is for them to say whether or not we will measure up to the principles and heritage that that little band of settlers and their predecessors wrought out for us. The only hope is for a rededication on the part of the American people to the concepts and precepts of fundamental constitutional government. There must be a determination on the part of our people to keep this country on a solid foundation of private enterprise, and individual freedom.

I have great faith in the American people. I believe that when they become aware of the consequences facing us they will measure up to the high standards set by those who have gone on before and will clean up the temple and steer our ship of state back on its right course.

We must preserve liberty and freedom in this country. We must see that State sovereignty is respected and maintained. We must instill in the younger generation that the least governed are the best governed and that there is no such thing as something for nothing. This we must do and shall do or else we will have lost what this great Republic has gained in the years gone by.

A National Lottery Means Taxes Without Tears

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. FINO. Mr. Speaker, I am happy to inform the Members of this Congress that in the past few months increased interest has been shown in my national lottery bill. More and more newspaper and magazine articles have evidenced greater support for this type of legislation. The most recent support comes from a magazine article which appears in the July issue of Town & Country.

This article, written by W. A. Powers, entitled "A National Lottery Means Taxes Without Tears," presents legal and moral justification for a lottery in the United States.

Because of its informative and interesting discussion of this topic, I am pleased to include it in this RECORD:

A NATIONAL LOTTERY MEANS TAXES WITHOUT TEARS

(By W. A. Powers)

In spite of protestations to the contrary on the part of politicians and clergymen, the American people today are the greatest gambling nation in the world. To say differently is only to bury your head, ostrich fashion, in the sand. And this is what most churchmen and politicos are doing when they campaign against a national lottery.

Clergymen and politicians, conscious of the church's influence, have long opposed the holding of a national lottery in the United States on the grounds that it would encourage gambling and would provide an evil influence on the poor. Today, with employment and wages at their highest peak in history, this argument is ludicrous. The plain facts are that every year over 57 percent of the adult population of America bets some $30 billion, and much of this sum is bet illegally—which means that the Government receives no percentage from it in the form of taxes. In the 24 States where parimutuel betting is allowed at racetracks, the Government's "take" in taxes is $100 million a year. And in Nevada, the only State where gambling in all forms (except lotteries) is legal, the taxes on it are sufficient to pay for all highways, schools, and hospitals throughout the State. Only by putting the Government stamp of approval on it can gambling be rid of racketeering, and only with this stamp of approval and with Government control can gambling dollars find their way into the United States Treasury.

Legally or illegally, Americans are going to continue to gamble, just as they continued to drink during Prohibition. Present-day figures more than bear this out. It is time, we believe, that the moral hypocrisy about gambling was ended and was replaced by a nation-wide legal policy that would result in increased revenue to the Government. A Government-controlled national lottery in the United States would not only put an end to today's vast and crooked "numbers game" but would also largely discourage the flow from this country of some four to six billion dollars that Americans spend every year on foreign lotteries. On only a small portion of this money does the Government collect anything in the way of taxes.

At almost every session of Congress, the proposal is raised to establish a United States national lottery. Invariably, these proposals are stillborn in the House of Representatives because the legislators are afraid of antagonizing the church groups. This holier-than-thou attitude about lotteries on the part of the church is little more than eyewash. For years, churches have been the country's biggest advocates and practitioners of bingo games and, by definition, a "bingo game" is nothing other than a "lottery." "The word 'lottery'," says the Encyclopedia Britannica, "may be applied to any process of determining prizes by lot, whether the object be amusement or gambling or public profit."

It may also interest the churchmen to know that the funds for the steeple of Old Christ Church, in Philadelphia, were raised by a lottery run by Benjamin Franklin and that the drawing for the first lottery ever held in England, in 1569, took place at the west door of St. Paul's Cathedral. Religious lotteries were also common in 18th-century France—the two largest being the Loterie de Piété and the Loterie des Enfans Trouvés. These examples show that religious opposition to lotteries has neither historical nor current validity.

The latest proposal for a United States national lottery was submitted to the House Ways and Means Committee this January by Representative PAUL A. FINO, Republican, of New York. Shortly before the running of the Grand National at Aintree in March, Representative FINO brought attention to his Federal Lottery Act under the 1-minute rule. His timing was apt. Every year the outcome of the Aintree steeplechase determines the winners of the Irish Hospitals' Sweepstake, one of the best-known, best-run, and richest lotteries in the world. With no cost to Irish taxpayers and considerable support from American ticket buyers, these sweepstakes have given Ireland an outstanding system of hospitals.

The bill for a Federal Lottery Act that now sits in Congress carefully outlines just how such a lottery would be conducted. It would be under the sponsorship of a five-man Commission appointed by the President and approved by the Senate. This Commission would determine when and how often lotteries should be held and for what amounts of money. Tickets would be engraved and printed by the Secretary of the Treasury and sold only in United States post offices under the direction of the Postmaster General. Proceeds from the sale of tickets would be deposited in the Treasury, and prizes would be paid from this fund on vouchers signed by the Chairman of the Lottery Commission.

The remaining money, after prizes and costs had been paid, would be turned over to Federal hospitals, to the blind, to recipients of old-age benefits, and to disabled veterans. At the present time, these services take some $4½ billion a year of the taxpayers' money. The income from a national lottery, it is estimated, would be close to $10 billion a year. All this would be in the form of painless, voluntary taxation and would reduce the general tax burden an average of $250 a head throughout the country.

HISTORICAL JUSTIFICATION

Historically, lotteries of one sort or another are as old as history itself. In Exodus, it is recorded that Moses divided the land west of Jordan "by lot." Private lotteries were popular in the Roman Saturnalia and at the banquets of the aristocrats. Nero often had his guests draw for such prizes as a country house or a slave, and Heliogabalus would vary the interest of his drawings by having one ticket win a golden vase and another 6 live flies. The first known public lottery was held by the Emperor Augustus, who used it to raise funds to rebuild Rome from a brick to a marble city.

From the Romans, the tradition of lotteries was handed down to the feudal and merchant princes of medieval and Renaissance Europe. The Italian republics of the 16th century used the lottery principle to sell merchandise. The lotto of Florence and the seminario of Genoa were the best known of these, though Venice also had a lottery that raised considerable revenue for the state. In France, we find that the first letters patent for a lottery were granted in 1539 by Francis I and, in 1656, another was opened by Lorenzo Tonti, originator of the tontines, for the building of a stone bridge between the Louvre and the Faubourg St. Germain. Later, lotteries came to enjoy immense popularity in France and became a major source of government income, even paying for a large part of the War of the Spanish Succession.

In England, Queen Elizabeth realized that her people were natural gamblers who played secretly and openly, regardless of penalty. Deciding to have the government profit from this proclivity, she instituted a lottery for the repair of harbors in 1569. Another was formed to finance the Virginia Company in 1612. In 1698, all English lotteries—with the exception of the Royal Oak Lottery, for the benefit of the Royal Fishing Company—were prohibited as public nuisances. But Parliament revived them again in 1709 and annually derived large profits, until they were again suppressed in 1824. From 1793 to 1824, the government made an average yearly profit from these lotteries of £346,765.

Critics who feel that lotteries are not compatible with the American way of life might be reminded that as early as 1665 the Dutch held a lottery in New Amsterdam, to benefit the poor of the colony. In 1768, George Washington personally signed tickets for the Mountain Road Lottery and, in 1776, the Continental Congress authorized a national lottery to defray the expenses of the Revolution. At that time most States legalized lotteries, and before 1820 the Virginia Legislature passed as many as 70 acts authorizing lotteries for public improvements. As early as 1795, the city of Washington was empowered to raise money for public purposes by lottery, and this same means was also employed to finance the building programs of Yale, Harvard, Princeton, Columbia, Brown, Dartmouth, and William and Mary.

Not until 1833 did the trend against lotteries begin in the United States. New York and Massachusetts were the first States to legislate against them and soon other States followed suit, until the only legal lottery in America was the Louisiana State Lottery, which continued until 1890. What defeated these lotteries was not the feeling that they encouraged gambling or took the savings of the poor, but that most of them, because they were privately run, became dishonest. Accounts were falsified, fake tickets were sold, and drawings were crooked. In a Government-controlled national lottery, these evils could never exist, as fines for issuing invalid tickets would be as stringent as those for counterfeiting Government bonds. The whole lottery would be run by the Government and policed by Government agencies. There would be no more danger of having racketeers monopolize the venture than there would be of having them run the United States Mint. The difference between a privately run lottery and a Government-run one is exactly the same as that between bookmaking and parimutuel betting. The one is eminently dishonest and nets the Government nothing. The other is beyond reproach and nets the Government millions.

FOREIGN EXAMPLES

People who feel that lotteries are an outmoded way of raising money need only look around them. With the exception of the United States, almost every major country in the world augments its income by lotteries. England not only has its legalized football pools—from which the Government receives tremendous taxes—but recently authorized the Bank of England to run a lottery which, in its first 4 months of operation, brought $175 million into the British Treasury from only 2¼ million participants. Almost all South American countries run government lotteries and find that they are the best means of stamping out the privately run numbers rackets. Mexico's lottery, with 8 drawings a month, has been in operation since 1770, and 20 years ago France reintroduced a national lottery that has been largely responsible for its economic stability.

Other countries that run national lotteries of one sort or another are Canada, Turkey, Greece, Belgium, Italy, Egypt, Japan, and the Philippines. Sweden's national lottery, with monthly drawings, supports its state theaters, orchestras, and other cultural interests—and still has $20 million left over for the general treasury. Another well-organized and highly profitable state lottery is that run by the Australian Government, which sells some $200 million worth of tickets a year to Americans alone.

The situation that now exists in the United States regarding lotteries is in every way reminiscent of the one during prohibition. When that law became impossible to enforce, it was wisely repealed. As a result, crime diminished and Government profits soared. The time has now come for us to be equally realistic about a national lottery. The money is going to be gambled, whether we legalize it or not, and, by legalizing it, we can have it gambled honestly and to our national benefit. The church groups who oppose the move are only bedding down with the big and little racketeers of organized crime.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

The Oil Import Problem

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. JOHNSON of Texas. Mr. President, I have received from Gen. Ernest O. Thompson, a member of the Texas Railroad Commission, who is well known to this body, a copy of a statement on oil imports setting forth the official sentiment of a group of associations of independent oil producers regarding administration action recently taken to curb imports.

I ask unanimous consent that this statement annd the resolution included in it be printed in the Appendix of the RECORD, along with a list of the associations represented at the meeting at which the statement was adopted.

There being no objection, the statement with enclosures, was ordered to be printed in the RECORD, as follows:

STATEMENT ON OIL IMPORTS ADOPTED AT MEETING OF ASSOCIATIONS COOPERATING ON THE OIL IMPORT PROBLEM, DALLAS, TEX., AUGUST 5, 1957

The action by President Eisenhower and his Cabinet Committee on July 29, 1957, was a most important and constructive effort to limit oil imports in the interest of national security and the consuming public.

This action results from a petition filed by the Independent Petroleum Association of America and 18 cooperating associations of oil producers, under the defense amendment (sec. 7) of the Trade Agreements Extension Act of 1955.

The problem of excessive oil imports is now fully recognized by both Congress and the executive branch of the Federal Government. The Government is now committed to the policy of limiting imports to a proper balance with domestic supplies. Under this policy, domestic producers can continue to provide ample oil at reasonable prices.

National policy as to oil imports is now established. Only one question remains. Are the import limits and the method of control adequate to assure the necessary development of United States petroleum resources?

The recommended limitations on crude oil imports would have a significant effect on both imports and domestic production. Under the plan, domestic production is estimated to increase in the coming months by 300,000 to 400,000 barrels daily over the present level which is depressed by a combination of increasing imports and seasonal factors. This would represent substantial relief from excessive imports and should encourage domestic exploration and development.

After careful consideration of the report and recommendations, we are hopeful that the plan will prove to be effective. We recognize that further action may be required. Importing companies now have both an opportunity and a responsibility and we urge their strict compliance. We commend the President and the Cabinet Committee for the clear intent to impose mandatory controls if importing companies fail to comply with the specific quotas established for each company: Now, therefore, be it

Resolved, That we commend the action by President Eisenhower and his Cabinet Committee as a long and important step toward a sound and lasting solution to the oil import problem. We pledge our continuing cooperation, our vigilance and our full efforts to that end.

ASSOCIATIONS REPRESENTED AT JOINT MEETING, AUGUST 5, 1957, DALLAS, TEX.

1. Independent Petroleum Association of America.
2. Independent Producers and Royalty Owners Association of New Mexico.
3. Oil Producers Agency of California.
4. Kentucky Oil & Gas Association.
5. Kansas Independent Oil & Gas Association.
6. Ohio Oil & Gas Association.
7. Bradford District Pennsylvania Oil Producers Association.
8. West Central Texas Oil & Gas Association.
9. Texas Independent Producers & Royalty Owners Association.
10. North Texas Oil & Gas Association.
11. Oklahoma Independent Petroleum Association.
12. Independent Oil Producers & Landowners Association, Tri-State (Illinois, Indiana, and Kentucky).
13. American Association of Oilwell Drilling Contractors.
14. National Stripper Well Association.
15. East Texas Oil Association.
16. Panhandle Producers & Royalty Owners Association, Amarillo.
17. Independent Oilmen and Landowners Association of North Dakota.
18. Southwest Pennsylvania Oil Producers Association.

Phenomenal Growth of Industry in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. JOHNSON of Texas. Mr. President, one of the most startling aspects of the past decade has been the phenomenal growth of industry on the Texas gulf coast.

The synthetic rubber industry, production of petrochemicals, and manufacturing of various types, have increased steadily. Some of the leaps have been spectacular.

Recently, I received a memorandum from John F. Rudy, the respected assistant to the executive vice president of the Goodyear Tire & Rubber Co. The Goodyear synthetic rubber plant in Houston is now the world's largest. A $10 million expansion program has been completed and the plant's capacity is now 220,000 long tons a year.

Mr. President, I ask unanimous consent that this memorandum be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM TO THE HONORABLE LYNDON B. JOHNSON, UNITED STATES SENATOR

The Goodyear Houston synthetic rubber plant is now the world's largest. A $10 million expansion program has been completed bringing the plant's productive capacity of synthetic rubber to 220,000 long tons a year.

Some 650 persons are employed at Goodyear's Houston plant. The yearly payroll approaches $4 million. Plant investment totals $22 million.

The Houston plant has had a colorful career. It was born out of a wartime emergency on a 136-acre patch of gulf coast grazing land in 1943.

Goodyear is very proud of its record in building and operating this plant for the Federal Government from 1943 through April 1955. During this period the Houston plant made history with an imposing list of "firsts" in the field of synthetic rubber and of economic importance to all American industry and defense.

Goodyear purchased the Houston plant from the Federal Government 2 years ago. Since then its improvements in equipment and processing have enabled it to produce over 286,000 long tons of synthetic rubber.

The Goodyear Houston plant manager is Mr. Ben A. Rosinski, a tireless worker in church and civic affairs in Bellaire, a neighboring residential community to Houston.

JOHN F. RUDY.

AUGUST 8, 1957.

San Angelo, Tex., Reclamation Project

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. JOHNSON of Texas. Mr. President, when the Senate last week passed the bill providing for the San Angelo, Tex., reclamation project, it acted in the best interests of a stable and growing area in West Texas.

The San Angelo Standard-Times editorially heralds this legislation as the beginning of a new era for that section. I ask unanimous consent that the Standard-Times editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENCOURAGING PROGRESS FOR THREE RIVERS DAM

When the Three Rivers Dam bill, voted favorably by the Senate Tuesday, goes to the

President, the Chief Executive need not rely on hearsay evidence for any action he may take. He has been on the ground, he saw here the effects of 7 years of drought, and he knows the dilemma that drought imposes on a great section of the country.

He saw in west Texas a stability of character and a tenacity of purpose on the part of the citizens that impressed him at the time. He suggested a situation wherein the Federal Government could lend a helping hand.

San Angelo greets with hope the action of both the House and Senate in approving the $32,220,000 proposal for constructing a dam here as indicative of the soundness of the project, the interest of the representatives of the people in water conservation, and as endorsement of a "do-it-yourself" program.

With a strong assist from the Federal Government the city of San Angelo and the irrigation interests who will benefit among others from the dam are prepared to handle the financing themselves. Studies by reputable, dedicated men have proved that such financing is not an impossible burden, but for a growing developing area is indeed a bargain package, with vast benefits certain to accrue from our farsightedness.

It is encouraging that the project has gotten so far in as short a time as required. The drought over 7 years made it imperative that action be taken to take care of a growing city, protect it from floods, and provide some insurance for a continuing stable economy.

Credit for the progress of this measure, fraught with so much importance to this section, rests in the early spade work done by local leaders, and then the work of the Texas delegation in Congress, including Representative O. C. FISHER, of the 21st District; Senator LYNDON JOHNSON, Representative SAM RAYBURN, and Representative J. T. RUTHERFORD, of Odessa.

They had valid argument to substantiate the San Angelo project in that it met the requirements of the Bureau of Reclamation and it followed the pattern of other projects where no voice of opposition was heard.

The signature of President Eisenhower on this measure will mark the beginning of a new era in the industrial and economic growth of the Queen City of the Conchos.

Alcoholics Anonymous in Operation in the Municipal Court for the District of Columbia

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report by Robert J. Conner, Sr., assistant director of probation, on Alcoholics Anonymous in Operation in the Municipal Court for the District of Columbia.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

ALCOHOLICS ANONYMOUS IN OPERATION IN THE MUNICIPAL COURT FOR THE DISTRICT OF COLUMBIA—REPORT FOR THE FISCAL YEAR JULY 1, 1956–JUNE 30, 1957

(By Robert J. Conner, Sr., Assistant Director of Probation)

PREFACE

Since the inception of Alcoholics Anonymous in this court over 11 years ago, we have operated in the realm of a creative minority and we humbly maintain that position as we continue to expand and grow to a degree that is very rewarding in terms of salvaging the lives of a segment of society that has been classified and reclassified by many well-meaning individuals and organizations.

The fact remains, and the proof is in the final results, that the simple program of Alcoholics Anonymous is the answer to the problems of a greater number of alcoholics than the answer drawn from the combined efforts of all those interested in contributing to the rehabilitation of alcoholics.

Alcoholics are a complicated people; experience proves that they cannot comprehend a complicated answer. We have endeavored to keep Alcoholics Anonymous simple and operating on the proper level and have hurdled every obstacle in sight, some of which appeared very suddenly.

Have any of you who read these lines thought what it would be like to change places with someone less fortunate than you? That is precisely the position which we have taken and are still occupying. It is not the easiest task by any stretch of the imagination, but let us assure you that it is about the most rewarding, for out of our efforts have come revolutionary changes for the better in the warped lives of those whom we have attempted to help rebuild their lives into something worthwhile, which from the surface appeared forever lost.

During the fiscal year July 1, 1956, through June 30, 1957, a total of 243 probationers were referred to Alcoholics Anonymous. Of that number, 17 were revoked, 11 absconded, and 1 was dropped due to mental deficiency. Of the 214 individuals remaining who either have completed their probation or are still in the process of rehabilitation, less than 1 percent are unemployed. Many of them have been reunited with their families and are assuming their rightful place in society.

When one considers that a total of approximately 40,000 arrests for intoxication were made during the fiscal year, which passed through this court, then it is obvious that the above total of 243 or slightly more than one-half of 1 percent of the total, represents an almost infinitesimal fraction referred to Alcoholics Anonymous through this office.

However, on a second glance, when one considers the present staff of this office and the large volume of work it normally carries, the above 243 probationers represent an unusual responsibility for the individualized attention they have received.

With an adequate and enlarged personnel, it is understandable how many more cases we can individualize through the process of rehabilitation.

The classes of Alcoholics Anonymous meet every Monday at 8:30 p. m., in room 114 of the Civil Division, located at Fourth and E Streets NW. This is an additional feature just begun and we are very grateful for the court's added cooperation in this new endeavor.

An Alcoholics Anonymous court group meets every Saturday at 9 a. m., in room 301 of the Criminal Division, located at Fifth and E Street NW. The classes and meetings are not only for the benefit of those selected from the defendants appearing in this court for rehabilitation but for any Alcoholics Anonymous member from the area, many of whom attend. All these meetings are conducted on the same level as meetings of the other 38 groups in the metropolitan area.

After these people are screened in court, conditioned for a short period of time in the District of Columbia jail, and finally received for probation and reference to Alcoholics Anonymous, not a few are found to be entirely destitute. First, we place them in a suitable home established by Alcoholics Anonymous members with a similar history, a home where the atmosphere is conducive to sobriety and constructive thinking, occupied and operated by alcoholics. We then endeavor to secure suitable employment, which is accomplished through other members of Alcoholics Anonymous to a large degree. Finally, there is the problem of re uniting the individual with his family That, too, is brought about to a great exten by and through an understanding of the purpose of the Alcoholics Anonymous program.

Translating impressions into actions ha brought the living program of Alcoholics Anonymous under court auspices from it humble beginning to its present size and continuous growth. The very fact of at tendance in the setting of a court building by those whose disappointments and heart aches once brought them to their lowest ebb implies faith in Alcoholics Anonymous. This faith includes their faith in us and their strengthened willingness to look for a new set of directions and values to lift them up and out of their misery.

Directing thoughts and actions into har mony and wholesomeness through Alcoholics Anonymous principles is a fact. The pro bation office is forever present to implement concrete cooperation toward this goal.

This is the only court in the country where an Alcoholics Anonymous meeting actually functions within the confines of the court. Too much emphasis cannot be placed on the wholehearted cooperation of Chief Judge Leonard P. Walsh who has made a great contribution for the benefit of this group, especially since the beginning of the year 1957 when we implemented his idea to further and broaden this effort to the extent that this present year will show an expansion far greater than in any previous year.

Tribute is also due all of the associate judges of this court for their cooperation and understanding of this, the greatest single problem confronting this court and community. In not one instance have any of the judges declined to cooperate when it was thought that the Alcoholics Anonymous program could be a benefit to an individual who was at the time on his way to total ruin as the result of the excessive use of alcohol.

The McCarthy I Knew

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio interview of Dr. J. B. Matthews by Mr. Hardy Burt, broadcast over the Mutual Broadcasting System, May 22, 1957, entitled "The McCARTHY I Knew."

There being no objection, the radio interview was ordered to be printed in the RECORD, as follows:

THE MCCARTHY I KNEW—HARDY BURT INTERVIEWS J. B. MATTHEWS ON MUTUAL BROADCASTING SYSTEM

Mr. BURT. Few Americans did more to influence the state of the Nation than Senator JOE MCCARTHY, and with perhaps a few exceptions no American in history gained so many dedicated admirers and friends and made so many implacable, even very emotional enemies. When the name, MCCARTHY, was almost a daily fixture on the front pages of the Nation's newspapers, the mere mention of that name in a crowded room was guaranteed to set off some kind of verbal explosion. Our topic this evening is The MCCARTHY I Knew. Senator MCCARTHY, as he was known

y one of his closest and most loyal friends, . B. Matthews, at one time executive direc- r of the Senate Permanent Investigations ubcommittee, the famed McCarthy commit- e. I have been able to persuade Dr. Mat- ews to come and be our guest here this ening. He has accepted extremely few in- itations since his retirement from that com- ittee several years ago to appear on any ind of broadcasts, radio or television. But, view of Senator McCARTHY's death, Dr. atthews has acceded to our invitation to ppear to discuss The McCARTHY I knew. Dr. atthews was well known, incidentally, be- ore he was executive director of the Mc- arthy committee, as director of research of he Dies committee.

J. B., millions of Americans, of course, were yal friends of JOE McCARTHY, applauding n campaign to rid the Government of Com- unist influence and spies and, on the other and, millions literally hated him. I hate o use that word—they just hated his guts, hat was what they did. Why did so many mericans, in your opinion, literally hate JOE cCARTHY?

Mr. MATTHEWS. In the first place, let me y that JOE McCARTHY was not only an in- piring leader for me personally, but a dear ersonal friend. I think the answer to your uestion, "Why did so many people hate enator McCARTHY?" is found is a very simple tatement, namely, the influence of the Com- unist conspiracy extends outward to reach lmost incredible lengths. People who were ever sympathetic with the Communists, ho had nothing but hostility in their own houghts concerning communism, were, evertheless, drawn into the web of hatred hich was initiated by the Communist con- piracy.

Mr. BURT. Do you think, J. B., that most mericans who did hate McCARTHY could pecifically tell you why they hated him?

Mr. MATTHEWS. No, I have tried to get any of them to do that and I have found hat they are stumped for an answer.

Mr. BURT. When did you first meet Senator cCARTHY?

Mr. MATTHEWS. I first met Senator Mc- ARTHY on the evening of March 7, 1950, in he lobby of the Statler Hotel in Washing- on, D. C. I may say that the meeting was rranged by a very well-known publisher ho called me by telephone and asked me o come to Washington to meet the Senator o go over with him certain data which the enator was to use in his appearance before he Tydings committee on the morning of arch 8. At that meeting in the Statler otel, several other people were present, in- luding the wife of Senator McCARTHY who as then Miss Jean KERR—

Mr. BURT. His secretary at that time——

Mr. MATTHEWS. One of his assistants. Also resent was his devoted secretary, Mary riscoll.

Mr. BURT. Well, why—what was the pur- ose of this meeting, J. B., may I ask you hat?

Mr. MATTHEWS. Well, as I said, the purpose f the meeting was to go over certain data.

Mr. BURT. In connection with the Tydings ommittee hearings.

Mr. MATTHEWS. That's right. You will re- ember that Senator McCARTHY made a peech in Wheeling, W. Va., on February , 1950, in which he alleged that certain ommunist influences had been dominant n the State Department. That speech roused considerable national interest and rew the fire of certain Senators, and Mc- ARTHY was called upon to appear before a pecial committee set up under the chair- anship of Senator Millard Tydings, of Maryland.

Mr. BURT. Well how did it happen, Mr. atthews, how did it happen, J. B., that ou became executive director of the so- alled McCarthy committee?

Mr. MATTHEWS. Several years after this first meeting with Senator McCARTHY, the Senator became chairman of the Senate permanent investigations subcommittee in January of 1953. During the previous 3 years I had collaborated very closely with Senator McCARTHY in his work and apparently he considered that my presence with the subcommittee would be of some assistance.

Mr. BURT. How long were you the executive director, J. B.?

Mr. MATTHEWS. For approximately 18 days, as I recall the exact number of days.

Mr. BURT. Those were quite hectic days, too, I rather imagine.

Mr. MATTHEWS. Yes; if I may revert to the record. Shortly before I went to Washington to become executive director of the McCarthy committee, I had published an article in the American Mercury magazine on the Communist infiltration into the ranks of clergymen. The article was written long before Senator McCARTHY invited me to become executive director of his committee and he had no knowledge of the article. The article drew the fire of outstanding politicians and papers and other mediums of communication.

Mr. BURT. As well as a great many of the Protestant clergy, I should think.

Mr. MATTHEWS. Well, that's correct, but I think I should say that it was not the article that was under fire and it was not J. B. Matthews who was under fire. It was simply an excuse for attacking Senator McCARTHY.

Mr. BURT. Then in your opinion it was a way of getting at Senator McCARTHY. Would you stand by today what you wrote in the article at that time, J. B.?

Mr. MATTHEWS. Certain very, very distinguished Protestant clergymen have said in print, including the Saturday Evening Post, that I understated the case very grossly.

Mr. BURT. Do you think the situation is better now insofar as Communist infiltration of the clergy is concerned than it was at that time?

Mr. MATTHEWS. Oh, immeasurably better, and by that I mean that the Protestant clergy have now been alerted to a point where only the hard core fellow travelers among them still persist in following the party line.

Mr. BURT. There aren't so many dupes, in other words, in your opinion.

Mr. MATTHEWS. The dupes have been stripped away, for the most part.

Mr. BURT. J. B., do you think Senator McCARTHY smeared innocent people as so often alleged?

Mr. MATTHEWS. That's a very general question, and I've heard the accusation made quite frequently. When I have asked for specific details, they have never been forthcoming. If you'll give me a single illustration, let's discuss that.

Mr. BURT. Well, how about this Miss Moss in that famous case? Mrs. Moss, was that her name? Annie Moss?

Mr. MATTHEWS. Annie Lee Moss? Well, now, there's an interesting case. Senator McCARTHY had nothing whatever to do with the accusations or allegations made against Annie Lee Moss. A witness called before his committee, by the name of Mrs. Mary Markward, identified Annie Lee Moss as a Communist Party member from whom she collected dues. And I should say, to make this perfectly clear, that Mrs. Mary Markward was an undercover agent for the Federal Bureau of Investigation. Whatever error may or may not have been made, it was not of the making of Senator McCARTHY.

Mr. BURT. But it has been charged that he did often falsely accuse innocent people, hasn't it?

Mr. MATTHEWS. As I have just cited a single example, the charge against Mrs. Moss was made not by Senator McCARTHY. The charge was made by an undercover agent of the Federal Bureau of Investigation, and there's still a great deal of doubt as to whether the testimony given by Mrs. Mary Markward was accurate or inaccurate.

Mr. BURT. Well, what you're saying is that a great many people falsely accused innocent Senator McCARTHY, is that what you're saying?

Mr. MATTHEWS. That's correct.

Mr. BURT. You knew the Senator as well, perhaps, almost as well as any man in the world. Do you think that he deliberately sought publicity? Was he a publicity hound?

Mr. MATTHEWS. Any man who is a Member of the United States Senate will receive a certain amount of publicity by virtue of his membership in that august body, particularly if he happens to be the chairman of an important Senate committee. Publicity is unavoidable. When Senator McCARTHY launched his crusade to rid the Government of the United States of Communists and Communist dupes and fellow travelers, no one could have expected him to keep his information secret. When he gave it to the public, naturally the press carried it.

Mr. BURT. During the latter months of his life, J. B., it has been charged by friends of Senator McCARTHY that the press met him with a campaign of silence, a wall of silence so far as the press is concerned. Do you think the press deliberately ignored Senator McCARTHY?

Mr. MATTHEW:. No; I don't think so; I saw his name in print quite frequently. In fact, only a day or two before the Senator's death, U. S. News & World Report featured a statement which he made in answer to an inquiry concerning the definition of modern Republicans. Senator McCARTHY answered, "A modern Republican is somebody who was not a Republican at all until 1952."

Mr. BURT. It was very clear, from many evidences, including the fact that the Senator and his wife were never invited by President Eisenhower to any White House function that the President had indeed an extreme distaste for Senator McCARTHY. He didn't like him and, obviously Senator McCARTHY didn't care too much for President Eisenhower either. What is the story back of this? Is there anything that has not been reported in the press that you could tell us as to the animosity between President Eisenhower and Senator McCARTHY?

Mr. MATTHEWS. There was obviously political hostility between the Senator and the President. I dont' know that he was never invited to the White House. He may have been in the earlier days of the Eisenhower administration.

Mr. BURT. In the latter days, I was thinking, since the friction, the division between Senator McCARTHY and President Eisenhower.

Mr. MATTHEWS. I think one day the story will be told of the meeting at the Department of Justice, the news of which John Adams accidentally let slip in his testimony during the Army-McCarthy hearings. You'll remember that as soon as Mr. Adams let that information slip out, namely, that there had been such a meeting at the Department of Justice, the President clamped down on all information concerning that meeting and disallowed its being investigated by the Army-McCarthy committee.

Mr. BURT. Do you think that President Eisenhower's hostility to Senator McCARTHY was occasioned by the fact that McCARTHY was seeking Communist influence in the United States Army, and, of course, the United States Army would be the pet of General Eisenhower?

Mr. MATTHEWS. Senator McCARTHY was not conducting a hunt for Communists in the Army. He was simply seeking to expose information which had come to him from Army

sources concerning the presence of Communists in the Army. You remember the famous case of the promotion of Peress from one rank to a higher rank after he had been identified as a Communist Party member by the McCarthy committee investigations.

Mr. BURT. J. B., who promoted Peress?

Mr. MATTHEWS. As it was finally told by the Army itself, the final decision for the promotion of Peress came from John Adams, the general counsel of the Army.

Mr. BURT. Dr. Matthews, it's been said that with all of the activity of Senator MCCARTHY, of all the hearings, the millions of words taken of witnesses, and so forth, that he never actually sent a Communist to jail. What would you say about that?

Mr. MATTHEWS. As you well know, and as the public, I think, knows, it is not the function of a congressional committee to prosecute persons for crimes. There would be no possibility of sending a man to jail as the direct result of a congressional inquiry. It's also true that the Federal Bureau of Investigation does not have powers of prosecution. It can be said quite as well that the FBI has never sent a Communist to jail. It's the business of the FBI to gather information; it's also the business of congressional committees to gather information and make such information available to the Department of Justice and, in the case of the congressional committees, to make it available to the public.

Mr. BURT. Some commentators have said that the reason for MCCARTHY's crusade and subsequent publicity that he personally was receiving, that the reason for this was that he was seeking the presidency of the United States. You knew the Senator quite well. Was he seeking the presidency of the United States, J. B.?

Mr. MATTHEWS. If the Senator had in the background of his mind or thinking an aspiration to become President of the United States, he never let me in on that secret. However, it should be pointed out, I think, that there's no disgrace in a man's aspiring to be President of United States. His enemies have been the ones who have made this allegation. It used to be considered an honorable thing for every boy born in the United States to aspire to become President.

Mr. BURT. But you don't know definitely whether or not JOE MCCARTHY was actually seeking the presidency of the United States?

Mr. MATTHEWS. Well, so far as the evidence is concerned, I would say that he definitely was not considering ever aspiring to be President of United States.

Mr. BURT. J. B., I know what a really loyal, dedicated, confirmed friend you were of Senator MCCARTHY, that you often spoke to him on the telephone; that he was often a guest in your house; you were his guest in Washington. Do you think, though, that at some times perhaps Senator MCCARTHY did get off the beam a little bit in his attitude toward witnesses in the vigor in which he talked to them and questioned them, or not?

Mr. MATTHEWS. No, I don't think so. But let's examine that question for a moment. The successor to Senator MCCARTHY, as chairman of the Senate Permanent Investigations Subcommittee, Senator JOHN MCCLELLAN, of Arkansas, is, in my opinion, a much tougher interrogator than was Senator MCCARTHY. I see nothing at all amiss in an interrogator of witnesses pursuing his inquiry with all possible vigilance and firmness.

Mr. BURT. When was the last time, J. B., that you talked with Senator MCCARTHY? What was his attitude at that time? When was it that you talked with him last before his death?

Mr. MATTHEWS. Senator MCCARTHY went to the hospital on Sunday evening. He called me on the telephone the previous Sunday morning and asked me to assemble certain data for him, and I was busily doing that at the time he passed away.

Mr. BURT. He gave you no indication that he had any premonition that he would actually die then?

Mr. MATTHEWS. Certainly not; he seemed to be in the best of spirits, as vigorous as ever to pursue the course of his own particular inquiry, namely, the influence of Communists in the United States.

Mr. BURT. J. B., it has been said that the Senator had a great deal of personal charm. Did you find in your experience with him that this was true, that his personality was very good, and that personally with people, with his friends, with his constituents he revealed a great deal of charm?

Mr. MATTHEWS. Senator MCCARTHY's enemies have depicted him as a pugnacious, violent, and passionately unbalanced crusader. I never knew any such JOE MCCARTHY. On the contrary, he was as even-tempered, as lacking in violent passions, as any man with whom I was ever associated. His personal charm was very contagious; I've seen it at work in many instances. When he would leave a hotel where he had just delivered a speech, he would unfailingly greet persons on the sidewalk who recognized him, he would walk to the corner of the block to shake hands with the policeman on the beat, and this was in States where he was not seeking votes.

Mr. BURT. What do you think really made JOE MCCARTHY take in his crusade against Communists and the vigor with which he carried on that crusade? What was back of it; what started him in that role, J. B., would you say?

Mr. MATTHEWS. You've asked two questions. What started him I'm not in a position to say. But I am in a position to say that from the time I became associated with him until the time of his death, he was a man who never deviated from his fixed purpose to expose the Communist conspiracy, which, in his mind, constituted a threat against civilization itself.

Mr. BURT. And it's your opinon that there was an organized campaign because of the manner in which he did prosecute this campaign, this crusade of his, that there was an organized campaign to get MCCARTHY, as such?

Mr. MATTHEWS. May I refer to a document which I prepared for use in the censure hearings before the United States Senate in the fall of 1954? I entitled this brief "Operation Get MCCARTHY," and if I may I'll read a few sentences from it to give you the answer to what I——

Mr. BURT. Just a few sentences because our time is short——

Mr. MATTHEWS. "Let us be under no illusions or misapprehensions. The Communist Party of the United States, an arm of the international Communist conspiracy, directed from the Kremlin, is the originator and successful manager of 'Operation Get MCCARTHY.' If the United States Senate votes censure of the Senator from Wisconsin, the Communist Party of the United States will have carried to final success the most extensive and impressive operation of the entire 33 years of its existence. If the United States Senate votes censure of the Senator from Wisconsin, the Communist Party of the United States will have demonstrated its power to capture the minds of a large section of the American people. This will have been a consummation too dreadful and too fantastic to contemplate. The leaders of the Communist Party, from their prison cells in Leavenworth and Atlanta, will exult over their greatest achievement to date."

Mr. BURT. There's been a lot of talk going on about MCCARTHY's place in history, so far as it's recorded in history books. What do you think, J. B.?

Mr. MATTHEWS. In my opinion, Senator MCCARTHY has already taken his place among the immortals of the United States Senate.

Autocratic Firing of Professors at Texas Tech

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. YARBOROUGH. Mr. President, the refusal of the Texas Tech board of directors to reinstate the three recently fired professors is a shadow on the great history of the school and a tragic departure from the principles of American life and democracy.

The board wrongly fired and wrongly refused to reinstate these three qualified men.

Dr. Byron Abernethy, Dr. Herbert Greenberg, and Dr. Per G. Stensland were the victims of this malicious action. Tech President E. N. Jones registered a vigorous protest at the time of the firing. He termed all three professors highly qualified.

This is a tragic departure from the principles of American life and democracy upon which this Nation was founded. If this action stands, the members of the board of directors of Texas Technological College have buried the principles of Thomas Jefferson, James Madison, and the Founding Fathers who brought forth on this continent a new nation conceived in liberty.

The great position of leadership along educational, intellectual, and technical lines built up by Texas Tech since its founding has been compromised and a shadow thrown over its great history by this act of intolerance and lack of vision of the board of directors.

It is plain that these highly qualified and competent men were not fired for inefficiency. They were discharged for exercising their constitutional right of free speech. There are certain people and interests in Texas who want to deny all schoolteachers their right of free speech. These persons and interests are afraid of an informed electorate.

We are not behind the Iron Curtain. We are living in a free world. This is democratic Texas, not communistic Russia or Fascist Germany and we should observe and apply democratic principles.

Mr. President, I ask unanimous consent to have this editorial from the Jacksonville Daily Progress printed in the Appendix of the CONGRESSIONAL RECORD. I also request unanimous consent to insert four thoughtful letters to the editor which were printed in the Lubbock Avalanche-Journal in the Appendix of the RECORD.

Both these papers have been militant leaders in trying to correct this great wrong.

The Lubbock Avalanche-Journal, a great newspaper in the hometown of Texas Tech, has done a great job of reporting this blow to academic freedom. The Avalanche-Journal's editorials have been models of thoughtful, yet forceful, essays on this matter that has greatly concerned every Texan and every believer in fair play everywhere.

Barnes Broiles, the militant Democratic editor, of the Jacksonville Daily Progress has long been a foe of autocratic and underhanded actions such as the Tech firings.

There being no objection, the editorial and letters to the editor were ordered to be printed in the RECORD, as follows:

[From the Jacksonville (Tex.) Daily Progress]

FREEDOM'S FATE—TEXAS CAN'T ALLOW TEXAS TECH INSULT BE FORGOTTEN, UNCORRECTED

In Russia if a professor didn't agree, politically, with the ruling regime, he would be liquidated, or banished to Siberia.

In Hitler's Germany a professor who differed with Hitler would have been exterminated.

There are many countries where free speeech is denied.

In Texas, there is freedom of speech generally—in most every place except Lubbock, that is.

Three professors who didn't agree with the Shivers-appointed board of directors were fired, dismissed, terminated. They'll live, but their way of making a living was cut off.

The three professors were banished because they had different political views than J. Evetts Haley, a radical appointee, a former college professor himself.

Gov. Price Daniel has condemned the secrecy of the board in taking the action. He is to be commended for that. Maybe he'll appoint men who have more respect for freedom when terms expire on the Tech board. Maybe he'll insist his appointees pledge open meetings. No star chambers.

Senator RALPH YARBOROUGH put it thusly: "This (the firing of the professors without a hearing) is a tragic departure from the principles of American life and democracy upon which this Nation was founded. If this action stands, the members of the board of directors of Texas Technological College have buried the principles of Thomas Jefferson, James Madison and the Founding Fathers who brought forth on this continent a new nation conceived in liberty."

We had hoped the Tech board would grant a hearing, but that apparently is out.

We must never let the Tech matter die. Every man who stands for political office, especially for the legislature or for governor, should be asked to take a stand on the star chamber and freedom of speech.

This is not Russia. This is Texas, the land of free people who should never be cowed by college boards or anybody else in saying whatever they believe is best. Free speech is the very foundation of our liberty. We must protect it.

[From the Lubbock (Tex.) Avalanche-Journal of August 4, 1957]

IN WHICH OUR READERS GIVE THEIR VIEWS: LETTERS TO THE EDITOR

RAPS TECH DECISION

EDITOR, THE AVALANCHE-JOURNAL:

Nothing in America is more inimical to American ideals and American tenets of political faith than those specimens of intellectual petrification and academic atrophy who call themselves conservatives to escape the opprobrium of their real title, Fascist, while they try to prescribe for all of us what we shall hold orthodox in politics, nationalism, religion, and other matters of opinion.

There should be no room on the board of any educational institution for one of these modern Tories to advocate and promote suppression and distortion of thought. To dictate to teachers what they shall think and teach is as un-American as vodka.

The first thing a teacher should tell an American student is that there isn't a thought that enters the mind of man that he hasn't the right to examine, to understand and to accept or reject. There is no education possible when thought and the expression of thought isn't free. Nobody in America has the right to cram the minds of our young people into an arbitrary intellectual and academic box and forbid them to think outside of it.

Thomas Jefferson told the members of the faculty of the new University of Virginia, "In this institution you will not be afraid to follow truth wherever it may lead and to tolerate error as long as reason is left free to combat it."

And on another occasion he said, "The first business of this Nation will be to fight every form of tyranny over the minds and thoughts of men."

These two statements taken together and understood should tell every intelligent citizen and taxpayer what he should think of the political coup on exhibition out at Tech. That is the first long step toward making that great institution a noisome pool of intellectual and academic stagnation. The youngster I intended to educate there will have to go somewhere else, where reason takes precedence over gullibility as the goal of a university education.

C. RAY WILLIAMS.

GIRARD.

SEEKS NEW BOARD

EDITOR, THE AVALANCHE-JOURNAL: The secret session at which the board of directors of Texas Tech fired three professors without hearing or stated cause has damaged Tech seriously.

This action threatent Tech's accreditation and will make it very difficult to recruit and hold a first class faculty.

Article 2630 of the Civil Statutes of Texas gives the Governor power to remove any member of the Tech board for inefficiency. Taking the most charitable view, the board's politically motivated action constitutes at least gross inefficiency. Therefore, I am writing the Honorable Price Daniel today requesting that the entire board of directors be removed, and I urge all friends and alumni of Tech to do the same.

Sincerely,

JUNE R. WELCH,
Master of Arts, Texas Tech, 1953.
GRAND PRAIRIE, TEX.

SLAP AT EDUCATION

EDITOR, THE AVALANCHE-JOURNAL: I wish to commend you on your stand in regard to the Tech situation. As a Texan, a Techsan, and a Texas teacher, I find the whole affair a slap in the face of Texas education. If we need teachers, and they say we do, who is going to want to enter a profession that deprives them of their right to take part in the democratic processes, to exercise their rights as an individual, and to be able to answer sincerely questions asked by their pupils? And believe me they ask them at all levels without jeopardizing their positions.

I hold two degrees from Tech and have a son who is an honor graduate from the engineering school. What about our rights to an explanation? Just who are these people that the board is supposed to be representing? I haven't found a single one. Everyone that I have contacted deplores the fact that such gestapo actions can take place in our State, and to our school.

I would like to commend President Jones in his defense of his staff. But I am afraid that said board will be after his scalp next. Personally, I hope that the Southern Association does investigate, and that each board member continues to have this affair pounded in his ears until the final day of his respective term.

I would like to sign this, but things being what they are maybe I had better not. See what I mean?

Sincerely,

A TECHSAN.

FROM STUDENT'S DAD

Editor, the Avalanche-Journal: If the Texas Tech Board fired Dr. Byron Abernethy for his stand with the Democrats of Texas, then they stink with political bigotry. If they had legitimate reasons and do not give him a hearing, they are guilty of the same practice made famous by Joe Stalin. Some pretty good men died at Bunker Hill, Gettysburg and the Alamo that such despotism would never exist in America. And to think that one or probably both such conditions do exist in our own Texas Tech is abominable.

Some Tech board members stated Dr. Abernethy's constitutional rights had not been violated, which marks them as highly unfit for their job. Freedom of speech and the press and the right to be heard are cornerstones of American liberty and are guaranteed under our Constitution.

Dr. Jones states he "supposes" Dr. Abernethy was fired on account of his activity with "the liberal Democrats of Texas." So what if he was active with them. All real Democrats everywhere are liberal Democrats who rate people above dollars. Since the Tech board was appointed by Shivers, it is possible they belong to that species of souls who say they are Democrats and then vote Republican. Maybe that accounts for their bigotry in not giving a man his day in court.

As the father of a senior in Texas Tech, the writer calls upon the board to either accord an open hearing or resign themselves. Most students work long and hard and their families sacrifice in order for them to graduate.from an accredited school. As the matter now stands, Tech has been disgraced by the board and is certain to be placed on the blacklist. It is not right for this to happen, and if the board had the best interest of Tech at heart it would not happen. In the alternative, along with thousands of other parents and students, the writer is waiting—with the very positive assurance we are not going to take it sitting down.

J. B. BENNETT.

ABILENE.

Highway Conditions in North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several communications from A. W. Wentz, State highway commissioner of North Dakota, enclosing resolutions adopted by the Western Association of State Highway Officials, in a recent meeting at Houston, Tex. I ask that both the letters and resolutions be printed in the Appendix of the RECORD.

There being no objection, the letters and resolutions were ordered to be printed in the RECORD, as follows:

NORTH DAKOTA
STATE HIGHWAY DEPARTMENT,
Bismarck, N. Dak., August 9, 1957.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed you will find a copy of Resolution No. 5 recently adopted at a conference of the Western Association of State Highway officials held at Houston, Tex.

I have written to you heretofore concerning support of such a measure to exclude conveyances of property to State highway departments from the Internal Revenue documentary stamp tax and therefore am forwarding this resolution for your information.

Very truly yours,
A. W. WENTZ,
State Highway Commissioner.

RESOLUTION 5

Whereas under present rulings of the United States Bureau of Internal Revenue conveyances of private property to public agencies for public use are subject to the imposition of the Internal Revenue documentary stamp tax; and

Whereas while technical legal liability for such stamp tax rests upon the private property owner, in fact the cost thereof must frequently be borne by the public agencies in order to avoid condemnation proceedings and to that extent, imposition of the stamp tax upon such conveyances constitutes an unreasonable interference with and burden upon necessary State governmental functions; and

Whereas H. R. 6849, presently being considered by the Congress of the United States, would eliminate such unreasonable interference and burden by exempting conveyances of private property to public agencies from said documentary stamp tax: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials in annual convention assembled in Houston, Tex., this 13th day of June 1957, instructs its president and executive committee to actively seek enactment of H. R. 6849 or other appropriate legislation to assure that conveyances of private property to State highway departments for highway purposes be exempted from the Internal Revenue documentary stamp tax.

NORTH DAKOTA STATE
HIGHWAY DEPARTMENT,
Bismarck, N. Dak., August 9, 1957.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: I am enclosing a copy of Resolution No. 1 adopted by the Western Association of State Highway Officials at a recent meeting at Houston, Tex.

We are informed that Representative ROBERT E. JONES of Alabama has introduced two measures which would, in effect, carry out the petition contained in resolution No. 1. These have been identified as H. R. 6987 and 6988.

You are perhaps aware that the 1957 session of the North Dakota State Legislature enacted a bill providing for the reimbursement of utilities when required to remove from right of way involving the Interstate Highway. Subsequently, the attorney general of North Dakota ruled that this law violated our State constitution.

The latest information available to us indicates that the only court test of this matter has been in the State of Maine where the Supreme Court ruled that such a provision violated the constitution of the State of Maine.

We recommend that you support proper legislation to prohibit the payment of highway funds for nonhighway purposes such as utility removal.

Very truly yours,
A. W. WENTZ,
State Highway Commissioner.

RESOLUTION 1

Whereas there is a concerted nationwide movement by utility companies to cause legislation to be enacted in the respective States having for its purpose the mandatory payment from public fuhds of the costs of removing or adjusting the facilities of such companies located upon public highway rights-of-way, when it is necessary that such relocations or adjustments be effected in order to provide for Federal-aid highway or State construction; and

Whereas it is unfair to require the payment from public funds for the relocations or adjustments of utilities where such utilities have been occupying publicly acquired rights-of-way without the utility having paid any part of the costs of such public right-of-way; and

Whereas such legislation would be detrimental to the entire Federal-aid highway program because it would be diverting public funds and would be decreasing very considerably the funds to be available for highway construction and would greatly delay the completion of the Federal-aid highway systems thereby depriving the public of the highways needed in the national defense, for the economic development of the entire Nation, and for the safety and convenience of the motoring public: Therefore be it hereby

Resolved by the Western Association of State Highway Officials assembled at Houston, Tex., this 13th day of June 1957, That such association vigorously oppose such legislation in the respective States, and that the Congress of the United States be hereby petitioned, for the reasons hereinabove set forth, to enact proper legislation to prohibit the payment or rembursement from Federal-aid highway funds of any portion of the costs for moving, removing or adjusting the facilities of utilities when such facilities are located upon the publicly owned rights-of-way of a public highway; and be it further

Resolved, That a copy of this resolution be submitted to each Member of the Congress of the United States.

NORTH DAKOTA
STATE HIGHWAY DEPARTMENT,
Bismarck, N. Dak., August 9, 1957.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed you will find a copy of Resolution No. 4 which was adopted by the Western Association of State Highway Officials in a conference at Houston, Tex., recently.

Many of our most severe problems concerning the Interstate System in North Dakota, we believe, would be solved if we were permitted to construct access roads outside of the area of right of way acquired for the Interstate Highway itself.

We would urge that you support even a broader law than that petitioned for in Resolution No. 4, as we feel that agricultural interests also require the services of access roads to the Interstate System.

Very truly yours,
A. W. WENTZ,
State Highway Commissioner.

RESOLUTION 4

Whereas there is increasing need for the construction of access roads for the development of our natural resources, to stimulate the mining of vital strategic minerals, and leading to Federal installations; and

Whereas such access roads will provide recreation opportunities to great numbers of our people; and

Whereas the Nation will receive much benefit from the supply of these strategic minerals so necessary for the defense of our country; and

Whereas the resulting industrial growth will provide economic benefit to the entire Nation; and

Whereas State and local governments are unable to provide for financing such access roads: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials in convention assembled at Houston, Tex., on June 13, 1957, urgently requests the Congress of the United States to take the necessary action to provide funds for the construction of such access roads, and that copies of this resolution be sent to Members of Congress of the Western States and to members of the appropriate committees.

NORTH DAKOTA STATE
HIGHWAY DEPARTMENT,
Bismarck, N. Dak., August 9, 1957.

Hon. WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SENATOR LANGER: Enclosed you will find a copy of Resolution No. 2 adopted at a recent meeting of the Western Association of State Highway Officials at Houston, Tex.

It is our understanding that there are proposals now before Congress, proposing to expand the mileage of the National System of Interstate Highways.

We feel that it is not good business to make a present extension of this system until such time as the present designated highways have been assured of completion.

Very truly yours,
A. W. WENTZ,
State Highway Commissioner.

RESOLUTION 2

Whereas the executives and member delegates of the 36th annual conference of the Western Association of State Highway Officials are aware of the current status of the expanded highway program, as it applies to the National System of Interstate and Defense Highways, having been so appraised of the progress made thereupon, by Federal Highway Administrator Bertram D. Tallamy; and

Whereas the membership of this organization is also fully cognizant of the many serious obstacles confronting the orderly completion of the interstate program within the time allotted by the Congress of the United States, even though progress to date has been satisfactory and on schedule; and

Whereas it is the general feeling of the membership of the Western Association of State Highway Officials that completion of the currently established 41,000 miles of the interstate network will test the capabilities of the several State highway departments and the United States Bureau of Public Roads: Now, therefore, be it

Resolved, That the Western Association of State Highway Officials, in conference at Houston, Tex., on June 13, 1957, does hereby record its opposition to any current or proposed legislation which would expand the mileage of the National System of Interstate Highways, until such time as funds have been made available to assure the completion of the existing mileage, in accordance with established standards of design and construction.

Protecting the Small Investor

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. WILEY. Mr. President, from time to time I have commented publicly on the need for continued vigilance by the investing public against stock frauds.

Fortunately, thanks to the Securities Exchange Act, thanks to self-policing by the vast securities industry itself, and thanks to the public's own increased caution, the amount of stock swindles has been greatly reduced.

Swindles do, however, still ocrur. They derive from a relatively small number of fringe operators.

From time to time, newspapers and and other exposés remind us of new outbreaks of what are generally described as "boilershop" operations.

In my work on the Judiciary and Senate Foreign Relations Committees, I had taken up with the Securities Exchange Commission, with various State attorneys general and other sources, the matter of protecting American investors. From the standpoint of the Foreign Relations Committee, I had been particularly active in seeking to curb frauds based up high pressure telephone or mail solicitations from swindlers abroad.

But whether the promoters of worthless stock were inside or outside our borders, the public has needed more protection, especially in the case of often gullible old folks and other unsuspecting investors.

I was interested to read, therefore, in last Sunday's New York Times, a writeup of one of the most important self-policing instruments in terms of protecting the good name of the securities industry and protecting the public.

I refer to the vital National Association of Securities Dealers.

The writeup described the work and background of its able executive director, Mr. Wallace H. Fulton, with whom my office has been in contact in times past.

I know that the Times writeup was of special interest to the Senate and House Banking Committees which concern themselves with this field. Beyond any question, still more vigilance is needed. Legitimate small business need finances to expand in the tight-money days. But "get-rich-quick" artists are still hawking their worthless wares and reaping millions in ill-gotten gains.

In order that the Times article may be more widely available, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERSONALITY: SECURITIES BUSINESS POLICEMAN—NASD'S EXECUTIVE DIRECTOR KEEPS HIS EYES ON DEALERS—W. H. FULTON HAS HIS SHARE OF CRITICS—AND SUPPORTERS

(By Robert E. Bedingfield)

Wallace H. Fulton is a policeman's policeman.

Mr. Fulton is executive director of the National Association of Securities Dealers, Inc., which was created in 1938 to give Wall Streeters—particularly those dealing in the over-the-counter market—their own "private eye."

The NASD is by no means a governmental or even a quasi-governmental agency. But under the powers Congress gave it there is as much weight behind some of its regulations as is in the hands of the courts. The organization, with 21 governors from all parts of the country and 14 district committees can discipline a member out of business. And it has become almost impossible to conduct a securities business without being a member of the NASD. The association does not exist to reimburse wronged investors. Its principal function is to prevent wrongdoing in the first place.

In Wall Street the organization is sometimes referred to facetiously as the "last feather of the Blue Eagle." The Blue Eagle was the emblem of the National Recovery Administration of the early New Deal days.

FORMER COMPLIANCE DIRECTOR

The NASD was formed from the ashes of the old Investment Bankers Code devised to police the investment banking industry under the National Recovery Administration. Before being named executive director of the NASD, Mr. Fulton had served in Washington as director of compliance of the Investment Bankers Code Committee.

Mr. Fulton, as executive director of the NASD, is responsible for the day-to-day policing activities of the organization. With more than 4,000 members, it is the largest group in the securities business. Like most paid administrators of a supervisory body, Mr. Fulton occupies a fairly hot seat.

He not only has to please the members who pay his salary—and whom on orders of the governors of the association he can rule out of business—but also the investing public. In addition, he has to work closely and remain on the best possible terms with the various Federal agencies that depend upon the N. A. S. D. to keep a "taut ship" over the over-the-counter market dealers and traders and their business methods and operations. Consequently, Mr. Fulton has a full quota of detractors as well as supporters.

Mr. Fulton is a reserved man, yet he speaks positively and firmly. He acknowledges that he learned early in life to "think twice and speak once." This, perhaps, sharpens the differences in attitude with which he is regarded in financial circles.

One Wall Streeter expressed the view last week that "Wallace Fulton is probably the best acquainted man in the securities business. He can go anywhere in the country and call 3 out of 4 securities men by their first, last and middle names. Yet there's no half-way in your relationship with him. People either like Wally and like everything about him or they don't like him and can find nothing good to say about him."

Mr. Fulton, a resident of Washington, D. C., where the N. A. S. D. has its headquarters, was born in Oakland, Calif., on March 16, 1896. He was no amateur in the securities business when he moved to the Nation's Capital during the NRA days.

After hanging up his private's uniform following World War I, he entered the University of California and then transferred to the University of Minnesota, where he studies agriculture and business administration. He explains that "the switch in colleges was due simply to the fact that I learned I could secure a part-time position in Minnesota."

FIRST JOB AS A CLERK

Following his graduation in 1922, Mr. Fulton returned home and took the first job that was offered—working as a clerk for Walkers Manual, Inc., a statistical rating agency for West Coast securities similar to Moody's manual in the East. He advanced rapidly and by 1929 was president and part owner of the organization. During the 1920's he joined the partners of several of the big Pacific Coast banking houses in forming a California Securities Dealers Association.

"And then," he recalls, "when the Investment Bankers Code came in, I was asked to act as secretary. The job was described as 'one of those things that won't take up much of your time.'"

Mr. Fulton says that that proved to be one of the understatements of all time, "but, after all, Californians are brash people in many respects."

As the code committee's work became more complex, Mr. Fulton one day was asked to go to New York to attend a meeting with the chairman of the code group. He says that when the boarded the Twentieth Century Limited in Chicago he was pleasantly surprised to find Francis Patton, a partner in A. G. Becker & Co. and a code committee member, also aboard the train.

"PLANTED" ON THE TRAIN

The two men had dinner together and, Mr. Fulton says, stayed up "much too late in the observation car regaling each other with our latest stories and gossip about friends in the business. The subject of the code or my meeting of the following day were never discussed. It wasn't until a year later after the Supreme Court ruled the NRA as unconstitutional that I learned that 'France' had been planted on the train to size me up before the committee met and offered me the job of compliance director of the code."

After the code had been thrown out, Mr. Fulton returned to California and Walkers Manual. He says that he never again expected to have any reason to leave the west coast. But in 1936 he got a long distance call asking him to return as director of the Investment Bankers Conference, Inc.

The conference, while it was in operation, worked with Congress and the Securities and Exchange Commission on enabling legislation for the creation of the NASD. All the organization's actions since its formation have been subject to review or appeal to the SEC.

The keystone of the NASD as set forth in its articles is: "A member in the conduct of his business shall observe high standards of commercial honor and just and equitable principles of trade."

The organization's 26 rules are designed and applied to protect investors and the public interest in securities transactions; to see to it that high standards of business conduct are observed by its members; to collaborate with governmental and other agencies in promoting the observance of securities laws; to provide safeguards against unreasonable profits or unreasonable charges of any kind and to prevent fraudulent and manipulative acts.

FEES: $1 MILLION A YEAR

The association, which collects $1 million a year in fees from its members, is empowered to inspect members' books and records to ascertain if rules have been or are being violated. These inspections are by direct examination or by questionnaire and are made at frequent intervals, whether or not there is reason to believe violations will be found. Thus the NASD has not had to rely on complaints from the public or other members to obtain information concerning the practices of its members.

The organization has not pussyfooted. Mr. Fulton reports that to date it has expelled 117 members; suspended for as little as 15 days to as long as 2 years, 38; fined 246 members as little as $25 to as much as $12,500. In addition to these penalties imposed on members against whom complaints were filed over the years, it has censured, fined, suspended, or expelled 157 individuals in the securities business.

The NASD is organized on both a national and a district basis—the country is divided into 14 districts. As executive director, Mr. Fulton is constantly meeting with members and district committees. It means that he

doesn't spend much time at home in Washington.

In fact, he is away so often he has had to give up one of his cherished hobbies—raising orchids and, instead, turn to the raising of dwarf trees. Orchids, he explains, require careful attention and must be raised under the right humidity conditions.

The United States and the Refugee

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Eleanor Waters, committee secretary of the Catholic Association for International Peace, and the statement she encloses of the Committee on World Order of the Catholic Association for International Peace.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

THE CATHOLIC ASSOCIATION FOR INTERNATIONAL PEACE,
Washington, D. C., August 1, 1957.

The Honorable WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: Permit me to direct your attention to the enclosed statement by the Committee on World Order of the Catholic Association for International Peace, emphasizing the need for emergency refugee immigration legislation. We believe that this statement will be of interest to you.

With every good wish, I remain,
Sincerely yours,

ELEANOR WATERS,
Committee Secretary.

THE UNITED STATES AND THE REFUGEE—POLICY STATEMENT BY THE COMMITTEE ON WORLD ORDER

At the termination of World War II, the United States embarked upon a wholesome emergency refugee resettlement program that was designed to enable our country to play its rightful part in the solution of the huge postwar refugee problem.

Through the Displaced Persons Act of 1948 and its amendment of 1950, we permitted over 400,000 uprooted and displaced persons to find sanctuary and a new life in our blessed country. Although there was some early opposition to the proposed legislation and even against the refugees, and although their reception and integration into our American way of life presented many problems, very few now object to their presence here. They have become part of the national scene and are contributing from their culture and skills to the enrichment of our industrial and economic life; their children have found their way into our schools, many of them into American colleges and universities. They are part of our parishes and our communities, and in every way we are richer for having accepted them.

In 1953, the Congress enacted the second Emergency Refugee Relief Act as another evidence of its desire to participate in the resettlement of these victims of war and oppression. The large majority of the 209,000 nonquota visas that it authorized were made available for refugees. This legislation provided an opportunity for sanctuary in behalf of many who had fled from oppression to a haven of refuge here, where they and their families now have a guaranty of freedom.

The Hungarian crisis of last November and its consequent displacement of almost 200,000 people again served to dramatize the need for further United States participation in granting asylum to these victims of Communist tyranny. Our country, again anxious to come to the rescue of persecuted people, responded by means of a presidential directive, resulting in the admission of some 32,000 of them to the United States. A majority of these were admitted under parole status, due to the fact that the few thousand visas remaining under the Refugee Relief Act could be made available only to the first lucky ones. The regularization of the status of those admitted on parole is now perplexing many people, and there are some, including the President himself, who have appealed to Congress to accomplish this by means of special legislation.

Thousands of these Hungarian refugees, many of whom have been separated from their families and who sought sanctuary in Austria, Yugoslavia, and other countries of Western Europe, should be given an opportunity to seek a decent livelihood in some more fortunate country like our own. In addition, there are several thousand Croats, Macedonians, Serbs, and Slovenes who have fled into Austria and northern Italy. There are also large numbers of refugee families who were in the so-called pipeline when the Refugee Relief Act ended on December 31, 1956. Many of the breadwinners from Italy, who came in under the Refugee Relief Act, left their spouses and children behind, thus creating serious problems for separated families. The conflicts in the Middle East and the Far East also have produced tremendous numbers of refugees for whom agencies of mercy, both voluntary and governmental, have been seeking relief through migration to places that can provide them with the opportunity to begin life anew.

It is extremely doubtful that Congress will incorporate refugee legislation into our basic immigration law, at least in the foreseeable future. Hence it would seem that strong efforts should be made to obtain further emergency legislation to supplement those measures passed in previous Congresses.

Senator JOHN F. KENNEDY, of Massachusetts, has introduced an immigration bill, as has Congressman FRANCIS WALTER, of Pennsylvania. Both bills would grant some limited relief for refugees, but would not adequately serve the purpose of granting asylum to large numbers of those who fled persecution and are so urgently in need of resettlement.

We have assumed a role of world leadership that places grave responsibilities upon us in this and other world crises. The refugees' plight is not the least of the sores in today's sick world. To assure some form of action on this critical issue, the citizens of this country should urge their representatives in Congress to exert the best possible influence toward the passage of further legislation to alleviate the refugee problem. Surely, there is still much more room in the inn.

A Canadian View of the McKay Appointment

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. NEUBERGER. Mr. President, because there has been considerable controversy over the appointment of Douglas McKay, former Secretary of the Interior, as Chairman of the International Joint Commission, I believe a Canadian opinion of Mr. McKay's qualifications will be significant.

I wish to call to the attention of the Senate the column about Mr. McKay by Bill Ryan, business editor of the Vancouver Province, which was published in that important British Columbia newspaper August 6, 1957. For the information of the Senate, I will point out that the Province is a newspaper which traditionally supports the Conservative Party in Canadian elections. Thus, it cannot be dismissed as radical by Republican defenders of Mr. McKay. The column by Mr. Ryan describes the appointment of Mr. McKay as "another roadblock."

I ask unanimous consent that the entire comment by Mr. Bill Ryan in the Vancouver, British Columbia, Province appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TERRITORY BOOMS—BRITISH COLUMBIA'S YUKON TRADE BUCKS SOFT SPOT FOR EDMONTONIANS

(By Bill Ryan)

Canada-United States talks on Columbia River power development have likely hit another roadblock—rather than stimulant—in the appointment of former United States Interior Secretary Douglas McKay as United States Chairman of the International Joint Commission.

McKay, say Washington observers, is a private power exponent, and probably lukewarm to any expansion of public power in the Pacific Northwest. What's more, his appointment apparently does nothing to solve the continuing private-versus-public power squabble in the United States, with which Canada's Columbia River hopes seem inextricably bound.

It is a bleak picture for British Columbia, one virtually without visible solution—unless Canada goes it alone on upper Columbia development. And such a course has its drawbacks since it might provide the United States Pacific Northwest with substantial downstream benefits—free of charge.

Michigan Bean Soup

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. POTTER. Mr. President, a grave error has been committed against the Michigan bean by a certain food columnist who states that bean soup can be made by mixing together canned black bean soup and canned beef consomme, flavoring the mix with lemon juice and hardboiled eggs.

The Grand Rapids Herald, one of the great newspapers of Michigan, has taken the position that bean soup is made with beans—and furthermore that the best bean soup is made with Michigan beans.

It is well that the Herald has endeavored to correct the terrible wrong done to Michigan beans. I ask unanimous consent to have printed in the Ap-

pendix of the RECORD the editorial to which I have referred. It is entitled "Peabeans Only."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PEA BEANS ONLY

Senator CHARLES E. POTTER, who sends out on request copies of the recipe for Michigan bean soup as served in the Senate restaurant, is probably the man to deal with the atrocious error that appears in the August number of a magazine women are reputed to believe in.

Under the heading "Michigan Bean Soup," the magazine directions begin like this: "Mix together in a saucepan, one 10½-ounce can of condensed black bean soup, one 10½-ounce can of beef consomme" and goes on with matters like lemon juice and hardboiled eggs.

It may be a good soup, but no Michigan bean grower is ever going to recognize it as Michigan bean soup.

White pea beans—that's the foundation for Michigan bean soup. You can skip the broth and lemon juice, substituting a little salt pork, but the beans, white and nourishing, are the thing you can't change or leave out. Michigan grows those beans, and no other bean, black, red, or pinto, will do for Michigan bean soup.

Visits by National Commanders of Veterans' Organizations to Foreign Countries

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. CASE of New Jersey. Mr. President, Joseph F. Burke, national commander of the Disabled American Veterans, and six other national commanders of veterans' organizations, recently returned from a tour of several foreign countries. The national commanders made their trip in conjunction with President Eisenhower's people-to-people program designed to increase contacts between our leaders and institutions and those of other nations throughout the world. Mr. Burke, who is from Bayonne, N. J., and his colleagues visited England, France, Italy, and Israel for 2 weeks.

Upon his return, at the request of the Bayonne Times, his hometown newspaper, he wrote a series of three articles on the impressions of his visit. I know it would be of interest to a great many people to read the warm and sympathetic views of this American abroad in seeking to better understand the ways of others, as he would have them understand us. It is not necessary to agree with all of Joe Burke's observations to commend them to the attention of the Senate.

I ask unanimous consent that the three articles written by Mr. Burke appear in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Bayonne (N. J.) Times of August 1, 1957]

VETERAN ABROAD, I—BURKE REGARDS ENGLAND AS FIREST UNITED STATES ALLY

(Joseph F. Burke, national commander of the Disabled American Veterans, returned recently from a 2-week tour of England, France, Italy, and Israel. Accompanied by six other national commanders of veterans organizations, Burke made the trip in connection with President Eisenhower's People-to-People program, in which representatives of institutions in this country meet with representatives of similar agencies overseas. In a three-series article, Burke will give his impressions of the places he visited.)

(By Joseph F. Burke)

I want to say this first of all: I am not an expert on Europe or the Middle East. Perhaps there are some people clever enough to visit 4 foreign countries in 2 weeks and come back and tell you all about it. They can tell you what is wrong and what should be done about it. I can't do that. I am not that gifted.

PRESS FRIENDLY

However, I saw a lot and I listened a lot. To my way of thinking, that is the best way to learn a lot. I did.

Before leaving the United States, we were advised that we might meet a hostile press. This proved to be untrue. We were interviewed many times, and were asked many searching questions. But at no time were we deliberately embarrassed.

It was surprising to note that the entire attitude of the people changed when we told them that we were not making the tour on Government funds. They became much more interested, talkative and helpful. It is a point I intend to study much further, as you may well understand.

An opinion which was held by some of the people I spoke with was that Americans are given to friendly talk and hostile actions. I explained that we always have been friendly. I said, certain policies and decisions which we believe were made in the interests of our own security by our Government occasionally appear unfriendly to other people.

However, I want to emphasize this: The people were gracious toward us. There was not one unpleasant instance during the entire trip. I did not see any "Yankee, go home" signs.

I found England very pleasant. The sentiment of the people there seemed to be that if we aren't friends then we should be. They are a bit troubled and worried about some of our actions, but still basically pro-American.

They feel as though we must stand together. Because of the same language they believe that no serious differences would ever come between us. We might argue, but never fight. That's the way they look at it.

Naturally, the Suez question was the main topic. Many of the people I spoke to objected to our stand in the matter. I pointed out to them that they had to understand that there was a difference of opinion in the United States also regarding the steps we took.

They were quick to assure me that there also was considerable differences in their own country. I found the English a wonderful agreeable, and intelligent people. Of all the nations I visited I believe that England would be the one we could count on first to help in case of emergency.

One of the highlights of the trip to England was a visit by two gentlemen from Eire. They were members of the American Legion, and when they heard we were in London they came across to say hello. They were our guests at our general meeting with the British veteran representatives.

Naturally when they found out that my mother and father were from the Auld Sod they were very pleased and we had a stimulating conversation.

[From the Bayonne (N. J.) Times of August 2, 1957]

VETERAN ABROAD, II—ISRAEL SETTLERS REMIND BURKE OF UNITED STATES PIONEERS

(This is the second of three articles written by Joseph F. Burke, national commander of the Disabled American Veterans, who has returned from a 2-week European and Middle Eastern tour. Yesterday Burke discussed his general impressions and England. The national commander stresses that he is no expert on European affairs, and that he merely is reporting his general ideas of the trip.)

(By Joseph F. Burke)

Israel was the country in which I noticed the most tension. The situation is taut. The Arabs feel that there is no Israel, and the Israelis are determined to keep their country.

I feel I am safe in saying that neither the Arabs nor the Israelis will advance until they decide to live in peace and harmony. Friendship must develop between the two peoples before the first steps of real progress can be taken.

TOURED GAZA STRIP

This tension of which I speak was one of the most important phase of the trip. I did not think things were so desperate as they are.

One of the things which stuck hard in my head was that you can leave an air-conditioned hotel in Tel Aviv, and within 10 minutes by car you can see Jews of 42 nationalities trying desperately to eke out a living.

We toured the Gaza strip where tension is alive. People work in the fields and live close by in places you might call bockhouses. They are constantly on guard, and always watching as they work.

Looking at these people in the fields makes you think of our own American pioneers who worked with their rifles always within reach.

I found the Israelis very pro-American. Perhaps this is because they realize how much they owe us. And the feeling of this debt perhaps overbalances any bitterness they might have about the Suez crisis.

The standing army in Israel is small but the country can be defended quickly with this blockhouse system. These people in the fields would be under the command of senior noncommissioned officers. They are ready to fight.

The Israeli army is small but as modern as any that can be put in the field today. That is, without atomic weapons which the Israelis do not have. This is no exaggeration. They proved that they can move fast.

Defensively, their army can be ready for complete action within a matter of hours. Offensively, they can be set to attack within a few days. They showed that this was possible in the Egyptian campaign.

Perhaps the only way for an American to understand Israel's position would be to visualize constant attacks from Canadians and Mexicans across our borders. Then we follow those raids with retaliatory raids of our own. And add to all this tension the fact that the country has 1,000 miles of borders to defend.

Of all the countries I saw, I believe that Israel left the most forceful impression with me. London, Paris and Rome looked like the cities we all have seen many times before—they are alike in many respects.

But this was the first time I had been in a little country which was struggling so desperately to keep its name and honor.

While we were being interviewed by newsmen in Tel Aviv, Herb Block of the Jewish

War Veterans was asked what he thought of Israel.

"I'm a prejudiced witness," said Herb, "and this is a bit unfair. Why not ask Joe here for his reactions?"

I turned to Herb and I said: "Herb, what makes you think you're the only prejudiced witness here? My Irish ancestors have been fighting for their independence much longer than Israel. That puts me in a prejudiced class, too."

We had conferences with Prime Minister Ben-Gurion and General Moshe Dayan, Israel's chief of staff. I found them both confident and very interesting. Besides Tel Aviv, we visited Jerusalem, Nazareth, and Haifa.

[From the Bayonne (N. J.) Times of August 3, 1957]

VETERAN ABROAD, III—EUROPEANS DISAPPROVE UNITED STATES POLICY, NOT NATION ITSELF, BURKE FINDS

(This is the third and concluding article by Joseph F. Burke, national commander of the Disabled American Veterans, about his recent trip to Europe and the Middle East in conjunction with President Eisenhower's People-to-People program. He made the trip with six other national commanders of veteran organizations.)

(By Joseph F. Burke)

A good way to sum up this trip would be to say that the people overseas are not anti-American, but they are anti-American policy.

The one country I would worry most about is France. I do not say they would go Communist in case of hostilities. But I do think that unless we get busy, and fast, they would be inclined to remain neutral. In other words, we might lose them—not to the enemy but from ourselves.

I noticed there was considerable difficulty in getting these people to understand how our democracy works. You had to sit down and explain it.

For instance, many people I spoke with in France were upset by the remarks of our Senator JOHN F. KENNEDY, of Massachusetts, about their Algerian problem.

KENNEDY, you remember, objected to France's handling of the situation, and said that the United Nations should step in and stop hostilities until the case had been reviewed.

I went into detail to explain that when individual, prominent Americans make statements they are not necessarily speaking for the entire United States. I told them that Senator KENNEDY had made the statements from his vast knowledge of foreign affairs and after a long study of the Algerian situation.

Americans realized, I said, that this opinion was his own, and we could either accept or reject it in our own minds. I repeated to them that this free speech was one of the cornerstones of our democracy.

A newspaperman asked me what were my impressions about being in France for the first time. I told him I was won by the country and the people. My feelings, honestly, were stirred. I felt wonderful about being on the soil of the country which had helped us win our war of independence. We must remember that without France none of us might have had the privilege of being born an American citizen.

I repeat that we must act soon to save France from adopting a neutral outlook on world affairs.

On the other hand we have Italy, which is very warmhearted toward Americans. Maybe this is because of the fact that they have been treated more generously by us than the other two Axis members, Japan and Germany. Remember, we took no reprisals against Italy, and our troops were completely out of there shortly after the war was over. All this despite the fact that she was our enemy in World War II.

I noticed that the Italians seemed to go out of their way to be nice to Americans.

I must tell you this. During the fighting in Italy, I lost my left arm. Lewis Gaugh, cochairman of our trip, was kidding around and said, "Joe lost his arm over here and came back to see if he could find it."

The Italian newsmen were not sure how to take the joke, so I said, "I am content to let my arm stay in Italy. I came to know and love this nation during this war. I know what the people went through."

And even though the remark had been indirectly the result of Gaugh's kidding, I meant every word of it. I can say that the Italian veteran leaders were very pleased with what I said, to put it mildly.

Getting away from veteran problems for a while, I would like to go on record as saying that the Italian girls are just as beautiful as we have been led to believe by the importation of Italian actresses to our country.

Of course, as one of our group suggested, we might have been looking at American tourists. That could be true, too, because Rome was flooded with tourists from the United States.

Although they are not so emotional as the French—who are the extreme—the Italians can be very gay and fun-loving.

And yet the mood changes as one approaches another section of Rome-Vatican City. Here one realizes the tremendous religious significance of this city-within-a-city. Many people don't know that the Holy Father appears at his study windows each noon and blesses the thousands who gather outside. He does this every day that his health permits.

The pilgrims who come here from all over the world know the contributions he has made towards peace. Just to see him makes a tremendous impression on all the people who visit Rome.

In conclusion, I believe that President Eisenhower's people-to-people program is a worthwhile project. I believe that it will expand until every representative organization in the United States has sent delegates to see, talk to, and get to know our friends overseas.

Plight of Farmers in North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Oscar Lykken, of Kindred, N. Dak., relating to farm conditions in North Dakota.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KINDRED, N. DAK., *August 2, 1957.*

Senator BILL LANGER,
Washington, D. C.

DEAR BILL: It seems that under Ike's rule, or the Government's I should say, are doing nothing to help the farmers from going broke.

Our Berkely Implement Co. here at Kindred is soon to be foreclosed on, as the farmers can't pay their bills.

Who is running this country anyway? Everything we buy is going up and our grain prices are going down. How can we balance our books with this going on. With that rat Benson in Washington we will all go broke. Ike must know that, or he does not care.

It's getting pretty rough.

Yours truly,

OSCAR LYKKEN.

Legislation To Protect Security of FBI Files Vitally Needed

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. MARTIN. Mr. Speaker, the Congress should pass without further delay the legislation which has been reported out of the Judiciary Committee to offset the disastrous effects of the Supreme Court decision in the Jencks case. We are failing the American people in our plain duty to the national welfare if we adjourn without passing this most essential measure. Every day of delay adversely affects the work of the FBI and the other investigatory agencies of the Government. This is clearly pointed out in the following letter which I have received from Director J. Edgar Hoover of the FBI, who stresses the urgency of the legislation:

Hon. JOSEPH W. MARTIN, Jr.,
House of Representatives,
Washington, D. C.

DEAR JOE: I have just had the opportunity of reading your statement in Saturday's New York Herald Tribune regarding the necessity of acting upon the legislation designed to clarify the situation brought on by the Jencks decision. It was heartening indeed to note the hope that the legislation would be acted upon before the adjournment of Congress.

The need for the legislation which the Attorney General has recommended and which has now been approved by the House Judiciary Committee becomes more real as additional cases come before the various Federal district courts. Its enactment is vital to the future ability of the Federal Bureau of Investigation to carry out its internal security and law enforcement responsibilities.

Already we have had the revolting experience of witnessing persons charged with violations of Federal law turned loose when the Government was faced with the dilemma of either disclosing the contents of its investigative reports or abandoning a prosecution. This situation could have been avoided had it been possible to present records and documents to the courts for an in camera inspection to safeguard the rights of the defendant as is provided for in the legislation presently before the Congress.

The FBI and other Federal investigative agencies are effective in direct ratio to their ability to secure information and evidence. The fact that prior to June 3, 1957, informed people knew that our files were inviolate has been a powerful factor in our ability to secure information. Since the Jencks decision, however, we have faced one obstacle after another. We have experienced instance after instance where sources of information have been closed to our agents because of the fear that the confidence we could once guarantee could no longer be assured. We have also experienced a reluctance on the

part of numerous citizens to cooperate as freely as they once did.

Thus, you can appreciate how encouraging it was to note your hope that Congress, before it adjourns, would take steps to clarify the situation with which every Federal investigative agency has been confronted since the Jencks decision. The need is urgent, I can assure you, to act upon the Attorney General's recommendations which have been approved by the House Judiciary Committee.

With best wishes and kind regards.

Sincerely,

EDGAR.

Overcrowded Schools in Alabama

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 14, 1957

Mr. SPARKMAN. Mr. President, recently Mr. Tom Henshaw, an Associated Press news-feature writer, wrote an article entitled "Alabama Schools Most Overcrowded in Nation," which was published in the Birmingham News of August 4, 1957.

I think the article presents a very good picture of the deplorable condition which exists in many of the public schools of our country and the need for some kind of school construction aid or other Federal aid for education.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIRTY-EIGHT PERCENT BEYOND NORMAL—ALABAMA SCHOOLS MOST OVERCROWDED IN NATION

(By Tom Henshaw)

"I hope the hard fight will increase the interest of the citizens in providing classroom facilities for the children of America."

Thus spoke Representative SAMUEL MCCONNELL, Republican, of Pennsylvania, sounding a hopeful note at the bier of a $1½ billion Federal aid to education bill, for which he was GOP floor leader.

School aid bills have been beaten in the House in each of the past two congressional sessions, despite the fact most people agree the Nation's public schools are badly overcrowded

Next month an estimated 33½ million youngsters will be trekking back to classrooms with facilities resigned to handle possibly little more than 30 billion.

The answer, of course, is more classrooms. But they would cost most States more than they care to tax. A large school of thought feels the Federal Government should provide the funds.

The accompanying maps and charts illustrate graphically the school problem facing the States: Rising enrollment plus lack of funds equals overcrowded classrooms.

How fast is enrollment rising?

In 1950, says the United States Office of Education, there were 25,241,000 pupils enrolled in public schools. By 1954, the last year in which complete figures are available, the number had risen to 28,995,000.

The Office of Education estimates more than 33½ million children will be in public schools this fall and, projecting ahead, it figures there will be nearly 38 million in 1962 and more than 40 million in 1965.

How badly overcrowded are the schools?

The Office of Education figures that the 31½ million pupils who attended public schools last year was about 2¼ million or more than 7 percent above the normal capacity of facilities.

Alabama was by far the most overcrowded with more than 38 percent of its pupil population in excess of normal capacity. Wisconsin is the least overcrowded, less than one-half of 1 percent.

Where does the school money come from?

The community and the State provide about 92 percent of funds used to build and operate schools, says the Office of Education. Almost all is raised by taxation and appropriations.

The Federal Government kicks in 4½ percent, mostly for the school-lunch programs; intermediate governments, like counties, account for 3 percent and the remaining one-half of 1 percent comes from special fees such as tuitions and transportation.

How much is spent per pupil on education?

The Office of education says $264.76 was spent annually on each pupil in average daily attendance at a public school in the United States during the academic year 1953–54, the last in which full figures are available.

By State, there were wide differences in amount, from the $361 spent by New York to the $122 provided in Mississippi.

Do the States spend money on schools in relation to their financial ability?

Generally, yes. New York, with the highest total personal incomes, spends the most on its schools, Mississippi, with the lowest total personal income, spends the least?

Is there a relationship between the amount of money spent on each pupil and the percentage of overcrowding?

Broadly speaking, yes. But there are exceptions.

Washington, for instance, where the population has been increasing rapidly, spends $305 on each pupil in average daily attendance, a figure topped by only eight other States. But Washington's overcrowding index is 15 percent, fifth on that list.

On the other hand, West Virginia, with a relatively static population, is 40th on the spending list with $186 but it's little more than 4 percent overcrowded.

Houses Are Too High

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of August 10, 1957:

HOUSES ARE TOO HIGH

The National Housing Conference says only about one-sixth of the families in the United States have a high enough income to justify the purchase of a new home, at today's prices.

This is both informative and discouraging. It would seem in the richest country in the world, more than 1 in each 6 families would be in a position to buy their own home. However, after a careful study of prices and the incomes of the average American family, that is the conclusion reached by the NHC.

The results of the survey show that the minimum price of a 1-family home ranges from about $8,500 in Philadelphia to about $14,000 in Milwaukee. The average is about $11,500, which is about the cost in Kansas City.

Further, it is estimated that a family should have an annual income of over $7,000 to meet the cost of an $11,500 house, the average. This finding is based on estimated monthly expenses of $119 for amortization, taxes, insurance, maintenance, utilities, and heat.

The NHC believes housing costs should not exceed one-fifth of a family's income, and we are inclined to agree, although the rule cannot apply generally to all families. Inflation, of course, has increased the price of a new home. So have higher and higher labor costs.

As a result, in our country, the richest in the world, only 1 in 6 families can afford to purchase a home of their own. While this is a high percentage, when compared with that prevailing in other countries, we think it should be higher. That the cost of homes should somehow be reduced, even if it is done by wider usage of, and better designed, prefabricated houses is evident.

Postal Pay Increase

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 14, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Charles Dunavant, legislative representative of branch 39 of the National Association of Postal Supervisors, together with the editorial he encloses from the Los Angeles Herald-Express of July 29, 1957.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

BRANCH 39, NATIONAL ASSOCIATION OF POSTAL SUPERVISORS,
Los Angeles, Calif., August 6, 1957.

Hon. WILLIAM LANGER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR LANGER: The enclosed editorial which appeared in the Los Angeles Herald-Express, traditionally a conservative newspaper strongly supporting economy in Government, clearly defines the urgent need of an immediate salary increase for Post Office employees. It reflects the universally held favorable public opinion toward adequate salaries for postal people.

The more than 400 members of the Los Angeles Branch 39, National Association of Postal Supervisors, urge you to support an immediate and adequate salary increase.

Very truly yours,

CHARLES DUNAVANT,
Legislative Representative.

[From the Los Angeles Herald-Express of July 29, 1957]

POSTAL PAY INCREASE

Although there seems to be a general opinion in some Washington quarters that the President will veto the postal pay increase measure which seems likely to have final congressional approval at this session, we sincerely hope that is not true.

The Herald-Express, along with the other Hearst newspapers, has been waging a determined campaign to reduce Governmental

expenditures and lower taxes, but we would like to see Government expenses cut in the right places.

Of all the workers in the United States, we feel that the downtrodden postal workers are among the most deserving for salary increases. They are the poorest paid of all Government workers, although all of us, in our homes or offices, know how essential their services are to us personally and how important they are to the business health of this Nation.

If you have a chance to talk to your postman, or to workers in Los Angeles postoffice stations, they will tell you that the pay is so poor it is almost impossible to obtain enough recruits for jobs or retain workers beyond the time when they can take better paying jobs.

The House of Representatives has approved an across-the-board increase of $546 a year for postal workers. This would raise the total Federal expenditures by less than a third of a billion dollars annually. A Senate committee has endorsed a somewhat smaller wage boost.

There is no doubt of the merit of the proposed wage increase. The only possible doubt is as to whether it is enough.

Our Colleague James E. Van Zandt, of the 20th District of Pennsylvania, Paid Unusual Tribute by the Department of Pennsylvania American Legion

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FENTON. Mr. Speaker, last week, in convention assembled at Harrisburg, Pa., the department of Pennsylvania American Legion approved a resolution commending Congressman JAMES E. VAN ZANDT for his work as a member of the Congressional Joint Committee on Atomic Energy and the House Committee on the Armed Services, together with his many years of service to the veterans of the Nation and their dependents.

The honor accorded Congressman VAN ZANDT was the subject of the following editorial which appeared in the August 13, 1957, issue of the Altoona (Pa.) Mirror:

PAID UNUSUAL TRIBUTE

Unprecedented as it may seem, Congressman JAMES E. VAN ZANDT of Altoona is a peacemaker and today he rates as perhaps the most outstanding individual among war veterans, all because of a recent honor bestowed upon him during the annual convention of the Pennsylvania department of the American Legion.

Congressman VAN ZANDT, during the Harrisburg convention session, was honored by the Legion delegates, a resolution being unanimously adopted commending him for his work as a member of the Joint Atomic Energy Committee and calling him an outstanding Member of Congress, as well as a distinguished and hard-working friend of all servicemen.

The commendation was unusual, but well merited, and the Legion committee called attention to the many achievements of the Altoonan, his war service, his activity in organized veteran affairs, and his excellent record in Congress.

The award is rated unprecedented for it is the first time in American Legion history that a rival, organizationwise, one with strong ties to the Veterans of Foreign Wars, has been so highly lauded.

The Congressman is affiliated with both veterans' groups and he twice served as department commander of the VFW in Pennsylvania and on three occasions headed the national VFW as commander. To be accorded the high honor by the Legion is a most appreciated tribute to Congressman VAN ZANDT'S ability, his services to all veteran organizations, and his extreme popularity and knowledge of national affairs.

The award came as a complete surprise to the Congressman, who was absent, however, from the meeting. During the reading of the award on the convention floor, Legionnaires loudly applauded the official action.

Congressman VAN ZANDT, an Altoona native, now 59 years old, served in World War I as a volunteer, rising to chief quartermaster at the end of the war. He has held a continued enlistment in the reserves since that time and has never missed an annual cruise. He was recalled for World War II service in the Pacific, ending almost 4 years' active duty with the rank of captain. He also served in the Korean area. His military and war records brought him numerous awards and decorations.

With Congress scheduled to adjourn this month, Mr. VAN ZANDT plans to attend the national encampment of the VFW at Miami Beach. He will tour later in September, flying to Vienna, Austria, for an atomic energy session, and he will visit in various foreign countries for a month.

The Congressman is closing out his 8th term, first from the 23d District in 1938 and now the 20th District, his service being interrupted by World War II. His Pennsylvania railroad service dates from 1916.

Wilkes-Barre's 109th Field Artillery Battalion Makes Excellent Showing

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of August 12, 1957, which comments on the performance of the 109th Field Artillery Battalion at the Governor's Day review held at Indiantown Gap, Pa., on Saturday, August 10, 1957:

ONE HUNDRED AND NINTH MEASURES UP

Its excellent showing at the annual Governor's Day Review at Indiantown Gap Military Reservation on Saturday is a credit to the officers and men of the 109th Field Artillery Battalion and a source of gratification to our community. The battalion was living up to its own best traditions and those of the long line of predecessor organizations with proud records in war and peace.

Saturday's creditable performance that drew applause and words of commendation was no accident. It was the product of careful planning, competent instruction, and faithful drilling. The public knows and sees little of these things but the members of the battalion are conscious of them. Lt. Col. Frank Townsend and those associated with him in the command of the battalion can justly take pride in the results achieved. The devoted spirit shown by this organization deserves appreciation.

Citizen Award to Walter H. Beam

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include a news article which appeared in a recent issue of the Indianola Tribune, Indianaola, Iowa, with reference to a citizen award which was presented to Walter H. Beam, of Martensdale, Iowa:

WALTER H. BEAM WINS FIRST MARTENSDALE CITIZEN AWARD

Walter H. Beam, an employee of the State of Iowa for 43 years and an original resident of Martensdale received Martensdale's first citizen of the year award Monday evening, February 25, 1957.

The award was given by the Martensdale Community Club at a pot luck dinner at the club building and was presented by Mrs. John Powers, master of ceremonies for the program.

President Dwight D. Eisenhower, four former Iowa governors and the widow of a fifth, the late William S. Beardsley of New Virginia, sent letters of greeting to Mr. Beam for the occasion. The ex-governors, all Republicans, were Dan Turner, Robert D. Blue, Leo A. Hoegh and Bourke B. Hickenlooper, now United States Senator from Iowa.

Greetings were also received from Judge Harold E. Davidson, of the 15th judicial district, a longtime friend; Glenn D. Sarsfield, State comptroller and Mr. Beam's former boss and William B. Sayre of Ackworth, Warren County Republican chairman and Emory English, editor of the Iowa Annals.

Mr. Beam was honored for six reasons, Mrs. Powers said. In her talk she listed Mr. Beam's qualities: president of the community club, his work for the Wick field picnic, his election work for the Republican Party, Martensdale pioneer, his work for schools and civic development and over 40 years of service to the State of Iowa.

Mr. Beam is best known as parliamentarian to the Iowa Senate, a post he filled with distinction while serving as secretary of the senate for seven sessions, 1925–31 and 1937–41. He also worked between sessions, on six issues of the Iowa Code as a proofreader.

Mr. Beam first went to work for the State in 1913 when he became senate file clerk. He then worked his way up the ladder, becoming a reading and engrossing clerk and then assistant senate secretary.

He left the senate in 1942, after 29 years' continuous service, when he became an auditor with the State tax commissioner. He then went back to the senate for 1 term in 1945 as assistant secretary before transferring to the comptroller's office, where he audited all State printing bills from 1945 until January of this year. He then left State employment when his job was transferred to the State printing board.

Mr. Beam has also worked for Martensdale since the town was founded in 1913. He

came July 27, 1913, to buy grain for a Des Moines firm and has lived there since.

He worked to get the first post office for the new community and he worked day and night for the Martensdale Consolidated School District, which operates the present Martensdale schools. He has also been active in the town's Community Church, and took an active part in building the present building, which was dedicated in 1945.

Mr. Beam has also been active in Warren County affairs. He taught country school 4 years when he first came to the county in 1896 from Warren County, Ill., where he was born and raised and attended school. He was born there September 4, 1875, and taught school before moving to a farm near where Martensdale was to be located later.

He also served 2 terms as county auditor from 1909 to 1912 and he was a member of the county board of education for 27 years, ending in 1942.

He also served 12 years on the county Republican central committee and he has been a lifelong, active Republican. The letters from President Eisenhower, the five governors, and Mr. Sayre all praised his faithful party service.

Mr. Beam married the former Katie Ruth Darling December 28, 1910, at her home in Bedford and the couple have lived in Martensdale ever since the town was formed. The couple have 4 sons, George and Charles, of Indianola; Burl, of Martensdale; and Max, of Hamilton, Mass.; and 6 grandchildren.

Others on the program honoring Mr. Beam were Mr. Frank Lickteig, Martensdale garageman, who talked on early businesses in town; Mrs. Carl Martens, who talked on early families and homes; and the Reverend Virgil Bunjer, pastor of the Martensdale Community Church, who gave the history of the church.

Mrs. Powers also asked club members to think about donating the use of their building for a youth center. "This would do no harm at all as we have the space and just have to utilize it," she concluded.

Farm Conditions in North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two GTA Daily Radio Roundups, prepared by the Public Relations Department, the first dated August 8, 1957, and the second dated August 12, 1957.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, AUGUST 8, 1957

The 1957 small-grain harvest is at its peak right now. It's a busy time for farmers in the GTA country—the two Dakotas, Montana, and Minnesota. Here is where the choicest grain in the Nation is grown. The harvest is a race against the weather to get the ripe grain off the fields, before it can be damaged by rain and weather. This year the harvest started about 2 weeks early, and the first truckloads of oats, barley, rye, and wheat came in over the scales late in July.

Some of the grain is running light in test weight, because of unfavorable weather during the growing season—too much heat, too little rain. That makes bad news for farmers who had hoped to hit top price brackets with high-quality grain. Most farmers are hauling right from field to elevator, and they ned cash to pay bills and living expenses, like the rest of it. That means they sell their grain outright, or put it under Government loan.

Only a generation ago, this great flood of grain to market would have spelled price disaster for farmers, particularly with some of the grain running light in test weight. The harvest comes only once a year, and it is telescoped into a few weeks. It used to be that prices nosedived, and after the grain was out of the farmers' hands and in the big elevators, prices worked back up to profitable levels. Prices still go down during harvest, but it is not the landslide it used to be. Back of this change for better marketing lies a vast cooperative grain marketing system, built by the farmers themselves, and, of course, the Government loan program, which cooperatives played such a big role in obtaining for farmers.

The farmers had two main objectives in mind when they set out, more than 50 years ago, to build their own marketing system. They wanted more services, and they wanted stable markets that would lead to better prices. They now have the services, and getting better each year. And, markets are far more stable than they used to be. A big reason for this is millions of bushels of storage space for grain, in the country and in the terminals, where the grain is held—still under farmer ownership—until the harvest tide is flushed out of the market.

In the big terminal markets, GTA now has storage space for 20 million bushels of grain. The country elevators that ship to GTA, and there are 650 of them, have space to store, roughly, another 60 million bushels. You can see how that takes the rush out of grain marketing, and smoothes it out into a more stable operation.

But, don't believe for a minute that the farmers are resting on their laurels, that they have quit building their marketing system. Steel bins and quonsets and warehouses and new "prairie skyscraper" elevators are pushing up all the time, working toward the day when market stability will be 100 percent accomplished.

GTA DAILY RADIO ROUNDUP, AUGUST 12, 1957

Back in the thirties, when farmers all over the Nation were in deep distress, farm groups all got together on ways to help. Out of this unity came price supports, the REA, farm-credit facilities, crop insurance, and many other legislated aids to agriculture. The question that now is in order is, Can our farm groups get back to working in harmony for the common good again?

Farm unity, as we knew it in the thirties, has well nigh disappeared. The so-called farm bloc has been shattered. Has it been part of the grand strategy of the present Secretary of Agriculture to destroy first the farm bloc, then the farm programs that have worked so well in the past? Some reporters of the Washington scene say it has, and we all are aware, of the constant campaign that has been waged by the Secretary against price supports and production controls.

Now there is underway a new effort to piece the farm bloc back together again and come up with some kind of a program that will satisfy the various segments of our agriculture. That effort was undertaken in Washington last week when spokesmen for some 37 commodity organizations met. The meeting has been condemned by the Farm Bureau. The farmers union had observers present, and hopes something good may come out of it. The Grange was even actively participating. Little was done at this meeting, other than to agree on 2 or 3 principles and to set another meeting for more detailed discussion in September.

The big-city newspapers, of course, have seized upon the meeting to condemn present farm programs and to predict dire consequences for the major farm organizations. But the newspapers in the big cities have so frequently lauded the Benson efforts to sabotage all farm programs that their prophetic accuracy can be discounted considerably. It is completely possible that the meeting in Washington of the commodity groups can make a good start toward repairing the damage that Benson has done to farmer-managed programs. It is almost certain, however, that the general farm organizations will, in the end, have the say in determining the final program. To think otherwise would be wishful thinking.

In the meantime, reliable sources in Congress tell us there is virtually no prospect for farm legislation at this session, and the session is expected to be concluded in the next couple of weeks. But these same sources feel there will be a big drive on when the new session opens next January, and that we will see some real farm legislation by its end. It all depends on the concerted action of farmers throughout the country. Congress must know what farmers want and how bad they want it.

The farm-legislation problem calls for the big job of cooperation on the part of farmers, their farm organizations, and their leaders. It's a job we ought to know how to do on these upper Midwest plains, where cooperation, through GTA, the co-op way, has become a byword.

Mr. Byrd of Virginia

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. GOLDWATER. Mr. President, recently Mr. James J. Kilpatrick, one of Virginia's outstanding journalists, wrote a very fine article about our colleague, the Senator from Virginia [Mr. BYRD]. This article appears in the August 10 issue of Human Events. So that more people in this country may have the opportunity to know this great statesman and great American, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MR. BYRD, OF VIRGINIA—AT 70, HE CONTINUES HIS GREAT CAREER

(By James J. Kilpatrick)

Every Friday evening, the debates of the United States Senate permitting, HARRY FLOOD BYRD drives the sixty-odd miles from Washington to his home at Berryville, Va. It is a pleasant drive at almost any season of the year, through the rolling hunt country of Fairfax and Loudoun Counties, across the Shenandoah River, finally up a winding drive to the white-columned mansion, Rosemont, where dinner is waiting for him. From his veranda he can rest his eyes on a countryside so perfect it might have been clipped from a British travel poster—chimneys and steeples, and tree-lined country roads, and far away the soft, slate shadows of the Blue Ridge Mountains.

Here the senior Senator from Virginia finds not only a few hours of rest and relaxation, but more deeply, a sort of spiritual purging and renewal. Here are his land, his well-

ordered orchards, his State. On Saturday mornings, when he goes to his office in the Winchester Star Building, he can study the neat, comprehensible figures of his farming operations. Saturday afternoons, in an old pair of pants and some worn hiking shoes, he can occupy himself with the realities of a farmer's world—scale on the Winesaps, the yield of Red Delicious. By Sunday night, when he drives back to the Shoreham and to the maelstrom of Washington, he is ready for another week of struggling against the forces of centralization he has resisted so long.

HARRY BYRD is 70 now. He has been in public life for 50 years, from the time he was elected—he was not quite 21—to the city council of Winchester. He was a State senator at 28, Governor of Virginia at 39; he has served as a Senator from Virginia since March of 1933. Today he is chairman of the Senate Finance Committee, third in seniority in the upper Chamber, by general agreement one of the most powerful men on the Hill.

There are paradoxes in the Senator's makeup, as there doubtless are in every man's. He was raised in a State that prides itself on tobacco and fine liquor, but the Senator neither smokes nor drinks. He is a lifelong Democrat, with one of the most remarkable Republican voting records in the Senate. His every political instinct is conservative, yet his 4-year term as Governor of Virginia was marked by the most radical innovations in the State's government in this century.

But the student who delights in the inconsistencies of man, and in documenting the expedient about-faces of the average political leader, can glean little from BYRD's career. Thirty-four years ago when he led a fight in Virginia to keep the State's highway system free of debt, HARRY BYRD was crying for economy, efficiency, and sound finance. He was fighting for States rights and quoting the 10th amendment when Harding was in the White House. He has never swerved, never shifted. In a woefully unstable time, when old institutions totter or take on new faces, the Senator goes steadfastly on his way. He is an aristocrat, in the oldest and deepest meaning of the Greek root word—in the same sense that Jefferson, who was also a good politician, was an aristocrat, too; which is to say that BYRD believes in government by the best men the State can provide, and by "best" he means not necessarily the most brilliant or the most cultured, but the most honest, most industrious, and most highminded men.

Does all this depict the gentleman from Virginia as some paragon of virtue, an iceberg of gentility in a sea of common politicians? If so, the words are ill chosen. BYRD is essentially a gregarious person, with a lusty laugh and a childlike love of a good story. He actively enjoys making a speech before Rotary or Kiwanis; his battered felt hat exudes a characteristic informality; he is one of the easiest men in Washington for a reporter to reach by telephone. BYRD could not live down his illustrious ancestry if he wanted to, and he doesn't want to; but he doesn't take himself too seriously either.

The Byrds of Virginia go back to William Byrd I (1652–1704), a wealthy gentleman who laid out the city of Richmond and still is known affectionately in the State capital as Father Byrd. His son was William Byrd II (1674–1744), builder of the fabulous plantation known as Westover, a power in colonial times. Unhappily, the next Byrd in line was William III, who gambled away the rich inheritance of his father and left the family with neither position nor special prominence during the turbulent days of the Revolution.

Next in line was Thomas Taylor Byrd (1752–1821), a farmer who established the clan in Clarke County. His son was the first Richard Evelyn Byrd, a lawyer in Winchester; his son, in turn, was a Col. William Byrd, who migrated to Texas, became adjutant general of the State, and in time commanded a Confederate cavalry unit. It was in Austin, Tex., that the Senator's father, Richard Evelyn Byrd, was born in 1860. Soon after the war, the family returned to Virginia, and in time Richard Evelyn embarked upon a political career that saw him become speaker of the Virginia House of Delegates.

HARRY FLOOD BYRD was born in Martinsburg, W. Va., June 10, 1887. He was named for his mother's only brother. When two more boys came along, the infants were christened, with a puckish fealty to family tradition, Tom and Dick. After a distinguished career in World War I, Tom settled down in Clarke County as a quiet farmer and apple grower; Dick, of course, became admiral of the polar seas; HARRY took to politics.

The boys were born into a family rich in history but short on cash. At 15, as the oldest son, HARRY dropped out of school to do what he could toward improving the family fortunes. He rented a part interest in a small apple orchard, and began his days at 4:30 a. m. with a hand sprayer. He worked most of the day for the local telephone company. He saw an opportunity in the bankrupt weekly Star. It was a Horatio Alger story. His earnings on one orchard provided an equity in another; by the time he was 21 he was running the telephone company; he managed to get the Star back on its feet by driving into West Virginia every Wednesday with enough cash to buy paper for the week's press run. Today the BYRD family's holdings in Virginia and West Virginia constitute the largest private apple orchards in the world, and the Star, edited by State Senator Harry F. Byrd, Jr., is a thriving daily.

It was inevitable that the Senator should have gone early into politics. By the time his father won election to the Virginia House of Delegates in 1906, the 19-year-old son was saturated with politics. His mother's father and grandfather had served in the Virginia assembly; another of her grandfathers had served as Ambassador to France under Buchanan; her uncle was a United States Senator from West Virginia; her brother, "Uncle Hal" Flood, was for years a Member of the House of Representatives. Household conversation revolved constantly about the tribulations of the Democratic Party. In 1915 young Mr. BYRD became State Senator BYRD, and his career was on the way.

Political affairs in Virginia at this time were pretty much dominated by United States Senator Thomas S. Martin, a colorless figure who held a loose alliance with the powerful Methodist minister, James Cannon, Jr. Then, in a relatively short span of time, several events came together: Martin died, Cannon was raised to the bishopric and assigned temporarily away from Virginia, and there arose the road bond fight of 1923. HARRY BYRD, hating public debt, swiftly found himself leading opposition to the bond issue. He adopted John Randolph's magic slogan, "Pay as we go" and swept the State with passionate arguments against indebtedness. When the votes were counted, the bond issue was defeated by nearly 50,000 votes ("we would have turned out another 50,000 to vote against it," BYRD once recalled, "if the farmers could have driven through the mud to get to the polls"). And with the results of the referendum, BYRD was pushed into the vacuum of political leadership created by Martin's death.

At that, he might have remained in the State senate and tended his orchards if a chance remark at New York had not raised his temper. Attending the Democratic National Convention of 1924, BYRD found himself in a taxi with Bishop Cannon. The bishop, who still regarded Virginia as his political see, coldly advised BYRD not even to think of running for governor. "We," said the bishop, "have decided to elect Walter Mapp." Four months later, BYRD announced his own candidacy, and in the Democratic primary of 1925 he had the pleasure of defeating Cannon's nominee by an overwhelming margin.

BYRD's term as Governor of Virginia, from 1926 to 1930, is vividly remembered in the State to this day. There had been nothing like it before; there has been nothing like it since. He undertook a wholesale reorganization of the topheavy State bureaucracy and, amazingly, won easy legislative approval of reforms that most observers had thought impossible. Ninety-five State agencies were regrouped under 12 departments (40 agencies were abolished altogether). There had been 48 separate agencies collecting or disbursing State funds; these were boiled into 1 office of a State treasurer. BYRD instituted an 8-hour day for State employees who had been working 7 hours. More significantly, BYRD threw his whole support behind a movement to revise the Virginia constitution of 1902. A constitutional convention would have cost at least $500,000, and would have proclaimed amendments without direct approval of the people. Governor BYRD, as an alternative, named a small commission of outstanding attorneys (the commission spent a frugal $5,000 only), which recommended 47 material amendments to the constitution.

These changes were approved by the general assembly, and in June 1928, were approved by the people. Interestingly, 1 change increased the State supreme court from 5 to 7 members. BYRD declined to name the new justices, and forthrightly explained why: "I assured the public in my speeches advocating the proposed amendments that their adoption would give me no new appointments during my term. I believed that statement when I made it, and I expected the people to believe it when they heard it."

By the time BYRD went out of office in January of 1930, State taxes had been reduced; the State debt had been lowered by $4 million; a strong antilynching bill had been written into law (Virginia has not had a lynching since then), and mileage in the State highway system had increased by 45 percent. BYRD's Program of Progress, as he proudly called it, was an astonishing achievement in a State accustomed to moving, if at all, with painful slowness. The record caused BYRD to be nominated as Virginia's favorite son during the Democratic convention of 1932; and the following year, when Claude Swanson resigned his seat in the United States Senate to become Secretary of the Navy, no other appointment could have been made but that of HARRY BYRD. He took his seat March 4, 1933, and has held it against all challengers from that day to this.

The Democratic platform of 1932, he has often asserted, was an admirable platform. "I am still standing on it." The platform called for a reduction in Federal spending, for a renewed dedication to States rights, for economy in government. The first bill that BYRD voted on was a bill to "preserve the credit of the United States Government."

Before many months had passed, to be sure, the platform that was to have been so faithfully kept, had been summarily discarded. Senator BYRD, surprised and resentful, began building up the record of fierce party independence that he continues to compile today. He voted against the NIRA, the Guffey Coal Act, the AAA, the Wagner Act. He sought a program of Federal reorganization, only to have his efforts frustrated by President Roosevelt's ambitious plans. To BYRD's absolute horror, the Federal budget began going ever deeper in the red. Speaking to the Academy of Political Science in New York in 1937, the Senator observed in awe that "the Federal Government has spent in 7 years the in-

credible sum of $47 billion." It is inevitable, he asserted, "that the national credit will be impaired unless we retrench."

BYRD's repeated demands for a balanced budget led to a memorable exchange late in 1938 with Marriner S. Eccles, then chairman of the Federal Reserve Board. In a public letter on December 26, Eccles ridiculed BYRD's adherence to "those old-fashioned virtues of thrift, frugality, self-reliance, and industry." BYRD waited until January 16, and then fired a devastating reply. The Senator has a gift for pungent political attack; he took Mr. Eccles' hide clean off. His statement was widely commented upon then; it is excellent reading today.

Yet it is notable that in succeeding months, BYRD the economizer became BYRD the advocate of greater spending—greater spending on defense. In one speech after another, he needled the White House for what seemed to him inadequate outlays for the armed services. At one point, the President devoted a fire side chat to assuring the public that things were not so bad as the gentleman from Virginia believed. Roosevelt, though often sorely irriated by Senator BYRD, remained on good terms with him to the end. He loved to poke fun at the Virginian's incessant cries for economy, and made the mistake, just prior to his fourth inaugural, of remarking publicly that he would show BYRD and his fellow economizers a few things: he wouldn't spend a cent on his inauguration. Senator BYRD, who by accident of his chairmanship of the Rules Committee was chairman of the inaugural committee, took him at his word. At BYRD's request an appropriation for the ceremony was held to $25,000, half the usual cost. Out of this BYRD agreed to pay $700 in printing costs only, and while FDR fumed the Senator blandly turned back $24,300.

BYRD had played a significant role in the first nomination of Roosevelt in 1932; he also had given a boost to Truman's bid for the Vice Presidency at the convention of 1944, though not for any special love for Harry Truman (BYRD's only interest was in blocking Henry Wallace). As events worked out, the Virginian was even cooler to the Fair Deal than he had been to the Rooseveltian New Deal. The week after World War II ended, BYRD called publicly for a cutback in the Federal payroll to the prewar level of 1 million employees. Badgerlike, he went after Mr. Truman's budgets with unrelenting zeal. Every January, with the assistance of his crack staffman, Heywood Bell, Jr., the Senator worked up a "Byrd budget," to show that appropriations really could be cut by specific amounts. It was this monumental labor on BYRD's part that provoked and infuriated Truman into the historic declaration that there were "too many BYRDS in Congress." The Senator's expression, when he first heard of the remarks, was one of absolute glee.

BYRD's repeated conflicts with the White House during the Truman administration not unnaturally offended disciples of "party loyalty." He was often accused of "voting with the Republicans." For a time, BYRD passed off the charge with a good-humored comment that "my name begins with a 'B,' so I vote first and the Republicans vote with me." But at one point, the Senator delivered a tart reply to an insistent questioner who kept wanting to know, "What kind of Democrat are you?" BYRD's response was quoted by the Washington Post in 1951:

"I want to tell you what kind of a Democrat I am. I am not a Republican, I will tell you that. I vote with them when they are right, and against them when they are wrong, but I am not a Republican. The kind of Democrat that I try earnestly to be is that kind of Democrat that two of the greatest presidents of these United States were, both from Virginia, Thomas Jefferson and Woodrow Wilson. The kind of Democrat I try to be is the kind that Andrew Jackson was, who boasted that the proudest achievement of his administration was to pay off in toto the public debt. That is an opportunity that no one will ever have again. I am the kind of a Democrat that Grover Cleveland was, who said it was the duty of the people to support the Government, and not the Government, the people. The test of my vote in the Senate and my actions elsewhere, now, as they have been in the past, and as they will be in the future, is determined by what I believe to be best for my country."

That may seem a hackneyed peroration. BYRD means it. Time after time he has offended powerful interests in Virginia by his uncompromising independence of spirit. He has refused to support merely desirable, but nonessential, public improvements in his own Virginia. Late in 1951, less than a year before his most bitter fight for reelection, he rejected a plea from Virginia veterans that a VA district office in Richmond be maintained. "I do not feel that I can sincerely talk economy in Washington and oppose economy in Federal operations in Virginia," said BYRD. And that was that.

But statesman that he is, the senior Senator from Virginia is a thorough politician also. Now and then it appears that his hold on the Byrd organization (known to his foes as the Byrd machine) may be slipping. But every time the organization has been written off as an aggregation of old mossbacks, it bounces back to life more vigorous than before. Like the imperturbable oyster, the organization has a way of sucking in irritants and turning them into pearls. Through a process of genteel persuasion, so quiet as to be barely audible, unseemly controversies generally are avoided. When the organization is pushed into a fight, as it was in the Virginia gubernatorial race of 1949 and again in the Senator's own campaign of 1952, the organization fights like a catamount. BYRD has a hot temper; he sometimes has difficulty keeping it under control.

Most of the time, however, he is as cool as the white suits he wears throughout the summer months. In the Senate, he is a behind-the-scenes man. He seldom speaks on the floor, perhaps because he is not an exceptional orator. His voice is rather high pitched; he has little sense of timing. Yet he is a superlative organizer and skilled parliamentarian. Presiding over the Finance Committee, he is often fretful with bores on the witness stand, and ignorance of easily ascertainable figures causes him acute anguish. He has been working on the Federal budget so long that his mind is a storehouse of itemized facts on spending. If there is one criticism to be made of his public statements, it is the unusual complaint that they have too many facts—too many detailed figures that are clear to Senator BYRD but often obscure to others.

What is ahead for BYRD? The presumption in Virginia is that he will, of course, run for another term next year. He has offended many party-line Democrats by his unwillingness to support Adlai Stevenson in 1952 and 1956; he is a continuing irritation to the State's liberals and globalists; his uncompromising advocacy of massive resistance to race mixing in the public schools would aline the growing Negro vote against him. Yet the same factors have served to enhance the affection in which BYRD is held by conservative Virginians who are appalled by the course of the national Democratic Party; his stand on the school-segregation issue unquestionably is admired by the bulk of the people. At this writing, there is no Democrat, and certainly no Republican, who could give him much of a contest.

Thus the prospect is that BYRD will be around for a long time to come. Virginians hope so, for they are intensely proud of him. If his voice often seems to be the voice of one crying in the wilderness, they are confident that he, at least, sees the straight way.

The Agricultural Conservation Program

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. LAIRD. Mr. Speaker, the agricultural conservation program shares with farmers and ranchers the costs of practices needed for conserving cropland, range and pasture, orchard land, farm woodlots, and agricultural water. An average of over 2 million farmers a year have participated voluntarily in the ACP during the past 10 years.

As a farmer-Government partnership, ACP cost-sharing supplies about half the cost of approved practices. The program is open to all farmers to help them carry out their conservation plans, get their most urgently needed work done, and to get more needed conservation done than they would, or could, working entirely on their own resources.

Farmers have made tremendous strides in protecting and improving the productive capacity of their land since the Congress started the ACP in 1936. Among such accomplishments made with ACP cost-sharing during the past 10 years, are:

Four million acres of permanent-type conservation cover.

One hundred and forty-eight million acres of green manure and cover crops.

Two hundred and fourteen acres limed to permit conservation cover to grow.

Six hundred and eighty-seven thousand dams to store water for erosion control, water conservation, and better distribution of grazing.

Eleven million seven hundred thousand acres terraced.

Forty-seven million acres of contour farming and stripcropping.

One million acres planted to trees.

The national ACP is adjusted each year on the basis of local farmer recommendations, congressional suggestions, and departmental knowledge of conservation needs and conditions. As a result of such constructive efforts, farmers find the ACP a flexible program easy to adapt by local farmer committees to help solve the many and varied local farm conservation problems.

More emphasis is given to practices with long-lasting benefits, but assistance is not limited to such practices. Special attention is given to urgently needed water conservation measures. The program is often used to establish conservation practices on farmland that contribute to flood control and watershed conservation.

In many counties, farmers have made good use of the ACP to pool their efforts to get at community problems which they could not solve working individually. Almost 10,000 such pooling efforts,

of about 12 farmers each, have been completed.

The program utilizes where needed, the local technical services of the Soil Conservation Service and Forest Service. Seeding, fertilizing, and other such information from land-grant colleges is used. Farmer committees are assisted in planning and developing their local program by these local technicians and representatives of other local agricultural groups.

The agricultural conservation program helps to assure our rapidly growing population that its future requirements for a generous supply of food, clothing, shelter, and many other raw materials will be met. The ACP shares with farmers and ranchers the costs of needed conservation practices the producers would not or could not do without assistance.

The future security of all the people depends on protecting the Nation's soil and water resources. These croplands, grazing lands, and woodlands furnish 70 percent of all raw products used by industry today.

During the past 10 years, the general public has benefited from the conservation work done under ACP by an average of over 2 million farmers a year.

Examples of the tremendous strides made in protecting and improving productive capacity to meet the future needs of the country during the past 10 years under ACP:

One hundred and seventy-four million acres of conservation cover.

Six hundred and eighty-seven thousand dams to control erosion, save water, improve grazing land.

One million acres planted to trees.

Eleven million seven thousand acres of sloping land terraced.

In carrying out its part of the farmer-Government partnership, ACP cost-sharing supplies only about half the cost of approved practices. Farmers supply the rest of the cost. The program is open to all producers on privately owned land to carry out their conservation plans, get the most urgently needed work done, and emphasizes practices with permanent and semipermanent benefits.

The program is so flexible that it is easily adapted to meeting special, local, and emergency problems such as drought, flood damage, and severe erosion. Special attention is given to urgently needed water-conservation measures. The program is often used to establish conservation practices on farmland that help control floods and wind erosion.

The ACP has helped solve some 10,000 special community conservation problems in the last 10 years which producers could not have solved working individually.

The ACP utilities technical services and research information as well as local farmer experience, in developing and carrying out local programs.

The ACP utilizes technical services the conservation aspects of the soil bank. Instead, the two programs supplement each other in getting conservation farming systems started and in getting conservation speeded up on farms and ranches in the public interest.

Trips on Colorful Utah's Highways

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. WATKINS. Mr. President, Mrs. Joyce Rockwood Muench, a member of one of America's best-known husband-wife, writer-photographer teams, has written a series of articles in Arizona Highways on the Nation's outstanding scenic-vacation land, the colorful standing rocks country of southeastern Utah.

Mrs. Muench describes this country as the "grandest, most challenging country I can think of, the fabulous and little known 'Land of the Sleeping Rainbow'."

These articles and the superlative Muench color photos of this area are helping tell the world about an area that until very recently was known only to local cowboys, prospectors, and Indians and a few venturesome tourists brave enough to get off the paved highway.

We in Utah who know and love this dramatically colorful desert-mountain country are gratified at this publicity given to our State by the distinguished monthly publication of the Arizona Highways Department. And because of the national interest in travel and in wilderness lands, I hereby request unanimous consent to reproduce in the Appendix of the RECORD the Muench article from the June issue of Arizona Highways.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRIPS ON COLORFUL UTAH'S HIGHWAYS

(By Joyce Rockwood Muench)

Under the guise of work, my husband and I have spent the last two decades scouting out and photographing beautiful places. You might say that we make a business of other people's vacations.

We've been asked so often that we have the answer ready before the sentence is finished: "What area do you like best?"

"The most wonderful area is where we've just been."

So right now, although we're back home, reliving our adventures and enjoying our pictures, the grandest, most challenging country I can think of is in southeastern Utah, the fabulous and little known "Land of the Sleeping Rainbow."

You never heard the name? It's what the Navaho Indians call a most dramatic portion of the Colorado Plateau.

It's where you'll find such enticing labels as the Circle Cliffs, Cathedrals in Stone, Capitol Reef, Valley of the Goblins, the majestic Henry Mountains (that are still growing).

Within its borders are the Aquarius Plateau, with the highest forest in the world beginning at most peak's timberline and rising another thousand feet; the Hondoo on the Muddy, in the San Rafael Swell; Utah's Grand Canyon, and weird Upheaval Dome.

Yes, those and more than you could see in a dozen vacations all rolled into one.

Rainbows, I realize, are traditionally to be seen in the sky, with a pot of gold at their foot—if you can reach it. Today, the style even in rainbows has changed. Uranium hunters look for treasure where the many-colored bands of the Chinle shales spread over the ground, and every other formation has its brilliant tints.

Whether he found pay dirt or not, the modern prospector has left a trail through some of the most gaily painted, fantastically shaped and eroded scenery on the globe. We can follow him into yesterday's remote and inaccessible corners to see amazing examples of Nature's handiwork.

Along the approaching highways, fine little towns with modern motels and restaurants seem completely unaware of the exciting places you are heading for, but are glad to serve you. Within the magic circle itself are Torrey, Fruita, Hanksville, Boulder, Escalante and Moab to cater to your needs.

You may spend your days in some of the most rugged scenery on earth and, if you so desire, be back to a white tablecloth at supper time.

Next to "what area is best," people most persistently want to know "when is the best time to go?" That's easy to answer—"Whenever you can go, from early spring to the very end of autumn."

There's so much climate in the Land of the Sleeping Rainbow, that any month in nine will be ideal for some part of it. Since you can't possibly see it all at once, perhaps next year you may come in another season.

Elevations vary from 3,480 feet above sea level at Hite on the Colorado to 12,500 feet on the Aquarius Plateau, making for many climates to choose from.

In spring and early summer there will be flowers up high, and the lowest desert stretches will be pleasantly cool. July and August bring heat to low-lying areas, but the finest kind of weather to great portions of the plateau lands. They also bring great thunderclouds, which photographers dote upon, and flashfloods in some of the canyons.

Fall is crisp, with clear air, lovely color on the aspens in the heights and later on cottonwoods and tamarisk in the canyons. November may close high roads with the first snow and then warm up to glorious weeks of a belated Indian summer. Then it is that mountains 70 miles away seem about to fall in your lap, and the nippy nights put you right to sleep after a long day among the rainbows. After that—before you know it—it's spring again.

Perhaps you've already noticed very few roads on the map inside the 100-mile-wide area between Federal highways. Utah State 24 crosses from 89 to 6–50 and State 95 leaves it at Hanskville to meander southward. State 54 from Bryce Canyon serves Escalante and Boulder, merging into 117 over shoulders of the Aquarius Plateau to Torrey.

The rest of the roads aren't on the map yet, because you can bulldoze a road faster than you can print it on a map. Don't blame local information for failing to include a route that wasn't there a month ago, or where only cattlemen or prospectors travel. But believe me, there are some wonderful roads in that country. Some are almost as spectacular as the scenery and for those you will definitely need a four-wheel drive and a guide.

On our adventures, we went in Marilda, a four-wheel drive station wagon of acrobatic-contortionist abilities and personality-plus. She was put through her paces by Lurt Knee, only licensed guide in the area. We made his Pleasant Creek Ranch in Capitol Reef National Monument our headquarters.

Cradled among great walls of the Reef and perched on juniper-studded "Hogan Hill," Sleeping Rainbow Lodge has magnificent views and as yet, limited accommodations. The Henry Mountains on the east watch it through the rift of Pleasant Creek Canyon and from a side window the Aquarius Plateau with its lofty forest can be glimpsed up a cut in Miners Mountain.

Deer, porcupine and desert fox investigate the premises at night and no summer day is without its cooling breeze.

When Lurt first took us into the Circle Cliffs, years ago, we were probably the first party to penetrate the great Wingate sandstone escarpment and drop into the rounded dome of Burr Flat, just for the fun of it. There were "ways" to get in but no roads and once inside, the car knew as much about where to go as we did. Now, with a bow to uranium-searchers, there are two entrances by road and one exit (only) by canyon.

What might be considered the front door to the exclusive Circle is the Burr Trail, breaching the eastern rim. It climbs over the Waterpocket Fold from a well traveled road that joins Notom, on State 24, a few miles east of Capitol Reef National Monument.

The Burr Trail was only that, a few years ago, a difficult horse path switchbacking up a rocky canyon wall. When uranium men decided on making a road of it, oldtimers shook their heads and said it couldn't be done. Now it's a thrilling sight as it mounts at an angle, turns and goes back—climbing every inch of the way. A wonderful view looking east to the Henry Mountains is achieved with new perspective on each rising level.

If the irregular cliffs, cut into shapes beyond all cataloguing, were not enough for the visitor, the Black Forests would draw people as bees to honey to this rockhound's paradise. For a characteristic of the Chinle and Shinarump formations is the presence of petrified trees which grew in swampy lowlands.

They lie on slopes, in gullies and rolling down the hillsides. Some were giants of a primeval forest, 150 feet in height (or so the petrified remnants measure) and 1 standing stump, 12 feet tall at 1 side and 10 feet through at the base. Other, only slightly less magnificent specimens lie athwart each other, as in a driedup millpond. Segments from thimblesize to immovable sections, are just emerging from their clay blankets.

The exit to the Circle Cliffs leaves Burr Flat by a channel through which a goodly share of a mountain (once standing above the flat) was carried away. It's not really a road but one of the most spectacular canyon trips which the Colorado Plateau offers. Fall is particularly lovely through Silver Falls Canyon.

Our tiny car worked its way down rock corridors with cliffs above sweeping in overhangs, curving back in undercuts where sun never penetrates dark seeps, fringed by ferns. From a shadowed room we rolled into great golden amphitheaters. Immense old cottonwoods drape their irregular, dark-ridged trunks and heavy branches with golden leaves through which the afternoon sun filtered.

Reflected light from the cliffs filled the spacious chambers and we watched reflections of high domes and marveled at the weathering—painted on cross-bedded Navaho sandstone.

Silver Falls finally comes into the canyon of the Escalante River and a little downstream from the ford, Harris Canyon enters, providing a convenient continuation of the route. Inclining gently, the gorge is quite as dramatic and overwhelming as the earlier miles. A small perennial stream must be crossed and recrossed through vast rooms and past deep caves, where prehistoric Indians built small houses.

The town of Escalante lies a few miles beyond the canyon head. Once there, the pavement of State Route 54, the modern motels, and a good dinner at a cafe make the day's experiences in the Circle Cliffs seem completely unreal.

An extra day's trip leads south from Escalante to Kodachrome Flat and the graceful Grosvenor Arch. Both of interest and unique in their way, they are always in demand for the camera fan.

The return can be made through the town of Boulder, which, until 1935, was a packhorse town without road access, into the Circle Cliffs via wonderful views from Long Canyon Point on the western rim, and out over the Burr Trail. This is always open as a through route if a summer storm should make the canyon exit temporarily inadvisable or fall snow shut the high road over 117.

But for an illuminating overview of the circle, you will want to climb the flanks of Boulder Mountain on the way to Torrey.

This is a reviewing stand for the march of events which cover more of geologic time than the spectator can easily grasp. The Aquarius Plateau, on which we are (Boulder Mountain is the local name for this portion of the plateau), is one of the region's great headlands, visible for miles in every direction.

The 49 miles on top is the remnant of a vast surface that once stood much higher and reached south and east of the present Green and Colorado Rivers. Since landscapes are never the static affairs we take them to be, profound changes have come with the centuries, as erosion has torn at the highlands.

We look down into the ruins of a mountain, once mounded up to 11,300 feet, a vanished neighbor of the Aquarius, the existence of which was first surmised by the geologist. Its volcanic cap was split open and its own streams devoured the rocks, chewing them up and spitting them into a maze of desert canyons. The Escalante River is still concerned with carrying off debris, delivering it to the Colorado River to be scattered clear to the Gulf of California.

All that is left here is a great ellipse of cliffs, standing like the edges of a broken and empty eggshell. You can see across the domed basin they guard to the white cones of the Henry Mountains beyond.

At the foot of the cliffs sweep the Sleeping Rainbow—one of the largest and finest displays of the Chinle formation in the whole region. There are purples and yellows, lavenders and pinks, lilacs, ash gray, red, blue, and brown.

The great geologist, Herbert Gregory, says of the colored bands:

"Their wide expanse, their brilliant coloring and fantastic weathering makes them an outstanding scenic feature, even in a region where most rocks are highly colored and eroded into picturesque forms."

Learning the Hard Way

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster (S. C.) News of August 8, 1957:

LEARNING THE HARD WAY

"We have had amply demonstrated to us that medicine and politics do not mix." That quote is from a magazine which can speak with authority, the British Medical Journal, Britain has had socialized medicine for many years, and her National Health Service employs something like 99 percent of all British doctors.

The service's current troubles have been much in the news lately. The most publicized issue has been doctors' pay, by any reasonable standard, it is low and the Government so far has refused to make adequate adjustments. But there is more to the matter than this economic factor. As the British Medical Journal puts it, "The employees have lost all trust and confidence in their monopoly employer." As evidence, it cites the fact that in recent months there has been a striking increase in the number of doctors investigating the possibility of leaving England for one of the Dominions.

What are the troubles, other than the salary problem, that socialized medicine has brought to Britain's doctors? The Journal has this to say: "The pettifogging arguments about whether a food is a drug, the formfilling, the regulations, earnest discussions on whether a week's leave not taken one year can be carried on to the next, the ever-increasing intrusion of the administrator, both centrally and locally, all this and much more is turning medicine into an administrator's maze."

Then the Journal makes the most ominous statement of all, "The unfortunate doctor soon loses his sense of direction and will end up by losing his sense of profession."

Measures are periodically proposed in this country which would give the Government sweeping and varied controls over the doctors and medical practice, and thus set the stage for ultimate socialized medicine. We can profit by Britain's costly example, and avoid such schemes like the plague.

Comments on Recent Supreme Court Rulings

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. GOLDWATER. Mr. President, the Arizona Republic of Saturday, August 10, carried a very interesting comment on recent Supreme Court rulings, written by one of Arizona's outstanding lawyers, Mr. Terrence A. Carson. Mr. Carson has had long experience in the law, having practiced in Arizona since 1923. He is recognized as one of the great constitutional lawyers of the West, having had more cases involving the Constitution than any other lawyer in the State during the time he has practiced. Mr. Carson understands his subject, he expresses himself well on it, and I ask unanimous consent that this article be printed in the Appendix of the RECORD for the perusal of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUSTICES HIT OWN COURT'S RULING

(By Terrence A. Carson)

There has been a storm of protest against the United States Supreme Court decisions dealing with communism and other local issues of the States. For the first time in history, the Court's decisions have been protested by the American Bar Association, judges of the State supreme courts, State attorneys general, Members of Congress, governors, law enforcement agencies, and even by Judges of the Supreme Court itself.

Justice Douglas bitterly criticized the Court in the Chessman case, where Chessman had been convicted of 17 felonies in California, including murder and rape. He pointed out the case had been before the Supreme Court seven times and, he stated

the abuse of appellate power would lead to the curtailment or the abolishment of the jurisdiction of the Court in some respects.

Justices Harlan and Clark criticized the Court in the Konigsberg case where Konigsberg refused to answer certain questions regarding communism in his application for admission to the bar. Konigsberg also stated that the Communist Party in the United States did not believe in the overthrow of our Government by force, which is contrary to everything that the Communists have taught in their long history. Judge Clark, who had been United States Attorney General and who had battled the Communists, bitterly dissented in the Watkins case and in other cases dealing with the power to curb communism.

The Supreme Court for the first time overruled the actions of States regarding applications for admission to the bar after the applications had been rejected by reason of Communist membership or affiliation. The Court held, in spite of the showing of communistic affiliation or connections, that evidence of good character overcame this fact. It will be remembered that Alger Hiss produced evidence of good character from the White House down.

The Supreme Court has dealt serious blows to Congress in dealing with their investigative powers. Had it not been for these powers, the treason of Alger Hiss would have never been discovered. The facts of the Teapot Dome scandal would not have been brought to light, and the uncovering of recent labor racketeering would never have taken place.

The Court has curtailed the powers of the FBI and of Congress to run down traitors, criminals, and labor racketeers. It has given unnecessary aid and comfort to murderers, rapists, and acid-throwing labor thugs such as blinded Victor Riesel. Certainly the court should protect the rights of individuals but, it is not its duty to open the flood gates. The Court also has by its decisions crippled the power of the Secretary of State to deny passports to Communists or subversives to travel in foreign countries. In one case, the State Department was forced to grant passports to arch traitors now in France who, as American citizens, had carried on treason against the United States with their Communist connections.

We wonder why the Supreme Court, under the leadership of Chief Justice Warren, has been so solicitous of the rights of Communists and traitors. The Court must know that if the power of the United States was destroyed, the Communists would take over the leadership of the world. America, like the rest of the Communist countries, would become a slave camp. The Court must know that since World War II, we have spent over $300 billion for national defense and, $50 billion for foreign aid and, we are now spending $36 billion a year for national defense. This back-breaking burden is borne mostly by the taxpayers of America, and at the present time there is no relief in sight.

The Court must know that if we are forced to draft young men and send them to the four corners of the earth to guard against communism, then our beloved country should have the right to protect itself agatinst subversives at home. We hope that the Court has not forgotten the countless millions who have been butchered, tortured, and murdered along with the other millions who have been sent to the Siberian slave camps and who have died of torture.

We hope that the court has not forgotten the millions of hapless Chinese peasants who have been butchered in Communist China. If this does not convince the court, then it can think of the millions in the satellite countries in chains, some of whom fought tanks with their bare hands to gain their freedom.

If this is not enough to convince the court of the dangers of communism, let the court read the report of the special U. N. committee that investigated the butchery and the sending off to the slave camps of Siberia, the freedom fighters of the Hungarian revolution. If this still is not enough, then the court might remember the countless thousands who died in the frozen wastes of Korea due, in a large part, to the treason of homegrown Communists.

With the cry of countless millions of people held in bondage by the Communists with their murder, butchery, and rape of innocent victims, and the motortal cries of the Hungarian freedom fighters whose bodies were ground up like cattle and dumped into the waters of the Danube, I am reminded of the answer Ross gave to Macduff in the immortal lines of Shakespeare's Macbeth:

"Stands Scotland where it did? Alas poor country
Almost afraid to know itself! It cannot
Be call'd our mother, but our grave: where nothing,
But who knows nothing, is once seen to smile;
Where sighs and groans and shrieks that rend the air,
Are made, not mark'd; where violent sorrow seems
A modern ecstasy; the dead man's knell
Is there scarce ask'd for who; and good men's lives
Expire before the flowers in their caps,
Dying or ere they sicken."

The Special School Milk Program

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. LAIRD. Mr. Speaker, the special school milk program which was inaugurated by the 83d Congress has been a tremendous success. As one Member of Congress who was most active in establishing this program and in cosponsoring the extension of it for an additional 2 years, I desire today to give a progress report on the program.

The special milk program operated by the Department of Agriculture is designed to increase the consumption of fluid milk by children. It is a relatively new program; it was inaugurated only 3 years ago by the Republican 83d Congress. In that time, however, it has developed into a remarkably successful program—benefiting both our children and our dairy farmers.

This program was authorized as a part of the revised dairy price support program included in the Agricultural Act of 1954. It was intended to represent a positive approach to the problem of surplus milk production. By making it possible for children to drink more fluid milk—it was reasoned—less milk would flow into Government inventories in the form of surplus butter, cheese, and dry milk.

By the second year of operations, 1955–56, over 60,000 schools were in the program. In that year, over 1.4 billion half-pints of milk were consumed by the children in these schools. This was in addition to the 1.7 billion half-pints children were consuming as a part of the school lunch. As the result of these two programs, the Department of Agriculture estimates that about 17 million children are drinking milk at school.

Studies made by the Department of Agriculture show that milk consumption by students increased by as much as 80 to 100 percent after the school entered this special milk program. Commodity Credit Corporation funds finance the program and the chief use of the funds is to permit the schools to reduce the price of milk to children. Schools are also encouraging children to drink more fluid milk by establishing new times of service—during recess periods, before the children take their bus ride home—and in many other ways.

The program was scheduled to end in June 1956. But, upon the President's recommendation, it was continued for another 2 years through legislation which I cosponsored. The program was also extended to summer camps, orphanages and other institutions caring for children. The program continued to grow in its third year, 1956–57. Over 70,000 schools and institutions participated and the children drank almost 1.8 billion half-pints of milk, over and above the milk served with the school lunch.

Thus, the special milk program is not only helping children, it is building bigger markets for fluid milk.

H. David Frackman Rededicates Our Constitutional Heritage of Individual Liberty

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. TELLER. Mr. Speaker, massive historical upheavals which wrested individual liberties from tyrants contributed to the concept of individual liberty—a concept which is a cornerstone of our constitutional system.

H. David Frackman is a prominent lawyer of 40 years' standing at the bar, a past national officer of the Jewish War Veterans of the United States. He is also the president of the Manhattan Civic Club, and prominent in fraternal and interfaith activities. On July 4, 1957, he delivered an address under the auspices of the Captain Belvedere Brooks Post of the American Legion, at the Soldiers and Sailors Monument at Riverside Drive in New York City.

Mr. Frackman's July 4 address contains a penetrating analysis of our constitutional heritage. It is a scholarly address, and at the same time it points up the need for rededicating ourselves to the protection of those ideals of constitutional liberty which have made our Nation great.

The address follows:

We are assembled this Fourth of July at the Soldiers' and Sailors' Monument erected to commemorate the memory of our departed comrades who fought and died in de-

fense of our freedoms. This day we especially bear in mind the beginnings of our country. The Declaration of Independence documented our grievances against the English King and declared to the entire world our determination to be free of tyranny and to stand upon our own feet as a sovereign Nation. These freedoms were won only after extreme sacrifices and the loss of lives. The men and women who died did not seek war. None of our comrades in the colonial days or in the wars which followed sought to benefit by its spoils. War was forced upon them by those seeking to destroy our concept of individual liberty.

The foundation of human freedom had its beginning in 1215 with the signing of the Magna Charta by King John. This document was presented to King John by the English Barons who felt that their rights had been violated by him. Because of King John's abuse of power, the barons had cast off their allegience and taken up arms against him. They wanted a guaranty that for the renewal of their homage and fealty, the king would grant to them the freemen of England and their heirs, certain liberties and privileges dealing with the church, their feudal rights, law and justice, taxation, the seizure of property, popular interests and temporary evils. It must be borne in mind that these privileges granted by the Magna Charta were extended to the English barons only and did not include the common man. These privileges rested entirely upon this feudal contract which would continue to be the basis for the contractual relationship between the King and the English barons so long as he respected their rights. This document is often referred to as the palladium of popular liberties and has a constitutional importance in the development of human rights.

The next constitutional document of great importance in the historical growth of human liberty is known as the Mayflower Compact. This document was signed by 41 Pilgrims aboard the Mayflower in Provincetown Harbor, November 11, 1620, 1 month before landing at Plymouth. This was the first written constitution in America. By the signing of this instrument its subscribers formed a civil body politic to enact, constitute and frame such just and equal laws, ordinances, acts, constitutions and officers from time to time as shall be thought most meet and convenient for the general good of the colony.

On May 10, 1776, delegates from the United Colonies of New Hampshire; Massachusetts Bay; Rhode Island and Providence Plantation; Connecticut; New York; New Jersey; Pennsylvania; New Castle, Kent, and Sussex in Delaware; Maryland; Virginia; North Carolina, and South Carolina met in Philadelphia to discuss and recommend to the respective assemblies the adoption of a document setting forth the grievances of the Colonies against the British Crown and stating its determination to be free and independent of its rule, and finally, in the form in which we know it to be, our Declaration of Independence was adopted by the Congress on July 4, 1776, and signed by the representatives of the 13 States mentioned.

It contained a recital of the wrongs and injuries perpetrated by the King of Great Britain against the Colonies and announced to the entire world our determination to form a free and independent government under democratic rule. With this declaration of fact, the delegates of the Colonies then went on to take steps to formulate our structure of government. As we already know, the Articles of Confederation which followed proved ineffective.

The next important constitutional document in American life is known as the Articles of Confederation, adopted by the Colonial Congress November 15, 1777. The source of its authority emanated from the delegates of the several States assembled. It did not vest in the Federal Government, the centralized authority which was subsequently provided for in the United States Constitution, adopted in 1789. The Articles of Confederation permitted each State to retain its sovereignty, freedom, and independence. It proved ineffective to unite the several States and its people under a centralized form of government adequate to grant and guarantee the rights which are presently enjoyed by our people. Soon after its adoption it became evident that the Articles of Confederation would not serve the purpose for which it was intended and steps were taken to insure to the people the privileges desired and subsequently secured to them upon an adoption of the Constitution of the United States.

On May 25, 1787, 55 delegates from these 13 States met in Philadelphia to discuss and draw up a Constitution which would replace the Articles of Confederation. There were differences of opinion, heated and bitter discussions, and after many compromises a document was prepared and referred to the 13 States for its ratification. It was not until June 21, 1789, that the required 9 out of the 13 States ratified the Constitution and the new Federal Government was established at New York on April 30, 1789.

The basic difference between the Articles of Confederation and the Constitution of the United States lies in the source of its authority. The authority for the Articles of Confederation emanated from the States; the authority for the Constitution of the United States emanated from the people.

After the adoption of the Constitution and before the first sessions of Congress held under it in New York City on March 4, 1789, resolutions in the form of amendments thereto were offered and subsequently adopted because it was felt that without these amendments there were no sufficient safeguards for human liberty. These first ten amendments are referred to as our Bill of Rights.

The Bill of Rights guarantees to us freedom of religion, speech, and the press. The right to petition the Government for a redress of grievances; guarantees to us that persons and houses shall be secure from unreasonable search and seizure; due process of law; a trial by jury in cases involving felonies; other privileges and rights which have become the heritage of a free people. These rights and privileges could not have been vested in the people under a form of government other than one centralized and maintained for all the people governed by it. Any disintegration of our central federalized government can well jeopardize these rights and privileges and impair our freedoms. How well within recent times have we come to know that freedoms can be impaired unless zealously guarded. It was Thomas Paine who said "that those who would enjoy the blessings of liberty must suffer the inconvenience of supporting it". Some of these freedoms in our own day became impaired because some submitted to the slanted thinking of one individual. The Supreme Court of the United States recently rectified these wrongs, pointing out anew the safeguards of liberty guaranteed to us apparently ignored by those believing themselves above the accepted thinking of the majority of the people.

I think we have reached a turning point in this situation and that we are now fully awake to the realization that these freedoms must be zealously guarded.

Our forefathers in the very beginning of our national life were aware of the possibility that from time to time individuals and groups might try to destroy or impair these freedoms. A word of caution was delivered by the first Chief Justice of the United States, John Jay. What he said then can well be heeded by us now. In writing for the "Federalist", Chief Justice John Jay said, referring to the Constitutional Convention which drafted the Constitution.

"This convention composed of men who possessed the confidence of the people and many of whom had become highly distinguished by their patriotism, virtue, and wisdom in times which tried the minds and hearts of men, undertook the arduous task. In the mild season of peace, with minds unoccupied by other subjects, they passed many months in cool, uninterrupted, and daily consultations; and finally without having been awed by power, or influenced by any passions except love for their country, they presented and recommended to the people the plan produced by their joint effort and very unanimous councils. * * * These and similar considerations then induced the people to rely greatly on the judgment and integrity of the Congress; and they took their advice, notwithstanding the various arts and endeavors used to deter and dissuade them from it. I am persuaded in my own mind that the people have always thought right on this subject and that their universal and uniform attachment to the cause of the Union rests on great and weighty reasons. They who promote the idea of substituting a number of distinct confederacies would put the continuance of the Union in utmost jeopardy.

"I sincerely wish that it may be as clearly foreseen by every good citizen that, whenever the dissolution of the Union arrives, America will have reason to exclaim in the words of the poet, 'Farewell, a long farewell to all my greatness.' "

Our Constitution was not written for a section of our country nor for a segment of its people. It was written for all of our people. It was not written for the North or the South, the East or the West. It was intended to be a rule of law and order for all America; a government of the people, by the people, and for the people.

We did not fear foreign ideologies during the period when immigration was unrestricted. During this era we grew into the mightiest nation on earth. We should not and need not fear the outside world now.

We recognize the fact that opposed to our way of life there exists in the world an ideology which seeks to overthrow our democratic institutions. It is the task of each of us to vigilantly guard our freedoms and our liberties. None of us would willingly surrender our way of life or the form of government under which we live. The world is no longer as big as it once appeared to be. Of necessity we must consider the lot of people in other lands in relation to our own security. In advocating the cause of freedom, America has been obliged to assume the role of world leadership, and we stand irrevocably committed to this obligation. To settle differences among nations by peaceful means the United Nations organization came into being. In the United Nations, we play a prominent part as it is the instrumentality through which all liberty-loving people hope to achieve permanent peace economically and politically, security and freedom from the scourge of war. Through the United Nations it is hoped that all people will realize better standards of life in larger freedom and for these ends we must live together with one another as good neighbors practicing tolerance in our dealings with each other for the common good.

There has been adopted by the United Nations through the workings of its Commission on Human Rights a universal bill of rights. It consists of 400 words set forth coincidentally in 10 articles and closely follows our American Bill of Rights. It is hoped that just as our Bill of Rights is the foundation stone of liberty for our people here, so the universal bill of rights in time will become the foundation stone of freedom for the oppressed people of all lands everywhere. To implement the universal bill

of rights and the Charter of the United Nations, a North Atlantic pact was entered into as a collective self-defense arrangement among countries of the North Atlantic area who, while banded together to resist armed attack against any one of them specifically, reaffirms their obligations in the Charter of the United Nations to settle their disputes with any nation solely by peaceful means. It is designed to fit into the very framework of the United Nations and to insure practical efforts for maintaining peace and security.

We have come a long way since the days of the Magna Carta. We are effectively planting the knowledge, the desire and the hope for freedom in places heretofore unknown. This Government leads the way in the struggle now pending between democracy and totalitarian ideologies. As we meet with the representatives of foreign lands to work out the destiny of all people by peaceful means, we must nevertheless bear in mind the necessity of maintaining ourselves militarily in the strongest possible position. We have not yet reached the day when we can turn our swords into ploughshares. We must remain militarily at least as strong as those who seek to destroy our American way of life. However, we must not exclude any avenue in the field of diplomacy or international relationship which may tend toward a better understanding and a more secure peace.

To this end, we must remain united within our own borders. We must think alike concerning the fundamental principles of liberty and we must not permit one segment of our people to disregard the constitutional rights of another. We must unite for our common good.

Let us this day rededicate ourselves to the task of preserving our freedoms; to minimize with all our might the political and economic inequalities which exist; to give spirit and truth to the Declaration which induced our forefathers to sever their relationship with their mother country, and to recognize that our systems of government will endure only if we serve well all the people without regard to race, creed, color, religion, or place of origin.

Let America be a land in which no man shall be master and none shall be slave.

William Rifkin, of Wilkes-Barre, an Outstanding American

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of August 12, 1957, commenting on the passing of Mr. William Rifkin, of Wilkes-Barre:

WILL RIFKIN, A FINE AMERICAN

There is a lesson for all America in the life and death of Wilkes-Barre's beloved William Rifkin—Bill to his brothers at the Elks and Will to countless others who, through the years, enjoyed the privilege of his friendship and drew inspiration from his example as an American and humanitarian.

Will Rifkin was just about everything a good citizen and a good neighbor could possibly be.

Yet, his forbears did not come to these shores on the Mayflower. Nor was he able to trace his ancestry to the gallant colonists who struck a blow for liberty in the Revolution. Like millions of his countrymen, he was of a later generation of Americans who have contributed so much to the land of their adoption, although their roots may not be so deep in the soil of America.

Will Rifkin's folks came from Russia. He himself was born in Moscow, in the very shadow of the Kremlin. In view of what pictures are conjured in the minds of Americans today when mention is made of Moscow or the Kremlin, it seems incredible that so loyal an American, so generous a neighbor and mild-mannered an individual could spring from the same soil that produced such ruthless dictators for four decades and, before that, despots in royal raiment. He was the antithesis of everything they portrayed.

The explanation is simple. The czars of yesterday and the Communist gangsters of today are not representatives of the Russian people who include millions of Will Rifkins, victims of conditions over which they had or have no control.

Will Rifkin was fortunate to have resourceful parents with the courage of their convictions. They managed to liberate him from this tyranny and to provide for him a fresh start in America. The imigrant boy, who came to Wilkes-Barre 66 years ago, demonstrated his gratitude not only by becoming a success in business, but by contributing to the betterment of this land of opportunity.

It is difficult to write about two classes of men—those who do relatively little and those who do so much. Will Rifkin was in the latter category. No attempt is made here to enumerate all his good qualities or deeds, for that would be a monumental undertaking. Rather, we mention a few highlights for purpose of illustration.

Take, for instance, his connection with the Elks. For 38 consecutive years, he was retained as treasurer on the basis of ability and loyalty. What finer compliment could be paid a man from so representative a body of citizens as members of this organization? The congregation he served as president, other fraternal groups with which he was identified and the charities to which he contributed—all could testify to his worth if space were available.

Will Rifkin not only shared his resources with worthy causes and individuals; he gave generously of himself. If we take with us when we die only that which we give away, Will Rifkin this afternoon departed heavily encumbered indeed. He believe it was more blessed to give than to receive.

This friendly, modest man was endowed with commonsense, understanding, tolerance, and compassion. His good works speak for him far more eloquently than any words of ours. America and Wilkes-Barre are better places because Will Rifkin passed through on his journey from the cradle to the grave.

Accomplishments of the Forest Service

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. LAIRD. Mr. Speaker, the Forest Service was created in 1905. This is the 52d year of operation of the Forest Service in the United States Department of Agriculture.

Forestry in the United States has made rapid forward strides during the past few years. Working together, public and private agencies are effectively demonstrating the values of protection, good management, and wise use of the Nation's forest resources. Especially significant have been the advances in knowledge obtained through forest research, the gains made in organized protection of forests against fire, insects, and disease, the development of the national forests, and the advances in cooperative activities by the Federal Government, the States, and private owners of forest lands.

The Forest Service of the United States Department of Agriculture has had a leading part in this progress. New knowledge developed through its research program has contributed greatly to the improvement of forest and range management practices both on public and private lands, and to the development of new wood products and more efficient utilization of wood.

The national forests administered by the Forest Service are playing an increasingly important part in the Nation's economy. They provide recreational opportunities for millions, more than 45 million recreational visits were reported last year. They also helped to meet the country's needs for forest products, and contributed to the food supply by furnishing seasonal grazing for nearly 4 million livestock. One of their most important services is watershed protection, safeguarding the headwaters of many important streams and the sources of water supply for hundreds of towns and cities.

The Forest Service last year cooperated with the State of Wisconsin and many other States in providing organized protection against forest fires; also in producing and distributing trees for forest planting, and in furnishing technical advice to woodland owners on forest management.

COOPERATION IN FORESTRY

The Forest Service, United States Department of Agriculture, is cooperating with State forestry agencies and private forest-land owners to promote effective protection and sound management of forest lands.

The Forest Service is cooperating with 44 States and the Territory of Hawaii to provide systematic protection against fire for State and private lands. Cooperative protection was extended last year to 4.8 million more acres, bringing the total area covered to 387 million acres. Some 44 million acres still remained to be covered by organized protection. Acreage burned on the protected areas was held to six-tenths of 1 percent of the area protected, compared with 11.3 percent on the unprotected area. The rate of burn on unprotected areas is 18 times greater than that of areas receiving organized protection.

The Forest Service also cooperated with 44 States, Hawaii, and Puerto Rico in the production and distribution of trees to farmers and other landowners for forest and windbarrier planting. Distribution from the State nurseries last year amounted to some 559 million trees, an increase of about 60 million over the preceding year, and enough to plant about 560,000 acres. Interest in

woodland planting was expected to increase still more because of the soil-bank program, in which tree planting is one of the authorized means for converting cropland to conservation uses. An increase in production of several hundred million trees a year is underway.

Another Federal-State cooperative program provides technical advice and assistance to woodland owners. Last year 38,121 owners received technical assistance on forest management problems. Products harvested under the guidance of the cooperative project foresters brought a total of $14,757,555 to the forest owners.

DEVELOPMENT OF THE NATIONAL FORESTS

The Forest Service, United State Department of Agriculture, is responsible for the administration of a system of national forests comprising in all about 150 units, and totaling 181 million acres. National forests are located in 39 States, and in Alaska, and Puerto Rico.

Administration and development of the national forests has progressed to a point where they are a significant factor in the total national economy. Their resources are the principal economic support of hundreds of communities, and under the sustained yield management policy of the Forest Service they will contribute permanently to the stability of those communities.

National-forest timber is now making an important contribution to the Nation's timber supply. These forests supplied 6.9 billion board-feet of timber last year, a new record. The yearly cut will be further increased as growing stock is built up and as more roads are built to give access to stands that cannot now be reached. National-forest ranges last year furnished 5.6 million cow-months and 7.9 million sheep-months of seasonal grazing for livestock, an important contribution to the Nation's production of meat, wool, and leather.

Recreational use of the national forests has doubled in the past 8 years. With 45,713,000 visits in 1955, the national forests carried a big share of the Nation's outdoor recreation use. The total included more than 12 million visits by hunters and fishermen.

Of vital importance to local and national welfare is the protection of watersheds. National forests are located at the headwaters of many of this country's major rivers and streams. They help protect the water supplies of some 1,800 cities and towns, of more than 13 million acres of irrigated farmlands, more than 600 hydroelectric power developments, and thousands of industrial plants.

PROGRESS IN FOREST RESEARCH

One of the major activities of the Forest Service, United States Department of Agriculture, has been research, aimed at finding the best answers to many problems in forestry and wildland management and in wood utilization.

The Forest Service maintains nine regional forest and range experiment stations in continental United States, with a number of branch stations and research centers. New knowledge developed through the work of these stations has provided the basis for many management practices now widely used both on the national forests and on the holdings of progressive private timberland and rangeland owners.

Research at the Forest Products Laboratory, maintained by the Forest Service at Madison, Wis., has contributed hundreds of new or improved wood products, led to development of new industries, and brought about savings of millions of dollars annually through improvement of products or reduction of waste.

Among the many research accomplishments reported in the past year were development of an effective method of fumigating seedbeds at forest tree nurseries to control root rot losses; new techniques in wood boat construction to reduce decay losses; more economical spraying procedures for control of pine bark beetles. A hitherto unknown disease causing losses of red, black and scarlet oaks in the Northeast was discovered; research was started to determine the causes and to develop control procedures.

Mr. Speaker, I commend Secretary Benson and the entire Forest Service for their record of accomplishment in behalf of all our citizens.

Assessment, Training, and Employment of the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FOGARTY. Mr. Speaker, a former Member of Congress and a very good friend of mine is doing wonderful work on behalf of the handicapped of this country. Maj. Gen. Melvin J. Maas, United States Marine Corps Reserve, retired, is well known as the Chairman of the President's Committee on Employment of the Physically Handicapped, and I would at this time like to include in the Appendix of the RECORD an address I know you will agree is truly inspiring and which he delivered at London, England, on July 24 of this year before the Seventh World Congress of the International Society for the Welfare of Cripples. The address follows:

ASSESSMENT, TRAINING, AND EMPLOYMENT

(Address by Maj. Gen. Melvin J. Maas, United States Marine Corps Reserve, retired, Chairman, the President's Committee on Employment of the Physically Handicapped, United States of America, before the Seventh World Congress of the International Society for the Welfare of Cripples, London, England, July 24, 1957)

Mr. Chairman, ladies, and gentlemen, I am very happy to have the opportunity to participate in this world congress with so many people from so many lands who are interested in the problems of the handicapped and endeavoring to find common solutions to their problems.

The subject assigned to me, Assessment, Training, and Job Placement for the Handicapped, is a fascinating one and very close to my heart.

I think you might be interested in some of the problems that we have encountered in the United States and the solutions which we are developing. I have no desire to try to convince any of you that you should do what we are doing nor in the same way we are doing it. I know that only too often American energy is misinterpreted as cocksureness and our enthusiasm to help others is mistaken for a desire to impose our way of doing things on other people. I assure you nothing could be further from my purpose.

I expect to learn a great deal from these sessions in new techniques, methods, and procedures which I can take back to the United States to help improve our own programs. I am sure that I will get out of this Congress far, far more than I can contribute to it.

At the outset, let me tell you something about the President's Committee on Employment of the Handicapped of which I have the honor to be Chairman. The Committee is not a Government agency. It is a group of volunteer citizens but under the sponsorship of the President of the United States. While I hold a Presidential commission, I am not a Government official, which in plain language means that I am not on the payroll.

The President's Committee is composed of some 300 members mostly representing great national organizations which are a cross section of the United States. On the membership are represented all the great employer associations, the great labor unions, the veterans organizations, the medical profession, women's clubs, social workers, the clergy and a number of outstanding individuals—all dedicated to the advancement of the cause of the handicapped.

The mission of the President's Committee is educational, informational and promotional. Our work is to create an atmosphere among employers, the unions, fellow workers and the general public of acceptance for employment of qualified handicapped men and women. We know that such rehabilitated and vocationally trained men and women make not only good employees, but frequently superior ones in the matter of production, safety, attendance records, and steadiness on the job. They are the equal and frequently superior to the average of other workers.

The President's Committee is not in the business of conducting rehabilitation nor of actual job placement. We cooperate and support the agencies of Government which do conduct these activities. We work very closely and virtually in partnership with the Office of Vocational Rehabilitation of the Department of Health, Education, and Welfare, which guides some 1,000 local State offices of vocational rehabilitation, and with the United States Employment Service of the Department of Labor, which similarly assists some 1,700 local State employment offices.

The procedure which we have developed is that a potentially employable handicapped man or woman is referred to a team made up of a physician, a social worker, a psychologist, a rehabilitation expert and an employment specialist. A scientific analysis is made of the individual's physical condition and potential physical capacities if rehabilitated and, if required, furnished with appropriate prosthetic devices. The team makes a thorough analysis of the individual, studies job possibilities in the light of physical and mental potentialities. When a conclusion is reached by this expert team, a recommendation is made as to the rehabilitation necessary. Then the individual is sent to a rehabilitation center where he or she is given necessary medical restoration, and thereafter an intensive course of vocational training is undertaken. This may include further medical treatment, physical therapy, psychological adjustments. When the vocational re-

habilitation process has been completed, the individual is taken over by the employment service and interviewed by a trained counselor and a placement expert. After reviewing the individual's case history and analyzing the physical capacities, the individual is referred to an employer.

Part of this whole process is the encouragement to employers to subject each job under their control to a scientific analysis of the physical requirements of every position. These requirements are carefully card-indexed. The employment specialist refers the rehabilitated applicant to an employer where the physical requirements and skills of a job can be matched to the remaining physical capacities and the skills developed by rehabilitation of an individual. Employment is then carefully followed up, after an appropriate period of work experience, to see if the individual has actually been properly placed. If there is any doubt, a conference may result in a reassignment to a more suitable job.

Under a law requested by President Eisenhower, rehabilitation has been substantially increased in the United States since 1954, when the United States Congress enacted what we know as Public Law 565. Under this law, the Federal Government makes available to the States substantial grants of Federal funds which must be matched by only a fraction of the Federal funds to qualify. No State is compelled to accept such funds but they are made very attractive in order to induce States to accelerate their rehabilitation activities.

As an evidence of the substantial increase in rehabilitation in the United States in the year just concluded, 75,000 individuals completed vocational rehabilitation, this in contrast with 66,000 the year before which in itself was a substantial increase over any previous year. Keeping pace with this has been the increase in the number of physically handicapped who have obtained jobs in the past few years. Last year through just the public employment service alone, 295,000 handicapped men and women obtained jobs in contrast with 265,000 the year before and 185,000 the previous year.

Our entire effort is on a voluntary basis. No handicapped person is compelled to accept rehabilitation; no employer is compelled to accept the handicapped as employees. Our efforts are directed to persuade the handicapped to accept rehabilitation and jobs and to convince employers that the rehabilitated handicapped makes not only good but outstanding employees. As a result, rehabilitated handicapped men and women in the United States are now successfully filling every type of position and job in every occupation in our complex industrial and business structure from top executives to skilled operators of machine tools.

All of this has had a profound impact on the economy of the country. As an illustration, the men and women who have obtained jobs during the past 10 years during this crusade of jobs for the handicapped earned in the past year alone over $6 billion. These men and women had been costing the communities of the country in the aggregate millions upon millions of dollars a year for their maintenance in idleness. Now they are returning to the Government hundreds of millions of dollars from their wages in income taxes alone.

However, it is not this monetary consideration that is the reason that the Government and these voluntary groups of citizens are so active in the campaign of obtaining jobs for the handicapped. The motivation behind this in the United States is our devotion to the principle that every citizen, regardless of race, color, creed, or physical appearance because of a physical handicap, is entitled as a matter of right to his or her opportunity to achieve economic equality. It is because of our dedication to the philosophy that recognizes the dignity of every human being and because of our passion for individual freedom.

We know that there is no real freedom for the man or woman who wants to work and who is willing to work, who can't get a job because of prejudice, intolerance, or discrimination. Whatever lies behind that discrimination we know that there is no independence for the man or woman who wants to work, is capable of work but is forced to remain on public welfare because he or she can't get a job.

We believe that the secret in the United States behind our growing success in helping the individual to achieve economic independence is our determination to be good neighbors. A good neighbor is one who helps others to help themselves. That is the essence of the whole problem of the handicapped. It is helping the handicapped to help themselves.

We feel that if we are good neighbors in our communities, we will be good neighbors to all. We are certain that if everywhere in the world people become good neighbors in their communities, in time they will become good neighbors in the world community, War results only from hatred, fear, and jealously. But you can't hate nor fear a good neighbor who helps others to help themselves.

Therefore, I believe that you and the international society, in contributing to the building of communities of good neighbors toward a world community of good neighbors, are doing more to contribute to the ultimate attainment of man's oldest and most cherished dream, universal and lasting peace, than the diplomats or military leaders.

I am sure that President Eisenhower joins with me when I say God bless you and the great humanitarian work which you are doing.

Orphan-Refugee Legislation

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 14, 1957

Mr. NEUBERGER. Mr. President, there is an urgent need for revision of our immigration laws, and of vital concern is the need for legislation to admit orphan children who have been adopted by American families.

At the present time, adopted orphan children from Italy, Greece, the Far East, and other countries with relatively small immigration quotas cannot be admitted to the United States except by private legislation. I am advised that nearly 500 private orphan bills have been introduced, and this represents almost 5 percent of the total number of bills introduced in Congress. Private legislation, with its long delay, and the consumption of vital congressional time, does not provide a suitable remedy.

Mr. President, I have sponsored legislation since last January to admit orphan children into the United States who have been or will be adopted by American families. The need for such legislation is urgent, since many of the children adopted by American families face death in their homelands because of inadequate food, medical care, and poor sanitation. Children adopted by American families have already died while private legislation has been pending in Congress.

I am, indeed, pleased that the House and Senate Judiciary Committees are now actively considering legislation which would provide for the admittance of these orphan children, and I earnestly hope that the humanitarian and noncontroversial orphan legislation can be kept separate from the controversial changes in our immigration laws.

Mr. President, I was honored to join with the Senator from Massachusetts [Mr. KENNEDY] and other liberal Senators in sponsoring S. 2410 which provides for liberalization of our basic immigration laws. This proposal would permit the reallocation of unused immigration quotas and provides for other humanitarian changes in our immigration laws. I understand that the basic proposals of this bill have the support of Representative FRANCIS E. WALTER, of Pennsylvania, chairman of the House Immigration Subcommittee. Indeed many of the proposals are similar to his H. R. 8123.

It is important to remember that all of us except full-blooded American Indians are either immigrants or the descendants of immigrants. The United States has a tradition of offering sanctuary to the oppressed.

Immigration has helped to build America. Each immigrant is not only a jobholder, but he and his family are consumers who buy goods and services and otherwise contribute to our economic system. While our country has grown by 25 million people in the last 10 years, only about 2,770,000 immigrants have entered the country. Immigration thus plays a very minor role in our continued population growth. Our population growth has had a beneficial rather than a depressing effect on our employment and economy.

Mr. President, I ask unanimous consent to place in the Appendix of the CONGRESSIONAL RECORD an excellent article by Jalmar Johnson, the associate editor of the Oregonian, of Portland, which appeared in his paper on August 10, 1957, on the need for revision of our immigration laws.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERTY STATUE'S WELCOME NEEDS REVISION

(By Jalmar Johnson)

When the United States let down its immigration bars temporarily a few months ago to admit refugees from Hungary, some Americans were incensed. Charity should begin at home, they cried; aliens should not be let in to take the bread from those citizens who for various reasons were not sharing in the general prosperity.

By May, only 32,075 Hungarians had been admitted and since then there has been only a trickle of refugees from that country. The impact could not have been great on a population of approximately 170 million. Few, if any, crusts of bread have been torn from American mouths.

How the United States has lost its preeminence as the refuge and great hope of the poor and oppressed people of the world is shown in the immigration figures for the decade 1946–55. In those tempestuous post-

war years roughly 50 million persons migrated from their homelands in search of political and economic stability, according to the August bulletin of the Population Reference Bureau, Inc.

It was a mass movement of people unprecedented in world history. Yet less than 2 million of these uprooted folk came to this country, where, on the base of the Statue of Liberty, are carved these inspired lines of Emma Lazarus:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, the tempest-tost, to me;
I lift my lamp beside the golden door."

The principal reason so few were guided here by the lighted lamp is that they could not come because of the quotas, which in one form or another have controlled immigration quantitatively since 1920. Some, such as the Irish and Scandinavians, who once came to America by the hundreds of thousands, did not care to come. They evidently are happy at home these days. But 400,000 refugees and displaced persons, chiefly from eastern and southern Europe, did come under special legislation which mortgaged the quotas of countries in these areas for periods ranging from 3 to more than 300 years.

Net immigration to the United States, including half a million from quota-free countries of the Western Hemisphere, was 1,704,000 for the decade. This represented approximately 1 percent of our total population and 7 percent of the country's population growth during the decade.

The 1946–55 immigration was almost exactly the same as in the decade 1841–50 when the total population of the United States was 23,191,876. It was about one-fifth as great as in the decade 1906–15 when 9,422,141 aliens came here to put our total population barely over the 100 million mark.

Perhaps we need to be more cautious now than we once were in admitting foreigners to our shores. Maybe in 1841–50 and 1906–15 the United States took too big a chance. But many of our leaders and innumerable good citizens are descendants of those who came then, and in the years between, to escape economic, political or religious oppression.

The Chief Justice of the United States is only 1 generation removed from Ellis Island and the First Lady only 2. The other day the son of a Yugoslav immigrant was appointed Governor of Alaska. Examples almost without end could be given of immigrants and their descendants who have made lasting contributions to America.

If we must be extremely choosy about those we admit, then we should rewrite the verse on the Statue of Liberty. Perhaps it should read like this:

"Give me a few of your not too tired, your not too poor,
Your quota of those double-checked for desire to breathe free.
A not too wretched sampling of your teeming shore.
Send these—with proper credentials, of course—to me:
I leave ajar, ever so slightly, the golden door."

Or we might ship the Statue of Liberty to Canada, where immigrants accounted for more than one-fourth of that country's total population increase in the postwar decade. Or to Australia, or New Zealand, where immigration made up 40 percent and 27 percent, respectively, of the total growth.

In any event, we shouldn't pretend the lamp is lit when it isn't.

Federal Employees Salary Adjustment

SPEECH
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 9, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 2462) to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes.

Mr. SANTANGELO. Mr. Chairman, the House is now considering a bill of very great importance to every classified Federal employee and his family. It is no exaggeration to say that for many thousands of people, the difference between bare subsistence and a decent standard of living depends upon congressional enactment of an adequate pay raise, such as the one provided for in H. R. 2462.

The compelling necessity for an immediate increase in the Government's classified pay schedule can be made abundantly clear by citing a few basic and unyielding facts about the American economy today. The cost of living has been very high for some time, and it is steadily increasing. Federal salaries have not increased at anything like the same rate, with the result that the average civil servant's real income becomes smaller and smaller with each passing day.

The House Post Office and Civil Service Committee, of which I am proud to be a member, has within the past 2 months completed hearings on both postal and classified pay raise bills. Witness after witness has brought out, not just with emotional pleas, but with facts and figures and case histories, the unfortunate plight of those who are trying, without adequate funds, to make ends meet.

The last classified pay raise law was enacted in June of 1955 and made retroactive to March of that year. At that time, in March 1955, the cost-of-living index stood at 114.3. This index, through June of this year, was 120.2. The fact that this index jumped six-tenths of a point from May to June of 1957 shows how rapidly living costs are now rising and further emphasizes the urgency for speedy action on our part.

The administration has steadfastly opposed a pay increase, primarily on the grounds of fiscal policy and the belief that it would add to inflationary pressures. I reject these arguments. Increases in salaries do not reflect themselves in the price of goods. They render services and do not produce goods.

Even the Chairman of the Civil Service Commission, although opposing any pay increase, admitted that "hundreds of thousands of (persons) on the Government payroll, undoubtedly need more money."

By what logic is it sound fiscal policy to ignore the financial hardships under which many Government workers are now living and to oppose any action designed to relieve this hardship?

Nobody wants inflation, but to argue that a pay increase will cause inflation is to confuse cause and effect. The Federal payroll is not the cause of inflation, and an increase in this payroll is needed now to keep up with the effects of inflation. Government employees no more cause inflation than they control it. There certainly is no good reason why they should be made to suffer excessively because of it.

In favorably reporting H. R. 2462 last week, the Post Office and Civil Service Committee presented what I regard as cogent and unanswerable reasons for its immediate passage. Since 1951 classified employees have received only 1 pay raise—the 7.5 percent increase in 1955 which, as the report says, "failed by a considerable margin at that time to bring the compensation of these employees abreast of the rising cost of living and of salary increases granted other employees in private business and industry." This report goes on to point out that since 1952, "the average hourly straight-time earnings of employees in manufacturing industries have increased 18.5 percent."

There are additional excellent reasons why Congress should pass H. R. 2462 without delay. Employee turnover in the Government has long been a serious problem. Former President Hoover has said it costs $3,000 to recruit and train the average civil servant. How can the Government hope to attract and keep competent people unless we pay them a decent salary? What hope is there for greater economy and efficiency in Government if we must cope with a 25-percent turnover in employees each year?

We must remember that, compared to workers in private enterprise, civil servants have very little bargaining power. They have no right to strike. They are wholly dependent upon Congress to take care of their needs and interests.

It is our responsibility to make certain this bill becomes law before this session of Congress adjourns. To do less would be a dereliction of duty on our part.

Death of Dr. Christie—First Air Medic

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. SPARKMAN. Mr. President, one of the most interesting developments over the years since World War I has been the field of air surgery. The Chief Air Surgeon for the American Expeditionary Forces in France during World War I was Dr. Ralph Conklin Christie. He also wrote the first manual on physical requirements for flying.

A few days ago Dr. Christie died in the city of Los Angeles, Calif.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a news item relating to the death of Dr. Christie.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. CHRISTIE DIES—FIRST AIR MEDIC

Dr. Ralph Conklin Christie, the first flight surgeon in the United States and a former city councilman, died Friday in a local hospital.

The 74-year-old physician, who was medical officer on the staff of Gen. William (Billy) Mitchell during World War I, was a victim of cancer.

During his World War I service as chief flight surgeon for the Air Service's American Expeditionary Force in France, Dr. Christie wrote the first manual on the physical requirements for flying.

Locally, Dr. Christie served as councilman in 1932–34, and was a member of the Long Beach Water Commission.

Born in Creston, Iowa, October 9, 1882, Dr. Christie moved to Omaha, Nebr., where he received his early schooling.

In 1910, he was graduated from the University of Nebraska with a bachelor of science degree and doctor of medicine degree. He took post graduate work at Columbia University in New York.

He was a member of Phi Kappa Psi, and Phi Rho Sigma, a medical fraternity.

At the outbreak of World War I, Dr. Christie joined the Air Service and rose to the rank of captain. Later he became the first flight surgeon in the Nation.

After his distinguished achievements in the war, Dr. Christie moved to Long Beach with his wife, Jessie M., and began private practice in 1922.

At one time he was associated with the Douglas Aircraft Co.'s medical department here.

While a member of the Long Beach Water Commission, Dr. Christie was instrumental in this city becoming part of the metropolitan water district.

The Story of King Gold and King Silver

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. BARING. Mr. Speaker, representing the people of Nevada, who are naturally interested in the rightful use of metals, gold and silver, as a medium of exchange and as a basic valuator for all of the items we wish to purchase or to sell, I want to call the attention of my colleagues to a very interesting fable written in 1936 by Mr. Peter Ivanoff, an acknowledged authority on monetary systems and currency. Mr. Ivanoff was with the Franco Bank in Hankow, China, and was an active member of the Rotary Club there. He left China in 1947 when the Communists invaded and took control of the mainland. This book, which tells the story of king gold and king silver, points out the fact that eons ago men were slaves in their respective communities because they had no measure of exchange and no valuator. Then one day a man, noticing a shinging, yellow piece of metal, made a medallion from this discovery, and thereafter his wife became the envy of all the ladies on that island. It was not long before the natives of adjoining islands, bringing their various wares to barter and trade, observed the medallions this man had made and offered to trade certain of their products for one of the medallions, that they might present this thing of beauty to their queen. The man quickly recognized that with a very few medallions he could leave his home island to trade his medallions elsewhere for any goods he wished to acquire. This was truly the birth of freedom from slavery.

Down through history nations of the world have traded and bartered with confidence when they had gold and silver as valuators. History has shown us that in times of great stress and emergency men and governments have been prone to depreciate their currency and walk away from the path of freedom by ignoring the awful confusion that would result from printing currency that had no fixed tie with an agreed valuator. In the 1930's, to regain some of the tremendous markets in India, England so set forth to loosen the controls on their pound. This necessitated drastic action by the Japanese, who devaluated their yen to meet this competition. And so we witnessed the depreciation of the pound from its highly respected international position of $4.86 down to $2.80. All nations trading with these countries that abandoned the gold standard have suffered through lack of confidence in the currencies they could offer in the world markets for the purchase of services and goods from other countries. Countless billions of American dollars have been exported in an effort to bolster up the economic positions of so-called friendly nations. I say "so-called" in a qualified way, because it is apparent that many times we have tried to help with our money, goods, and services, only to find little appreciation for the handouts we have so magnanimously given to foreign nations while at the same time refusing support to some of our own industries.

I might mention here that you are well acquainted with the efforts we western Congressmen made to protect the tungsten industry, which is so vital to many communities in my State and in other States of the West. I would be reluctant to speak on this subject were it not for the fact that I have in my hand some material recently written on how we may stop inflation in this country. All of us know too many retired people, too many white-collar workers, too many people living on fixed incomes to not be aware of the suffering or the embarrassment brought about when every year these people's dollars buy less and less. I am not against helping those friendly nations who are helping themselves and who indicate their desire to join with us in our world fight for freedom, and I am all for our country's having a strong Military Establishment for the defense of our Nation and the protection of our principles.

It is my firm belief that if the financial experts of our Nation will join with qualified Members of both Houses of Congress, they will reach the conclusion that we should and we must stop printing more currency, stop increasing our national debt, stop devaluating the value of the goods owned by the people, and arrive at a basis whereby our currencies and our fiscal policies will be tied to and fixed with a gold and silver standard. This would restore confidence in our own currency and the Government behind it, to lead the way out of chaos and frustration for the scores of countries whose very existence depends upon having a medium of exchange that can be relied upon by all nations with whom they trade.

In closing, Mr. Speaker, I wish to call to the attention of my colleagues the fact that in this story of the two kingdoms there is highlighted the confusion that peoples would be confronted with were we not to agree on the matter of measurements, whereby we know that 12 inches equals 1 foot and 3 feet equals 1 yard. We all also have a great appreciation of the value of our system of weights, where 1 pound contains 16 ounces, or 2,000 pounds 1 ton. To change this would throw our whole national and international economic system out of balance.

Not too many years ago the nations of the world looked to the pound sterling as the valuator. The pound sterling contained 123 grains of gold. It is my opinion, and I know a good many Members of the House concur with me, that unless this Congress takes some definite action to restore a valuator we will surely be confronted with the 10-cent dollar before the next 10 sessions of Congress. I believe every Member of this House would fight to avoid shouldering this burden on our sons and daughters. Certainly those who may look forward to living their twilight years on a fixed income would hate to contemplate what measures would have to be taken in order to buy the barest necessities we all must have.

For the RECORD, Mr. Speaker, I would like to have printed a copy of a letter written to me on March 8 by Mr. William P. Moloney, of Marion, Ohio, who in his closing sentence says, "I know of no situation where corrective measures are so sorely needed."

The letter follows:

MARION, OHIO, *March 8, 1957.*

Hon. WALTER S. BARING,
House Office Building,
Washington, D. C.

DEAR MR. BARING: Approximately 25 years ago I acquired 2 mines in the State of Nevada, 1 gold and 1 gold and silver. The gold mine was operated in a small way until the closing act in 1942. Both of these mines have merit and I have expended approximately $200,000 in the purchase and development of these mines and both could be operated successfully now if it were possible to sell newly mined gold and silver at its real value.

A recent issue of the Battle Mountain Scout carries a rather lengthy interview stating your position in reference to proposed legislation, the purpose of which is to correct the injustice to which the owners of gold and silver mines have been subjected by governmental action.

Every act of Congress since 1934 that affected, directly or indirectly, the gold and silver mining industry has been detrimental to the industry and you are to be commended for your efforts to restore some measure of justice to the industry.

It is difficult to conceive that the United States Government should refuse to purchase the products of any industry at a price that represents its true value and at the same time prevent that industry from selling its products to those who are willing to purchase these products at their true value. The basic concept of the right to own, to hold, and to sell private property which the Government of the United States is pledged to uphold and to defend at all costs, is denied by the Government itself.

Not only does the Government deny the fundamental right of the private citizen to own, hold, and dispose of private property but it becomes socialistic in its treatment of this industry by supplying the commercial users in this country, the gold and silver needed for commercial use. Of course the Treasury Department very graciously grants permission to sell newly mined gold and silver to the industry, but it stands ready to serve the commercial users at cost so that the owner of the newly mined gold and silver is in the same position as if he sold it to the Government.

It is a well-known fact that this policy of the Government of selling gold and silver to commercial users without profit to the Government has not only been to the tremendous advantage economically of the fabricators and users of gold and silver, but has been largely instrumental in keeping the gold and silver mines in Nevada and elsewhere out of operation.

Obviously, it would be a great step toward restoring justice to the gold and silver industry if the mine owners were permitted to sell newly mined gold and silver in the world market, a privilege and a right enjoyed by every other industry in the United States.

There is no need to say to you that the condition of the gold and silver mining industry in the West is sad nor is it necessary to say to you that if the Government would get out of the market of selling gold and silver to commercial users and permit the industry to sell to commercial users in this country at a price competitive to world prices the gold and silver industry would revive immediately. Is there any way to induce or to compel the Government to cease selling gold and silver to commercial users and to leave this field to the industry? That would restore some measure of justice.

I know of no situation where corrective measures are so sorely needed and your efforts are certainly to be commended.

Very truly yours,

WILLIAM P. MOLONEY.

Face-to-Face Discussion Far Better Than Any Correspondence Sent to Constituents

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. HENDERSON. Mr. Speaker, I firmly believe that a primary task of each Member of Congress is to maintain the closest possible contact with the people he is privileged to serve in the House of Representatives. This poses a considerable problem when dependence must be placed upon correspondence instead of direct, face-to-face discussion of the issues which confront the Nation. It has been my experience that personal conferences held throughout the 15th district of Ohio have provided my constituents an excellent opportunity to discuss public affairs as well as matters of personal concern in which some action by the Federal Government is involved.

As soon as the present session of Congress is concluded, I shall return to Ohio where constituents may meet me in my district office in the Central National Bank Building at Cambridge. As in past years, I shall visit all of the 7 counties of the 15th district often in the coming 4 months before returning to Washington in January. It is also my intention to spend a day in the courthouse of each county-seat town where I will welcome the opportunity to discuss privately any matter of interest. These meetings will be informal and will be held from 9 a. m. to 4 p. m. The following schedule has been arranged for these informal conferences:

Perry County, September 16, Muskingum County, September 17, Monroe County, September 18, Noble County, September 19, Washington County, September 20, Morgan County, September 21, Guernsey County, September 23.

No appointments are necessary for these conferences and I will be pleased to meet with such individuals as may wish to call at the courthouse.

Transmission Belt for the Power Trust Line

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ULLMAN. Mr. Speaker, an editorial appearing in this week's edition of the national weekly newspaper, Labor, did much to clarify some blatant misconceptions concerning the Hells Canyon fight which were contained in an article entitled "Pacific Northwest Stands On Its Own Feet," recently published by the Reader's Digest.

This editorial also had high praise for a fine letter written to the editor of the Reader's Digest about this subject by Senators MAGNUSON and JACKSON, and Congressman DON MAGNUSON of the State of Washington. As was pointed out by Senators MAGNUSON and JACKSON and Representative MAGNUSON, the author of this fallacious article completely ignores the real issue in the Hells Canyon fight, that is, full development of the public resources as opposed to partial utilization envisioned by the Idaho Power Co. projects.

Mr. Speaker, I believe my colleagues will find this editorial interesting reading and under unanimous consent I ask that it be printed in the Appendix of the RECORD.

TRANSMISSION BELT FOR THE POWER TRUST LINE

The power trust puts out such a blizzard of propaganda that it's seldom worth while to single out any one piece of it. However, when a particular devious and deceptive article is published in Reader's Digest, comment is needed, because that magazine has millions of readers, many of whom also read Labor.

The article—entitled "Pacific Northwest Stands on Its Own Feet"—was written by William Hard.

Hard lauds the Pacific Northwest States for, as he claims, proving that local agencies can meet their own light and power needs without a penny from the Federal Government. As examples, he cited three power projects in the State of Washington. One is being built by a group of public and private electric utility bodies. Another, the Rocky Reach Dam, is being built by the Chelan public district, a local public power agency. The third, the Priest Rapids-Wanapum project, is being built by the Grant County public utility district under contracts to sell the power to 12 distributors, some public-owned and some private power companies.

Hard completely disregarded a main point in this story, declared Senators WARREN MAGNUSON, HENRY M. JACKSON, and Congressman DON MAGNUSON, all Washington State Democrats, in a protesting letter to the editor of Reader's Digest.

"This point," they said, "is that neither Rocky Reach nor Priest Rapids-Wanapum could have been built without the upstream water storage and river flow control provided by the Federal dams at Grand Coulee, Albeni Falls, and Hungry Horse.

"This combination of Federal multipurpose projects, plus largely power-only dams built by non-Federal bodies, is a working reality only because the water-storage facilities exist through previous Federal developments," the three solons from Washington State said. "We feel that Hard's article, making the entirely illogical conclusion that local utility districts should take over the Columbia River and its tributaries, is misleading and deceptive."

Actually, the first part of Hard's article, about the dam projects named above, is merely window dressing for the part he is leading up to—a shockingly distorted version of the Hells Canyon dispute. The main and real business of this article is a devious attempt to justify the administration's giveaway of the Snake River to the Idaho Power Co., thus blocking construction of a high public dam in Hells Canyon.

The article contains so many omissions and misstatements that only a few can be noted here, as follows:

Hard says that, under the license granted by the FPC, Idaho Power must impound up to 1 million acre-feet of flood-control water. He fails to mention that the high public dam would provide nearly 4 million acre-feet of water storage—about 4 times as much as the low private dams.

Hard dodges the two biggest issues—the comparative amounts of power which the private and public Hells Canyon projects would produce, and the prices at which that power would be sold. He didn't dare challenge official figures showing that: The high public dam would produce 1,122,000 kilowatts of power, more than twice as much as the 505,000 from the 3 low private dams. The cost of the public power would be 2.65 mills per kilowatt, less than half the 6.69 mills for the private power.

That's why supporters of the high public dam project say the giveaway is not only a vastly valuable handout to the power trust, but also is an inexcusable waste of natural resources vital to the Northwest and the Nation.

Discussing the Hells Canyon part of Hard's article in their protesting letter to the Reader's Digest editor, the two MAGNUSONS and JACKSON said:

"Just as the Grand Coulee, Albeni Falls, and Hungry Horse Federal dams make downstream projects possible, so would the high Hells Canyon Dam utilize the river system's resources to the fullest. The high Hells Canyon Dam would provide an additional 436,000 kilowatts of power at the dams downstream on the Snake and Columbia Rivers.

"This is the crux of the fight for the high Hells Canyon Dam project," the letter to the Digest editor declared. "Contrary to Hard's conclusion, the issue is not private versus public power development. The issue is full development of these public resources as opposed to the partial utilization envisioned by the Idaho Power Co. projects."

Just try sending the Digest this editorial pointing out some of the bugs in Hard's article, and see if that reactionary magazine will print it. Also watch to see whether the Digest publishes the protesting letter from the MAGNUSONS and JACKSON.

Resolution Renaming the Grass River Lock in Honor of Senator Wiley and Representative Dondero

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. ASHLEY. Mr. Speaker, the people of Toledo, Ohio, for many years have been vitally and actively interested in the development of the St. Lawrence Seaway. They have recognized the immeasurable economic benefits that will accrue to the entire Great Lakes Basin and, indeed, to the entire Nation upon completion of this project.

In recognition and appreciation of the invaluable role of Senator ALEXANDER WILEY and Representative GEORGE A. DONDERO, of Michigan, in spearheading the St. Lawrence seaway development project, the City Council of Toledo recently adopted the following resolution, recommending that the Grass River lock at the east end of the Long Sault Canal be renamed the Wiley-Dondero lock as a fitting tribute to these distinguished gentlemen.

I am happy, indeed, to insert at this point in the RECORD the full text of the resolution:

RESOLUTION TO RENAME THE ST. LAWRENCE SEAWAY LOCK IN HONOR OF SENATOR WILEY AND REPRESENTATIVE DONDERO

Whereas the Council of the City of Toledo has long recognized the great economic advantages that will accrue to the Toledo metropolitan area, the State of Ohio, the entire Great Lakes region, and to international trade on the completion of the St. Lawrence seaway project; and

Whereas it is recognized that for many years efforts had been made to enlist support of the United States Government in the St. Lawrence River development, but it was not until the 83d Congress passed Public Law 358 on May 6, 1954, which President Dwight D. Eisenhower approved on May 13, 1954, that United States participation in the project was assured; and

Whereas Senator ALEXANDER WILEY, of Wisconsin, then chairman of the Senate Foreign Relations Committee, and Representative George A. Dondero, of Michigan, then chairman of the House Public Works Committee, were coauthors of the St. Lawrence seaway bill, now designated as the Wiley-Dondero bill, and were leaders in guiding the measure through the Senate and the House of Representatives, respectively; and

Whereas a vital part of the seaway project, the Grass River lock at the east end of Long Sault Canal in the International Rapids section, is now under construction with completion scheduled for 1959, when the seaway will be opened to ocean traffic; and

Whereas one of the two great locks in the American seaway project has been named the Eisenhower lock in recognition of Presidential support of the seaway project: Now, therefore, be it

Resolved, That in recognition of the great leadership of Senator ALEXANDER WILEY, of Wisconsin, and Representative George A. Dondero, of Michigan, and in tribute to their dauntless championship of the seaway over a period of many years, the Council of the City of Toledo in meeting assembled on August 7, 1957, does hereby recommend and urge the Congress of the United States, the Secretary of Defense, and the St. Lawrence Seaway Development Corporation of the United States that the Grass River lock in the International Rapids section of the St. Lawrence seaway be designated as the Wiley-Dondero lock as a fitting tribute to these two congressional leaders for their contributions in making the St. Lawrence seaway project a reality.

Adopted August 7, 1957.

OLLIE CZELUSTA,
Mayor.

Attest:

C. F. DIEFENBACH,
Clerk of Council.

A Strong Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. MANSFIELD. Mr. President, in the Christian Science Monitor of Tuesday, August 13, 1957, there appears an editorial entitled, "A Strong Civil-Rights Bill."

This is an editorial which explains the present situation regarding the bill passed by the Senate, and I note included in the editorial the following statements:

The more the Senate bill is studied, the harder it becomes to oppose it as ineffective.

Further—

Precisely because it would enlist an essential degree of consent, we believe the Senate bill is strong, in terms of actual effectiveness. And the clearer its strength is perceived, the harder it will be to play politics with the issue.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STRONG CIVIL-RIGHTS BILL

Political maneuvering over civil rights the last few days has been complicated. Strange bedfellows have climbed in together. Latest ill-matched team is composed of certain civil rights Republicans and conservative southern Democrats. Both are trying to place the conflicting bills passed by the respective Houses in the hands of a House-Senate conference committee for revision.

The purpose of the southerners is said to be to obtain such serious modifications of the Senate bill that it can be killed by filibuster. The aim of the Republicans is said to be to so strengthen the bill that even if it fails in Congress they can go into next year's election as supporters of a strong program. The Democratic leaders are pushing an alternative plan to have the House take up the Senate bill directly and make one simple amendment—to limit the jury-trial provision to voting cases. This procedure would be less likely to split Democratic ranks.

Both sides are hurling recriminations. An interesting common denominator of these is the charge that the opposition is trying to block civil-rights legislation. This is a hopeful sign, indicating that neither side relishes to appear as blocking it. So despite the hurdles remaining—including the possibility that uncompromising diehards will dominate a conference committee—there is good hope for effective legislation.

The more the Senate bill is studied the harder it becomes to oppose it as ineffective. Here are some of its solid gains:

1. A national commission, equipped with subpena powers, would dig into civil-rights violations and recommend action, focusing public opinion as never before.

2. A special division of the Department of Justice would be working continually on civil-rights cases.

3. The full power and majesty of the National Government would intervene by injunctive processes to halt beforehand efforts to deprive Negroes of the right to vote.

4. Such suits—so long as they are aimed at prevention rather than punishment—cannot be interfered with by jury trials.

5. High legal authorities believe these civil-contempt proceedings can be made effective. Orders can include any person holding the office of registrar of voters so a man could not nullify them by resigning. To prevent intimidation peace bonds could be required.

One cannot exactly predict the operation of any such law and undoubtedly some ingenious blocking steps can be taken by State legislatures and local officials. But this bill is far less likely to encounter such resistance than measures attempting to enforce integration—an issue on which there is both more unity of opposition and far higher emotional feeling than on voting rights.

Precisely because it would enlist an essential degree of consent we believe the Senate bill is strong—in terms of actual effectiveness. And the clearer its strength is perceived the harder it will be to play politics with the issue.

The Country Doctor—A Beneficiary of Man

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. YARBOROUGH. Mr. President, in the past 2 or 3 decades modern medicine has made advances in care and prevention of disease that would stagger the imagination of doctors of an earlier day.

One characteristic of the early-day doctor, however, will permit no improvement. That is in the field of human relations.

Many of us in Texas remember with fondness the country doctor who made his rounds on horseback or in a buggy. The ranches and farms were widely scattered and the doctor might ride horseback for 4 or 5 hours to make a $2 call on a patient. This doctor knew no office hours, night or day. This doctor was not only a professional man, but also the best friend to many of these pioneer families.

In those years, the doctor was the last person to be paid. And in many of the cases the doctor had to raise cattle on the side to make a living.

Texas today is becoming a leader in medicine. Its hospitals and specialists rank second to none, even though there aren't enough of them. Texans salute this great progress. But we also keep a place in our hearts for those great humanitarians and men of medicine of another era.

Mr. President, such a man was Dr. A. B. Edwards, a beloved doctor and friend of pioneer Texans. He was born the year after the War Between the States on Elm Fork of the Trinity River in Texas. He graduated from the medical branch of the University of Louisville in 1888 and that year he came back to Texas and settled at Antelope. His practice was spread over Archer, Clay, Jack, and Young Counties. He was a beloved civic and business leader of his community.

Last Thursday Dr. Edwards was laid to rest in Henrietta. He would have been 91 years old the 31st of this month. He was the father-in-law of the late Lucian Parrish, a former Member of the House of Representatives of the United States Congress.

Mr. President, I ask unanimous consent of the Senate to print in the Appendix of the RECORD this tribute to him from a story in the Wichita Falls Record News. It is not only a tribute to him as an individual, but a tribute to that great race of men of pioneer Texas, the country doctor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. BRYANT EDWARDS SUCCUMBS IN HENRIETTA

Last rites for Dr. A. B. Edwards, Henrietta, have been set for 10 a. m. Thursday in the Henrietta First Baptist Church. Burial will be in the Hope Cemetery, Henrietta, under direction of Hawkins Funeral Home.

Dr. Edwards, a pioneer Clay County physician, died Tuesday morning in a Henrietta hospital. He was 90.

A business and civic leader since the 1880's, Dr. Edwards combined his many other interests with a medical career that brought him acclaim throughout the entire Southwest.

Born on Elm Fork of the Trinity near present Valley View in 1866, Dr. Edwards would have been 91 years old on August 31.

Funeral arrangements, under the direction of Hawkins Funeral Home in Henrietta, are incomplete.

The long-time physician's father, Jackson Berry Edwards, came with an immigrant train to Texas from Tennessee in 1844 and settled on the Elm Fork of the Trinity. When Dr. Edwards was 11 months old, his father died and his mother took over active management of their livestock business.

After Dr. Edwards graduated from the medical branch of the University of Louisville in 1886, he went to Antelope on the Clay and Jack Counties line. At that time he planned to practice at Antelope for a while and then go to Gainesville, because he doubted he could earn a living in the Antelope community, according to biographical sketches. However, the young physician was a busy man.

In 1888, in partnership with his brother, C. B. Edwards, and under the firm name of Edwards Bros., a supply store and cattle business was established. Dr. Edwards practiced medicine and his brother superintended the mercantile business and their cattle interests.

Those were the days when ranches were far apart, and the doctor kept good teams and buggies to care for his many patients in Archer, Clay, Jack, and Young Counties. His driver sometimes was called on in emergencies and to give anesthetics, with surgery frequently done on kitchen or makeshift tables.

The brothers obtained their first land in Clay County in 1887 and then they got together a ranch near Antelope and stocked it in part with livestock taken in on grocery and doctor bills.

In 1889 Dr. Edwards was married to Betty Moore, daughter of Capt. James Bryant Moore of Jacksboro.

Their three children, who survive, are Mrs. Lucian Parrish of Santa Barbara, Calif., wife of the late Lucian Parrish who died in 1918 while a Member of Congress; Bryant Edwards of Henrietta and A. B. (Kirk) Edwards of Henrietta, both well-known cattlemen of this area.

There are two grandchildren, Lucian W. Parrish, Fort Worth, and Mrs. Henry Fowler, Dallas.

Five great-grandchildren also survive.

In 1901, Dr. Edwards moved from Antelope to Henrietta and immediately became one of the outstanding citizens of the town. Although he continued his practice of medicine until 1906, Dr. Edwards was constantly building his cattle business and trying new and modern methods of ranching.

The Edwards brothers became members of the Texas and Southwestern Cattle Raisers Association in 1900, and Dr. Edwards continued as an active member until recent years. He was believed to be the oldest living member. The pioneer rancher also was one of the first men in the State to feed cottonseed meal to steers and to bring in registered bulls to develop his herd.

After Mrs. Edwards' death in March 1950, Dr. Edwards became less active in the cattle business, but he continued his participation a number of years in his favorite sports, hunting and fishing.

Henrietta, Clay County and the entire area owe much to the leadership and inspiration of this pioneer resident. It was in 1953 that Edwards, described as a retired country doctor and beloved cattleman-citizen of Henrietta, gave the Clay County Memorial Library to his fellow citizens. Dr. Edwards and his two sons made the gift in memory of the wife and mother, Mrs. Bettie Edwards. The site, half a block from the courthouse square, was acquired by Dr. Edwards in 1952, and construction of the modern brick building was undertaken with only a few public officials knowing the use for which it was planned.

Known as Edwards Public Library, the building and its contents stand as testimonials to the Edwards family and its contribution to Clay County.

Dr. Edwards for many years was a leader in Clay County pioneer reunions, serving as president of that event in 1955.

This Is New England

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial, which recently appeared in the Standard-Times, New Bedford, Mass.

This editorial, which relates to a speech on New England that I recently delivered in the House, is very ably written and will be of deep interest to all those interested in New England and its problems.

I desire to express my appreciation to this outstanding newspaper in my great State for its consistent, effective advocacy of measures designed to protect and to promote the interests of Massachusetts and New England as well as those of the Nation as a whole.

The editorial follows:

THIS IS NEW ENGLAND

Congressman PHILIP J. PHILBIN of Clinton, representing the Massachusetts third district, delivered a memorable address on the floor of the House that should stir pride in the heart of every New Englander.

A native and life-long resident of the Bay State, Representative PHILBIN was concerned that the virtues of New England may not be as well known as they should be in other sections of the country.

Mr. PHILBIN not only was concerned—he did something about it. He delivered an inspirational speech entitled "New Horizons for New England." In his preliminary remarks he said:

"Historically, economically, politically, spiritually and in many other respects, New England is truly an outstanding section of this great country. In my mind, by and large, it is the best place in the world in which to live and work, and I say this with real pride and with no reflection upon any other part of our great Nation."

The veteran congressman—in his 15th year on Capitol Hill—then cited a few facts and figures to back up his claims about New England. It was an impressive presentation.

More than one-quarter of the Nation's private nuclear projects planned for the next 5 years will be in New England.

This region has one-seventh of the country's companies that supply products relating to atomic energy.

The world's first 2 atomic-powered submarines were made in New England, and 7 of the next 8 will be built in the region.

New England has 15 percent of the Nation's electronics industry—more than 1,200 plants in all—and half of these were not in existence a decade ago.

One-eighth of the country's aircraft parts and products are made in New England—providing employment for some 75,000 persons in more than 2,600 plants.

New England has one-sixth of the Nation's research facilities. It produces 80 percent of the country's packaged and frozen seafood, 38 percent of the shoes, one-sixth of the plastic products.

Congressman PHILBIN went on to enumerate other assets of New England and discussed some of the region's problems.

"We in New England," he said, "have found in diversification of industry, in research, in the will to work—we have found not only

the means to offset previous industrial losses of historic businesses but the ability to forge ahead to new, higher and broader horizons of industrial activity."

New Englanders will concur heartily with PHILBIN's pungent prophecy: "Our progress has been phenomenal; our future progress will be even greater."

This region could use more goodwill ambassadors with Mr. PHILBIN's enthusiasm.

Problems in the North

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. ROBERTS. Mr. Speaker, racial tension north of the Mason-Dixon line often are overshadowed by discussions of what the South needs to do to solve its problems. Two daily newspapers in Alabama's Fourth District, which I am privileged to represent, carried editorials recently pointing up the need for some doorstep sweeping in the North.

The editorials, which appeared on August 8, are as follows: from the Anniston Star, "Negroes in the North"; and from the Selma Times-Journal, "Cause for Wonder."

Under leave to extend my remarks, I submit the two editorials:

NEGROES IN THE NORTH

In a Monday editorial taking cognizance of the recent race rioting in Chicago, the Milwaukee Journal observes that on "the record to date, we in the North must be a little ashamed of ourselves."

Such reproof is, to our way of thinking, too mild. But at least the Milwaukee paper is objective enough to concede the hypocrisy of northerners who criticize the South's approach to racial matters.

In fact, some further comment in the editorial in question suggests very strongly that northerners' criticism well might become a thing of the past.

It is stated that in Chicago, as one example, Negroes now number approximately 1 million, or one-fifth of the population of the city and its immediate suburbs.

Other metropolitan areas outside the South also have received sizable migrations of Negroes, and every month thousands more of them leave the South with the grossly erroneous idea that they are going to places where, despite limited training and skills, they can command high pay and can enjoy abundant living.

The awakening to a cruel deception naturally makes for unrest—a fact that apparently is recognized by the Journal. For it declares: "All things considered, authorities and unofficial organizations have done quite well in preventing worse and more frequent outbreaks."

The editorial goes on to say that rather than excusing those which do occur in Chicago and elsewhere in the North, the conscientious northerner "will accept the unpleasant fact as evidence that we still have a long way to go before Negroes get their full rights and privileges here."

The paper's appeal is for extra effort in the interest of easy assimilation.

But by painful experience, it no doubt will be learned eventually that the racial problem best can be solved by encouraging Negroes to raise their educational, economic, social, health, and moral standards within their own race—and not in competition with whites.

CAUSE FOR WONDER

Reading about racial tension in Chicago, Southerners cannot help but wonder why northerners spend so much time worrying about our problems when they have much more serious ones of their own.

As the result of recent racial clashes on Chicago's south side, 800 extra policemen were ordered on emergency duty, making a total of 934 in the Calumet and Trumbull Park areas alone.

Police Commissioner Timothy O'Connor said the extra manpower is part of a continuing effort to prevent recurrence of stone-throwing melees in which 37 persons were injured and almost 90 arrested. He added that all citizens of Chicago would be given full protection of the law, regardless of how many policemen were required.

Nobody can find fault with this policy, but let us examine the costs of maintaining it. At a moderate guess, each of these extra 900 policemen draws at least 10 dollars a day salary, and various other expenses of the racial patrol undoubtedly run the daily bill well above $10,000.

In Alabama, where Negroes are safe without police protection anywhere they are supposed to be, at any time, there is not a single city which spends anywhere near this much for maintenance of its entire law enforcement agency.

If Chicago wants to continue bearing this tremendous burden, that is the business of its citizenry, but it does seem to be an exorbitant price for persisting in the senseless process of trying to force round pegs into square holes.

The Late Senator McCarthy

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the radio broadcasts by Fulton Lewis, Jr., May 3, 6, and 7, 1957, on Senator JOSEPH R. MCCARTHY.

Mr. President, on May 8 I took occasion to say that:

JOE MCCARTHY was a great American. He believed, as I do, that any man refusing to take the oath of allegiance to the United States of America, or any man who hid behind the fifth amendment when asked if he had ever been disloyal, did not belong on the public payroll.

Mr. President, the censure of Senator JOSEPH MCCARTHY by his colleagues, in the absence of an allegation that he had ever violated any rule of the United States Senate, was a very dangerous precedent. It was the first tangible move to destroy the investigative power of this great body. It was accomplished under an emotional strain, comparable to a war hysteria.

The precedent could not have been established under normal conditions. It is a dangerous precedent, and if followed hereafter, any Member of this distinguished body can be censured when any other Member can be persuaded to submit a resolution looking to that end, provided the emotion and hysteria of the moment can be aroused to the point of securing the necessary majority vote on this floor.

Mr. President, the whole proceedings relating to the censure of Senator JOSEPH MCCARTHY should be expunged from the permanent record.

Mr. President, I am advised by the Public Printer that the cost of printing the article will be $173.25. Notwithstanding the cost, I ask that the text of the broadcasts be printed in the Appendix of the RECORD.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

[From the Fulton Lewis, Jr., broadcasts of May 3, 6, and 7, 1957]

SENATOR JOSEPH R. MCCARTHY

MAY 3, 1957

The body of Senator JOSEPH R. MCCARTHY of Wisconsin is lying in state tonight at a Washington funeral home, and will remain so over the weekend so the public may pay its respects; and Senate leaders decided today that a state funeral in the Chamber of the Senate which he loved so devotedly will be held on Monday morning at 11 o'clock, with a Catholic priest and the chaplain of the Senate presiding.

It is the first time such services have been held in the Senate Chamber since the one for the late Senator William E. Borah of Idaho, and it is an honor that has been accorded to few men in history.

The committee which decided on the arrangements consisted of Senator STYLES BRIDGES of New Hampshire, Senator WILLIAM KNOWLAND of California, Senator LYNDON JOHNSON of Texas, and Senator CARL HAYDEN of Arizona. Shortly before noon they called on Mrs. McCarthy at the little remodeled house just three blocks from the Capitol, and asked her wishes, and she agreed to the Senate funeral. She was haggard and tired, but she was calm and in complete possession of herself and she has held up admirably throughout the day. During the night she got a few snatches of sleep, and close friends have been with her constantly, in shifts, since they picked her up yesterday afternoon at Bethesda Naval Hospital, shortly after Senator MCCARTHY passed away.

Prior to the Senate funeral on Monday, there will be a mass at St. Matthews' Cathedral, where Senator MCCARTHY and Jeannie Kerr were married in 1953. After the Senate ceremonies, the body will be flown to Appleton, Wis., where the Senator will be buried in the family plot. All flags on Government buildings, including the White House, were at half mast; messages of condolence were pouring in from all over the Nation, and even from ships at sea.

President Eisenhower issued a statement of sympathy for Mrs. McCarthy which was very carefully worded, and which avoided any expression of regret except for Mrs. McCarthy's personal loss. Other top officials, including Secretary of State Dulles and Vice President NIXON sent messages of sympathy.

Mrs. McCarthy requested that no flowers be sent, but that instead, in the case of those who would have done so, a contribution be sent to the New York Foundling Hospital, 175 East 68th Street, New York City, which is the home from which she and her husband got their black-haired, blue-eyed adopted daughter of 6 months, Tierney.

Mrs. McCarthy's mother was under a doctor's care from shock, and apparently suffered a slight heart attack last night, although doctors do not believe there is serious damage.

Moscow radio said, in reporting MCCARTHY's death, that he was responsible for the preparation of a new military venture by the United States. It said:

"The aims of this double-dyed reactionary are linked with such a phenomenon of American reality as McCarthyism—a fierce onslaught against the progressive forces in the working-class organizations of the United States of America, hunting down and

subjecting to terrorist persecution all who oppose the domination of a handful of millionaires. McCarthyism spread throughout the country on an atmosphere of fear and anti-Communist hysteria which contributed to a more reactionary, antinational policy within the country, and to the preparation of a new military venture."

So Moscow is happy, and feels it has been rid of a dangerous enemy. That would have been a source of great satisfaction to JOE MCCARTHY.

* * * * *

The foundling hospital in New York indicated very strongly this afternoon, that Mrs. McCarthy will be allowed to keep little Tierney, despite the fact that the probationary adoption period is only about half over. So that hurdle seems to be cleared.

From Members of the Senate came various expressions of shock and loss, one of them, by Senator WILLIAM JENNER, is perhaps typical. He said, "America has lost a fighting patriot, a courageous man who has been willing to pay the price for his convictions and for his country. I was proud that I stood by him in his fight for America."

That last comment is important, because it referred directly to the cause for Senator MCCARTHY's death, the Senate censure resolution, engineered and pressured through by those forces that were gripped by fear of their own pasts, and had to get rid of Senator MCCARTHY to save themselves.

That was what killed the junior Senator from Wisconsin. That was what preyed on him constantly, and gnawed at his heart, and broke his spirit, and I saw it happen. He didn't believe the Senate would vote censure. He found it incredible that his colleagues would do him an injustice, or subject him to a stacked committee in the censure hearings. But he failed to calculate the pressure and the money and the influence that was at work, some of it from the White House itself. One man above all others in the White House family hated JOE MCCARTHY, and that man was Paul G. Hoffman, the President's confidante whom he named to the United Nations, the man who wrecked the Studebaker-Packard Corp., the man who headed the foreign-aid program in its most squandering days, the man who conceived and until recently, headed the notorious Fund for the Republic.

Paul Hoffman, in his hatred, helped to pay for the lawyers who drew up the censure charges which Senator FLANDERS, of Vermont, lodged against Senator MCCARTHY, and which finally—though proven to be false—resulted in the McCarthy censure.

On July 19 of last year, Senator FLANDERS openly admitted this fact on the floor of the United States Senate, at the time he publicly apologized to Senator MCCARTHY for what he had done. He said he wished the whole thing could be forgotten, but he did admit that Mr. Hoffman contributed $1,000 for the drafting of those false charges.

And it was the vote of censure, under pressure such as many Senators had never known before, growing out of those charges, that started Senator MCCARTHY on his long, slow death. From then on, he had no will to live. And I knew, when I heard the diagnosis of the Bethesda Naval Hospital doctors on Monday, that this was the end of the Nation's most dedicated fighter against communism and subversive activities, because his physical strength was so spent that he couldn't possibly survive any major illness.

So I hope Paul Hoffman is satisfied. But I doubt that in his project he has won much in the way of thanks or affection from the average American citizen. JOE MCCARTHY was too much of an American patriot, and too devoted to his country. Mr. Paul Hoffman is interested in the rest of the world, and expending our substance over the world.

There will be a note of some irony in those Senate services because that, in a sense, was the execution chamber. And thus, Monday, the Senate, which performed the execution, will honor the man it executed. In that, at least, there is ironic justice.

I have received hundreds of telegrams today, suggesting that the Governor of Wisconsin appoint Jeannie Kerr McCarthy to fill the vacancy left by her husband, and let me say that no person alive—man or woman—could fill it more capably than Jeannie McCarthy. She has been the top-level consultant and adviser to her husband, first as secretary, and then as wife, virtually ever since the beginning of his Senate career.

Unfortunately, however, the Wisconsin law does not provide for such appointments, but rather prescribes that the Governor shall order a special election, from 55 to 70 days after the vacancy occurs, with a primary 4 weeks beforehand, and Jeannie McCarthy is hardly in any condition, emotionally or physically—or financially, so far as that goes—to conduct any campaign throughout the State of Wisconsin.

If she were drafted, that might be a different matter, and it could be done by the simple expedient of seeing to it that she is the only candidate in the Republican primary. She could win without campaigning in the general election.

Perhaps some such move as that will take place. The Governor is scheduling conferences immediately after the funeral ceremonies in Appleton to talk over that situation.

* * * * *

One last observation.

It is interesting, indeed, to observe today the deep silence from all those sources that screamed such indignation because a Canadian diplomat committed suicide when he was accused of Communist associations, and Harry Dexter White died of a heart attack after he had been accused, and Larry Dugan jumped out of a window in New York when some of his associates found themselves in Communist trouble.

Those screaming voices are silent when JOE MCCARTHY, the enemy of communism, dies as a result of their persecutions.

MAY 6, 1957

The remains of Senator JOE MCCARTHY are in Appleton, Wis., tonight, after a weekend of his Nation's and his church's highest honors, and homage from many thousands of just ordinary people who filed past his bier in a funeral home, a stone's throw from the White House.

How many there were is impossible to determine, but a guest book in which some of those who came to pay their respects signed their names showed some 5,000 signatures; many additional thousands failed to register because of the jam, and there were many groups of young people who also did not register. At times, the queue was 3 and 4 blocks long and many people stood in line for hours.

There was a rosary service at 8:30 p. m. last night, and another chapel service with family and close friends early this morning. Then, shortly before 9 a. m., the body was moved to St. Matthew's Cathedral where the Senator married the beautiful young Jeannie Kerr in 1953, and where, this morning, about 2,000 persons were gathered.

Among those present were the Vice President and Mrs. Nixon; White House assistant I. Jack Martin, representing the President; Senate Republican Leader William Knowland, and a group of other Senators; and the Senator's two leading assistants in the famous McCarthy investigations, Roy Cohn, and staff director Frank Carr.

Among the company that participated in the requiem mass were 72 priests, monsignors and bishops.

Mrs. McCarthy, in the company of her husband's brothers and sister, held up well until after Archbishop O'Boyle left the altar, and stopped momentarily to take her hand and say a few words, which were inaudible to anyone else. Then, for a moment, she bowed her head and sobbed, but she seemed to force herself under control after a fleeting moment, and resumed her composure.

After the mass, the casket was taken—with a 48-man Marine honor guard—to the Capitol, where it was carried by Marine pallbearers up the great steps of the Senate wing, and onto the Senate floor. With its draping of flags, it was placed in front of the Vice President's rostrum. Mrs. McCarthy came into the Senate chamber momentarily, then retired to a chair that had been prepared for her, just outside the open doors, where she could hear and see what went on without being exposed to the eyes of the gallery visitors.

Admission to the galleries was strictly by card, but they were filled to capacity, except for the Senators' private gallery (which is always exempted on card occasions, as a matter of tradition). There were a handful of seats, there.

The Senate services were brief and included a eulogy by the Reverend Frederick Brown Harris, Chaplain of the Senate, and the Reverend Father William J. Awalt, who married the McCarthys in 1953.

There were 37 Republican Senators present, and 32 Democrats, many of them Senators who voted for the censure of Senator MCCARTHY in December of 1954—the vote that broke his heart and spirit, and started the decline in his health which ended in death Thursday afternoon at 6:02 p. m.

Few people realize this next fact, and perhaps it becomes important only in perspective, but the resolution of censure which finally was voted in regard to Senator MCCARTHY had absolutely nothing to do with the original charges which Senator FLANDERS, of Vermont, financed to the tune of $1,000 by Paul Hoffman, brought against the junior Senator from Wisconsin. They were all thrown in the wastebasket. The actual final censure resolution had to do with Senator MCCARTHY's activities after the Army-McCarthy hearings were over—and I say this because the Senator's traducers are constantly talking about the resolution of censure by which he was condemned by his colleagues by a vote of 67 to 22 as "growing out of the Army-McCarthy hearings."

To keep the record straight, I'd like to read the exact resolution to you, and here it is:

"*Resolved*, That the Senator from Wisconsin [Mr. MCCARTHY] failed to cooperate with the Subcommittee on Privileges and Elections of the Senate Committee on Rules and Administration in clearing up matters referred to that subcommittee which concerned his conduct as a Senator, and affected the honor of the Senate, and, instead, repeatedly abused the subcommittee and its members who were trying to carry out assigned duties, thereby obstructing the constitutional processes of the Senate, and that this conduct of the Senator from Wisconsin [Mr. MCCARTHY] is contrary to senatorial traditions and is hereby condemned.

"SEC. 2. The Senator from Wisconsin [Mr. MCCARTHY], in writing to the chairman of the Select Committee to study censure charges [Mr. WATKINS] after the Select Committee had issued its report, and before the report was presented to the Senate, charging three members of the Select Committee with 'deliberate deception' and 'fraud' for failure to disqualify themselves; in stating to the press on November 4, 1954, that the special Senate session that was to begin November 8, 1954, was a 'lynch party'; in repeatedly describing this special Senate session as a 'lynch bee' in a nationwide tele-

vision and radio show on November 7, 1954, in stating to the public press on November 13, 1954, that the chairman of the Select Committee [Mr. WATKINS] was guilty of 'the most unusual, most cowardly thing I've ever heard of,' and stating further: 'I expected he'd be afraid to answer the questions, but didn't think he'd be stupid enough to make a public statement' and in characterizing the said committee as 'the unwitting handmaiden,' 'involuntary agent,' and 'attorneys in fact' of the Communist Party and in charging that the said committee, in writing its report, 'imitated Communist methods—that it distorted, misrepresented, and omitted in its efforts to manufacture a plausible rationalization' in support of its recommendations to the Senate, which characterizations and charges were contained in a statement released to the press and inserted in the CONGRESSIONAL RECORD of November 10, 1954, acted contrary to senatorial ethics, intended to bring the Senate into dishonor and disrepute, to obstruct the constitutional processes of the Senate, and to impair its dignity; and such conduct is hereby condemned."

Those were the things for which the Senator's colleagues censured him—not his conduct of the Army hearings, or any other McCarthy committee hearings; so the next time you find someone who implies otherwise, you will know better.

As for the Senators who made up this list of 67 votes in favor of the censure resolution, all Democrats who voted at all, voted in favor of it. That was a straight political party-line vote, to be expected in any such internal Republican hara-kiri performance as was going on.

The important votes for that resolution were the ones from the Republicans, and you will note as I go along that, included in this list, are all the names that Mr. Paul G. Hoffman, as high priest of the new modern Republicanism, considers to be the stalwarts of his movement.

Here they are:

Mrs. George P. Abel, of Nebraska; George Aiken, of Vermont; Glenn Beall, of Maryland; Wallace Bennett, of Utah; Prescott Bush, of Connecticut; Frank Carlson, of Kansas; Francis Case, of South Dakota; John Sherman Cooper, of Kentucky; Norris Cotton, of New Hampshire; James Duff, of Pennsylvania; Homer Ferguson, of Michigan; Ralph Flanders, of Vermont; Robert Hendrickson, of New Jersey; Irving Ives, of New York; Frederick Payne, of Maine; Charles Potter, of Michigan; Leverett Saltonstall, of Massachusetts; Margaret Chase Smith, of Maine; Alexander Smith, of New Jersey; Edward Thye, of Minnesota; John Williams, of Delaware, and the leading figure in the prosecution—Arthur Watkins, of Utah.

Senators HOMER CAPEHART, of Indiana, and JOHN BRICKER, of Ohio, were absent, but had their positions on the resolution announced as "nay."

Senator ALEXANDER WILEY, of Wisconsin, was absent and unannounced.

I give you that list because I've been asked in hundreds of letters to do so.

Getting back to the services today, when the Senate ceremonies were over, the casket was taken to National Airport, where a MATS plane was waiting to transport it and the family party to Appleton for the final service and gravesite ceremonies there. The entire McCarthy office staff, to the last person, made the trip to Appleton, and friends provided private planes to make it possible. Some members of the staff were on the verge of hysteria, others were suffering from shock. Most of them were in as bad shape as Mrs. McCarthy herself. I know of no individual, in any line of endeavor who was held in higher affection by those who worked with him day by day, than Senator MCCARTHY.

So ends the drama that was JOE MCCARTHY. His enemies still attempt to malign him, and will do so for a long time to come. They have reason to do so, because Senator MCCARTHY, in death, may well be even more powerful as a force than Senator MCCARTHY could ever have been in life.

The death sharpens the focus of public sentiment and public thinking on the real issues that he represented, and the true facts of the McCarthy controversy. For one thing, it leaves to calm public appraisal the question of why Paul Hoffman wanted to destroy him, and why the other forces who worked so feverishly for that same destruction, considered it so important, and whether those grounds for censure, which I just read you, were really justification for the almost unprecedented Senate action of censure, and if they were not justification, why and how the Senate was pressurized into adopting that censure resolution, and who was behind it.

Any one of the Senators whose names I read you will tell you that the pressure was terrific, and most of them will tell you that they wish they had never cast the vote as they did. And what, pray, is the answer to that?

Somebody—some forces—had to get rid of Senator JOE MCCARTHY, and they did it.

MAY 7, 1957

Senator JOE MCCARTHY of Wisconsin, probably the most controversial political figure of modern times, so far as the United States is concerned, was laid to final rest beside his Irish-born mother and father today, in the cemetery of 98-year-old St. Mary's Catholic Church in Appleton, Wis., which he has attended since he was a small boy.

Some 30,000 of his fellow Wisconsinites, coming from near and far, filed through the church late yesterday afternoon and last night, to pass by the open casket and pay their final respects.

The Reverend Adam M. Grill, pastor of St. Mary's, said in his remarks that Senator MCCARTHY did not die of disease alone, but principally because he exhausted himself physically for love of his fellow beings. He said:

"Even more threatening than the atom and hydrogen bombs is the common enemy of all democracy and God-fearing people—communism.

"Of all the great men in our country, no one recognized this more completely than Senator MCCARTHY."

Here in Washington, the Senate post office was struggling with the most prodigious volume of mail ever to flood the office of any one Senator at any time. One report was that 70 mailbags full had been delivered to the McCarthy office this morning, and another large load this afternoon.

The only person in the offices this afternoon was the social secretary of a close friend of Jeannie McCarthy, Mrs. Garvin Tankersley, and she said she had no idea how many there were because she had made no attempt to count them, but that they were stacked everywhere, to the extent that it was almost impossible to move around.

Most of it seems to be condolence mail for Mrs. McCarthy, expressions of sympathy, and so forth. Mrs. McCarthy's mother, Mrs. Kerr, is very much improved from the heart attack she suffered when she learned of the Senator's death last Thursday night, although she still is under a doctor's care.

The Herbert Hoover Memorial Library, in Palo Alto, Calif., which has probably the greatest collection of papers of famous statesmen and public figures in the world, has expressed an interest in getting the McCarthy papers, under whatever terms and conditions Mrs. McCarthy wants to prescribe, which itself is considerable of an accolade to the late Senator. This is very exclusive company, the Hoover Library, and the mere expression of interest is, in itself, a very high honor.

The tentative schedule as things stand at present is for Mrs. McCarthy to return to Washington tomorrow and leave to others the problems of her husband's affairs there in Appleton, although at the time she left here, that had not been finally decided.

* * * * *

A sudden move developed today, proposed by Republican Representative ALVIN O'KONSKI of Wisconsin, urging the Governor of that State, Vernon Thompson, to ask the legislature to change the law to permit him to fill the MCCARTHY vacancy by appointment, instead of calling a special election, but it is too early as yet to gage the progress of that suggestion. The idea, of course, would be to appoint Mrs. McCarthy to at least fill out the unexpired portion of the Senator's terms, and as I said last Friday night, she would be a brilliant appointment. She has been at his right hand as his No. 1 adviser virtually since he was elected to the Senate, and she could continue his entire staff, just as it is.

Thirteen Ambassadors Gave Republican Party $156,000

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in Labor on August 17, 1957. The article entitled "Find 13 Ambassadors Gave GOP $156,000" follows:

FIND 13 AMBASSADORS GAVE GOP $156,000

Thirteen noncareer ambassadors appointed or reappointed by President Eisenhower in his second term contributed a total of $156,200 to the 1956 Republican campaign, a check of campaign records disclosed this past week.

This fact contrasted with the President's recent assurance that he never considers campaign contributions in appointing ambassadors and a similar assurance from Secretary of State John Foster Dulles that such contributions aren't an important factor in choosing Uncle Sam's top representatives abroad. Eisenhower insisted that he picks only highly qualified men.

Both Ike and Dulles were quizzed about this after newsmen found the new ambassador to Ceylon, big-business man Maxwell H. Gluck, didn't even know the name of Ceylon's prime minister. On the other hand, Gluck had shelled out $21,500 to the GOP campaign last year.

Other ambassadorial plums, with the GOP contributions that preceded them, are as follows: John Hay Whitney (Great Britain), $37,500; John C. Folger (Belgium), $11,500; Joseph S. Farland (Dominican Republic), $9,000; Amory Houghton (France), $8,500; Earl Smith (Cuba), $3,800.

Also, Jefferson Patterson (Uruguay), $21,000; L. Corrin Strong (Norway), $20,500; James D. Zellerbach (Italy), $8,500; Robert H. Thayer (Rumania), $6,000; Robert D. Coe (Denmark), $4,950; Whitney Willauer (Honduras), $2,500, and Wiley D. Buchanan (Luxembourg), $1,000.

In addition, 6 former ambassadors who served in Ike's first term but weren't reappointed gave $82,500 to last year's GOP campaign. Nearly all of this came from C. Doug-

as Dillon, now promoted to be Deputy Under Secretary of State, and from Mrs. Clare Booth Luce, who resigned as Ambassador to Italy for health reasons. Dillon gave $27,500 while Mrs. Luce and her husband gave $25,000.

On the other hand, one Democratic contributor got appointed too. He's David K. Bruce, Ambassador to Germany, who gave the Democrats $1,000.

Proposed Solution of Present Agricultural Ills

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. COAD. Mr. Speaker, to many of our people the most dangerous economic problem is inflation. However, in the rural areas there is the added problem of low farm prices. The cost of living is going higher and higher but the price for agricultural commodities is still on a very low level.

The agricultural economic problem is most serious. There are many of us in the Congress who are concerned about this situation. There are those of us who are attempting to study this matter through in order to come up with a workable solution.

With genuine appreciation I received this week a letter from Mr. Walter W. Goeppinger of Boone, Iowa, which is also my home town, and along with it he sent his "Proposed Solution of Present Agricultural Ills." Mr. Goeppinger has given this problem a great amount of study and has presented some straightforward statements regarding the agricultural situation. I believe every Member of the Congress will be enlightened by the thinking presented in Mr. Goeppinger's proposals. Mr. Goeppinger's statement is as follows:

PROPOSED SOLUTION OF PRESENT AGRICULTURAL ILLS

Following are the conclusions of my enclosed proposals:

1. Present chaotic conditions in agriculture are the result of farm programs carrying no requirement to bring total agricultural production in balance with consumption.

2. Pass a new farm law providing for crop production on that portion of our entire tillable land in the United States that it is felt by the United States Department of Agriculture is needed for our present ability to consume. If United States Department of Agriculture economists arrived at a figure of 90 percent, then every farming unit would have the right to crop only 90 percent of its tillable acreage. The balance of the land, 10 percent, would have to remain absolutely idle, no pasture, hay, or crop production from it. The amount of retired land could be adjusted each year as United States Department of Agriculture determined the need.

3. Under the above program provide for some acreage restriction on the basic crops to prevent the South from putting the greatest portion of its ground to cotton, corn, grain sorghums and soybeans and the North from putting the greatest portion of its land to corn, grain sorghums, and soybeans. However, these acreage allotments should be more realistic than this year when corn acreage allotments were placed so ridiculously low that 70 percent of the farms in Iowa are not complying as a result.

4. Guarantee farmers 100 percent parity for all the products that they raise that are of a storable and nonperishable nature. If this is done, then meat, dairy products, poultry and eggs will automatically move close to or above 100 percent parity price levels. Raising feed grain prices raises such secondary products' prices within a short time. Lowering feed grain prices lowers the secondary products' prices within a few months' time.

5. Provide in the law some form of penalty such as marketing quota restrictions to prevent some operators staying out of the farm program above outlined. Unless we get 100 percent cooperation with the law or near to it, the program cannot be expected to realize its goal.

6. Overcome city taxpayer criticism of the soil bank by doing away with all acreage reserve and conservation reserve payments and make the incentive to farmers for reduced acreage 100 percent parity price guaranties on all grains, cotton, tobacco, rice, soybeans, peanuts and any other products of the land that United States Department of Agriculture economists feel should be included in 100 percent parity price protection.

7. Bring wheat production down to a domestic consumption basis, renting or buying whole farms in the Great Plains' winter wheat belt to help accomplish same. Thus, eliminate the export subsidy program until the world wheat market can stand our offerings and put lands back into grass in the Dust Bowl that should never have been plowed in the first place.

8. Have economists and agriculturalists from the cotton areas bring forth a program suitable to them that would fit into the general picture of solution that I propose.

9. Cattle and sheep ranches should take a proportional cut on any lands where grain or fodder crops are raised. Present grazing lands would not be required to put land into the soil bank.

10. Leave it up to United States Department of Agriculture to decide what would be required of lands in fruit and vegetable production. These are minor problems compared to those posed by the basic crops.

11. Unless something drastic is done soon to reverse the present pathetic chaos in agriculture, the family farm will be a thing of the past and large scale hired hand or corporation farming will be the only alternative. Such a condition is not desirable either socially or economically.

12. We need to and must save some of our soil fertility for posterity. With 75 percent of Iowa's topsoil lost in less than 100 years of farming, present soil mining must stop. A program providing for part of our tillable land out of production is the only one that is sound. One hundred percent parity for farm product prices is the only level fair to the farm producer.

Tribute to Hamil of REA

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks I would like to submit for the record the following tributes I have received to David Hamil, Administrator of the Rural Electrification Administration.

From the Lane-Scott Electric Cooperative of Dighton, Kans.:

We are very much perturbed about the attitude of the present administration toward Dave Hamil. We feel that he has the interest of the rural people at heart and is a very able administrator. We hate to see the big business interests undermine him the way they are. It looks as though he will get the same treatment given Claude Wickard. We will appreciate anything you can do to help Mr. Hamil.

From the Kansas Electric Cooperatives, Inc.:

At the regular board meeting of the Kansas Electric Cooperatives, Inc., held in Lyons, Kans., August 2, 1957, the following resolution was unanimously adopted:

Resolved, That we commend David A. Hamil, REA administrator for his outstanding work, and urge his continued wholehearted contribution for the public benefit.

I also wish to add my thoughts in tribute to Mr. Hamil. I feel that Mr. and Mrs. Rural America are in great need of his services and it is my hope that he will continue to serve for many more years in his present capacity as Administrator of our rural electrification program. I have received several letters from constituents who wanted to express their high esteem of Mr. Hamil and I join with them in expressing appreciation for his efforts.

Soil Conservation Service

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. LAIRD. Mr. Speaker, the Soil Conservation Service of the United States Department of Agriculture has been doing a tremendous job. I wish to take this opportunity to congratulate the Soil Conservation Service on its splendid work during 1957 and to commend the many county committees and employees of this Service for their contribution to a better agricultural future and to a better America.

CONSERVATION PROGRESS THROUGH SOIL CONSERVATION DISTRICTS

The dramatic spread of soil conservation farming over the United States in the last two decades or so is reflected in the growth and accomplishments of farmer-organized and farmer-managed soil conservation districts.

Established under State laws—the first in 1937—approximately 2,750 of these districts today include 9 out of 10 farms and ranches in the country and more than 87 percent of all the farmland. At the beginning of 1957, nearly 1¾ million farmers and ranchers already were cooperating with their local districts. Through them, these landowners and operators receive Soil Conservation Service help in soil surveys, conservation farm planning and applying soil and water conservation practices. They also

draw upon facilities of the United States Department of Agriculture and other Federal, State, or local agencies or private sources.

Soil surveys, on which is based farm and ranch planning for treatment and use of land within its needs and capabilities, have been completed on more than half a billion acres. More than 64 million acres of range site surveys also have been made. The survey information also is widely used in watershed flood prevention, forestry and range, cost-sharing and farm credit, rural development and other programs, and by county, suburban, and other interests.

As of January 1, this year, nearly 1,140,000 soil conservation district landowners and operators had basic conservation plans, on 318¼ million acres. These plans, worked out by the farmers and soil conservation technicians together to meet the physical and economic needs of each farm or ranch, are the blueprints for stable farming and the conservation and best use of the Nation's vital soil and agricultural water resources.

Conservation actually put onto the land is, of course, the real measure of accomplishment through the planned land-use adjustments. Although, individual practices are not of themselves infallible yardsticks of progress, they do show the consistent advancement we are making conservationwise. Thus contour farming has been adopted on about 34 million acres, stripcropping on between 14 and 15 million acres, and range and pasture seeding on some 30 million acres. More than a million acres of terraces have been built in soil conservation districts; irrigated land leveling has been done on approximately 5 million acres and conservation water application on about 8¼ million acres. About 4 million acres of land in the districts have been planted to trees, and more than 803,000 farm and ranch ponds had been built by the first of this year.

It is significant that a substantial part of this work today is being done as part of communitywide watershed protection and flood prevention undertakings, in which soil conservation districts are taking active leadership. The scope of conservation farming undoubtedly will be broadened further through the soil bank conservation reserve, Great Plains and related programs, as it already has been in agricultural conservation programs and other activities.

MODERN CONSERVATION BENEFITS ALL COMMUNITY RESOURCES

Individual farmers and whole communities throughout the United States today are putting to effective use what we might call a matched set of conservation tools for developing the Nation's soil and water and related resources adequately to meet current and future needs.

Federal and State legislative authorizations, local community desires, and technical and other facilities are being translated into cooperative action on a broadened scale through various interrelated programs and incentives. These include local soil conservation district programs, small-watershed projects, agricultural conservation program cost-sharing, the soil-bank program's acreage reserve and conservation reserve, the rural development program, soil and water conservation credit facilities, and Federal income-tax deductions allowed for certain conservation expenditures.

The Federal Government's contributions, at congressional direction, to the agricultural conservation action, cost-sharing and credit programs, as well as to important conservation research and extension education, are made available through the United States Department of Agriculture. The Soil Conservation Service, in turn, as the agency responsible for technical leadership in the Department's soil and water conservation and flood prevention activities, provides technical and certain other help to 1¾ million cooperators in 2,750 soil conservation districts, to community watershed groups, and to others as directed.

In the agricultural conservation program's cost-sharing program, for example, the Service, in meeting one of its assigned responsibilities, helped approximately 464,000 farmers and ranchers with the installation of various enduring practices during 1956.

The Service has similar responsibility for giving help particularly to farmers in the conservation reserve part of the newer soil-bank program, which also calls for the fullest practicable use of land-use capability data and for completing the basic land inventory of the Nation as rapidly as possible. The Service counseled approximately 42,000 farmers in 2,500 counties on conservation and acreage reserve problems in 1956. In doing so, it drew upon such experience as that reflected in the fact that during the past 5 years more than 1½ million acres were converted each year from cultivated crops to grass and trees on farms and ranches serviced by the Soil Conservation Service.

The Service also makes recommendations and gives technical assistance to farmers in connection with soil and water conservation loans made through the Farmers Home Administration. Such loans, to individual farmers and farmer associations, totaled $11¾ million in 1956.

Another responsibility of the Service is to give technical help to low-income farmers in selected areas as part of the rural development program. Out of an appropriation available for direct technical aid under this program in 50 some pilot counties, the Service is providing, in most counties, the equivalent of 1 full-time and 1 part-time technician for soil survey and farm planning.

Especially in light of the broadened resource conservation demands, the Department of Agriculture has undertaken a national inventory of soil and water conservation needs. It is under Soil Conservation Service leadership in cooperation with other departmental agencies, State and local agencies, organizations and groups concerned with soil, water, forest, grass, and wildlife conservation, utilization and management. Substantial progress has been made in gathering economic and soils data, and in perfecting inventory procedures in pretests underway in several counties in five States.

WATERSHED PROTECTION AND FLOOD PREVENTION MOVES AHEAD

Rapidly spreading interest and participation in community watershed protection and flood-prevention projects point to upstream watershed development as one of our most promising devices for resource conservation.

Rural and urban interests all over the country are joining forces in land and water conservation and management on a local-State-Federal partnership basis in creek-size watersheds. Federal technical and cost-sharing assistance is provided under Public Law 566 of the 83d Congress and the amending Public Law 1018 enacted by the 84th Congress.

In addition to the work getting underway through the Watershed Protection and Flood Prevention Act, conservation land treatment and structural work is well advanced in 58 pilot small-watershed projects for which Congress first appropriated money in 1953. Also, similar flood-prevention work has been in progress since 1947 on subwatersheds of 11 major authorized watersheds as authorized by the 1944 Flood Control Act. These are Buffalo Creek, N. Y.; Middle Colorado, Tex.; Coosa River, Ga. and Tenn.; Little Sioux, Iowa; Little Tallahatchie, Miss.; Los Angeles, Calif.; Potomac, Md.; Pennsylvania, Virginia, and West Virginia; Santa Inez, Calif.; Trinity, Tex.; Washita, Okla.; Yazoo, Miss.

As of the 1st of April 1957, more than 650 applications for watershed planning help under Public Law 566 had been received in Washington from 46 States and Hawaii, after being initiated by soil conservation districts, watershed associations, or other local sponsoring community interests and having received State approval. Approximately 250 of these had been approved for planning assistance, and 36 had been approved for operations, in 24 States. Work plans on many more are in some stage of preparation. Construction work will get underway progressively as the plans are completed and approved for Federal assistance, by the Department of Agriculture through the Soil Conservation Service or by Congress, depending upon the size or cost of structures involved.

Work done in the 58 pilot projects to January 1, 1957, included nearly 200 floodwater-retarding structures, more than 1,400 stabilization and sediment-control structures, 165 silt and debris basins, and about 125 miles of stream channel and stabilization improvement. Work has been contracted and is underway on comparable additional works of improvement. More than 55 percent of the total area in the pilot projects is covered by soil conservation district agreements, with basic conservation plans developed on about 37 percent of the area and 42 percent of the operating units; and soil surveys have been made on more than 63 percent of the pilot-projects area.

Meanwhile, 278 work plans covering 15½ million acres had been prepared in the 11 authorized watersheds by January 1, in which more than half the total land area was covered by district agreements, and basic plans had been developed on about 40 percent of the area

and 42 percent of the operating units. Sixty-four percent of the authorized projects area was covered by soil surveys. Structural work completed includes some 430 floodwater-retarding structures, nearly 6,000 stabilization and sediment-control structures, and 975 miles of stream-channel improvement and stabilization work.

THE GREAT PLAINS CONSERVATION PROGRAM

A more stabilized agriculture in the 10 periodically drought affected Plains States is the longtime objective of the Great Plains conservation program now being developed through concerted local and Federal efforts.

The program represents renewed efforts by local and State people in that area, the United States Department of Agriculture, and Congress, to minimize future drought effects. This through conservation farm and ranch planning and treatment that helps to stop wind erosion and bring about safe land use in dry years and wet. Implementing legislation for Federal participation, Public Law 1021 of the 84th Congress, supplements but does not replace soil conservation district, watershed, agricultural conservation program or other programs.

Farmers and ranchers who wish to take part present plans acceptable to the Secretary of Agriculture for needed conservation measures and land-use changes. The Department of Agriculture will then offer them long-term contracts providing for sharing the cost of establishing the combination of conservation practices provided for in the plans. Such contracts may run for up to 10 years or whatever shorter time is required, but not later than December 31, 1971. Total Federal expenditures may not exceed $25 million in any 1 year or $150 million all together, in counties designated by the Secretary based on recommendations of program committees made up of State and Federal agencies in the States.

No new agencies are being set up to help local people carry out this program, assigned to be worked out by an interagency group of representatives from 10 Department of Agriculture agencies under administrative leadership of the Soil Conservation Service. The Great Plains council, land-grant colleges, farm organizations, and others are continuing to assist in the program. Soil and water conservation technicians of the Department will help landowners and operators make the plans, as part of the total Great Plains program designed to help bring about all the agricultural and economic adjustments needed to protect, stabilize, and improve the productive capacity of the important Great Plains agricultural region.

Although July 1, 1957, was fixed as the date for formal start of the Great Plains conservation program as money should be made available by Congress, technical, educational, cost-sharing, research and other related activities began to be speeded up after the Department of Agriculture proposed a Great Plains program to the President in 1955. Thus ACP cost sharing for certain water conservation and other practices has been broadened.

The Soil Conservation Service, meanwhile, accelerated soil surveys in 166 designated counties in the critical wind erosion areas of Texas, New Mexico, Oklahoma, Colorado, Kansas, Nebraska, and Wyoming. Soil surveys were made on more than 15 million acres in the 10 States in 1956, compared to 12¾ million acres in 1955 and not quite 11¾ million acres in 1954.

The Service also has provided for a general expansion of surveys and for increased assistance in planning and establishing conservation practices throughout these States, North and South Dakota and Montana as part of its regular operations. As of July 1, 1956, nearly 99 percent of the farms and 91 percent of the land in farms in the 10 Great Plains States were in 871 farmer-organized and farmer-managed soil-conservation districts.

Mr. Speaker, I commend Secretary Benson, the Department of Agriculture, and the Soil Conservation Service for an outstanding job of accomplishment.

H. R. 8002—"Gadget" Legislation

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. CANNON. Mr. Speaker, the New York Times of August 12, 1957, pinpoints accurately the principal defects of H. R. 8002, the so-called accrued expenditure bill. It labels the bill as gadget legislation.

Under leave to extend, I include the complete article:

BUDGETARY REFORM

(By Edward H. Collins)

There always has been, and probably always will be, a substantial proportion of the public that can be counted upon to be fatally fascinated by what are known as gadget proposals for legislative reform. The term "gadget" legislation, as used here, refers to proposed legislative shortcuts for the solution of public problems—shortcuts that are distinguished by their simplicity, or apparent simplicity, rather than by their realism, and whose followers are likely to consist largely of persons who find themselves so enamored by the stated purposes of the proposed legislation that they are little inclined to ask too many questions about the latter's feasibility.

All of which is by way of a preliminary to raising an open question about a widely publicized piece of legislation now pending in Congress and identified as House bill 8002. This measure traces its origins to the second Hoover Commission, which submitted its final report in June 1955. It deals with the controversial question of controlling budgetary balances carried forward from one year to another. The section of the Hoover report on which it is based carries the persuasive title "Restoration of Congressional Control of the Purse."

FOUR BILLION DOLLAR SAVINGS CITED

This is an undeniably wholesome policy objective. Equally alluring, perhaps, is a quotation from the Commission's task force carried in that document to the effect that if the program should be adopted a saving of $4 billion could reasonably be expected.

These are the two arguments that have been employed by the enthusiastic and well-organized advocates of this measure. Are they ligitimate claims, substantiated by specifications and reasoned arguments This is not an academic question. The House bill is still in the Appropriations Committee but the Rules Committee has given it the green light that could result in its going to the floor before this session of Congress is over. If the claims of its sponsors are valid, then obviously it should be brought to a vote at the earliest possible moment.

Unfortunately, the closer one scrutinizes this measure, the more it seems to take on the all-too-familiar characteristics associated with gadget legislation. No specifications have been advanced, for example, in support of the estimated saving of $4 million. Moreover, responsible members of the administration, such as Budget Director Percival F. Brundage, who are on record as favoring the measure, have flatly refused to identify themselves with this, or, indeed, any other, firm figure on estimated savings.

This fact would not, of itself, of course, necessarily condemn the proposed legislation. But when a measure has attracted widespread popular support largely on the basis of two more or less spectacular claims, and one of these collapses, as it were, at the touch, then prudence would seem to suggest a very serious examination of the soundness of the other.

SUBCOMMITTEE UNIMPRESSED

Actually, one such study was undertaken early this year by a subcommittee of the House Appropriations Committee. The subcommittee turned the measure down unanimously, branding it a snare and a delusion.

And now comes George Y. Harvey, of the Department of Political Science of the University of Missouri and many years staff director of the House Appropriations Committee, with a second exhaustive analysis of the proposal, which appears in the spring issue of the Public Administration Review. Mr. Harvey's findings, though stated more urbanely, are hardly less devastating.

The heart of the proposed budgetary reform in House bill 8002 lies in the phrase "contract authority," or "contract authorization." What it comes down to is an arrangement under which Congress could authorize contracts for long-term procurement programs without appropriating the full amount at that time.

METHOD REJECTED IN 1950

Instead, only as much would be appropriated as would accrue as an expenditure that year. The theory, one gathers from Mr. Harvey's scholarly study of the proposal, is that by pretending that the carryover of unspent authorizations doesn't exist, Congress, by some process that is not exactly clear, can "regain control of the purse." In the first place, this authority observes, there is nothing new in this approach to budgeting long-term programs. It was widely employed for several years after 1942, finally to be abolished as unsatisfactory in 1950 by joint agreement of the Bureau of the Budget and the House Appropriations Committee.

As Mr. Harvey sees it, the problem comes down to this question: "Will the change to contract authority to cover the lead time, with appropriations made as needed to liquidate such programs produce a better controlled budget?"

Contract authorizations, this authority notes, are in effect, promises of future appropriations, and are just as binding as appropriations. The failure of Congress to make appropriations for the liquidation of such contracts would only result in deficiency requests and ultimately in court judgments. His conclusion is that "control of expenditures would move to the executive

branch, with Congress required to take a second—ministerial—action to provide money for payment.

Even if it could be shown that contract authorization was as effective a budgetary procedure technically as the present system of long-term appropriations, when the human equation is considered it would represent a long step backward. If one doubts this, let him ask himself: "Who would be the more likely to succumb to the temptation to extravagance and reckless spending—the legislator who, when he voted for a given long-term procurement program, let us say, had to vote the money to pay for it at the same time, or the legislator who could vote for it in the knowledge that he would be called upon to vote the funds for only a token downpayment?

What Should Congress Do?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "What Should Congress Do?" which appeared in the August 12, 1957, issue of the East St. Louis (Ill.) Journal.

WHAT SHOULD CONGRESS DO?

A week ago it was said in these columns after the Senate attached the jury-trial amendment to the civil-rights bill that "it makes no difference now" whether the legislation is passed. The bill has since been approved by the Senate and sent back to the House where Speaker RAYBURN and House Republican leader MARTIN are trying to decide whether to seek a compromise between the radically different House and Senate versions of the legislation. So a new decision is called for. In the circumstances, Congress should, as Speaker RAYBURN said Friday, approve the bill.

But no one should be under any illusions that the legislation will result in any important advances in civil rights. However, what the Senate left in the legislation is at least better than no bill at all. And there is a disturbing indication that many Members of Congress, Republicans as well as Democrats, would just as soon keep the civil-rights issue for the 1958 congressional elections, as pass the bill in its Senate form, which any compromise will have to approximate.

The bill as approved by the Senate Wednesday would establish a Civil Rights Commission, set up a Civil Rights Division in the Justice Department and permit the Attorney General to seek Federal court injunctions against any violations of voting rights. However, if he tried to get the court to punish anyone accused of such violations, it would be necessary to bring the case before a jury. In the South most juries are all white, and such proponents of adequate civil-rights legislation as Senator DOUGLAS of Illinois, believe it would be extremely hard to get a white jury to convict a white man of a charge of denying voting rights to Negroes.

But, as has been pointed out so often in the last few days, the legislation is the first civil-rights bill to be passed by the Senate in 82 years—since the post-Civil War Reconstruction days. That in itself is an accomplishment.

One important change should be made in the Senate bill. And that is to limit the scope of the jury-trial amendment to voting-rights cases. As passed by the Senate, it would apply to all criminal contempt cases in Federal courts. Such a sweeping change in judicial procedure is not only unnecessary but unwise.

While the Senate civil-rights bill is a disappointment and not likely to advance anyone's rights very far, it is still better than none. This is faint praise, but it is reason enough for congressional approval of the legislation.

Thirteenth and Fourteenth of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. MICHEL. Mr. Speaker, I should like to have inserted in the RECORD today two editorial letters by F. F. McNaughton of the Pekin Daily Times in which he discusses housing and expenses in the Soviet Union.

The letters follows:

THE EDITOR'S LETTERS
(By F. F. McNaughton)

At last our guide has balked. I asked to be taken into an actual home to see how the poor people live. She said that would be an invasion of privacy (she doesn't want us to see).

I know that they share toilets, baths and kitchens. (Our guide does.) In the old quarters, families jam into small rooms, then muscle each other to get into the toilet down the hall, or get a burner on the one stove that is in the common kitchen.

But before you get to feeling too sorry for the Russians about this, let me tell you two things:

1. Rent is almost free;

2. They are building nice new apartments for 200,000 people, in Moscow alone, in 1957.

In America, 20 to 25 percent of a man's pay may go to rent. I was dumbfounded to find that a Russian rarely pays 2 percent. Our guide pays about 1 percent. The building firm engineer who took us to see a big new project told me that he and his wife (she's an engineer, too) make together $400 a month. And they pay $3.70 a month rent.

This engineer and a building superintendent took me through a new project that will house 12,000. It includes schools, theater, sports area, always a library, shopping center. Here there will be mostly 2 families to a kitchen. They are trying to get the living area per person up to 10 square yards. That is a 9- by 10-foot space per person. Of course most are short of that.

Rent is charged according to the square yards you get and your income.

They all seemed to be angry over something in Life last spring. Seems that Life ran pictures of this same housing area and gave the impression that only aristocrats could get into it. They demanded that I look carefully at the tenants, and see for myself that laboring men lived there as well as better paid engineers and skilled workmen. They admitted that a quite nice apartment building nearby was occupied almost entirely by teachers, who are honored here, and paid way above average.

I wanted to ask if the women who were digging trenches and spreading tar on this new construction lived in the buildings already finished. But I didn't have the nerve to walk up close and take a picture of those women doing that hard, manual work, there in the mud on a rainy day; even as I had not taken pictures of the women shoveling manure at the collective farms.

They insisted that I come back in 5 years and see all bad housing gone.

Just got Russian haircut—cost 25 cents.

It causes me to write you a column on what the Russian man pretty largely escapes paying.

For instance, 2-bits for a haircut. But let's talk of bigger items.

Rent: As we wrote you yesterday, it is 2 percent to 2½ percent of pay; might be 50 cents to $5 a month.

Income tax: Is tiny.

Education: All education is free; and smartest students are paid to go to school.

Health: All free.

Court: If you think the cow is yours, the state will provide a lawyer for you. You can hire your own if you wish.

Automobile: The state does not think you need one, so doesn't manufacture one for you. Thus you escape all that big expense.

Preacher: Nope, you don't have to pay the preacher because you "don't believe in God." That means, too, that you escape all that rather heavy expense in America that comes under the heading of charity. You don't have to dig up for Red Cross, Salvation Army, hospitals, colleges, mission, the Y, polio, community chest, the poor benighted Hindu, or even the poor Armenian. And since you cannot carry or send 1 ruble out of Russia, I assume that the Jews here cannot contribute to Israel.

Vacation: Much of it is paid.

Women: There's the biggest one of all. A Russian girl, when marrying does not plan to become a liability to her young husband. I talked to the woman who is head of the English department at the university. She is the most charming woman I have visited with in Russia. I was asking her: "What happens to the wives of young students studying to be doctors?" She made it plain to me that no wife becomes a burden on her student husband. She herself, a trim, dimpled blonde, looks 30, but is mother of 5, and now a grandmother, and she told me that "in 30 years while having my family, I have never missed any work."

But there is more to woman cost than that. Russian women, as Ceil wrote you, don't spend billions on cosmetics and beauty treatments. They buy no foundation garments (corsets); almost no furs or jewels. They spend no time dressing up in high heeled shoes and white gloves to go to cocktail parties. A few days after the baby comes, he goes into a nursery, and just as a mare returns quickly to the plow, so they return at once to spreading tar, pitching manure, waiting table, running a hotel, or acting as head of the English department in a country that now has 41,000 teachers teaching English.

Average pay in Russia is about $100 a month; but without all those expenses listed above, $100 isn't as bad as it might be.

The Battle for Our Souls

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. GUBSER. Mr. Speaker, the drastic cuts in the United States information program overseas which resulted from budgetary restrictions are not passing unnoticed by our friends abroad. Under leave to extend my remarks in the REC-

Mr. Speaker, I submit the following editorial which recently appeared in the respected newspaper Dagens Nyheder in Copenhagen, Denmark:

THE BATTLE FOR OUR SOULS

England's BBC is stopping its shortwave broadcast of many years' standing to Denmark.

The American Embassy Information Office, Copenhagen, has had its budget cut 40 percent, which so far has resulted in giving notice to 8 employees, and cutting library and film operations.

The Soviet Union is opening an information office in Copenhagen.

These three announcements have all come within a single week, and give some food for thought.

Cutbacks on United States information activities here are taking place across the board, with similar cuts over the rest of the world. They are the direct result of congressional economy efforts—and to a certain degree of certain powerful congressional circles' war on the present administration. The American Information Service is Copenhagen has never attempted to carry on propaganda but has—not least as a result of its excellent library and its comprehensive film service—managed to create a needed basis for cooperation between the two peoples—and understanding of that America which to so many Danes seems distant and wondrous.

Not yet is the cold war ended, and international policy is still a worldwide battle to win souls, a war of ideologies carried on across national boundaries. It is with some regret and with more than a grain of concern that we realize that it is the voice of the West that is being silenced or tuned down, while the propaganda trombone of the East—where no dictator is forced to seek budget approval from Congress or Parliament—turns up its howls.

A Bill To Prohibit the General Services Administration From Acquiring the Property of the National Grange at Jackson Place, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FOGARTY. Mr. Speaker, having been a member of Laurel Grange No. 40, Harmony, R. I., for the past 25 years and being very much interested in the welfare of the National Grange, I am today introducing a bill which would prohibit Government agencies to acquire or use the National Grange headquarters site without specific congressional approval.

For some time now, hundreds of Grange members in my district in Rhode Island have been writing to me and have enlisted my aid to try to save their headquarters property here in Washington. It appears, from speaking to others of my colleagues here in the House from various sections of the United States, that similar action has been taken in their districts. You may say this is an unusual request. Why are persons from all over the country up in arms calling upon Congress to assist in returning to a national organization a piece of property, 50 by 70, located in the Capital. I understand that back in 1941 land at 744 Jackson Place was purchased by the National Grange and that the building which now stands thereon was itself raised, thanks to the united and concerted efforts and contributions of local Grange units throughout the entire land.

I have looked into the matter and have been convinced that the Federal Government has no need of this property. The reason I have joined with several of my colleagues in presenting this legislation to the Congress is that I felt the more Members who rally behind the drive to save the National Grange Building, the better will be our chances of succeeding.

My bill provides that no portion of lot 816, square 167, in the District of Columbia, the headquarters and property of the National Grange of the Patrons of Husbandry, shall be acquired for or used by any agency of the Federal Government. Too, the Administrator of the General Services Administration is directed to withdraw the declaration of taking of said lot heretofore filed by him in the United States District Court for the District of Columbia and to take such other action as may be necessary to restore title to said lot to the National Grange of the Patrons of Husbandry.

Our course is simple in this matter. The National Grange has a valuable piece of property in a very convenient location, actually not needed by the General Services Administration, which contemplates erecting a new office building adjacent to it. I believe that we should take the necessary steps to prevent the taking of the National Grange property.

Twelfth Anniversary of Independence of Indonesia

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung Conference, I announced that I would address the United States Congress each time there was an anniversary of independence of one of the 29 participating nations in the Asian-African Conference on friendly terms with the United States.

I wish to extend warm greetings to the Indonesian people, President Sukarno, and His Excellency Moekarto Notowidigdo, Ambassador of Indonesia, on the occasion of the celebration of the 12th anniversary of independence of Indonesia, August 17, 1957.

Indonesia is by far one of the most important of the Southeast Asian countries recently emerged from colonial status into nationhood. Realizing that the burden of independence is not a light one, President Sukarno in his speech opening the Bandung Conference in Indonesia, summed up part of the price of independence when he said:

For many generations our peoples have been the voiceless ones in the world. We have been the unregarded, the peoples for whom decisions were made by others whose interests were paramount, the peoples who lived in poverty and humiliation. Then our nations demanded, nay fought for independence, and achieved independence, and with that independence came responsibility. We have heavy responsibilities to ourselves, and to the world, and to the yet unborn generations. But we do not regret them.

In 1945, the first year of our national revolution, we of Indonesia were confronted with the question of what we were going to do with our independence when it was finally attained and secured—we never questioned that it would be attained and secured. We knew how to oppose and destroy. Then we were suddenly confronted with the necessity of giving content and meaning to our independence. Not material content and meaning only, but also ethical and moral content, for independence without ethics and without morality would be indeed a poor imitation of what we sought. The responsibilities and burdens, the rights and duties and privileges of independence must be seen as part of the ethical and moral content of independence.

Ambassador Notowidigdo looking back over the recent events in Indonesian history wrote:

These first years of our Republic have been marked with many difficulties and frustrations but also with substantial progress in many fields. * * *

We do not yet see the full fruit of our labor, but we have already laid the foundations of our national institutions and sown the seeds for the progress of our Republic. Since the achievement of Independence, the domestic and international position of the State has been consolidated with the implementation of plans for social, economic, educational and cultural development. For these and other reasons, I am convinced that a feeling of optimism toward the future is justified.

In the field of education, many new schools have been built and the drive against illiteracy has reduced it from 90 percent of the population in prewar days to 48 percent today. The provision of modern health services and the building of much-needed housing are only examples of the many efforts being made toward improving the welfare of the people.

On the economic side there is much to be proud of and grateful for. There is also much more to be done. Indonesia has a wealth of natural resources and a large reservoir of manpower; the increased technical skills we hope to see attained by our people in a few years will add greatly to our productivity. Transportation facilities have been modernized and expanded. Projects for development in all fields of production are being carried out as quickly as materials and machinery become available. Agricultural production, especially in rice and sugar, has increased recently. Many fertile fields for investment, such as ship-building for our inter-island trade and the construction business, exist today in Indonesia, and we encourage and protect foreign capital investment on a mutually benefiting basis.

The economic progress of Indonesia, however, is still dependent to a considerable extent upon the world market for our raw materials such as rubber and tin. If the international community of trading nations can work out a method of controlling the fluctuations of raw material prices, then world-wide economic and political stability

will be much easier to achieve and countries like Indonesia will be better able to develop themselves.

Indonesia has pursued and will continue to pursue a course of friendship toward all nations. It is our hope that our country will become an ever-increasing influence for peace and justice in the world.

Indonesia is discovering, through bitter experience, that difficult as it is to found a nation, it is even more difficult to build it up. Her problems, though great and perplexing, are not different in kind from those faced by other nations with diverse peoples or covering large areas, such as the United States, Canada, or India. None of these countries is exactly like the other. Each is trying to solve its problems in its own way. And each has prospered under a nonguided, democratic form of federalism.

Indonesians showed, during their independence, that they did not lack for leadership, imagination, or courage. Surely they can pull together today, as they did then, to find their own democratic solutions to their challenging task of nation building.

Swinish Misrepresentation

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks I would like to insert in the RECORD at this point a thought-provoking article which appeared in a west coast maritime publication.

The editorial prepared by John Haydon, editor and publisher of the Marine Digest, decries the indiscriminate usage of the term "pork barrel" to apply to projects designed to develop our marine industries.

Since my congressional district has had, during the past 4 years, appropriations for 8 harbor improvement projects, I am in a position to know what these projects will mean to the shipping, commercial fisheries and general boating industries in the Pacific Northwest.

These projects cannot be justifiably termed "pork barrel" when they will return to the Government many benefits. All of them were judged by the United States Army engineers to have high cost-benefit ratios. In addition, the extra tax revenues accruing from increased employment and expansion of facilities and activities will be an added return on the investment of this Federal money.

I would like to concur with Mr. Haydon's thoughts that the cynical term "pork barrel" be stricken from the congressional vocabulary. Text of the editorial is as follows:

"PORK BARREL" MISLEADING SLANG

Let's drop the expression "pork barrel," in reference to projected Federal construction projects. It often is applied at random to public works such as flood control, irrigation, reclamation and power, for a particular area of the country.

A campaign, which should receive immediate support, was initiated recently by Herbert G. West, executive secretary of the Inland Waterways Association, to eliminate this misleading expression, used for many years in various parts of the country in connection with Federal projects.

As used in Congress, "pork barrel" disparagingly suggests that such projects, if authorized, would result in efforts to please or placate the Congressman and his district. It is regarded as a fund appropriated more for political patronage than to make Needed improvements.

No expenditure authorized by Congress is subject to the deliberate scrutiny of as many agencies of Government as public works appropriations.

The use of "pork barrel" in reference to these important Federal multipurpose projects should be banned both in and out of Congress. It is misleading political slang.

Niagara Power at Last

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times on the subject of the Niagara power project.

As one who strongly supported the legislation authorizing the New York Power Authority to proceed with this important project, I feel that the Times has summed up admirably the facts surrounding the situation prior to the enactment of the necessary piece of legislation. The editorial follows:

NIAGARA POWER AT LAST

The frustrations of congressional delay and disagreement for 7 years are ended at last, and the New York State Power Authority will develop to its fullest allowed potential the generation of electricity from the Niagara River. By voice vote the Senate approved the bill passed 2 weeks ago by the House, 313 to 75. The Presidential signature is expected.

Credit for congressional completion of reasonable compromise legislation crosses party lines. The issue of private versus public development, once so hotly debated, had been supplanted by a rather mild anticlimax of argument over the amount of power to be shipped into Pennsylvania and Ohio. As recently as 4 years ago the House had voted by 262 to 120 to allow private-company development, while last year the Senate had divided, 48 to 39, for public development under the Lehman plan of preference distribution.

The estimated cost of the Niagara project has gone up to $600 million from the $385 million it might have cost in 1950, when a treaty with Canada determined our share of waters to be used for power. This capital will be raised by the sale of bonds to private investor. The power authority has no call on State or Federal credit; it has no taxing powers. It is, in the words of Chairman Robert Moses, "a business organization under Government auspices."

It is fruitless to speculate on whether the long, deplorable, wasteful delay on Niagara could have been avoided. Perhaps the argument over private or public development would have been going on yet—in view of the nature of the 1953 House vote—had not a natural disaster, in the form of rockslides in the summer of 1956, nearly destroyed the Niagara Mohawk Co.'s plant at the falls. This was a powerful peacemaker.

But another catalytic agent was the bonfire built under Congress by the power authority in the successful challenge to the treaty reservation inserted by the Senate which required congressional approval before any agency would be licensed to develop Niagara waters. The Federal court of appeals on June 20 ruled, in effect, that this reservation was domestic legislation and that the Federal Power Commission had authority to license.

Well, the long battle is over. The power authority is not only ready to go ahead; it has, with anticipatory help from a State loan, already started making studies, surveys, borings, and designs. The settlement approved by Congress seems fair to all, and it comes none too soon to avoid disastrous hardships to power-hungry industry.

The Problems of the President

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include a column by David Lawrence:

THE PROBLEMS OF THE PRESIDENT: BASIC CAUSE IS VIEWED AS CONGRESS CONTROLLED BY OPPOSITION PARTY

Why is the obvious so often overlooked? This question might well be asked as one reads the many thousands of words being spoken and written about President Eisenhower's problems in dealing with Congress.

The obvious—that Congress is controlled by the Democratic Party, while a Republican administration occupies the White House—is hardly ever stressed as the basic cause of the differences between the executive and legislative branches of the Government nowadays.

But the ill effects of divided government cannot be suppressed.

It is, for instance, the objective and goal of the Democrats to win the next elections—both congressional and presidential. Plainly, Dwight Eisenhower gives prestige to the Republican Party. So the strategy of the Democrats is to see to it that Ike is discredited, ridiculed, and sniped at, in order that his hold on the people may be broken down. Speeches are prepared for Democratic Members of Congress to issue, and a whole barrage of publicity comes from the Democratic headquarters each week aimed at the President personally.

The drive was begun months ago to give exaggerated emphasis to Ike's illnesses. When this didn't impress the public, the next step was to hammer away at his absences from the White House or his playing golf or taking vacations. The statistics, of course, show that other Presidents—notably F. D. R.—averaged more days per year away from the White House than Ike has. But the people are presumed to have forgotten this—if, indeed, it ever was stressed by the partisans of other days.

Next in importance in Democratic strategy is to spread the impression that Ike doesn't work on the job—that the man who took an oath to execute faithfully the duties of his

fice, the man who commanded one of the iggest armies in the world in the biggest ar of all history, is so lacking in conscien- ousness that he would play "while Rome urns."

The public reads about official visitors and eremonies and golf playing, but little is vailable to the press on what any President oes from morning to night—the telephone alls, the cablegrams, the secret messages, as ell as the many memorandums on complex roblems that come to him from numerous xecutive departments and agencies for de- ision in the unspectacular phase of every- ay government.

Much of this detail at present is channeled hrough President Eisenhower's staff, but ven 4 or 5 knotty problems a day are enough o make anybody want to get some relief rom tension and make a break for the golf ourse. What a cruel form of propaganda is to deny the man in the White House n easing of his physical burdens by at- empting to picture him before the public s lacking in fidelity to his job.

Some of the attack is cautiously and nctuously applied. The President, it is rgued, is an honest man but he is in- redibly naive, or he is easily imposed upon, r he is bewildered by his job due to lack f experience. There have been many Presi- ents who have been imposed upon or mis- d. Some of their official advisers in past dministrations have gone to jail for fraudu- nt behavior. The public recognizes that no resident can be responsible for the oc- asional misbehavior of his appointees. isenhower may not have enough experi- nced politicians on his staff, but at least hey are an honest group of advisers.

When all the attacks are appraised, it must e said that, as of this month—less than a ear after his reelection for a second term— he prestige of President Eisenhower still eems to the Democrats very important to reak down. It's a curious contradiction— here has been so much said about the wan- ng influence of a second-term President, yet here is so much effort being exerted to eaken an influence that is supposedly non- xistent.

Eisenhower's prestige with the people is ot going to be affected by partisan attacks, ecause the public believes he is doing the est he can while a Democrat-controlled Con- ress attempts every day to sabotage his ad- inistration. The next election will not be ecided on the issue of whether Ike played o much golf but on whether his adminis- ration was able to maintain the kind of con- itions that permit Americans to play golf nstead of poring over the casualty lists of heir sons killed in action on the western ront.

McElroy Is Ideal for the Job

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FULTON. Mr. Speaker, it is a leasure to give hearty congratulations o Charlie Wilson, the Secretary of De- ense, for the capable handling of the emanding job of Secretary of Defense uring the Eisenhower administration. he job is so big and complicated that harlie Wilson deserves the thanks of he American people as well as every itizen of the free world for the vital art he has taken in assuming respon- ibility for the wonderful buildup of our United States forces and defenses, as well as the United States bases throughout the world, numbering 250.

Three cheers and a pat on the back to Charlie Wilson and his loyal wife as they finish their duty in Washington, D. C., and a real welcome for the new Secretary of Defense who is assuming this tremendous responsibility with the good wishes of Charlie Wilson as retiring Secretary of Defense and all of us who are interested in strong United States defense as the best insurance against another war.

Under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh, Pa., Press of August 8, 1957:

MCELROY IS IDEAL FOR JOB
(By Douglas Larsen)

WASHINGTON.—Neil McElroy, the 52-year-old president of the Procter & Gamble soap company looks like an ideal man to fill the shoes of Charley Wilson, outgoing Secretary of Defense.

Mr. McElroy is full of energy, and an industrialist of proven ability. He set up the various soap divisions of Procter & Gamble so that they would be in direct, heated competition with one another.

The result: The corporation's business zoomed.

President Eisenhower announced yesterday that he plans to nominate Mr. McElroy to succeed Mr. Wilson.

As Chairman of the White House Conference on Education, Mr. McElroy demonstrated that he had that special personality touch and sixth sense for sniffing out political boobytraps. These are essential attributes for a successful top Washington official.

EXPLOSIVE

This education conference had dangerous, explosive political and personal possibilities for Mr. McElroy. At least half the delegates to the meeting came armed with some kind of harpoon to hurl at him or the President.

But by being honest, direct, and businesslike he ended up with a pat on the back from everyone there, and with some work accomplished. The latter is rare and not really expected from education conferences.

It's good that Mr. McElroy has this nice collection of talents because there is no such thing as a boss of the Pentagon having too many talents. In fact, before Charley Wilson came along it was believed by many serious students of government that this defense post was too big for one man.

Charley proved that one man could run the three services and survive reasonably well. But it was frequently a harrowing experience.

To say that Mr. McElroy is moving into a hornet's nest is to minimize the hazards of his future employment. Recent reports indicate that the United States is more ahead of the Russians in the development of new weapons than most people have assumed. But that's where any optimism about his working conditions ceases.

SENATORS ROUGH

First off, Mr. McElroy is bound to be subjected to a rough session by the Senate before it confirms his appointment.

Because soap has been his product he won't be as vulnerable as Mr. Wilson was. General Motors was the biggest defense contractor when Mr. Wilson left the presidency of that firm to move to the Pentagon. But Mr. McElroy's personal holdings and business interests will get a microscopic inspection.

No matter how tough this preliminary bout is, it'll seem like fun compared to what will face him when he finally takes office in the Pentagon.

Among his problems will be an agonizing budget reduction and the Army-Air Force feud over guided missiles.

If Not the Kinzua, What?

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. FENTON. Mr. Speaker, with the passage of the public works appropriations bill for 1958, the proposed Allegheny River Reservoir in Pennsylvania and New York will become a reality.

After a period of more than 25 years the need for such a project has been recognized by the Congress and an initial appropriation of $1 million provided to commence construction in 1958.

May I add that much of the credit for this reservoir must go to Congressman LEON H. GAVIN, of Oil City, Pa., for his fine, persistent efforts over a long period of years to bring this project to a successful conclusion.

His knowledge of the facts in the case were indeed such that greatly impressed me as to the need for the Allegheny Reservoir.

The following newspaper article from the Oil City-Franklin-Clarion, Pa., the Derrick relates an interesting story as to the great need for the Kinzua Dam, and its probable effect in the years to come.

It is especially interesting to note the beneficial effect it will have for sportsmen.

Congressman GAVIN has given the people of western Pennsylvania fine service in advocating and pressing for this Allegheny Reservoir which will mean much to the future development of western Pennsylvania.

The article follows:

IF NOT THE KINZUA, WHAT?

If you have read the papers for the last 6 months, you might have noticed that some sportsmen's organizations are opposing the construction of the Kinzua Dam at Warren, Pa.

The opposition seems indecisive. It is yes and no.

At the convention of the Pennsylvania of Sportsmen's Clubs in Harrisburg last March, the federation passed a resolution opposing the proposed dam on the Allegheny River.

But at a meeting of the northwest division, part of the same federation, in New Castle last June, some sportsmen were undecided. How could the northwest division oppose the Kinzua Dam without opposing Congressman LEON H. GAVIN, of Oil City? GAVIN, fn 1956, received a citation for his efforts in behalf of conservation of our natural resources. It came from the hands of the northwest division.

And then on Sunday, June 29, at Cooks Forest, after the Western Pennsylvania Clean Streams Association, Inc., of Tarentum, conducted what appeared to several Oil City people to be a "cut and dried" session of its board of directors and officers, an effort was made to argue the merits of the Kinzua Dam again in the open part of the meeting.

AN ARGUMENT STAGED

Either by accident or design the stage had been set. Congressman GAVIN, a prime

mover for the Kinzua and a persistent and performing conservationist with national honors stretching from here to Washington, D. C., was the principal speaker.

From Clarion, "Heap" Alexander, just as much opposed to the Warren Dam, came in with an armload of papers.

In that part of the meeting where the pollution of Hemlock Creek could have been presented to the Clean Streams Association as new and serious business, Mr. Alexander was introduced. And instead there developed some egging-on of the juvenile, "sic 'em" variety.

But diplomatically, the president of the clean streams group would not encourage any Gavin-Alexander argument. The Congressmen declined also. Mr. ALEXANDER spoke his piece briefly.

After which there appeared to be some telling-off in one corner of the shelter. The Congressman's voice carries, even informally.

DEBATING SOCIETIES

So it appears at this late date, some 15 or 20 years after the Kinzua Reservoir had been authorized, after $650,000 had been spent on preliminaries and many lives and millions of dollars had been lost to floods along the Allegheny River watershed, sportsmen of this State, and others, are turning what should be fast-moving, forward-looking conservation groups into dillydallying, doubting, debating, we're-going-to-see-the-governor societies.

The question now arises by what yardstick of conservation have the sportsmen of Pennsylvania prejudged the Kinzua? If not the Kinzua Dam, what?

Can the northwestern Pennsylvania sportsman (outdoorsman would be better if he could be called a conservationist), favor or accept a diversion ditch to Lake Erie? Does he favor choking the Allegheny River with mooneyes, lamprey eels, and other water trash which would stream from the overflow gutter from the Great Lakes?

Can any sportsman be opposed to 9 more inches of water in the Allegheny River in the recreation season. Does he oppose better boating—the fastest growing outdoor recreation?

Can any conservationist oppose the improvement in ecological conditions which controlled streamflow may bring to the Allegheny? Does he want the yearly scourings by flash floods which wash out the aquatic insect life in the upper Allegheny and its tributaries to continue? Can he ignore the benefits of a controlled flow at times when bass, pike, and muskellunge are spawning?

WHO LIKES MOSS?

Will not 9 more inches of water in the river spread to cover many acres of gravel bars, shorelines, small islands, which now are burned out of insect life during the dry spells of later summer and fall. More water in the river can mean more food for fish and more fish and more sport.

Can any outdoorsman oppose lower water temperatures which the Kinzua will provide in the Allegheny? Will not better temperatures keep down moss and weed growth?

Will not the game fishes in the river benefit by the added oxygen which will be infused as the Kinzua discharges its storage?

Will not the 30-mile lake attract migratory waterfowl and speedup the Pennsylvania Game Commission's "geese in the mountains" projects?

RESERVOIR IS INSURANCE

Granted that the ideal way to stop floods is to trap water as it falls in the watershed. But with so many people abusing our soils, woods and waters, can any conservationist hope to secure $150 million or any sum equivalent to that which may be spent on the Kinzua, for basic land, soil and water conserving measures in the Upper Allegheny River Valley?

Is it wrong for a conservationist to accept a reservoir of water for flushing out domestic and industrial pollution, should such a need develop in the tremendous growth of this country's population as predicted for the next 25–50 years?

Has not the present-day prosperity, by-product of American industry, given the sportsman license to be choosy about the type of industry which settles in his watershed? Think back to the 1930's when thousands of western Pennsylvanians wheeled dirt and clay from one end of a field to the other on what were make-work projects. Remember our own Hasson-Ramage? Would not any industry, even one with the worst water-consuming and pollution features, have been accepted by any of the river-front, depression-suffering cities in the Allegheny Valley? May not these conditions return?

BY 2000 A. D.—A PITHOLE?

Can anyone oppose the Kinzua Reservoir because one of its multiple benefits may be a water supply for Pittsburgh's industry or homes? May not the same water yet be needed in Oil City, Knox, Clarion, Franklin, where new, open-pit operations are discharging mine acid waters, loosely, recklessly, and in some instances dangerously close to sands, springs and wells that yield our drinking water? (In heavy rains; poisonous, acid waters now are washed out of Horse Creek and Hemlock and many yet contaminate wells on the Seneca Farms—the source of Oil City's water).

Can the conservatinist say the Kinzua will form ugly mud banks along its 30-mile lake and then be ignorant of the mud which flows in the Allegheny River today. Let them post a watch on the State Street Bridge. After a heavy rain in the Upper Allegheny Valley, the river flows coffee-brown for 5 to 7 days? Isn't the mud already here—from Potter County to Pittsburgh? And what is the federationist, member of a clean streams group or corner conservationist doing about it?

If not the Kinzua Dam—by the year 2,000 what?

Equal Rights Amendment Is Democracy in Action

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. DOYLE. Mr. Speaker, it was my pleasure to sponsor House Joint Resolution 519 and since I was unable to participate in the discussion about the equal-rights amendment at the time Congresswoman ST. GEORGE spoke on the floor July 19, I feel it fitting and appropriate I make the following very brief comments:

The controversy regarding the equal-rights amendment today brings to mind Benjamin Franklin's passionate outburst prior to the Revolution when certain timid colonists opposed independence on the ground that they would have greater security as English colonies than as an independent nation. With fine scorn, Franklin said: "Those who would give up essential liberties for a little temporary security deserve neither liberty nor security, and will get neither."

The issue at stake in the equal-rights amendment is the fundamental question of freedom versus bondage for women. Shall we continue a dual system of government, with half of our citizens subjects of State authority, deprived of civil and political liberty guaranteed to all by our Constitution; and the other half free citizens, in a democracy, 100 percent protected by that great document?

In our democracy the principles of equal rights for all and special privileges for none and equal protection of the law should apply to both men and women alike. The equal-rights amendment would make such application a living reality.

Freedom of the Press

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the the following editorial which appeared in the New York Times on Sunday, August 11, 1957; it is a splendid expression of the relationship between freedom of the press and free people:

Freedom of the press is the greatest enemy of tyranny. It is also the greatest friend of liberty. These truisms were realized long ago. The men who formed the United States knew so well that liberty is impossible without freedom of the press that the principle is enshrined in the very first amendment to our Constitution.

Politics is an art and not a science, but it is nevertheless tempting to set up a law: a dictatorship cannot survive freedom of the press, and conversely where there is true and sustained freedom of the press there cannot be a dictatorship.

Cuba under President Fulgencio Batista is probably the most striking evidence of this fact in modern times. So long as General Batista maintained censorship last winter he was able to restrain the popular movement against his regime. When this censorship was broken in February, first by a revelation of the truth about Fidel Castro's successful rebellion in the Sierra Maestra and secondly by the expiration of the term for the suspension of constitutional guaranties, the resistance to the regime began to swell.

The Cuban press was still operating under great difficulties. Government pressure was menacing. It induced most Cuban newspapers and magazines to adopt a self-censorship, but it is to the credit of the press that it forced the issue to the utmost limits which could safely be reached. In recent weeks the news and articles were getting bolder and bolder in the amount of unpleasant truths printed and in the critical tone adopted.

One might say that the censorship now imposed is a tribute to the courage of the Cuban press under great difficulties. The information published in a newspaper such as the Prensa Libre of Habana or the widely distributed and influential weekly Bohemia, to name only two organs, was obviously building up a state of mind in the public that General Batista and his supporters could not stand.

It was the truth they could not stand. Truth kills dictatorships as surely as the

most deadly revolution. This is why General Batista suspended constitutional guaranties on August 1. Under them, the press was relatively free. Now, except for official communiques, it is blacked out. This may well give the Batista dictatorship a lease on life, but it may turn out that General Batista waited too long.

Tenth Anniversary of Independence of Pakistan

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Bandung conference, I announced that I would address the United States Congress each time there was an anniversary of independence of one of the 29 participating nations in the Asian-African Conference on friendly terms with the United States. I rise today to congratulate the people of Pakistan, Prime Minister H. S. Suhrawardy, and His Excellency Mohammed Ali, Ambassador of Pakistan, on the occasion of Pakistan's 10th anniversary of Independence, August 14, 1957.

Pakistan is only 10 years old yet the cultural heritage of the land and peoples comprising the nation stretch back to antiquity. Pakistan is a country formed by people of ancient lineage and great traditions. The nation came into existence as the result of a struggle of a people to win a homeland for themselves in which they would be free to live their own way of life, develop their own culture, and safeguard their political and economic interests. Pakistan was founded by the indomitable will of a people determined not to be relegated forever to the unalterable position of a colony. Pakistan thus represents the will of a people to live as a distinct nation because of their independent and distinct culture and outlook.

Pakistan has demonstrated its dedication to the ideals of democracy. Nearly 8½ years after Pakistan came into existence, the constitution of the country was completed. March 23 is and always will be a memorable day in the annals of the history of Pakistan. On this day, the new constitution of this young and virile nation of over 80 million people came into being, and Pakistan became a Republic. March 23, 1956 was, therefore, a milestone in Pakistan's progress along the path of political stability and constitutional government. The constitution lays the utmost emphasis on human rights and envisages a state which is conducted and inspired by fundamental democratic elements.

Pakistan was first firmly launched on this path by the Father of the Nation, Quad-i-Azam Mohammed Ali Jinnah, on August 14, 1947—the day Pakistan came into existence as an independent, sovereign state. Upon the death of Mohammed Ali Jinnah soon after the establishment of the new nation, there fell upon the shoulders of former Prime Minister Liaquat Ali Khan, the tremendous task of giving substance to the blueprint of building the machinery of government in order that Pakistan might effectively express the will of her people to contribute through democratic processes to the welfare of mankind. Today Prime Minister Suhrawardy is continuing in the same fine tradition.

The economic heritage of Pakistan was not so rich. However, the accomplishments of the country since it began its separate political existence evoke sincere admiration. Her achievements since winning independence are myriad. The astonishing progress made during such a short augurs well for the future. In the opinion of Mr. Zahiruddin Ahmed, economic counselor, at the Embassy of Pakistan in Washington:

Although Pakistan, starting from scratch, has made tremendous progress, there is still need and room for much greater efforts for the development of the country if the living standard of the common man is to be improved. The Government of Pakistan has set this target and is determined to achieve it. The main effort must of course be Pakistan's own but the help and assistance of friendly countries can materially accelerate the rate of progress, through continuing foreign aid, loans and, most important of all, through the investment of private venture capital in Pakistan.

Though Pakistan and America are far apart in space, though they are very different in their ways of life, each has great responsibilities for the peace and welfare of mankind which it cannot hope to meet fully without the advice and help of the other. From its birth as a new nation Pakistan has drawn inspiration from the United States in its efforts to resolve its problems. Through a positive policy designed to promote better understanding and closer cooperation between other nations and themselves, Pakistan has received substantial aid from the United States and has drawn closer to the American people.

The events of their early years of freedom and the manner in which the people of Pakistan faced them, have rightly filled them with hope and confidence for the future. We rejoice at Pakistan's march toward progress and a better standard of living, benefits which are common to all true democracies.

Again, I salute Pakistan and offer her a tribute of admiration and the most fervent good wishes for a successful and glorious national future.

Bob Addie Has Written a Column in Which Most of Us May Well Find a Bit of Each of Us

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. HÉBERT. Mr. Speaker, every once in a while a talented sportswriter dashes off a piece of refreshing prose which brightens our otherwise dull lives.

Bob Addie, of the Washington Post, has turned out just such a piece. Being of the breed, I perhaps can more appreciate his words than many of you. I am certain, however, that, for each of you in whom has sprung the hope of being a sportswriter or seeing his byline on the sports pages, there will be found a trace of yourself.

It is such a delightful departure from the usual stock in trade of the monotonous report or comment on those who make the news for sports pages that it should be shared by as many as possible. For these reasons, I pass it along to you, under leave to extend my remarks, and include Bob Addie's sparkling bit:

THE SPORTSWRITER

He affects sports shirts, sports jackets, sports overcoats, and sports shoes. He would like to affect a sports car, but he can only afford the sports cap. But, as you can see, he is a sport all the way.

He usually has had very little sports experience on the playing field. In high school and college, he was the official scorer, the waterboy, the equipment man, the team manager. When anyone asks him if he played college football, he says: "I was too light."

He's a frustrated foreign correspondent (who is a frustrated sportswriter). He would like to wear a trenchcoat, smoke a pipe, wear a fuzzy hat with a feather in it, speak nine foreign languages, and escort mysterious Swedish beauties out of the country a step ahead of the Russian spy ring which is trying to steal the secret on how to wear seersucker suits without wrinkling the cloth.

He's also a political seer and thinks he never misses picking a presidential race. After all, he figures, he picks 16 teams in the major leagues in baseball and then picks the No. 1 football team in the country out of hundreds of aspirants; so how hard can it be to pick between two candidates?

He can never leave his work because people won't let him. After all, he's in sports and sports to most people are recreation and relaxation. People like to relax talking about sports.

If he marries—and he usually does to pick up a reader—his wife generally knows nothing about sports and couldn't care less. If he has any kids they must be in the mold of champions he has admired.

If people look down their nose at his occupation, the sportswriter is quick to remind you that some of our most respected pundits were once sportswriters—people like Westbrook Pegler, Paul Gallico, the late Heywood Broun, Scotty Reston, Drew Middleton, Eddy Gilmore, George Dixon, and Winston Churchill. (Churchill covered cricket during the Boer War.)

He's proud of his profession and points to such giants in his business as the late Damon Runyon, the late Ring Lardner, the late W. O. McGeehan, the late Grantland Rice, and the late O. B. Keeler. The reason he admires all the late sportswriters is that our hero will never admit anyone alive is better than he is. But still he's proud of his integrity and points to the famous line of W. O. McGeehan, who was once offered a sum of money for a story. "If it's a bribe, it's enough," W. O. said. "If it's a gift, it's too much."

He always brings up the story of John Kieran, the erudite, onetime sportswriter of the New York Times. John was asked to speak at Yale but some students objected to the compromise with intellectualism in allowing a sportswriter to address a group of

old Eli's sons. So Kieran made his entire address in Latin.

He's proud, too, of the "characters" in his business—fellows who have become legends with their flights of whimsey. There was the old sportswriter, for instance, who was asked by a cub: "Is that the west where the sun is setting?" And the veteran replied: "If it isn't you have one heluva story, son." Then there were the two New York sportswriters in Texas covering the Giant's spring training years ago. They got homesick while "tapping the tea" and decided to take a taxi all the way back to New York. As they got in the cab, one said: "You'd better get in first because I'm geting out on 34th Street."

He is, after all, a newspaperman so he's proud of his scoops. But the day he writes a story which beats everybody else, people will forget where they read about it.

He is quick to defend and slow to offend. He can count on the fingers of one hand the number of athletes who have ever thanked him for a story but if he had a dime for every guy who threatened him when he wrote a critical story, he'd be too rich to write sports.

He can pontificate on the strategy of a football coach who has something like 100 intricate plays at his command and usually has them executed with the precision of a machine. But that doesn't awe the sportswriter, who figures all coaches are managing editors with their brains knocked out. (Or maybe it's the other way around.)

He lives in a beautiful world where it's always game time and yesterday's tragedies fade like the ripples on a lake. He's the eternal juvenile who would not change places with a king. He's Pagliacci, the Pied Piper, Walter Mitty, Peter Pan, and Jack Armstrong, the All-American Boy.

The Navy's Role in Keeping the Peace—Address by Rear Adm. Stephen R. Edson, S. C., United States Navy, Commanding Officer, Naval Supply Depot, Mechanicsburg, Pa., Representing the Department of the Navy, at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States, Held at Harrisburg, Pa., July 10 Through 14, 1957

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the encampment, Defense Means Freedom.

On July 12, 1957, the following address titled "The Navy's Role in Keeping the Peace," was delivered by Rear Adm. Stephen R. Edson, S. C., United States Navy, commanding officer, Naval Supply Depot, Mechanicsburg, Pa., representing the Department of the Navy:

The Navy's Role in Keeping the Peace

(Address by Rear Adm. Stephen R. Edson, S. C., United States Navy, commanding officer, Naval Supply Depot, Mechanicsburg, Pa., representing the Department of the Navy, before the 38th annual encampment of Veterans of Foreign Wars, July 12, 1957, Harrisburg, Pa.)

It is a distinctive honor for me to appear here today. The theme you have chosen for this year's encampment is one which has been a great influence upon our people, particularly in this prolonged period of world tensions when alert, patriotic organizations such as the Veterans of Foreign Wars, must devote so much of their efforts toward public realization that defense truly does mean freedom. As a professional military man I can express it no better way.

Since the foundation of the Republic we Americans have enjoyed a long list of basic rights and privileges. These rights and freedoms are as unquestioned in our daily lives as the air we breathe. We have freedom to worship as desired; we have the right of free speech; we have the right of trial by jury; to be confronted by our accusers and many, many other guaranties included in the Bill of Rights. These blessings are worth fighting for. Free nations such as ours are aware of the Communist threat to these freedoms.

Action taken by the United Nations in Korea helped to forestall Communist aggression. We must stand ready and alert to guard our freedom—and to preserve a just and lasting peace. We must be militarily strong. International communism led by the rulers in the Kremlin respects only power. To deal with the Communists successfully we must possess the power which they will respect. By possessing this power we are in a position to negotiate with them on the issues between their world and the free world, and we are thereby able to strive for measures that will ultimately change their thinking, their actions, and their worldwide ambitions. Our mission in the Navy is to fulfill this requirement in concert with our sister services and our allies among the friendly nations. The strength we develop must be great enough to give pause to any would-be aggressor. The Navy operating jointly with the Air Force, Army, and the Marine Corps must make any "adventure" in aggression a calculation in which the risk of defeat is greater than the prospect of victory, and therefore unacceptable at the outset.

The mission of the Navy, as well as that of the other Armed Forces today, is to deter war. We believe that public sentiment is not likely to be aroused in the future as it was by the Japanese attack on Pearl Harbor. As a consequence, we believe our capabilities can be created and developed only by months and years of sustained, unglamorous effort. Strong, well-armed forces are the essential instruments by which to defend ourselves against communism. Experience shows that if armed forces are weak, that fact when known by a potential enemy, results in an invitation to attack. We also believe force is a major deterrent to any tyrant.

I should like to tell you then what we believe the Navy has done, and is doing, toward prevention of war as we view war's possibilities.

First in importance, this Nation and its allies must maintain control of the seas. Such control is vital and can be guaranteed only by a strong Navy. When we think of seaborne forces we must continually bear in mind that two-thirds of the earth's surface is made up of navigable water.

Control of the seas in relation to the defense of our Nation is the basic reason for the Navy's existence. This control means securing the use of the seas for ourselves and our allies, and denying the use of those seas to the enemy. We can easily picture the results to our own country if the enemy were to control the seas in wartime. For example, we could not supply our overseas bases or the forces of our allies. We could not import critical materials from sources beyond our borders. The frontline of any fighting would recede to our own coast. America's shorelines would be open to assault.

Our Commander in Chief, President Eisenhower, has stated that "the most important factor preventing an attack on our country is composed of several elements—the well-dispersed mobile forces of the Army, Navy, and Air Force and our ability to deliver immediate retaliatory attack with nuclear weapons against any aggressor." It should be noted in this statement that emphasis is placed upon mobile forces. The Navy represents mobility. Today's attack carrier striking force can change position 1,000 miles in 24 hours. This force is a hard target to find, and even harder to hit once it has been located. Since it does not occupy a fixed position it is much less vulnerable to attack by missiles than bases on land. On the other hand its aircraft can hit any target within an area of 3½ million square miles.

The heart of the carrier striking force is the new 60,000-ton aircraft carrier, such as *Saratoga* and *Forrestal*, with supersonic aircraft and nuclear weapons. This type of ship is a fully integrated airfield complete with two runways, hangars, and supply shops. It can launch aircraft which—were they based ashore—would need 10,000-foot runways. It can recover these same aircraft while it is launching others. These mobile airbases can be moved wherever needed. They bring up no problems of real estate or sovereignty, and when the task is finished we can bring them home again. The attack carrier striking force is a highly mobile assault force which if operating off the Atlantic coast could, for example, strike Harrisburg with nuclear weapons in a matter of minutes.

Now I should like to repeat that the chief purpose of the United States Navy is to serve as a deterrent to hostilities. Our national policy is based upon a desire for peace, not for war.

Of course, a strong Navy is invaluable in winning wars, but its greatest value lies in deterring or preventing local conflicts which lead to wars. The Sixth Fleet in the Mediterranean is an excellent example of a naval force accomplishing diplomatic objectives. The Mediterranean and Suez area, a troublesome spot, has been patroled by the Sixth Fleet since the end of World War II.

The importance of the Middle East to American diplomacy lies in the continuing unrest existing between the new Nation of Israel and the surrounding Arab States. Also, the colonial areas of Algeria and Morocco are restless in apparent movements for independence. This unrest includes Communist struggling for control of several Mediterranean countries. In this oil-rich territory the presence of our strong fleet is tangible and constant evidence to the Mediterranean people of America's interest in that region. I'm sure we all remember when a strong Communist bid for Greece was overcome by anti-Communist forces with the result of a clean-cut victory in that part of the Mediterranean.

The same situation exists in the Formosa Strait. In that sector our Seventh Fleet is often called the biggest deterrent to war in that troubled area. There is little doubt but that the Communist Chinese would have attempted to occupy Taiwan except for the barrier we have maintained there. So there you have a mobile diplomatic arm that can take the initiative in the far corners of the world and in so doing preserves the peace as we have come to know it in recent years. I believe it is most significant that most of communism's gains have been within the Eurasian heartland beyond the contact of

the United States Navy and its diplomatic influence. We should take heart in noting that by far the largest percentage of the world's navigable coastlines, and the countries which own them, have not been lost to the free world.

Now I should like to say a few things about the future of the Navy. I'm sure you all have read of the great advances made toward nuclear propulsion, particularly the tremendous achievements of the submarine *Nautilus*. As you know, she has recently been refueled after more than 60,000 miles of cruising and is now operating in the Pacific with her second atomic charge. This vessel has operated almost continuously for a year and a half with only the original supply of atomic energy. We have also commissioned recently the second atomic submarine, the *Seawolf*, and there are 10 other nuclear-powered submarines scheduled to be finished in present shipbuilding programs.

Funds have been made available for a nuclear-powered 11,000-ton cruiser. This atomic powerplant is being adapted to use in the supercarriers which will form the basis for our mobile attack forces. And speaking of supercarriers, in addition to *Forrestal* and *Saratoga* there are several others of the *Forrestal* class authorized. They will be *Kitty-hawk, Ranger, Independence,* and others yet to be named.

Also, experiments in the use of atomic energy for aircraft indicate that the first nuclear-powered plane, weighted down as it will be with reactor and shielding equipment, will be a seaplane to utilize the unlimited runways of the sea.

The Navy has made splendid progress in the field of missiles. We have two guided-missile cruisers, *Boston* and *Canberra*, already operating with the fleet and these ships use the missile Terrier. We see this missile or its refined successors, as the broadside battery of the men-of-war of the future. The heavy guns are on their way out. We have other missiles, some used for different phases of offense, such as air-to-air in which we have Sidewinder and Sparrow. And then there is Regulus, a surface-to-surface type, which already is at sea in 2 submarines and 4 cruisers. Petrel, another air-to-air missile, is in use by two aircraft patrol squadrons. And the experimentation continues toward greater range, greater accuracy, and wider adaptability in this new but apparently almost limitless weapon.

I mentioned earlier that atomic power will in the near future be used to propel certain aircraft. The Navy Department has predicted that nuclear-powered planes will fly in 1958 or 1959. That's just around the corner. Now these aircraft will virtually destroy the distance barrier in their operations. Their range will be limited only by the endurance of the crews who man them. This new source of energy as demonstrated by the *Nautilus* has revolutionized our Navy. The future nuclear-powered aircraft carrier, probably of the *Forrestal* class, will be able to operate, conceivably, throughout an entire war without refueling. Much of her bunker space will be utilized for stowage of food supplies and parts for auxiliary machinery instead of fuel oil as we now are required to do. From the experience gained in our operation of the great ships designed for war will come the knowledge to use in our merchant fleets. This is the purpose we seek; to build, not destroy.

With our shores protected from Communist aggression we can move forward to productive enterprises. By the use of atomic energy we hope we shall one day be able to carry much of our material improvements to the rest of the world, and bring back to America the raw supplies we need to keep our Nation prosperous.

Up to now I have mentioned the part to play and being played in our country's defense by the Navy. I have told you a little about new weapons and developments designed to keep our people free from attack. You do not need to be reminded that these shiny new tools cost money—lots of money. The newspapers have recently described in detail the current size of the military budget and the huge slice of taxation from which these funds are derived. Most of us will agree that whatever the cost, it is cheap when compared to defeat or enslavement by an atheistic, alien, authoritarian system which recognize no dignity except that of the all-powerful state. But I am compelled to say that all of our inventions, developments, and complicated machinery in which we must place some faith for our defense will acutally mean little without good men to operate them. The Navy needs good men, both as officers and enlisted personnel. In the opportunities for enlisted men we have a choice of 60 major fields. Many of them are particularly well adapted to industrial and other civilian use. For example, we train and utilize the skill of our selected men in every branch of electronics. Navy yeomen perform clerical duties similar to those of civilians such as office manager, junior executive, clerk typist and the like. There are specialized assignments, too, such as frogmen or underwater demolition teams, and duty on board our submarines. We operate hundreds of schools giving technical training in various specialties as well as on-the-job training, ashore and in the fleet. In addition, there are free correspondence courses available to all who will study. The Navy of today is a complex, scientific organization which uses and needs the best men it can find, and offers in return a satisfying career, excellent training, world travel and the best in retirement benefits. Your sons can find wonderful opportunities in this new Navy and, at the same time, make their contributions toward their country's defense.

I should like to leave you with one thought which, I believe, epitomizes the Navy's efforts of today: an early day oriental statesman once said, "To avoid bleeding in war one must sweat in peace." Let us all continue to sweat and to remain alert to the job before us, that we and our children can remain forever free.

Lahey Feels United States Aid Should Be Continued

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

LAHEY FEELS UNITED STATES AID SHOULD BE CONTINUED

(By Edwin A. Lahey)

GUATEMALA CITY.—Guatemala has been operated for 3 years as a laboratory experiment in democracy. This experiment has had the moral and financial support of the United States.

In the uncertainty created by the assassination of President Carlos Castillo Armas, there have emerged two questions of vital and immediate importance to both the United States and Guatemala.

One: Has the investment of the United States in Guatemala been justified?

Two: Should the United States Congress renew its faith in Guatemala by continued generosity in foreign aid?

The answer to the first question is an unqualified "Yes." The United States has nothing to be ashamed of in its strong support of the late President Castillo Armas. The objective evidence in Guatemala supports this statement.

The answer to the second question involves political argument, rather than an examination of the record.

But it can only be "Yes" if Congress, now about to appropriate for foreign aid for fiscal 1958, wishes to protect our investment in democracy in Guatemala.

AID WITHDRAWAL INVITES CHAOS

Withdrawal of United States aid, or substantial reduction of it at this critical time, would be an invitation to chaos in Guatemala, and an American confession of failure in the project we undertook when we first supported Castillo Armas in the revolution of 1954.

It was then that the Communist-dominated government of Jacobo Arbenz, the only Red bastion in the Western Hemisphere, was overthrown.

These hard political facts make it probable that the Department of State will urge Congress, if Congress needs the urging, to back its faith in Guatemalan democracy with money in the coming weeks, when appropriations for foreign aid are voted.

The same facts make it probable that both civil and military leaders in Guatemala will strive to avoid the traditional excesses of Latin American politics and follow the middle-of-the-road policies to which Castillo Armas was firmly dedicated.

Castillo Armas was baited and badgered by both the far rights and the far left in Guatemala, but he made no bones about his desire to shape the character of his country to something resembling that of its political godfather north of the Rio Grande.

A recent official progress report on the 3 years under Castillo Armas gives a conclusive answer to the question whether our investment of about $60 million in direct grants and loans since 1954 has been a good one.

That money has helped the Guatemalan Government launch programs to improve the lives of the people, particularly in the rural areas and to help them help themselves.

The assistance has been translated into roads, low-cost housing, hospitals, health centers, and education.

PROGRESS CALLED MIRACULOUS

Considering the opposition that Castillo Armas had from both the far right and the far left, it is a modern miracle that he made as much progress in a middle-of-the-road program that he did.

The landed barons of the country, for example, wanted revenge against the spineless proletarians who had given them a hard time under Communist leadership before 1954.

But Castillo Armas, by presidential decree, established a minimum-wage law for agricultural labor, inadequate even by Latin American standards, but a sign of his sense of moderation.

And in recent weeks, the late president told a meeting of private employers:

"At no time must we think that the exploitation of our wealth can be carried out at the cost of inhuman exploitation of our workers."

When he died, Castillo Armas was trying to persuade the middle and upper classes of Guatemala that they must accept the income tax as inevitable. This tax is now under consideration in Congress.

At the working-class level, large groups were equally impatient with the Castillo Armas government and unable to understand the slow pace of its reforms.

The labor movement, completely dominated by Communists under the Arbenz regime, was shattered in the revolution.

It has been necessarily slow in rebuilding, because of the quarantine against Communists.

In the May Day parade a few months ago, which the late president reviewed from the balcony of the national palace, workers carried angry placards denouncing the government as antidemocratic and complaining about their own wages and working conditions.

RICH, POOR FORGET HOSTILITY

This most remarkable aspect of the assassination of Castillo Armas was the evaporation of this hostility at both ends of the social spectrum.

Rich and poor alike suddenly came to the conclusion that Castillo Armas had done a heroic job for his country in the 3 years of his service.

Without the magic spell of the late president's sincere devotion to his country's democratic aspirations, some sort of a military coup would have been as natural in Guatemala City last week as the afternoon rains that come ploping out of the low clouds with deadly regularity.

Representative Clyde Doyle of California Asks and Receives From Library of Congress, History of Prayers in Congress

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present to your attention documentary material which I requested from the Legislative Reference Service, Library of Congress, Washington, D. C. The topic thereof indicates that the material furnished me is not the text of bills, resolutions, petitions, nor unanimous consents; yet it deals with a subject which is daily brought up and participated in during every session of the House of Representatives, in which I have been honored to be a Member in this my sixth term and over which you have presided with exceeding dignity, fairness, and distinction longer than any American—living or deceased. For, Mr. Speaker, every day before we begin our work on bills and resolutions and unanimous consents; before we begin our debates under the 5-minute rule—in fact, Mr. Speaker, before we begin any of these daily duties and responsibilities in the field of legislation, we very appropriately and properly engage in prayer. This is led for us by the distinguished and devoted Chaplain of the House of Representatives, Reverend Braskamp, and the distinguished Chaplain of the United States Senate. Mr. Speaker, this is well. It is well and good and strengthening to our clear thinking and rededication to the highest and best there is in our hearts, souls, and minds and ambitions as we begin our legislative procedures.

Mr. Speaker, several years ago I was invited to speak over a radio hookup over a wide geographical area. When I was asked by the master of ceremonies of the program as to what I felt was the most important step for America to take, and not having had notice previously of the question I was to be asked—I extemporaneously replied that it was that America should get on her knees humbly and reverently and frequently and stay there in an attitude and ambition to every major problem confronting America, both in domestic and foreign relationships. I still feel, Mr. Speaker, that my answer of several years ago still applies. Therefore, Mr. Speaker, you and my other distinguished colleagues, I am sure, will all understand why it is that I appreciate having received unanimous consent to include the following history of prayer in Congress from the Library of Congress.

The last several years, Mr. Speaker, there have been two very significant developments in the field of prayer in Congress. For, as you know, for several years now there has been a breakfast prayer group which meets every Thursday morning during the time Congress is in session for prayer and worship. The group consists entirely of House Members and the attendance each Thursday morning ranges from 25 to 50 Members. I have been pelased and received much inspiration from the fraternity of spirit and comity of reverence which has come to me from participation in the group these 11 years that I have already served in this great legislative body. Within the last 2 years, Mr. Speaker, has come the opening of that beautiful Prayer Room in the Capitol itself. You and other distinguished leaders in this Congress, both in the House and the Senate, recognize the important place of prayer in the life of Congress itself by making this Prayer Room available each day for Members to use with reverent use.

The information furnished me by the Library of Congress follows:

MARCH 25, 1957.

LEGISLATIVE REFERENCE SERVICE,
Library of Congress, Washington, D. C.

GENTLEMEN: What is the history of the opening of the Senate and the House with prayer? When did it begin? Was the first session of Congress at New York opened with prayer? If so, will you give me a copy of it? Who was the chaplain?

Was there any period of time when either House or the Senate was not opened with prayer? Was it opened with prayer all through the Civil War?

Give me a copy of the prayers given in the Senate and the House at the time of Washington's Farewell Address and then at the time Abraham Lincoln sent his message to Congress on the State of the Union.

Also give me the prayers given in the House and the Senate at the time Theodore Roosevelt sent his first message to Congress on the State of the Union. Also Franklin Roosevelt each time he sent his first message on the State of the Union.

Also, when Thomas Jefferson sent his first message on the State of the Union. Also the following on similar occasions: Hoover, Taft, Coolidge, and Cleveland.

Thank you very much.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

HISTORY OF EARLY PRAYERS IN THE CONTINENTAL CONGRESS

The first prayer officially given in the Congress of the United States was made on September 7, 1774, by the Reverend Jacob Duché. On Tuesday, September 6, Mr. Thomas Cushing, of Massachusetts, had proposed that Congress have a season of prayer every morning. Mr. Samuel Adams moved that the Episcopal clergyman, Rev. Mr. Duché, be requested to offer prayer the following morning.

Reverend Duché, read the psalter for the seventh day of the month, which included the 39th Psalm. He then struck out into an extemporary prayer which noticeably moved the Delegates. No complete text of this prayer was found in any of the bibliographical sources.

On May 10, 1775, the Second Congress invited Reverend Duché to open the following morning's session with a prayer. Silas Deane wrote that Reverend Duché "made a most pathetic and pertinent prayer."

On July 8, 1776, John Hancock wrote to Reverend Duché asking him to accept the appointment of Chaplain of Congress. The appointment was accepted and the duty consisted of opening each session at 9 o'clock with a prayer. The first prayer which Reverend Duché offered in his new official capacity was a plea for protection for the new American States. The prayer, quoted from Sabine's History of the Loyalists, is as follows:

"O Lord our heavenly Father, high and mighty, King of Kings and Lord of Lords, who dost from Thy throne behold all the dwellers on earth, and reignest with power supreme and uncontrolled over all kingdoms, empires, and governments, look down in mercy, we beseech Thee, on these our American States, who have fled to Thee, from the rod of the oppressor, and turn themselves on Thy gracious protection, desiring to be henceforth dependent only on Thee; to Thee do they now look up for that countenance and support which Thou alone canst give; take them, therefore, heavenly Father, under Thy nurturing care; give them wisdom in council, and valor in the field; defeat the malicious designs of our cruel adversaries; convince them of the unrighteousness of the cause, and if they still persist in their sanguinary purposes, O let the voice of Thine own unerring justice sounding in their hearts, constrain them to drop the weapons of war from their unnerved hands in the day of battle. Be Thou present, God of wisdom, and direct the counsels of this honorable assembly; enable them to settle things on the best and surest foundations, that the scenes of blood may be speedily closed, that order, honor, and peace may be effectively restored, and pure religion and piety prevail and flourish among Thy people; preserve the health of their bodies and the vigor of their minds; shower down on them, and the millions they represent, such temporal blessings as Thou seest expedient for them in this world, and crown them with everlasting glory in the world to come. All this, we ask, in the name of Jesus Christ Thy Son, and our Saviour. Amen."

Reverend Duché resigned on October 17, 1776, because of ill health and parochial duties. Congress voted him $150 as an acknowledgement for his services. However, on October 30, the Reverend Jacob Duché replied that the money should be applied to the relief of widows and children of Pennsylvanian officers killed in battle.

According to the sources consulted, Reverend Duché was actually not sympathetic to the cause of the new Republic. He went to England and did not return to America until 1792.

(Sources: Edmund C. Burnett, the Continental Congress; New York, Macmillan, 1941. Journals of the Continental Congress, vols.

II, V, VI; 1774, 1775, 1776. Rev. Edward D. Neill, Rev. Jacob Duché, the first Chaplain of Congress.)

PRAYERS IN CONGRESS

The custom of opening sessions of Congress with prayer originated in the Continental Congress.[1]

The first sessions of the new Congress under the Constitution on March 4, 1789, were not opened with prayer. The Senate elected its first Chaplain, Rt. Rev. Bishop Samuel Provost, on April 25, 1789; [2] the first Chaplain of the House of Representatives was Rev. William Linn, elected May 1, 1789.[3] Copies of the first prayers offered by these chaplains are not available.[4]

A search of Annals of Congress, Congressional Globe, and CONGRESSIONAL RECORD does not reveal any period when the custom of prayers was abandoned in either the Senate or the House. Prayers were offered as usual at the opening of sessions of Congress during the Civil War period, 1861–65.

Copies of prayers made at the time of Washington's Farewell Address September 17, 1796, were not shown in Annals of Congress or in Richardson's Messages and Papers of Presidents.[5]

In the report of the first annual message delivered by Thomas Jefferson on December 8, 1891, no prayer is mentioned.[6]

The Congressional Globe for March 4, 1861, the date of Abraham Lincoln's inaugural address delivered from the east front of the Capitol, does not mention that a prayer was given.[7]

GROVER CLEVELAND

On Wednesday, March 4, 1885, before President-elect Grover Cleveland delivered his inaugural address,[8] Rev. E. D. Huntley, Chaplain to the Senate, offered the following prayer:

"Thou who art the same yesterday, today, and forever, we are grateful for another opportunity of appearing before Thee in the attitude of humble worship, and though we tarry but a moment in Thy presence, it shall suffice to quicken our consciences and to remind us that for the performance of all public as well as of all private duties we are amenable to Thee.

"We come to thank Thee for the mercies of the past and to implore the continuance of Thine all-favoring providence.

"We come to ask Thy blessing upon the retiring President of these United States and upon him whose Presidency of this Senate has added steadiness and safety to its legislation and maintained impartially the rights and privileges of all its Members. And though these officers transfer their responsibilities to other hands, we ask that they may never cease to be the objects of Thy care and the recipients of Thy godly favor.

"We ask Thy blessing upon him who is about to be inducted into the high office of President of this Republic. May his life and health be precious in Thy sight. May he receive the hearty, honest, and unbegrudged support of all good citizens; and may he, together with those who shall be constituted his advisers, be so under the direction of Thy Holy Spirit, that his administration shall prove a signal blessing to this Nation and so a blessing to the world.

"Be Thou with him who is to preside over the deliberations of this body, the Vice-President of the United States. As the eyes of the servants look unto the hands of their masters, so may his eyes look unto the Lord his God. May he be faithful to his trust, and may he be supplied with wisdom from on high for the discharge of all his duties.

"We ask Thy special blessing upon those who for years have been honorable Members of this Senate, and who this day retire from the public service appertaining to this body. May the years which remain to them be crowned with tokens of Thy love. May goodness and mercy follow them all the days of their life. And may those who come to take their places be men who, fearing the Lord and working righteousness, shall be acceptable to Thee.

"Regard in mercy all who occupy advisory, legislative, or judicial relations to the Government. Dispose their hearts to keep Thy law, and may they so direct in public matters that all nations shall be constrained to recognize us as a happy and prosperous people, and to ascribe our happiness and our prosperity to the readiness with which we yield ourselves to Thy suggestions and the promptness with which we follow Thy commands.

"Our petition is before Thee, Lord, and we humbly pray that Thou wilt answer it according to Thy riches in glory by Christ Jesus. Amen." [9]

THEODORE ROOSEVELT

On December 5, 1905, the date of the reading of Theodore Roosevelt's first annual message, a prayer was offered in the Senate by the Chaplain, Rev. Edward E. Hale,[10] and in the House by the Chaplain, Rev. Henry N. Couden.[11] The texts of the prayers are not given in the CONGRESSIONAL RECORD.

On March 4, 1905, when Theodore Roosevelt delivered his inaugural address, the following prayer was given by Rev. Edward E. Hale, Chaplain of the Senate:

" 'I will multiply my people, they shall not be few.
I will glorify them, and they shall not be small.
Their congregation shall be established before me;
And I will punish all that oppress them.
Their nobles shall be from themselves and their governor from the midst of them.
I will cause Him to draw near
And He shall approach unto me.
And ye shall be My people and I will be your God.
The law shall not depart from them.
Be thou strong and of good courage;
Be not afraid, neither be discouraged.
For the Lord thy God is with thee whithersoever thou goest.'

"Let us pray.

"Father of life, Father of love, the work is done—for better, for worse—which Thou hast given this Congress to do. Grant Thy blessing to our endeavors. Thou wilt crown with Thine own success every good effort. Thou wilt forgive every mistake of ours. The past is gone, and we will forget the things behind. Tomorrow is Thine, and we trust it to Thee.

"For the homes and the country we pray again and again and always that they may come into Thy kingdom of love and hope and faith, pure as Thine own light, peaceable as Thine own purpose, and alive with Thy life. Give to Thy servants wherever they may go of Thine own strength that they may be fellow workers together with God.

"Almighty God, this Nation is in Thy care, and this people seeks Thee today. We are in prayer for the country, that it may be more and more the happy Nation which seeks Thee and finds Thee, as they find Thee who seek for Thee with all their hearts.

"Thou hast made this people master of its own destiny. This people has chosen its leaders and its Congress for these years before them. And they ask, and we ask, Thy consecration on these years, for every father and mother, for every son and daughter, for every home, the help and blessing of the living God.

"For the President, for the Vice President, for the Congress, for the judges, and for the people we ask the blessing every hour of the living God.

"For purity in their homes, for peace, for health, for strength, for all that God can give, for all that men can use in the service which is perfect freedom.

"Hear us, answer us, and bless us as Thine own children in Christ Jesus.

"Join me audibly in the Lord's prayer.

"Our Father who art in heaven, hallowed be Thy name; Thy kingdom come, Thy will be done, on earth as it is in heaven. Give us this day our daily bread. Forgive us our trespasses as we forgive those who trespass against us. Lead us not into temptation, but deliver us from evil, for Thine is the kingdom, the power, and the glory, forever. Amen." [12]

WILLIAM HOWARD TAFT

William H. Taft's first annual message was read separately to each House of Congress on December 7, 1909. In the Senate, an opening prayer was offered by the Chaplain, Dr. Ulysses G. B. Pierce.[13] The prayer in the House was given by the Chaplain, Rev. Henry N. Couden.[14] Texts of these prayers are not printed in CONGRESSIONAL RECORD.

On March 4, 1909, when William H. Taft delivered his inaugural address in the Senate chamber, Rev. Edward E. Hale, Chaplain of the Senate, offered the following prayer:

" 'I will multiply my people; they shall not be few.
I will glorify them, and they shall not be small.
Their congregation shall be established before me;
And I will punish all that oppress them.
Their nobles shall be from themselves and their governors from the midst of them.
I will cause him to draw near
And he shall approach unto me.
And ye shall be my people and I will be your God.
The law shall not depart from them.
Be thou strong and of good courage;
Be not afraid, neither be discouraged,
For the Lord thy God is with thee whithersoever thou goest.'

"Let us join in prayer.

"Father Almighty, Thou hast been pleased to make this people Thine own nation. In Thy providence, Thou hast watched over the fathers. Thou hast led them from the beginning, that this should be that happy nation whose God is the Lord.

"This is our prayer: That this Government of the people, for the people, by the people may not cease from the land; that all the people this day would consecrate today to Thee and ask for a father's blessing upon the children; that as Thou wert pleased to lead the fathers in a thousand thousand providences, so wilt Thou be pleased to lead all the magistrates of this Nation; that Thou wouldst bind together the States of this Nation; that each and every man, each and every woman, and each and every child may know that they live to Thy glory and in Thy fear.

"Hear us, Father, answer us, and bless as Thine own children, in Christ Jesus.

"Join me audibly in the Lord's prayer.

"Our Father who art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done on earth as it is done in heaven. Give us this day our daily bread; and forgive us our trespasses as we forgive those who trespass against us. Lead us not into temptation, but deliver us from evil, for Thine is the kingdom, and the power, and the glory, forever and ever.

"God bless the United States of America." [15]

CALVIN COOLIDGE

On Tuesday, December 8, 1925, Calvin Coolidge's first annual message was read to the Senate. The Chaplain of the Senate,

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

Rev. J. J. Muir, opened with the following prayer:

"Our gracious heavenly Father, we thank Thee for the sunlight; we thank Thee for every inspiring influence, for the guardianship of the night and for the opportunity of service with the day. We beseech of Thee that there may be given unto us such a consciousness of Thy nearness and to [sic] the great realities that press heavily upon our thoughts, so as to lead us to the largest purposes befitting the individual. We pray for Thy guidance this day, and ask Thee to lead us even when we ourselves think we can be self-sufficient. Hear and help us. For Jesus Christ's sake. Amen." [16]

The same day, when the President's message was read to the House of Representatives, the chaplain, Rev. James Shera Montgomery, offered the following prayer:

"O Thou in whom we have our being, again we turn toward Thee as our blessed heavenly Father with praise and gratitude. We thank Thee that we are still the objects of Thy love and in the counsels of Thy infinite heart. May this day bring to us duty with wisdom and grace. In our failures rebuke, chasten, and forgive us. If impulsive, restrain us; if we lack knowledge, O do Thou inspire it. Make us strong in faith, clear in vision, and immovable in our allegiance to every vital interest of our country. We pray in the name of Jesus. Amen." [17]

HERBERT HOOVER

Herbert Hoover's first annual message was read to the Senate on Tuesday, April 16, 1929. Rev. Joseph R. Sizoo, D. D., minister of the New York Avenue Presbyterian Church of the city of Washington, opened with the following prayer:

"Ever-living, ever-loving God, source of worlds without end and beings without number, in whom all our longings, hopes and aspirations are centered, we thank Thee that Thou art mindful of Thine own. We are not strangers to Thy care. Give us to know at the opening of another day that nothing, however small, escapes Thy notice and that there is no experience in which we cannot find Thy presence. May it be so with us today. Bless the President of the Senate, endow him with wisdom, patience, and courage born of faith in Thee. Grant that through our fidelity to our tasks a better and braver day may come to mankind. Through Jesus Christ our Lord. Amen." [18]

That same day, the President's message was read in the House,[19] and the chaplain, Rev. James Shera Montgomery, offered this prayer:

"Teach us, O Lord, to keep in our grateful minds Thy prevailing providence. We would praise Thee for that love which is the supreme power and sign and wonder of God in the world. Let us always determine to make Thee the divine Lord of our lives, upon which falls no shadow and rests no blame. Make us serious in thought, helpful in act, and gracious in manner. May these virtues be the constant tempter of our daily conduct. So abide with us that the record of this Congress shall be real, exalted, inspiring, and possessing a captivating influence that shall be felt throughout our land. Amen." [20]

FRANKLIN D. ROOSEVELT—1933

When Franklin D. Roosevelt delivered his first inaugural address, on Saturday, March 4, 1933, the Chaplain of the Senate, Rev. ZeBarney T. Phillips, offered the following prayer:

"Eternal God and Heavenly Father, before whose face the generations rise and pass away, who through all the ages hast led Thy children with the fire and cloud; hearken to our prayer and turn the heart of every citizen of the Republic unto Thee in this fateful hour of our own and the world's great need. Bestow Thy choicest blessings upon these Thy servants, who under Thee have been called to be President and Vice President of the United States. Give unto them the grace of true humility, the heart that knows no guile, the courage born of innocency of life, the gentle patience of the Christ, and, above all, the spirit of love that believes and hopes and endures, that they may be true leaders of Thy people.

"Bless every Member of the Congress and all others in authority, that they may be a glorious company, the flower of men, to serve [as] a model for this mighty world and to be the fair beginning of a time when, with every root of bitterness cast out, the good of all shall be the goal of each. Let Thy blessing rest upon the retiring President, Vice President, and Members of the Congress, to whom we pay our loving tribute. Bring the nations of the world, through an ever-increasing sense of fellowship, into one great family; hasten the time when war shall be no more, and may we never be content with any peace save that of Him who won His peace by making this world's ills His own, Jesus Christ our Lord. Amen." [21]

FRANKLIN D. ROOSEVELT—FIRST ANNUAL MESSAGE, 1934

On Wednesday, January 3, 1934, President Roosevelt delivered his first annual message in person to a joint meeting of the Senate and the House. Prior to the entrance of the Members of the Senate into the House Chamber, Rev. James Shera Montgomery offered the following prayer:

"'O give thanks unto the Lord, for He is good, for His mercy endureth forever.'

"We wait on Thee, of whom we are fragments and from whom all virtue flows. We thank Thee that Thou are heart of our hearts, soul of our souls, and self of ourselves; in us do Thou work out Thy holy will. Our President, do Thou keep him in the circle of divine love and care. With Thy presence, Lord, do Thous bless our Speaker, the Members, the officers, and the employees of this Congress, and may all hearts confess that from Thee cometh all our benefits. O spread the mantle of happiness and good health upon all hearthstones. Almighty God, let these days be a prelude of the triumph that is to come. Merciful Father, come with us, and marvels shall come to our Nation reborn. Let self-sacrifice, heroism, and idealism make their irresistible appeal to our Republic until all citizens shall realize their brotherhood in one common Father. May they listen to the law of love, and then strife and conflict shall be in the melting shadows of the past. O righteous God, frown upon all Mammon worship and hasten the time when the world over shall become just and generous, and by Thy touch man everywhere shall receive the blessing that he needs. In the name of our Elder Brother and the world's Savior. Amen." [22]

FRANKLIN D. ROOSEVELT—ANNUAL MESSAGE, 1937

When President Roosevelt at the beginning of his second term delivered his annual message in person to a Joint Meeting of the House and Senate, a prayer was offered by Reverend Montgomery prior to the entrance of Members of the Senate.

That prayer was as follows:

"Almighty God, unto whom all hearts are open and all desires known, and from whom no secrets are hid, cleanse the thoughts of our hearts by the inspiration of Thy holy spirit, that we may perfectly love Thee and worthily magnify Thy holy name. Through Jesus Christ, our Lord. Amen." [23]

FRANKLIN D. ROOSEVELT—1941

On Monday, January 6, 1941, President Roosevelt at the beginning of his third term delivered his annual message to a joint meeting of the House and Senate. At 12 noon, when the House convened, Reverend Montgomery gave the following prayer:

"Thy mercy, O Lord, is in the heavens and Thy majesty and power reach unto the ends of the earth. We pray Thee that somewhere we may see peace dawning beneath our fancied hopes and fears. Oh, let the Macedonian cry of brotherhood be heard in the dark places of this sad world and make us men of equal temper, of responsive consciences, of sturdy wills, and of courage that even dares to die for duty. In doubt, cloud, and storm let Thy right hand be strengthened and lifted up until the precepts of the Master rest in a golden cloud upon the hilltops of earth. Blessed Lord, for those who are being robbed under skies without blue or stars, let the rich, the talented, and the strong be joined, renewed in all those deep emotions which are the creative urge of true patriotism. We pray that its message may move us over the uncharted seas before us. O Thou who are both loving and righteous, both holy and just, restrain us from all discord and prejudice that we may pass through these days with vision and with consecration to serve. Almighty God, hear our prayer beating up through this weary, troubled world to that throne that forever rests in the white light of the Father's love and mercy. In our dear Redeemer's name. Amen." [24]

FRANKLIN D. ROOSEVELT—1945

On Saturday, January 6, 1945, the annual message of the President was read to a joint meeting of the two Houses of Congress. Prior to the Senate's entrance to the Hall of the House of Representatives, the House met at noon, and the Chaplain, Rev. Frederick Brown Harris offered the following prayer:

"O God our Father, who art love and light and truth, we turn unfilled to Thee. In a world where the very foundations seem to be shaken and the mad fury of battle assails our senses and tears our hearts, we cherish this hushed and hallowed moment which so long ago the Founding Fathers set apart as an altar of prayer at the day's beginning. Here, bowing with contrite hearts, we would be sure of Thee and of spiritual resources before we go to meet the high solemnities of waiting tasks.

"Enlarge our sympathies. Deepen our compassion and our pity. Save our sacred cause from the poison of misunderstandings. Forbid that fogs and shadows rising out of the fever and panic of these tense times should dim our unity. When we are tempted by petty annoyances, by despondency, by resentments, and by the angry emotions of the world, may we gaze tenderly at the gaping wounds of our allies and remember with gratitude that in our favored land not one steeple has fallen, not one temple has been demolished, not one home is in ruins. Ennoble our spirits so that through us may be preserved for all mankind the ideals of the Republic, to the glory of the God who hath made and preserved us a Nation. We ask it in the dear Redeemer's name. Amen." [25]

v. W. H. Milburn.	Methodist	Dec. 5, 1853

From 1855 until 1861 the House of Representatives did not elect regular Chaplains. Instead, the different members of the District of Columbia clergy took turns in opening each daily session with a prayer and in preaching on Sundays. The 37th Congress, meeting in 1861, returned to former practice of choosing a Chaplain.

COLLECTED PRAYERS OFFERED AT OPENINGS OF DAILY SESSIONS OF HOUSE 1923–46 AND SENATE, 1927–31; 1942–46

United States Congress. House. Prayers offered by the Chaplain, James Shera Montgomery, at the opening of the daily sessions of the House of Representatives during 68th and 69th Congresses of the United States, 1923–27. Washington, Government Printing Office, 1927. (69th Cong., 2d sess., H. Doc. No. 780.)

United States Congress. Prayers offered by the Chaplain, Rev. James Shera Montgomery, D. D., at the opening of the daily sessions of the House of Representatives of the United States during the 70th and the 71st Congresses, 1927–31. Washington, Government Printing Office, 1932. (72d Cong., 1st sess., H. Doc. No. 239.)

United States Congress. Prayers offered by the Chaplain, Rev. James Shera Montgomery * * * at the opening of the daily sessions of the House of Representatives of the United States during the 72d the 73d Congresses, 1931–34. Washington, Government the United States during 72d and the 73d sess., H. Doc. No. 409.)

United States Congress. Prayers offered by the Chaplain, Rev. James Shera Montgomery * * * at the opening of the daily sessions of the House of Representatives of the United States during the 74th and 75th Congresses, 1935–38. Washington, Government Printing Office, 1938. (7th Cong., 3d sess., H. Doc. No. 710.)

United States Congress. Prayers offered by the Chaplain, Rev. James Shera Montgomery * * * at the opening of the daily sessions of the House of Representatives of the United States during the 77th and 78th Congresses, 1941–44. Washington, Government Printing Office, 1945. (78th Cong., 2d sess., H. Doc. No. 806.)

United States Congress. Prayers offered by the Chaplain, Rev. James Shera Montgomery * * * at the opening of the daily sessions of the House of Representatives of the United States during the 79th and 80th Congresses, 1945–48. Washington, Government Printing Office, 1949. (80th Cong., 2d sess., H. Doc. No. 753.)

United States Congress. Senate. Prayers offered by the Chaplain, Rev. ZeBarney Thorne Phillips, at the opening of the daily sessions of the Senate of the United States during the 70th and the 71st Congresses, 1927–31. Washington, Government Printing Office, 1931. (71st Cong., 3d sess. Senate Document No. 306.)

United States Congress. Prayers offered by the Chaplain, Rev. Frederick Brown Harris, at the opening of the daily sessions of the Senate of the United States during the 77th, 78th, and 79th Congresses, 1942–46. Washington, Government Printing Office, 1946. (79th Cong., 2d sess. Senate Document No. 204.)

Comments Concerning Proposed Change in Method of Filling Supreme Court Vacancies

---

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. FISHER. Mr. Speaker, a few days ago I introduced a resolution calling for an amendment to the Constitution by providing that a committee composed of a judge from each of the highest courts of the 48 States would make the appointments to fill vacancies on the United States Supreme Court.

If adopted this would relieve future Presidents of a heavy and difficult burden. It is designed to obtain the very best judicial talent in the country for service on the Supreme Court. This method should result in more public confidence in the Court, and should make decisions more independent of political, sociological, and ideological considerations.

Mr. Speaker, since this amendment was proposed I have received a considerable amount of mail from over the country expressing approval of this approach to the problem. As evidence of interest in the subject I shall quote from a few of those expressions.

A former Attorney General of Texas writes:

I have noted with a great deal of interest press reports on your resolution for constitutional amendment to change the method of selecting Supreme Court judges from Presidential appointment to selection by a committee of State judges from each of the 48 States. This sounds like an excellent idea to me and I sincerely believe that if you can ever get it through Congress that the various States will vote for it.

A letter from New York City agrees with the proposal:

I agree with Your Honor 100 percent in regards to Supreme Court Justices being nominated by the majority of judges in our 48 States. In that case it is up to them to find out whether or not that person is qualified for the bench and that would end harsh words between the GOP Party and Democrats.

Another from Phoenix, Ariz., approving the proposal, adds:

In Washington's Farewell Address we hea... this admonition to all who shall live under the Constitution of the United States: "But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

From Mr. and Mrs. Allen LaCour, of San Angelo, Tex., came this:

We wish to command you for the recent step you took in regard to a Supreme Court vacancy.

The recommendation to amend the Constitution so that a vacancy may be filled by a method you outlined seems more democratic and would result in less political pressure.

Another constituent, Mr. P. M. McKinley, also of San Angelo, wrote:

I was glad today to see in our local paper where you are taking steps to change the manner in which members of the Supreme Court are selected.

There can be no question about our judges of the various States being better qualified to give us those that know how to consider cases before them from a strictly judicial standpoint.

Here is another one, this from Mr. Earl E. Stiefel, Kerrville, Tex.:

Your proposed constitutional amendment for the selection of Supreme Court Justices seems to me to be the best solution which has been offered to the problem of selecting the men to fill these positions. In fact, I know of no other proposal which has been made or will be made to curtail the political appointments to the Supreme Court of the United States.

From Budd Lake, N. J., comes another letter, including this viewpoint:

Read your article in last night's Journal American. I thank God somebody down there is bringing to the people a solution for a condition that has developed under our present system. * * * Keep up the good work.

A letter from Napa, Calif., comments:

Your novel proposal to select Justices of the Supreme Court is worthy of commendation and is a timely action that should have been proposed many years ago.

Another letter from Geneva, Ill., includes this:

Today's Chicago Daily Tribune reports that you have proposed a constitutional amendment vesting the selection of members of the United States Supreme Court in a special committee of State court judges.

Such an amendment strikes me as very much needed. * * * When the Constitution was written, I think the members of the convention, while fearful of excessive power in the hands of the Executive, did not visualize the extent that power has now reached. Such an amendment as you proposed would do much to return to the States power that must be lodged in them if our Republic is to continue.

I shall conclude with another letter from the many I have received on this subject, this one from a Houston attorney:

The Houston Chronicle of August 9, 1957, reports that you have introduced a bill in the House calling for the appointment of United States Supreme Court Justices by a special committee of judges from each of the 48 States.

I would appreciate very much having a copy of the bill as introduced. Apparently yours is similar to the so-called Houston plan which is a resolution calling for an amendment to the Constitution. We are very much interested in the plan here.

Statement by Col. Jose Luis Cruz Salazar, Guatemalan Ambassador to the United States

---

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Col. Jose Luis Cruz Salazar, Guatemalan Ambassador to the United States, at a press conference August 5, 1957:

STATEMENT BY COL. JOSE LUIS CRUZ SALAZAR, GUATEMALAN AMBASSADOR TO THE UNITED STATES, AT PRESS CONFERENCE AUGUST 5, 1957

Ladies and gentlemen of the press, please allow me, at the very outset of this press conference, to take this opportunity to express through you the deep appreciation that my country feels for the kind sympathy that has been extended to us by government officials, by the press and by the people of the United States, regarding the death of our President and leader, Carlos Castillo Armas. These fine expressions, coming to us at a time of great national sorrow, are accepted by my people as one more demonstration of the genuinely friendly feeling that the people of the United States have for my small nation.

My purpose in calling this press conference is to discuss with you members of the press any aspects involved in the assassination of President Castillo, about which you may wish to inquire, but particularly to discuss the motives which provoked this murder. I believe that the reasons behind this assassination involve not only my own country, but are directed against the peace and security of our entire hemisphere.

A few days ago my government made available to the press in Guatemala City documentary evidence to support our allegation that the assassin, Romeo Vasquez Sanchez, was a Communist, and that, therefore, the murder of our President was a Communist conspiracy. This evidence was examined by several competent, experienced newspaper reporters of international reputation, including some of your own colleagues.

Indeed, the allegation of my government that Castillo's murder was the result of a Communist plot, had already been pretty well confirmed, in effect, by a remarkable statement made to the press by one of the leading Communists in the Western Hemisphere, Juan José Arévalo, the former President of Guatemala who turned the government of my country over to the Communists. Let me read Arévalo's direct quotation, as carried in a United Press dispatch, from Santiago de Chile, under the dateline of July 27. What I am reading is the translation of an article written in Spanish, in the Spanish language daily, Las Americas, published in Miami, Fla.

I quote Arévalo: "Romeo Vasquez Sanchez enters history as a symbol of the Latin American struggle against those who would attempt to transform them into colonies. Those who tried to sell or lease Guatemala to foreign commercial concerns, will fall 1 by 1 under the terrible judgment of popular vendetta."

That is the calculated statement by the man who betrayed my country to communism, and who now is one of the directors of the CTAL, the Communist trade union movement in Latin America, and one of the most powerful arms of the Communist conspiracy in this hemisphere. I think his words are worth some study, and should be viewed in the light of the fact that Castillo was the third Central American president to fall under an assassin's bullets in the past 18 months.

Those of you who are familiar with the propaganda techniques of the Communists in Latin America will certainly recognize the exact phrases used by Arévalo: "The Latin American struggle against those who attempt to transform them into colonies," and "those who tried to sell or lease Guatemala to foreign commercial concerns."

Ladies and gentlemen, I assure you that every Latin American public official of consequence, who by word or official act has dared to demonstrate his friendship for the United States during the past 30 years, has been repeatedly attacked by Communists with those same charges, and, indeed, even with those very words.

By canonizing the assassin, Arévalo, in effect not only admits Communist complicity, he brags about it. And there can be no question of the meaning of his arrogant statement that those of us who are friendly to the United States, "will fall one by one, under the terrible judgment of the popular vendetta." He is telling us that others are already marked for slaughter. And he is issuing a thinly veiled warning to all Latin American officials, of the fate that may befall them if they are too friendly with the United States. Do you wonder that many Latin American officials are asking themselves today: "Which of us will be next?" Speaking as an individual who has worked hard to maintain the friendliest of relations between our two sovereign governments, do you not feel that I would be naive, if I were to ignore the personal warning contained in Arévalo's proclamation of a vendetta.

To me there is no question that one of the motives behind Castillo's brutal murder, was an attempt to intimidate the leaders of Latin America from following policies of friendship with the United States. I think I can speak for my colleagues, when I say that this will fail. We will not be intimidated.

However, I believe there is another, and more significant motive behind the assassination of our leader.

During the 3 years since Castillo led us in a successful effort to overthrow the Communist dictatorship in my country, we have made truly great progress, politically, socially, and especially economically. Our economic progress has been very substantially speeded by the generous assistance we have received from the United States. Much of this aid has come under what you have called the "mutual security law."

Let me say that President Castillo and the members of our government attached much significance to that word, "mutual." To us it means that we in Guatemala have a mutual responsibility, with the United States and our other allies, in this unrelenting cold war between democracy and communism. And from the very outset we members of Castillo's government have been determined to discharge that responsibility, and to contribute our share to the security of the hemisphere and of the free world.

Therefore, as our economic programs commence to produce tangible results, we undertook a continuing program which I think will be of special interest to you members of the press.

We have been bringing to Guatemala journalists, educators, and public officials from our sister Latin American Republics, which we know, like ourselves, have been deluged with an unceasing stream of Communist propaganda. And we provide them, as only Guatemala can do, with the opportunity of making a factual comparison of the actual results that can be produced in an underdeveloped nation, by a Communist dictatorship, and by a free democratic government.

First, we suggest to our visitors that they talk with our people, and learn from them both of the terror that existed in Guatemala during the Communist regime, and also of the complete failure of the Communists to produce any beneficial results for our nation and its citizens.

Then my friends, we take our visitors about the country and show them the things that have already been accomplished during the 3 short years of a democratic government, under the leadership of President Castillo. Let me tell you some of the things that we are able to show them.

Hundreds of miles of new highways; vast areas of virgin land now being opened to cultivation; more than 15,000 small farms that have been given to landless farmers; a system of banks that make modest loans to small farmers for the purchase of seed and tools; new small industries springing up; a serious unemployment situation wiped out (we actually have a shortage of labor right now); 8 new office buildings, 2 new hotels, and more than 3,000 new homes that have been built, or are under construction in Guatemala City alone; 4 new private banks that have been established, the first new private banks to be opened in Guatemala in 15 years.

We are showing them new schools that have been opened; new hospitals now serving our sick; new health and sanitation programs now going into effect. We are building a new telephone system, and expanding our power facilities. And, what I know will be of special interest to you, we can show them a free press in operation, which freely criticizes the acts of our Government, without fear of official reprisal.

We tell our visitors that this is simply the beginning of a program that is just commencing to get underway. But that nevertheless, these are things that have been done in an underdeveloped country in 3 years. Not things that have been promised, but which have been actually achieved. And we say to them, go back and tell your people what an underdeveloped country can really do under good, democratic leadership.

Ladies and gentlemen, I submit to you in the world, where they are contesting so that the Communists cannot tolerate. The matching of polemics and empty promises, with positive achievements.

As many of you know, ever since the downfall of Arbenz the Communists have provoked a series of incidents in Guatemala designed to create dissension and unrest, and to impede our economic progress. These efforts failed. Our progress was being brought to the attention of all Latin America, and they knew of our plans to bring it soon to the attention of other underdeveloped areas in the world, where they are contesting so intensely for the support of the masses.

So I submit to the test of your logic, what appears to me to be the obvious thesis. When the failure of their other strategems became apparent, in a desperate effort to halt our forward progress and create political and economic chaos in Guatemala, they murdered the man who had guided our Government through a crucial period.

But, although they succeeded in murdering our leader, I say emphatically that they will fail in their objective. Fortunately Castillo left behind him a strong and well-constructed organization, which is more

than a political party; it is a democratic movement of men and women who are dedicated to carrying out the ideals he planted in us and effecting the programs for our people for which he gave his life.

Life Magazine's Unfair Attack on the Cotton Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. TEAGUE of Texas. Mr. Speaker, Life magazine has published an editorial entitled "King Cotton—the Royal Nonesuch," in which it has attempted to diagnose the ills of the cotton industry and prescribe a cure. Life's remedy is drastic and simple, and is as follows:

If the (cotton) industry was put on a basis of free competition and our prices left to find their own level * * * the (cotton) business would quickly thin down to efficient operators who could produce all the cotton really needed and at a profit.

* * * * *

(Cotton subsides for) the distressed small farmers—no longer makes sense. It keeps them at it when, if left to their own devices, they could go to town and work at a useful job.

* * * * *

We have every sympathy for the marginal, high-cost little fellow who is inexorably being crowded out, but is there any depression to justify keeping him on a dole? There is no likelihood of agricultural shortages either. The longer the 92.7 percent of the rest of us taxpayers keep him there by giving him money to stay in a business he can't possibly succeed at, the longer will the whole farm picture stay in a needless and senseless mess.

Life's cure for the ills of the cotton industry is not one which it is willing to adopt for itself, namely, the renunciation of Government subsidy. Life does not propose that its free competition formula extend beyond the cotton industry to business, industry, and labor, which thrive on a variety of Government subsidies and benefit programs.

In prescribing free competition for the cotton industry, Life held up General Motors as its shining example. Life said:

Instead of letting this very successful industry (cotton) stand on its own feet, the way General Motors does, the Government has so far lost a total of $1.7 billion in trying to keep it artificially regulated.

While Life apparently views General Motors as the essence of free competition, very little has been heard from General Motors along that line. General Motors rests comfortably in back of a 9 percent tariff on foreign car imports and appears to be content to let the United States send tax appropriated dollars to foreign nations for foreign aid, rather than allowing those nations to earn dollars by selling foreign cars in the United States at competitive prices. General Motors and most of American industry was born in the shadow of a protective tariff wall and there it has developed and prospered.

General Motors' brand of free competition has kept the Antitrust Division of the Department of Justice in court for the past 5 years seeking to restrain General Motors and Du Pont from unfair trade practices.

General Motors has taken advantage of the Federal program for rapid amortization of industrial expansion expenditures. The United States Government will lose about $35 million on rapid tax writeoffs for General Motors on certificates already granted, with more pending. General Motors holds about 1 percent of rapid amortization certificates issued to industry. These concessions to industry in the name of defense will cost about $450 million in net revenue loss and will create additional interest costs to the Government estimated at $3 billion by 1976, resulting from postponement of anticipated revenues. Before this program has run its course, losses to the United States Government through rapid amortization for capital expansion to industry will exceed losses through the cotton program by at least 3 times, yet these concessions are being granted to industry during a period of rising and unprecedented profits.

The public was treated to a glimpse of the way General Motors stands on its own feet when an armed services subcommittee looked into General Motors' handling of a $375 million Air Force contract. The chairman of the subcommittee accused General Motors of manipulation that borders on actual fraud. The investigation disclosed that General Motors had obtained a $375 million Air Force contract and had made $42.2 million profit, or 12.65 percent. According to the General Accounting Office, this was $17,459,000 in excess of the amount anticipated, or the profit rate of 8 percent which was agreed upon.

Life magazine criticized the program currently operating to dispose of surplus stocks of cotton through sale and barter to foreign countries and said:

This form of economic warfare wipes out a great deal of good will built up by other United States programs such as foreign aid.

Here Life entertains the theory that the American cotton farmer is to be sacrificed to obtain the good will of foreign nations and, to a considerable degree, that is what is happening. About $66.5 billion has been spent in foreign aid throughout the world. Much of these expenditures have gone to increase agricultural production in various countries. In 1956, there was an increase of 48 percent in the world's cotton production over average annual production for the period 1945 to 1949. Cotton production in the United States during the same period increased only 10 percent. Cotton production in Mexico increased 206 percent. India increased its cotton production 80 percent. Turkey increased its cotton production 123 percent. Cotton production in Africa and Oceania increased 33 percent. Cotton production in Egypt has remained at about the same level for 10 years; however, had not negotiations for the Aswan Dam been terminated, United States funds would have been used to construct that project and put hundreds of thousands more acres of land into cotton production.

Historically, the United States cotton farmer has depended on a foreign market for his production. United States foreign-aid dollars are being used to stimulate cotton production throughout the world and the United States foreign cotton market is shrinking. Despite this situation, Life magazine complains that the current program of the Department of Agriculture to dispose of farm surpluses abroad may offend foreign nations.

Life has called for free competition for the cotton industry and has predicted that:

If enough Americans squawk, something will be done to stop this silly business.

Life apparently is not concerned about Government subsidies and supports to business and industry. These supports come through a variety of ways and are well hidden from the public. The magazine industry, including the Luce publications, which publish Time and Life magazines, enjoy a subsidy through the Post Office Department.

The Post Office Department has estimated that it loses $9,494,000 per year delivering Life magazine. The year-end deficiency for 1956 for handling magazines and periodicals was estimated at $70,539,141. Very probably the taxpayers of the United States have expended more funds subsidizing the American magazine industry and other commercial publications during the years that the cotton program has operated than has been spent operating the cotton program. Life and other magazine publishers see a great issue of national interest involved if subsidies for the magazine industry are discontinued. A spokesman for Macfadden Publications appeared before a Senate committee and opposed a bill designed to require publishers to pay a greater part of the cost of delivery of publications and said:

Increased postal rate costs, which we would have to bear under H. R. 2983, would have a disastrous effect on our business.

Macfadden publications publishes such literature as True Story, True Romances, Photoplay, True Detective, True Experience, and Master Detective, magazines which undoubtedly are essential to upgrading the intellectual level of the American people.

A vice president of Time, Inc., publishers of Time, Life, Fortune, Sports Illustrated, House and Home, and Architectural Forum, appearing before a Senate committee considering a postal increase, opposed the rate increase and said that the Nation's welfare would be seriously affected by the absence of magazines and that the support of the magazine industry in the form of low postal rates, involving considerable amounts of public-service costs, should be accepted as a matter of policy. In other words, Life sees the public interest involved in subsidizing the magazine industry, but believes that the cotton industry should be placed on a basis of free competition and prices left to find their own level.

Federal subsidy and indirect support to American business and industry is so extensive that it defies comprehension. The bulk of American industry enjoys protection from competition through tariffs. The simplest implication of the tariff is that industry, which needed protection during Revolutionary days from industrial giants of Europe, continues to enjoy the protection of a subsidy or premium from the purchasers of industrial products. Importers of small metal items and cutlery pay a 15-percent tariff. The tariff on imported bicycles varies from 11 percent to 30 percent. The tariff on chinaware ranges from 60 percent to 70 percent, while the tariff on clocks and watches is from 32½ percent to 65 percent. The tariff against hemp rope is 4 cents per pound, and the tariff on shoes varies from 10 percent to 35 percent.

One of the Nation's largest industries, the transportation industry, is subsidized by the Federal Government.

Ocean shipping is subsidized through grants for construction of ships and operating subsidies. During the period 1936 through 1952, the United States paid $426,185,833 in subsidies for the construction of ships sold to American ship operators. In 1955 and 1956, about $92 million was obligated in subsidies for construction of ships. Eight hundred and forty-three ships were built for the Maritime Commission during World War II and were sold to United States citizens at prices of from one-fourth to one-fifth of their replacement cost. These ships were placed in operation by private owners, hauling war cargo at a guaranteed profit during World War II and Korea, with risk covered by Government insurance. The subsidized operator sometimes repays the Government part of the subsidy but only from a portion of his profits exceeding 10 percent on the investment. In addition to construction subsidies, operating subsidies are paid. During the period 1947 to 1952, the operating subsidy was estimated at $203 million. The subsidy, payable from January 1953 through June 1955, was estimated at $165 million and, despite these payments, it was estimated that an additional $112 million was still owed to ship operators. It is contended that the principal justification for Government subsidies to American shipping is to enable American ships to compete with foreign shipping and provide adequate shipping for defense purposes.

The extensive airline operation in the United States and American-owned airlines operated throughout the world, were brought into being through Government subsidy programs. From 1954 through fiscal year 1958, subsidy payments to air carriers are estimated at $216,845,250.

The railroad system of the United States was subsidized primarily through land grants from the Federal Government and States, amounting to approximately 183 million acres. It has been estimated that the total amount of public aid given to railroads to promote construction amounts to $1,282,000,000. In addition, since 1932, loans on very favorable terms have been made to railroads, and there is under discussion at the present time a new federally subsidized railroad program for the construction of railroad rolling stock by the Federal Government to be leased to railroad companies under highly favorable conditions.

The oil and gas industry and most mining industries are subsidized through a special depletion allowance for tax purposes. This allowance varies from 27.5 percent on oil and gas to 5 percent on brick and tile clay, gravel, stone, and so forth. It has been estimated that these depletion allowances result in tax revenue loss for all minerals of about $1 billion per year. It is estimated that the total revenue loss for oil and gas depletion allowances over the last 7 years may approximate $5 billion. The necessity for special depletion allowances is argued on the basis of needed incentives for exploration and the needs of national defense for development of oil, gas, and mineral resources.

Mining interests have also benefited from other Federal subsidy programs. Exploration for new strategic and critical minerals and metals has been stimulated by Government payment of one-half to three-fourths of the cost of drilling. The stockpiling program of the Government has, at times, provided a market price for particular minerals higher than the open market price and thus has created a subsidy for certain producers. The silver mining industry has been subsidized through special legislation since 1878.

Various segments of industry have benefited immeasurably from the Federal Government's surplus property disposal program. Following World War II, it is reported that $15.1 billion worth of surplus property was sold by the Federal Government for $4.1 billion. Certain transactions, involving large industrial installations, such as rubber plants and industrial plants, and so forth, received particular attention when they were sold to private buyers at a fraction of their original cost to the Government.

The Nation's housing program operates as a support to the homebuilding, real estate, and lending industries. The Federal Government has guaranteed housing loans through the Federal Housing Administration and Veterans' Administration in excess of $60 billion. Billions of dollars in Federal funds have been invested in mortgage paper through the Federal National Mortgage Association, the Federal Housing Administration, and the Veterans' Administration. The investment of these funds has created a secondary mortgage market and has stimulated the homebuilding, real estate, and lending industries, although it was necessary for funds for these projects to be obtained by the Federal Government through deficit financing.

Since the beginning of World War II, hundreds of billions of dollars have been expended on war materiel produced by industry. Virtually all of these purchases have been on a negotiated basis, under which industry was guaranteed a profit of about 10 percent after all costs were considered. Competitive bidding for defense contracts today is practically nonexistent. When an industrial organization negotiates a contract, its profit level is assured before any work is undertaken.

Minimum wage legislation provides a subsidy for those who, as a result of such legislation, receive a higher wage than they would otherwise. Certain Federal legislation which has been enacted has encouraged the growth of trade unions and has made it easier for organized labor to bargain effectively for higher wages. Labor in several of the larger industries, such as the automobile and steel industries, has obtained wage contracts based on the cost of living and, through this device, has set the pattern for wages in industry, with the result that organized labor is guaranteed an increasing share of the national income in direct relation to the cost-of-living index and national income.

Many of the business and industrial subsidy programs have been devised as defense measures. The cotton program was not established for defense purposes; however, in actual operation it has been of tremendous importance to the Nation's defenses, both in World War II and Korea. Cotton is a commodity which can be stored successfully for long periods of time. The cotton loan program was carrying substantial stocks of stored cotton, at the beginning of World War II and Korea. These reserves were used for defense purposes and had they not been available, our defense efforts would have been seriously hampered.

Against this background of broad government subsidy and support of business, industry, and labor, Life recommends that supports be withdrawn from the cotton program and the cotton industry be left to shift for itself on a free-competition basis. It is obvious that one segment of the economy, agriculture, cannot successfully operate on a free-competition basis when the other major segments of the national economy, labor, business and industry, are subsidized and supported directly and indirectly by protective legislation and a variety of Government programs. Evidence of agriculture's inability to compete is clearly shown in national income figures. During the period 1951 to 1956, the national farm income went down 20.7 percent, while the national nonfarm income went up by 27.6 percent during the same period. In 1952, farm net income was $15.1 billion. It had declined to $11.7 billion by 1957. Net interest income in 1952 was $7.4 billion and rose to $12.7 billion by 1957. Since 1952, the Administration has been aggressively pursuing a program of flexible price supports under which a determined attempt has been made to lower and withdraw support of agricultural prices. At the same time, the administration has been pursuing its hard money policy, which has resulted in a 62.9 percent increase in net interest income to lenders.

Probably United States agriculture could operate on a competitive free enterprise basis more successfully than any other segment of the Nation's economy. Only about 20 percent of the national farm produce is supported. Entire segments of agriculture, such as the poul-

try and meat industry, operate without price supports. Removal of price supports on the five basic commodities, corn, cotton, wheat, rice, and tobacco, would result in economic chaos throughout the agricultural economy, but these repercussions would be slight compared to the tremendous confusion, loss, unemployment, and disruption which would occur if Life's formula of free competition was applied to business, industry, and labor. Such a program would require the abandonment of tariffs; removal of oil and mineral depletion allowances; discontinuance of subsidies to the transportation industries; all rapid tax write-offs would be withdrawn from industry; magazine publishers would be required to bear expense of distribution; the guaranteed housing loan would be ended; the negotiated cost-plus contract would be abandoned; and the American economy as we know it today would be materially changed and, as Life puts it, "thinned down to efficient operators." Such drastic steps are not justified in the case of business, industry, and labor, and neither are they justified in the case of agriculture.

The Federal Government's programs for the cotton industry are not above criticism and are not entirely successful. Nevertheless, the programs of production control and price supports are the most successful yet devised. Programs to increase cotton consumption at home are of value and more should be done to find new uses for cotton. It is necessary that the cotton industry aggressively pursue the foreign market. A dramatic migration is in progress from the farm to the city. Whether it is in the national interest remains to be seen. It should not be unduly accelerated by abandonment of the Federal Government's agricultural programs. Agriculture cannot survive on a free-competition basis in a subsidized and supported business and industrial economy.

Castillo Slaying Brings World Alert; He Is Third Anti-Red Chief Assassinated

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. BOGGS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following newspaper article:

CASTILLO SLAYING BRINGS WORLD ALERT; HE'S THIRD ANTI-RED CHIEF ASSASSINATED

(By James E. Warner)

WASHINGTON, August 3.—A worldwide intelligence alert now is underway as a result of the assassination last week of Carlos Castillo Armas, President of Guatemala.

Purpose of the alert is to find out, if possible, "who's next."

President Castillo Armas was the third anti-Communist and pro-United States Latin American chief of state to be killed in the last 18 months. The others were the Presidents of Panama and Nicaragua, both violently anti-Communist, and pro-North American.

Communist connection with the killings of the latter two executives has never been proven, unlike the published pro-Communist rantings of President Castillo Armas' assassin.

READY FOR NEXT ATTEMPT

If the Central Intelligence Agency and other vitally interested bureaus come up with the answer to the question of "who's next?" there will be no publicity. But steps already are being taken to thwart any possible Communist attempt on the life of any other Latin American President.

Some Members of Congress already have taken cognizance of the trio of assassinations and are asking whether, after all, the Communist secret underground is not more efficient in this hemisphere than had been deemed possible. Moscow had sought to make Guatemala the headquarters of its Latin-American subversion department before its literally Moscow-directed government was overthrown by President Castillo Armas.

Two of the three anti-Communist Presidents were killed after President Eisenhower went to Panama last July for a meeting of chiefs of state demonstrating the solidarity of the hemisphere against Communist infiltration.

Predictions that other anti-Communist leaders would be assassinated were made by a former Communist Foreign Minister of Guatemala, Juan Jose Arevalo, now in Santiago, Chile, and published, among other places, in the CONGRESSIONAL RECORD. Representative PATRICK J. HILLINGS, Republican, California, close friend of Vice President RICHARD M. NIXON, and former chairman of a House committee which looked into Communist infiltration in Latin America, said:

"In some quarters there has been a question as to whether or not the President of Guatemala was killed as the result of a Communist plot. Statements by the former Communist Foreign Minister of Guatemala, Juan Jose Arevalo, openly praising the killer of President Castillo Armas, were made in Santiago.

"In addition, Arevalo, now in exile, has arrogantly told the world that there might be more such attacks indicating that other countries will fall in the same manner in which Guatemala fell: and further indicated that leaders of other free countries might also be the victims of assassins' plots."

Representative DONALD L. JACKSON, Republican, California, was even more blunt, asserting that "it appears that Murder, Inc., has opened a southern branch in the Western Hemisphere." He quoted Mr. Arevalo as hailing Romeo Vasquez Sanchez, the assassin member of President Castillo Armas' bodyguard who was promptly killed for his Communist inspired attack Sanches, said Mr. Arevalo, by his action in killing the President of Guatemala, "enters history as a symbol of the Latin American struggle against those who attempt to transform them into colonies."

AREVALO'S REMARKS

Mr. Arevalo added, in remarks published elsewhere in this country, that:

"Those who tried to sell or lease Guatemala to foreign commercial concerns will fall, one by one, under the terrible judgment of popular vendetta."

"Colonization" and "commercial exploitation" are the Communist keywords, thus far unsuccessful, in attempting to exploit Latin countries for their own imperialistic aims.

Representative JACKSON observed, regarding the foregoing Arevalo statement: "It appears that communism and its zealot agents intend to give any Latin American country which disagrees with the Communist philosophy the blood-purge treatment."

Before the accession of President Castillo Armas after his anti-Communist revolt, the United States Government issued an unusual white paper linking the Communist government in Guatemala directly to Moscow, and traced a shipload of arms, obviously destined for use against neighboring free countries and/or the Panama Canal, to Communist-dominated Poland.

NO OFFICIAL COMMENT

Neither the State Department nor the CIA, charged with intelligence operations outside the United States, would comment officially tonight on what action is being taken in the assassination of President Castillo Armas, over which President Eisenhower has expressed deep personal concern.

It can be stated, however, that intelligence services of the free nations throughout the world, as well as in the Americas, are hard at work to forestall any repetition of the Castillo Armas killing.

Statement by Chairman of Finance Committee of United States Steel Corp. Before Senate Antitrust and Monopoly Subcommittee

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, August 14, 1957

Mr. DIRKSEN. Mr. President, the Senate Antitrust and Monopoly Subcommittee is presently conducting public hearings on administered prices and some of the executives of the United States Steel Corp. are currently appearing before the subcommittee.

One of the witnesses appearing is Mr. Robert C. Tyson, chairman of the finance committee of the United States Steel Corp. His testimony is very informative and deals with the cost facts of United States Steel. Since some of the principals could also well apply to other industries and its relation to their national economy, I ask unanimous consent that his statement with exhibits be printed in full in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE COST FACTS OF UNITED STATES STEEL

(By Robert C. Tyson, chairman of finance committee, United States Steel Corp.)

One of the important factors which must have consideration in determining the prices United States Steel seeks to obtain for the products it sells, is the cost of operating the business. In the last two decades, certain unique and alarming cost trends have developed, full understanding of which is quite necessary, I believe, if the inflation problem with which the Nation is confronted is to be solved. These cost trends are by no means peculiar to United States Steel or the steel industry. Virtually all American industries are confronted with them. They are, however, well illustrated by the financial facts of United States Steel, which facts I would like to take a few minutes to display to this subcommittee.

United States Steel has only one continuing source of revenue out of which it must pay all its bills. It is receipts from products and services sold to customers. The biggest cost we incur, as may be noted in exhibits I and II, in providing goods and services to

customers is our employment cost—what we have to pay to or for our employees. In 1956 this 1 cost alone was 39.7 percent of our sales. The next biggest cost was the cost of products and services we have to buy from other people. It amounted to 35.2 percent of sales. The next biggest cost was taxes amounting to a little over 10 percent of sales. Next in size was wear and exhaustion—often called depreciation. Depreciation in a given year represents the allocation to that year of its share of the cost of facilities previously paid for out of savings. The cost was 6.6 percent of sales, but it was unrealistically low as I will explain in a moment. Beyond these costs interest and dividends, representing compensation for savings loaned and savings invested, totaled 4.2 percent of sales. Out of our business last year Government got in taxes about 2½ times what the bondholders and stockholders got; employees got nearly 10 times what bondholders and stockholders got.

The remaining item on our statement of income is called reinvested income and amounted to 4.2 percent of sales—the same as interest and dividends. This is the part of sales receipts used to help provide the additional working capital required by inflation and growth and, with the wear and exhaustion amount, to pay for plant and equipment purchased from others and to pay off debt.

It is in our most major cost that the most disturbing inflation is most readily observed. Ever since just before World War II our employment costs per hour, as you may note in exhibit III (exhibit III, chart, omitted), have been experiencing a continuous high-speed inflation. There is no year in which they have declined. On the contrary this cost has been compounding year by year at the frightening average rate of over 8 percent per annum—a doubling per decade. Last year the increase was 10 percent. Wartime wage inflation is traditional, but such persistent peacetime wage inflation is a new thing in the American economy. We have never had anything like it before. Something new has been added.

The wage inflation underlies all other cost and price inflation. This is because the wage inflation is surprisingly universal and uniform throughout American industry. Of this there is simple statistical proof. Thus all of 22 available, nonoverlapping, hourly wage series compiled by the Bureau of Labor Statistics rose markedly from 1940 to 1956—almost 200 percent on the average, as may be noted in exhibit IV. There were, of course, differences in the rate of change but such differences were not too material. This universality and uniformity of employment cost inflation, plus the fact that in consolidated industry employment cost represents three-quarters or more of all costs, explain why costs other than employment costs tend to parallel the inflation in employment costs. The products and services currently purchased from others, the plant and equipment purchased, the taxes paid—all have embodied in them the paralleling wage inflations. That they actually do so may be readily observed by noting the total cost curve in exhibit III (omitted). For each dollar that our employment costs increase, our total costs increase over $2. Economic arithmetic tells us that the new cost-push inflation can never be terminated until inflation in the biggest and most basic cost—employment cost—is terminated.

Another disturbing feature of the wage inflation is what appears to be its almost complete insensitivity to ordinary economic forces. By looking at the chart of our hourly employment costs one would be hard put to tell from it when we entered World War II or when that war ended, when we fought in Korea or when we stopped fighting, when business was good or when it was not so good, when the money supply was expanding or when it was not, when population growth was slow or when it speeded up, when wages and prices were subject to control or when they were not. Such inexorability of cost-push inflation must find explanation in changing American institutions rather than in altering economic conditions. Thus inflation has been institutionalized in America.

In this framework of institutionalized cost-push inflation it is apparent that industry must seek to secure at least cost-covering price increases from customers—or face possible insolvency. United States Steel has, accordingly, since the close of World War II advanced its prices from time to time within competitive limits indicated by long-range considerations.

The price increases have not, however, been sufficient to widen the profit margin. Thus in emerging from the great depression United States Steel made a profit in 1940 of 9.5 cents per dollar of sales—a figure often exceeded in predepression years but never equalled since 1940, as is disclosed in exhibit I. The nearest approach to the 1940 rate was in 1955 when United States Steel earned 9 cents per dollar of sales while operating at a 91-percent rate in contrast to the 83-percent rate in 1940. Last year our income was 8.2 cents per dollar of sales and the operating rate was 85 percent.

It also should be noted that although our costs per employment-hour in 1956 were 284 percent greater than in 1940, the prices of finished steel mill products, according to the Bureau of Labor Statistics, were only 138 percent greater. The difference between this very substantial increase in total costs per hour and the relatively smaller increase in prices has been absorbed by United States Steel over the years through greater efficiency of operation, intensive cost reduction, the expenditure of billions of dollars on modernization and improvement of our facilities and partly by the previously noted decline in the profit rate.

In this connection I would like to draw your attention to exhibit V (exhibit V, chart, omitted) and its supporting data in exhibit Va in order to warn against certain fallacious statistical comparisons. In this diagram you will note the ever-rising employment costs per hour which are compared, on the basis 1940=100, with the lesser rises in wholesale prices and steel prices. The heights of the bars across the bottom of the chart as measured by the scale on the right show United States Steel's income percent of sales for each year beginning with 1940. Please note that during the war period both our employment costs and wholesale prices in general rose rapidly, both increasing by over 50 percent from 1940 to 1946. On the other hand steel prices under regulation were not permitted to rise at all until 1945, and in 1946 were only 12 percent greater than in 1940. Profits were squeezed down to a low in 1944 of less than 3 percent of sales despite a 95 percent operating rate. In no prewar year had United States Steel ever operated at 90 percent or more and experienced an income percentage of less than 14 percent. Owing to this wartime factor steel product prices in 1946 and 1947 relative to wholesale prices in general were more out of line on the downside than they have been within the past half century for which we have records. A postwar readjustment was absolutely required if the steel industry was to escape gradual disintegration. To select as a base year one of these most abnormal years as a standard against which to compare present-day wage-price-profit relationships would obviously represent resort to extreme abuse of statistical methods.

In judging the cost-profit relationships of United States Steel there is another consideration of vital importance to economic health which is gradually coming to be understood by more people. I refer to the fact that income nowadays, especially for companies heavily invested in long-term facilities, must perform a new and additional functnon over and beyond its traditional role. This new function is to cover after taxes the depreciation deficiency which exists before taxes.

I start with the indisputable fact that, because of inflation, to construct or purchase new plant or equipment today costs a vastly gerater number of dollars than the plant or equipment being replaced cost 20 or more years ago. Yet the depreciation on these old plants is required for tax purposes to be based on the relatively small number of dollars paid for them long ago. As a result the depreciation currently allowed is quite insufficient to equal what has to be paid out when the old facilities are modernized or replaced. In the case of United States Steel and for many other companies, the addition to regular depreciation on old facilities of 5-year amortization on that portion of new facilities certified as necessary for the national defense has approximated temporarily a truer total of wear and exhaustion on all facilities based on current dollars. The inclusion of 5-year amortization in United States Steel's costs has not resulted, as some of our critics have misleadingly contended in the past, in an overstatement of wear and exhaustion, realistically considered. It has served instead to prevent a more serious understatement of depreciation cost.

Few people realize the extent of the deficiency in depreciation. United States Steel has calculated the number of dollars of wear and exhaustion that would have been needed in each year since 1939 to equal in each year's dollars the portion of the buying power originally expended which was used up in the year's production.

In every year since 1939, as shown in exhibit VI (exhibit VI, chart, omitted), the wear and exhaustion recorded—including amounts not allowed for tax purposes shown on the chart as accelerated depreciation for the years 1947 to 1952—failed to equal that needed for recovery of buying power. The 17-year aggregate deficiency was $904 million. The Federal income tax paid, as a result of treating this deficiency and the accelerated depreciation as income for tax purposes, aggregated $608 million, or 22 percent of the taxes paid. The $608 million for United States Steel and analogous amounts for all other companies, big and little, may be regarded as the hidden taxation of capital as it turns over through depreciation or, alternatively, as a hidden increase in the tax rate on true income. From the latter viewpoint it is highly inequitable, because it results in a higher rate for those industries or companies which require relatively heavier investment in longer term facilities than the average for all industry.

Short of correction of the tax injustice the depreciation deficiency is destined to become more serious. Thus United States Steel's wear and exhaustion recorded for 1956 was $278 million, or about $67 million short of the $345 million needed for buying power recovery. Included in recorded wear and exhaustion is $140 million of 5-year amortizatiton which will decline and virtually disappear after 1958.

As that happens the depreciation deficiency will actually increase and income will seemingly increase. Since taxes will increase by over half the decline in amortization, a curious and serious situation will result: At the very time that the business appears to have greater income the cash with which to conduct it is diminished; and cash is what is required to cover the ever-mounting costs, to supplement the inadequate depreciation permitted, and to meet the expanding working capital requirements in a period of continuing cost inflation. The prospect is that the portion of reported income that must be regarded as "phantom" income,

because it is required merely to maintain the business under conditions of continuing inflation, will increase.

As basic costs continue to be forced upward management's problem becomes especially acute with respect to covering the depreciation deficiency because it takes $2, either from cost reduction or from customers in the prices they pay, to yield $1 toward meeting the depreciation deficiency. This is because tax law refuses to treat the depreciation deficiency as a cost. Thus I have just noted the prospective disappearance of $140 million of amortization from our recorded wear and exhaustion. If such amortization had not been available in 1956, United States Steel's depreciation deficiency would have been increased from about $67 million to about $175 million. Such a deficiency is equivalent to more than $6 per ton of finished steel shipped in 1956, and to have $6 per ton after taxes requires $12 per ton in the price of steel.

I am sure that the more one studies this inflation-wrought deficiency in depreciation the more convinced he will become that part of what is conventionally labeled as income cannot be regarded as income in the former and traditional sense because it is actually required to cover realistic depreciation cost if the company is just to keep even, let alone expand. This in turn means that he who would inveigh against a reported profit margin, which is already low when compared with margins in past years of similar operating rates, had better think twice about it lest he find himself in reality demanding that the Nation's job-creating tools of production be eroded away and the incentive to provide new ones undermined.

While on this matter of profit size I should briefly mention another statistical fallacy to be avoided in measuring its historical trend. It is the use of a so-called percent return on investment. The point is, of course, that owing to accounting practices and tax laws the properties acquired long ago are recorded in an entirely different kind of dollar than is the present-day income. Moreover, the expedient of 5-year amortization has served still further to bring down the recorded net book values of properties. Today's income in cheapened in dollars cannot properly be compared with the smaller number of bigger dollars paid for things 20 or more years ago. The ratio records the speed of inflation as much as it does the return on investment. Its use for measuring historical trends is therefore denied. Its only significant use might be to compare one industry or company with another at the same time. Even that use of the percent return on net assets is impaired by the fact that the extent to which particular companies or industries are required to be heavily invested in long-term assets varies over a wide range. The longer lasting the assets the more understated the books assets are in terms of present-day dollars comparable with present-day income dollars. The steel industry is more heavily invested in such long-term assets than most other industries. Accordingly its income percent of net assets should be much higher than for most other industries if it is realistically to be earning at an equivalent rate of return on investment. This, however, is not true of the steel industry's rate of return on net assets.

Thus the First National City Bank of New York has compiled from published reports the percent return on net assets for 41 manufacturing industries in 1956. The range of rates among the various industries are shown in exhibit VII (exhibit VII, chart, omitted). The average rate for all industries was 13.9 percent. The average rate for the iron and steel industry was also 13.9 percent. There were 16 industries having as high or higher rates, ranging up to 22.4 percent, and 24 industries with lesser rates, ranging down to 6.3 percent. The evidence is that the steel industry earnings by this measurement are just about average, even without taking into consideration the qualifications I have mentioned with respect to the use of this kind of comparison. With those in mind it is obvious that the steel industry earnings are subaverage. If the steel industry book investment figures were adjusted to present-day dollars, and if the income were adjusted to take account of the depreciation deficiency, the rate of return would then calculate out to less than the lowest rate shown for these 41 industries.

A more realistic measurement of profit propriety is to compare the stock market valuation of the facilities on which the profit is earned with what it nowadays would cost to reproduce those facilities. United States Steel's common stock, selling at about $70 a share, puts a market valuation of not over $80 on a ton of integrated ingot capacity. Yet we know that it costs a minimum of $300 per ton to create brand new completely integrated ingot capacity. Profits or the prospect thereof would obviously have to be greater than at present to make it attractive to invest venture capital in a new integrated steel producing enterprise as against putting the money, for example, in tax exempt bonds. It is in fact quite probable that a truly objective analysis of profit margins available from steel producing might justify the concern expressed from time to time in past years by congressional committees about the adequacy of future steel supplies for a growing America.

I now would like to address myself briefly to two matters I believe to be of both widespread public interest and public misconception. First is the responsibility involved in absorbing wage increases without cost-covering price incerases; and, second, is the matter of financing expansion and other capital requirements through reinvestment of income and recourse to the capital markets.

With regard to the question of absorbing cost increases it often is stated, or at least implied, that the absorption can be out of profits. This at best is only a part truth, for 52 percent of the cost increase, which is not offset by price or efficiency increases, comes directly out of Federal income taxes. The balance of the cost increase then has to be met either by reduction of dividends or by reduction in the purchasing of things for which reinvested income is spent—that is, for needed added working capital and the purchase of new tools of production. The question thus really comes down to whether buyers of steel products shall pay for the higher costs of producing it, or whether they are to be subsidized out of the Government's tax revenues, out of stockholders' dividends, or out of moneys used in providing the Nation's plants and facilities.

How this would actually work out can be readily shown by a brief reference to the financial facts of United States Steel. Both costs and prices in 1956 were greater than in 1955. What would have happened if prices in 1956 had been held to the 1955 level? The answer is shown in the following table:

United States Steel's results in 1956

[Dollars in millions]

	Actual	At 1955 selling prices	Decrease
Receipts from customers	4,229	3,899	330
Disposed of as follows:			
Costs other than taxes on income	3,550	3,550	
Taxes on income	331	159	172
Dividends	170	190	158
Income reinvested	178		
Total	4,229	3,899	330

Thus, according to the Bureau of Labor Statistics, steel prices in 1955 averaged 7.8 percent less than they did in 1956. Taking that percentage off of our 1956 sales would reduce them and the tax base by $330 million. This would cause a drop in our income taxes from $331 million to $159 million, thus more than cutting them in half. There would also be a drop in our dividends, in our income reinvested, or in both from a total of $348 million to $190 million, that is, from 8.2 percent of sales to 4.9 percent. If profits were to continue to shrink at this pace it would be little more than another year before they were entirely wiped out, and all income taxes with them. After that the Treasury would have to look elsewhere for taxes, stockholders would be entirely without dividends, industries supplying us with tools of production would have to look elsewhere for orders to replace those lost from us, deterioration in the tools of production would supersede the modernization and expansion out of which comes increased productivity, the jobs of our own employees would become endangered, no one would lend money to the industry, and certainly no one would buy new stock in it—and, finally and ironically, the price of steel, after this brief interruption, would again have to march upward at the cost inflation rate just to keep on breaking even. So the technical answer to whether rising costs can be absorbed without price increase is, "Yes—for some companies for a brief and disastrous period." But I submit that there is no good purpose served in so doing. The evil in this matter is the basic cost inflation; once it has happened the alternatives are to try to keep productive America functioning with cost-covering price increases, or to head it towards the insolvency that no one really wants.

I must add one word of caution. We are quite accustomed to having our critics rework our figures to suit a self-serving purpose. Thus, a calculated payroll increase, forgetting all the other employment cost increases that attend it, and completely ignoring the fact that all other costs move right along up with the employment cost increases, is sometimes compared with the gross increase in revenue resulting from a price increase. I suppose the basic pretense is that the only justified price increase is one which yields just enough to cover an unearned payroll increase. This flies in the face of the truth established by a decade and a half of unrelenting experience—a truth that cannot be assailed in view of the record: All costs move upward reflecting the widespread underlying wage inflation. Only on an unwarranted and unstated assumption is it proper to compare revenue resulting from product price increases with wage increases gained for the members of one union alone. This assumption is that no other employees elsewhere in the economy are to enjoy similar wage increases, so that no increases of others would be reflected in our purchased products and services, the plants and equipment we buy, and the taxes we pay. It is not, shall I say, a responsible assumption.

I come finally to the matter of financing new capital requirements out of reinvested income and through the capital markets. I think there is a good deal of public misconception about the matter and so I would like to get a few perspective-giving facts on the record.

First, I would like you to note that according to data regularly published each month in Economic Indicators, prepared by the Council of Economic Advisers, an average of 53 percent of profits after taxes for all corporations has been paid out in dividends over the past 7 years, the balance being reinvested income as I describe it. The corresponding percentage for United States Steel is 51 percent. In short, United States Steel's decisions in this respect appear to follow closely the decisions of corporate America as a whole. There is nothing unique or especially interesting about this policy of United States Steel as such. It should be

noted that not all of the 49 percent of United States Steel's income reinvested was available for modernization and growth, since a substantial and growing part of it had to be used to make good the deficiency of depreciation I have described.

Next, I supply to you in exhibit VIII a tabulation showing for 18 steel producers combined, including United States Steel and representing 88 percent of the industry, and for United States Steel alone, the total outside financing done over the past 11 years since the close of World War II. This financing is compared with fixed capital expenditures in excess of the depreciation that was available. The balance of the expenditures financed by reinvested income is also shown. By inspection of this tabulation you may note that the external financing for the combined 18 companies, net of refunding, was equivalent to nearly two-thirds of the fixed capital expenditures in excess of depreciation. In the case of United States Steel such outside financing was equivalent to about one-third of the capital expenditures in excess of the depreciation. The notion that the steel industry relies almost exclusively upon reinvested income as a means of providing for expansion is just another one of those myths founded in fancy rather than in fact.

This is not to suggest for a moment that there is anything wrong with the traditional American business practice of growing by plowing back earnings. Indeed the plowing back of earnings is an essential part of growth—particularly of small business—no matter what other financing methods may be employed. Let me explain. All of you are aware, of course, that there are only three sources of new money available to any company, big or small, to meet the costs of modernizing or expanding its tools of production. All of them represent savings. All of them depend upon the presence or prospect of profit.

The first source of new money for modernization and expansion is reinvested income over and above that required to meet the depreciation deficiency I have mentioned. It is obvious that this source depends upon profits because it is a process whereby the owners of a business forego immediate dividends in favor of reinvesting part of the earnings in their business. During the past two decades of cost inflation United States Steel has striven mightily to maintain its modest prewar profit margin, and in this endeavor it has not been entirely successful, as I have noted. There are only two ways to maintain a profit margin in a period of cost inflation. One is to keep costs as low as possible through increased efficiency, to accomplish which is a continuing objective of United States Steel. But this has not entirely sufficed so that the other way—increasing prices within limits permitted by competition—has had to be utilized.

The second of the three sources of new money is borrowing. But borrowing is possible only if there is profit and reinvested income. We are confronted by the simple fact that there is limited capacity to borrow, particularly, if it is on top of any existing debt. And certainly one cannot borrow at all unless there is a big enough profit margin to convince bond buyers in wholesale fashion, that the bonds will be paid off at maturity in stride. And unless the bonds can be paid off, constantly increasing borrowing and perpetual indebtedness must be faced, which brings us right back to the necessity of having reinvested income.

I come finally to the sale of stock as a source of new money, and here again, I must point out to you that the feasibility of stock financing hinges on the adequacy of the profit margin. If there are not adequate dividends and reinvested income, the stock cannot be sold in a large enough amount and at a high enough price to avoid seriously diluting the equity of existing stockholders. On the other hand, if there is a good profit margin, there will be reinvested income to spend for modernization and growth and stock can be sold if it is desirable to supplement income reinvested.

I want it clearly understood that no one should decry any of these methods of financing as such. United States Steel has used all of them in the past and may use all of them in the future. But I do hope that I have helped you to understand that none of these methods of financing can provide for the healthy growth of the steel industry, or for any other industry in America, unless there are profit prospects which cover both the payment of dividends attractive to investors and reinvestment income as the company's own contribution of a cushion against adversity and of provision for growth. In short, you can't kill profits and keep progress.

In conclusion, gentlemen, the big basic cost fact affecting United States Steel's financial affairs is the unremitting and rapid rise in employment costs—far beyond the rates of increase in productivity. This appears to be a common denominator of all manufacturing activities with the result that there is a very close and inevitable rise in all our costs per employee-hour. Historically this cost rise got way ahead of prices during World War II. Following that war steel prices have ever since been experiencing the effects of the continuing cost-push. Steel prices have not, however, during the entire period, ever sufficiently restored the prewar cost-price relationships to result in a profit margin, conventionally stated, equal to that of 1940. This is despite the fact that operating rates in many subsequent years have been substantially higher than they were in 1940. Moreover, depreciation as conventionally stated and permissible for tax purposes is, as a byproduct of the inflation, far from realistic—whether we like it or not, it costs a great deal more to replace plant and equipment than is yielded from depreciation and accelerated amortization, when the depreciation is based on prices paid long ago for similar plant and equipment. This means that additional functions of just keeping the company even with the board fall upon what is called income, with the result that only a portion of such income can be regarded as available for the purposes formerly served by income in prewage inflation days. The records of United States Steel cumulatively and convincingly show that as long as nationwide wage inflation continues at rates exceeding the increases in productivity a price inflation will be compelled. By squeezing out profits there could be a brief lull, but prices thereafter would have to reflect directly the rising costs. In the meantime such squeezing out of profits, if adopted and enforced as a national policy for industry in general, would obviously bring about great unemployment. It brings to mind the 1930's, the last time when the American economy had to operate without profits and a period the like of which we all hope will never be repeated.

EXHIBIT I

United States Steel's financial story, 1910–56

[Dollars in millions]

[1] Deficit.

NOTE.—The data are in some respects necessarily approximate, and are based on the yearly earnings reported annually to stockholders without adjustment for surplus charges and credits except that the years 1942 and 1943 reflect renegotiation settlements made in the succeeding years. For example, taxes are as accrued before adjustments. Employment costs include pensions and social security taxes and, beginning with 1949, also include payments for insurance and other employee benefits.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Tribute to Leadership of American Labor Movement

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. HUMPHREY. Mr. President, in an address before the annual convention of the New York State CIO in New York City last Friday, Gov. Averell Harriman paid a deserving tribute to the leadership of the American labor movement for standing firm against racketeers trying to exploit the working men and women of the country, and for working through the AFL–CIO ethical practices committee to put their own house in order.

I ask unanimous consent that excerpts from Governor Harriman's address be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY GOVERNOR AVERELL HARRIMAN AT THE ANNUAL CONVENTION OF THE NEW YORK STATE CIO, COMMODORE HOTEL, NEW YORK CITY, AUGUST 9, 1957

Gov. Averell Harriman said today: "It is intolerable that hoodlums and racketeers, in the guise of trade unionists, shall be permitted to exploit working men and women of New York State."

Speaking at the annual convention of the New York State CIO, Governor Harriman said:

"There is no room for these elements in American life. I know you join with me in the determination to root them out.

"The position of the AFL–CIO on the issue of racketeers is plain. Its constitution evinces no words. It specifically establishes that 'it is a basic principle of the federation that it must be and remain free from any and all corrupt influences and from the undermining effort of communism, fascism or other totalitarian agencies.' The ethical practices code of the AFL–CIO has defined this section in this way: 'Under this constitutional provision there is no room within the federation or any of its affiliated unions for any person in a position of leadership or responsibility who is a crook or a racketeer.'

"I have talked with George Meany about this, and more than a year ago, I met with members of the AFL–CIO ethical practices committee. I told them then they could count upon me and the State government to give full support to their objectives.

"I salute George Meany and the other leaders of labor who are working vigorously to wipe out these parasites.

"In addition, we've got to get at those unprincipled employers who do business with the racketeers in order to keep legitimate trade unions out of their plants. And we've got to root out the phony labor relations consultants who negotiate 'sweetheart' agreements to perpetuate sweatshops.

"In doing this, we will be protecting and strengthening the legitimate trade union movement that has helped raise the standard of living and well being of our workers and their families and helped bring our Nation to the highest level of prosperity ever known on this earth.

"Here in New York, the AFL–CIO committee on Puerto Rican affairs is working to protect newcomers from exploitation. While I was in Puerto Rico recently, I discussed these problems with the Governor of the Commonwealth, and I was glad to learn that he and his government are prepared to help us any way they can.

"I commend you for what you are doing, and you can be sure you will have the fullest cooperation from the State government.

"But there is more to be done by the State. Unions are not law enforcing agencies. I am appointing a group of outstanding citizens to consider and recommend the manner in which the State can play a more effective role in protecting the public interest and the legitimate trade union movement by ridding our State of racketeers. This committee wil consult with all State and city agencies involved, as well as your unions and responsible employers.

"In addition, your unions can be helped in your efforts, if certain Federal administrative regulations which now serve as protective weapons to racketeer locals are changed. A regulation of the National Labor Relations Board provides that a contract between any union—even a racket union—and an employer is a bar to the election of another union in the plant. This is not part of the national labor relations law. It is an administrative ruling of the Board. This is a hindrance to efforts of your legitimate locals to break the grip of racketeers and certainly should be changed."

Discussing the civil-rights bill in Congress, Governor Harriman said, "The position of the Democratic Party of New York State is clear. Every single Democrat in the Congress from New York voted for the bill that passed the House. Unhappily, when the bill reached the Senate, the President of the United States expressed doubt as to his position on certain important provisions. As a result the enemies of the bill were quick to exploit the advantage handed them by the President's faltering confusion. Senators from both parties joined in watering the bill down. I only hope that it is still possible to stengthen the bill before its final passage by Congress. Regardless of what happens to this bill, the Democratic Party of New York State will continue its unwavering fight for full and effective civil rights for all the citizens of our country.

"In the meantime it is more vital than ever that we here in New York continue to press forward in eliminating discrimination in our State. When I became governor, revitalization of SCAB was one of my principal objectives. And, I am gratified to say that, despite the refusal of Republican legislative leaders to give the commission the additional powers and funds it needs, we have made substantial progress in the past 2½ years.

"We have extended the authority of the State Commission Against Discrimination to cover all publicly assisted housing including FHA and VA housing. We have a new and vigorous chairman of SCAD who has been working closely with you and with industry. I want to thank you for your action in setting up a labor advisory committee which has been so helpful in working with the commission. With your cooperation and that of industry, the commission has made important gains against discrimination not only in employment, but in promotions and upgrading.

"Our progress is shown by the fact that more complaints have been filed with the commission in the first 6 months of this year than in any previous full year with the exception of 1956. This doesn't mean that acts of discrimination are becoming more prevalent in our State. It does demonstrate that our citizens are becoming more fully aware that this administration has made the commission a more effective instrument for enforcing out antidiscrimination laws. Our people are more and more confident of SCAD's willingness and ability to halt discriminatory practices—and if this be zeal, let's have more of it.

"In other areas we have brought new vision to State government in advancing the welfare of all our citizens.

"For the first time, we have passed legislation to protect the consumer who buys on time from exploitation and gouging. And that means most of our families.

"Our charter for the aging has achieved national recognition as a practical program for assisting elderly citizens to continue to fulfill active and satisfying roles in their communities. We have been concentrating upon the placement of older workers in productive jobs. And we are breaking down the prejudices against hiring older people. During the past year, 1 out of every 4 workers placed in a job by the State employment service was over 45 years old.

"Despite the high level of business activity and general prosperity, substantial numbers of our families still don't have adequate minimum incomes, and this is true in rural communities as well as in the cities. To help these families help themselves, we have organized an attack on poverty, and this means greater efforts to expand educational opportunities, to extend vocational training and apprenticeship, to rehabilitate the physical handicapped, and to end discrimination in hiring and job advancements. I ask your support in furthering these practical programs to help eliminate poverty in our State.

"Since I became Governor, there has been the greatest increase in State aid to schools in the history of New York State. We have broadened the opportunity for higher education by tripling the number of Regents' scholarships. In addition, the State university must play its part in taking care of greatly increased numbers of boys and girls coming out of high school, growing numbers of whom are seeking higher education. To play its part, we must expand the State university. I ask your support for the $250 million bond issue for the State university that is coming before the voters this November.

"After bitter controversy, we beat off the efforts of Republican legislators, backed by the real-estate lobbby, to weaken rent controls in New York City. And after nearly 3 years of effort we made some progress this year in closing some of the loopholes in the rent law, but not enough.

"We have discussed the evils of exploitation of Puerto Ricans and other newcomers through low wages. But it is equally vicious to exploit them by making them pay exorbitant rents. Today, through the decontrol of phony conversions of apartments, many of our lowest-income families in poor and overcrowded quarters are required to pay a higher rent, on a square-foot basis, than families living in luxury apartments on Park Avenue.

"I think it is shameful that the Republican leaders of the legislature refused to join me in ending this type of exploitation. If the limited powers they grudgingly gave the rent commissioner are not adequate, I will be back this winter for additional legislation. And here again I ask, and I know I will have, your support.

"At the regular session and again at the special session of the legislature, we saw the true colors of the Republican majority on matters directly affecting the workingmen and women of our State. In Washington, the Eisenhower administration has been exposed as the captive of self-seeking, special-interest groups. Make no mistake about it. It's the same with the Republicans in the legislature at Albany.

"In Washington, the tight-money, high-interest policy of the Eisenhower administration is favoring big business at the expense of small business and individuals. The policy was supposed to stop inflation, but it has failed to do this. The cost of living has reached a new high in each of the last 10 months, and it is now about 4 percent higher than a year ago. Under the guise of checking inflation, the Eisenhower administration is applying measures to curtail consumption at a time when we are not fully using our productive capacity. This will not stop inflation, but will create unemployment—which is what they appear to want.

"At Albany in the last 2½ years, we have made important advances in labor legislation. Disability benefits have been increased. Unemployment benefits have been raised and coverage extended. But not enough.

"This year, I proposed we increase maximum benefits under the unemployment insurance and workmen's compensation laws from $36 to $45. The Republican leaders accepted my recommendation, but, as a price, they insisted upon riders which violate long-accepted principles of unemployment insurance and workmen's compensation.

"By attempting to force thousands of small and seasonal employers in the garment and apparel industries, the construction industry, the canning industry, and other seasonal industries to pay disproportionately higher taxes, the Republican bill challenged the sound and proven doctrine that unemployment is a social risk. It singled out as deserving of special punishment the worker who voluntarily quits his job to take another. It opened the way for the unscrupulous employer, out to delay or block payment of benfits to unemployed workers. The Republican bill on workmen's compensation threatened workers injured on the job with time-consuming and costly litigation to collect awards made by the Board.

"At the public hearing I held, representatives of labor from all over the State opposed these bills—without a dissenting voice. And there was substantial opposition from small and seasonal employers.

"I vetoed these bills.

"I then called the legislature back in special session and asked them to pass bills covering what all agreed upon, namely, increasing maximum benefits to $45 a week, and leave all controversial matters to be considered on their merits at the next regular session. Once again, the hypocrisy of their claim to be interested in the welfare of the working people was exposed. They showed they were ready to give increased benefits only if they could take away the rights that working people had gained over the years.

"Now the job ahead of all of us is to see to it that we get an increase in benefits at the next regular session—and make them retroactive to July 1. And there are other improvements we need, such as broadening disability benefits to help in meeting hospital expenses.

"In order to protect our high standards from the unfair competition from low-wage States, we must continue to fight for a national minimum wage of $1.25 an hour. On three occasions, the Republicans in the legislature refused to join me in this demand upon Congress. Employers, as well as labor, should be for this. And all of us in New York—employers and labor—should urge the President and the Congress to repeal those sections of Taft-Hartley which the President himself called union busting. I assure you that as long as I am Governor, there will be no misnamed right-to-work law in New York State. From now on, to make clear what these so-called right-to-work laws really are, I propose that we call them by their proper names—right-to-scab laws."

Reducing the Federal Wasteline

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview between Colonel Sherman and Norman MacDonald over WEEI in Boston on July 14, 1957, on the subject Reducing the Federal Wasteline.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

REDUCING THE FEDERAL WASTELINE—INTERVIEW WITH NORMAN MACDONALD

Mr. SHERMAN. In its great survey of the organization and operation of the executive branch of the Federal Government, the Hoover Commission necessarily gave detailed attention to Federal personnel procedures and the civil service system.

Mr. Hoover himself has said that no portion of the Commission's monumental report compares in importance to the section dealing with findings and recommendations in the whole area of how we handle the Government's problem of employing civilians to run its complicated machinery.

Because he has so often been heard to say publicly that control of the cost of Government is lost when control of personnel is lost, it has seemed appropriate to invite to discuss this activity Norman MacDonald, executive director of the Massachusetts Federation of Taxpayers Associations.

Incidentally, this month marks the taxpayers' federation's 25th anniversary of vigilant guard mount over Massachusetts tax dollars. Back when the federation was new the State was collecting only $77.5 million to carry on its services; this year Norman MacDonald and his staff are struggling to analyze a maze of figures totaling approximately $400 million. It is not surprising, therefore, that he and his organization are asking the question: "Isn't it time the State slowed down its spending at least long enough to take a look at its obsolete, inadequate, and unfair taxing system?"

Norman, I know you share Herbert Hoover's concern with the people Government must hire to do its business—their number, their conditions of employment, what they are paid while they work, and how much they will get when they retire. Perhaps like the Hoover Commission itself you are unable to translate directly good personnel practices into direct dollar savings; but perhaps also like the Hoover Commission, you see the possibility of even greater benefits than direct and immediate dollar savings.

Mr. MACDONALD. I do, as a matter of fact feel deeply about the whole subject, and very greatly regret the general dismal public apathy toward public personnel, which apart from defense and foreign aid which we still hopefully look upon as temporary necessities, represents the most important element in the cost of what we might call normal government. If we were to include the cost of military personnel and of payments to veterans there we would find the one great reason for high taxes. And we would also find ourselves confronted by a series of problems so complicated as to seem on the surface to be nearly insoluble. Fortunately the Hoover Commission has gone beneath the surface to find a course through the maze of complications.

Mr. SHERMAN. Do I gather, then that you agree with the Hoover Commission from whose report I now quote: "Our task force has found, and we agree, that the Government's personnel on the whole is competent, faithful and, in numerous specialties, distinguished. The greatest weakness is in expert managerial direction. Management needs to be improved at all levels, from the noncareer political appointees and the career administrators down to the first-line supervisors."?

Mr. MACDONALD. I not only agree, but I think I would go one step beyond the report to argue that the mere size of the Federal establishment (and it is indeed gigantic) has had altogether too much attention while the reasons for the growth in size have been largely ignored. It is dramatic, of course, to recall that when the new Federal Government moved into the new city of Washington some years after the Revolution, it carried with it only 143 officers and employees, while currently we have something like 2,300,000 of them. But size all by itself means nothing. A series of controls which may regulate size upon rational bases might mean everything in influencing the cost of Government.

Another thing I might mention in passing as sensible and realistic in approaching the personnel problem is that the Hoover Commission did not fall into the trap which has caught many a distinguished amateur over the years and that it did not suggest that all we need to do is to apply certain business practices and policies in personnel administration to the Federal establishment and we would be out of the fiscal woods. I often have felt that such thinking is folly because no two human enterprises can be further apart in their very natures than the profit drive which makes business operate as well as it does, and the service drive which forces government to operate as badly as it sometimes must.

Mr. SHERMAN. Am I to gather from what you have said that you do not think that governmental operation can be efficient so far as personnel is concerned? I think you rather alarm me.

Mr. MACDONALD. There is no cause for sustained alarm—if the Congress will heed the recommendations of the Hoover Commission. The base upon which these recommendations stands is, as I have already said, one rooted in realism. It is one which recognizes that policies should be fixed and in a sense executed by the party in power, and that continuity in the operation of the Government's manifold services requires

merous skilled, trained, nonpartisan employees whose permanence and conditions of employment are protected by law. These, anyone can see, are two different things requiring two different approaches. In recognizing this fundamental fact, the Hoover Commission has performed a most valuable public service. This double concept of public service has always been difficult to accept in the United States. I suppose the reason is that when we think of civil service we think only of the statutory means we established back in 1883 to regulate the selection, promotion, compensation, and retirement of certain public employees. In our devotion to what has sometimes been an unrealized ideal, and let's face that fact, we have refused to regard the term "civil service" as reasonably embracing all the nonmilitary men and women, whether within or without the statutory classified service. This fairly simple concept is understood in Great Britain and France, for instance, and will be understood here by anyone who will give the Hoover Commission's personnel report more than a cursory reading.

Mr. SHERMAN. I am sure you are right. Certainly I gained from reading the report of what we all think of as our "Civil Service" was originally a device for the recruitment, regulation and protection of appointment to the working force of the Government and only by later reference impinged at all upon the top supervisory and policy-making force.

Mr. MACDONALD. There you have stated what is the heart of the matter. But I think we have deliberately done so only in part. As I read the report, the great contribution of Mr. Hoover and his distinguished associates has been to recommend a change in national thinking—no longer to consider civil-service employees as only the rank and file, but to include in the category senior, well-paid career administrators of exceptional skill and experience for continuing service in our manifold departments and agencies. Salaries would range from $10,000 to a maximum of $17,500 after long, constructive and otherwise outstanding service.

Mr. SHERMAN. As I understand it, that recommendation, if carried out, would attract and hold the finest type of young men and women seeking a successful career in the public service. It might even reduce the tremendously expensive turnover of such employees which now ranges between 25 and 30 percent?

Mr. MACDONALD. Colonel Sherman, I shudder whenever I hear that turnover figure mentioned. It means only one thing to me: that Government, which sorely needs skill, loyalty, imagination and even vision is losing its most competent people at an appalling rate simply because neither the politicians nor the public has been willing to face up to the facts of life in a 20th century United States—as the Hoover Commission has done. Remember, I blame both the politicians and the public, because there is a general acceptance of the enlightened concept of the Hoover Commission that our situation is bound to deteriorate, with more taxes and lessening efficiency among the consequences. Probably I should also include a declining standard of service as well.

Basically, it is the standard of service which concerns me. A high standard, I am convinced, can result only from general understanding of what the Hoover Commission is trying to accomplish. To illustrate what I mean let me once more refer to the British and French civil services, both of which have permanent administrators of high rank. On the one hand, the British offices are world famous for their rigidities, and the French for their incomparable bureaucratic confusion. Neither of these things do we wish to see brought upon us as a consequence of a truly constructive recommendation. I am sorry, however, about the possibility unless your Citizens Committee for the Hoover Report which has performed prodigies of public education goes all out to inform the American people of what they can gain taxwise and in efficient service by the adoption of the recommendations we have been discussing.

Mr. SHERMAN. Right now our cause has the support of a countrywide wave of genuine public interest in how our Government is run and how much it costs. The President's 1958 Federal budget, which establishes a record for peacetime budgets, focused everybody's attention on the size and cost of Government. To go back to your comment on what you described as the double concept of service that has always been difficult to accept in the United States, I would like to point out that the Hoover Commission found that serious confusion did exist between the activities of officials with political responsibilities and the activities of career officials who remain in the Federal service no matter which political party is in power. They found that while career administrators normally have not been asked to actually engage in political battle, they have at times been thrust into the position of having to defend agency policies, programs, and activities. Now obviously a career official should not be asked to take political responsibility for a program nor should political officials be distributed amidst the permanent administrative structure of our career service. So it was to be expected that the Hoover Commission recommended there be this clear delineation between career and noncareer posts, with more career executives at the departmental level to take over the more political and partisan tasks. As I said, right now there seems to be an upsurge of genuine political interest in Government and we can at least hope that Congress will reflect this interest by adopting some of the noncontroversial measures that are waiting for action in Washington.

Pro and Con on Cigarette Issue

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. BEALL. Mr. President, as is well known, some of the finest tobacco in the entire world is grown in the great Free State of Maryland. Consequently, we Marylanders have a very special interest in all aspects of the tobacco industry. We are also quite proud of the way in which our forefathers who were tobacco growers established a pattern of patriotism, hard work, individual initiative, and responsibility. This tradition, I might add, is still faithfully observed by our tobacco producers of today. With these facts as background, I present an article entitled "Pro and Con on Cigarette Issue," and ask unanimous consent that it be printed in the Appendix of the RECORD. The author is the well-known David Lawrence, and the item was printed in yesterday's issue of the Evening Star, of Washington. In his article, Mr. Lawrence discusses the suspicion which has been used as a foundation for much of the misleading propaganda about cigarette smoking, and he indicates that the entire subject should be considered in the light of facts, not misrepresentations through guilt by association. I feel that most Marylanders share his desire to obtain hard, cold, basic facts on this issue, and I recommend his article for the special consideration of this body.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRO AND CON ON CIGARETTE ISSUE—CANCER SOCIETY OFFICIALS SEEN OPPOSED ON CAUSE-AND-EFFECT QUESTION

(By David Lawrence)

Does cigarette smoking really cause cancer of the lung? Scientists are divided on the subject, and evidently there is even a difference of opinion among the directors of the American Cancer Society as to how much actual proof of a cause-and-effect nature had been adduced.

This correspondent wrote 2 weeks ago that the statistics with reference to tobacco and lung cancer may really turn out some day to prove a cause-and-effect relationship, but to date it is only fair to say that no such evidence has yet been produced.

M. R. Runyon, executive vice president of the American Cancer Society, sends me a letter under date of August 9 in which he says that the case against cigarettes as an important cause of lung cancer rests upon a number of studies in the last 20 years which, when added together, form "a most convincing chain of evidence." He points to the report made by seven prominent scientists, described as an independent study group on smoking and health, sponsored by the American Cancer Society and other organizations. This group reviewed all the evidence available and on June 7, declared:

"The sum total of scientific evidence establishes beyond reasonable doubt that cigarette smoking is a causative factor in the rapidly increasing incidence of human epidermoid carcinoma of the lung."

Runyon also quotes from the report of a scientific body in Great Britain which, on June 27 last said:

"Evidence from many investigations in different countries indicates that a major part of the increase (in lung cancer) is associated with tobacco smoking, particularly in the form of cigarettes. In the opinion of the council, the most reasonable interpretation of this evidence is that the relationship is one of direct cause and effect."

This writer did not in his recent dispatch, nor does he now, dispute the right of various scientific groups to bring whatever facts they have gathered to the attention of the public and of Congress, together with any implications or interpretations the American Cancer Society or anybody else may derive from the statistics or the studies.

But it is also a significant fact that Dr. Ian G. MacDonald, director of cancer research of the University of Southern California who is not only chairman of the American Medical Association but is himself a director of the American Cancer Society, said to a congressional committee on July 25:

"Although there is an apparent association between cigarette smoking and lung cancer, a review of the total evidence fails to establish a cause-and-effect relationship. * * *

"In summary, the total evidence here reviewed fails to establish any sound basis on which a causative influence may be assigned to cigarette of cancer of the lung. As in a majority of human cancers, we have at hand an imposing list of predisposing factors, no one of which is of more than ephemeral status. The total problem of cancer in homo sapiens from the standpoint of its basic cause remains as much an impenetrable mystery as in the days of Aesculapius."

The Surgeon General of the United States Public Health Service—Leroy E. Burney—in a statement issued on July 12, does not go as far as the American Cancer Society's study

group in claiming that the scientific evidence establishes beyond reasonable doubt that cigarette smoking is a causative factor in lung cancer. Surgeon General Burney says:

"In the light of these studies, it is clear that there is an increasing and consistent body of evidence that excessive cigarette smoking is one of the causative factors in lung cancer."

But the Surgeon General also adds:

"At the same time, it is clear that heavy and prolonged cigarette smoking is not the only cause of lung cancer. Lung cancer occurs among nonsmokers, and the incidence of lung cancer among various population groups does not always coincide with the amount of cigarette smoking.

"The precise nature of the factors in heavy and prolonged cigarette smoking which can cause lung cancer is not known. The Public Health Service supports the recommendation of the study group that more research is needed to identify, isolate, and try to eliminate the factors in excessive cigarette smoking which can cause cancer.

"The Service also supports the recommendation that more research is needed into the role of air pollution and other factors which may also be causes of lung cancer in man."

There was a time when medical men throughtout the country insisted that the public should take its medical advice from them and not from public discussion of controversial aspects of cures as well as alleged causes of various illnesses.

Today, however, mere suspicion and guilt by association through statistics are apparently considered sufficiently convincing to arouse the public to change its habits of life. Just as it is important for all pertinent facts and statistics to be publicized, so it is also important for the dissenting view among scientists and physicians to be presented to the same public.

This writer happens never to have been a smoker, but does not feel it incumbent upon him to help scare other people into changing their habits of life on the basis merely of statistical association or suspicion.

Need for Retention of United States Naval Base at Chaguaramas

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. WILEY. Mr. President, the President of the United States has spoken out firmly and clearly in behalf of appropriating the full amount of funds which have now been authorized for the 1958 mutual-security program.

I fully respect, of course, the prerogatives of the House and Senate Appropriations Committees. I believe, however, that the President is correct in stating very decisively that the needs of free world security should not be ignored, and that the present proposed budget should not be slashed.

While I am glad to back up the President's position, I want to let it be known, simultaneously, that I feel the United States must, at the same time, speak very frankly to our friends when too much may be asked of us.

A case in point is the proposal of some of our West Indian friends to the effect that the United States should surrender the naval base at Chaguaramas, Trinidad, a base which we secured on a 99-year lease back in 1940. This base has cost us an estimated $100 million. Now, however, we are being asked to kindly move from this base, abandon it, and build it somewhere else, in order that the West Indian Federation, now in the making, can have a capital.

I, for one, am gratified that West Indians are moving steadily toward federation and self-government. But I see no reason why, in this instance, Uncle Sam should dip into the United States taxpayers' pockets to the tune of $100 million and simply writeoff our past expenditure at the base.

We of the United States have gone out of our way to be kind and to be generous. We have asked the taxpayer again and again to sacrifice. We are asking him to sacrifice, still again, in terms of the 1958 Mutual Security budget. But there is a point beyond which generosity becomes folly. There is a point beyond which the desire to make friends becomes a mere habit of squandering money.

I believe that the United Stats Navy is 100 percent correct in its desire to maintain the present base, and I, for one, pledge my full support to it.

I make these comments without any sense of vindictiveness or harsh criticism, but simply as plain, blunt facts.

I believe that the case for our American position was well summed up in a Milwaukee Journal article of August 6. I send it to the desk, along with the text of another Journal article of August 11 and a New York Times article of the same day. I ask unanimous consent that all three of these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of August 6, 1957]

A REQUEST THAT WOULD GOUGE THE UNITED STATES A FEW HUNDRED MILLIONS

Many Americans hailed establishment last year of federation government for most British territories in the Caribbean area. The proposal that the United States surrender a $150-million naval base for a federation capital site is something else again.

The naval base is on Chaguaramas Bay, Trinidad. It was started during World War II. Enclosed by a string of islands, it is considered one of the best naval bases in the world. It is an integral part of the defense system of this country, all the friendly territories in the Caribbean and South America. No other natural site like it is available in the area.

The United States has a 99-year lease, given by Great Britain in 1940, on the base property.

There are 13 major islands or groups of islands in the Caribbean federation. They reach from Jamaica (south of Cuba) through the Greater and Lesser Antilles to Trinidad, off Venezuela.

In these many islands there are plenty of sites for a West Indies federation capital, more central and practical than Chaguaramas Bay. It is interesting to recall that during early negotiations leading to federation no mention was made of Trinidad for a capital. The thinking was that Grenada was the best and most logical capital site. Jamaica was also mentioned.

Now federation leaders and newspapers [illegible] asking Uncle Sam to void his lease, junk [illegible] naval base, build a new one elsewhere—[illegible] all for free, as a gesture of good will [illegible] friendship toward his Caribbean neighbo[illegible]

This plea will leave the overburde[illegible] American taxpayer very cold, indeed. Let [illegible] federation find another capital site. [illegible] someone else make a gesture of good [illegible] for a change, instead of trying to wring [illegible] few more hundred million dollars out of [illegible] United States. And, in this instance, let [illegible] new British West Indies Commonwealth [illegible] tion show a proper appreciation of the f[illegible] that its defense is now being provided ga[illegible] tically without charge by good old Uncle S[illegible]

[From the Milwaukee Journal of Aug[illegible] 11, 1957]

WHY WEST INDIES ASKS UNITED STATES B[illegible] AS GIFT—AND MAY NOT GET IT

(By Patrick Keatley)

LONDON, ENGLAND.—Three million West I[illegible] dians are asking Uncle Sam for a mighty [illegible] birthday present. Its name is Chaguara[illegible] and in cold cash it is worth no less th[illegible] $100 million.

That is the amount that has been inves[illegible] by the United States Navy in its deactiva[illegible] antisubmarine base at Chaguaramas, in [illegible] island colony of Trinidad. Now the W[illegible] Indians want it as the site of their new f[illegible] eral capital.

Next April the 10 colonies which make [illegible] the British West Indias will take a decis[illegible] step toward independence. For three c[illegible] turies they have been ruled from London, b[illegible] now a timetable has been drawn up, setti[illegible] 1962 as the target date for nationhood.

BASE SEEN AS KEY TO PANAMA DEFENSE

The first step is the holding of federal el[illegible] tions next March, and the assembling of t[illegible] first house of representatives at Trinidad [illegible] April. But where will they assemble? Th[illegible] is something that 3 million West Indians [illegible] demanding to know.

And that is what brought their prime [illegible] politicians hot footing it to London for thr[illegible] way talks with the British and the Americ[illegible] The next move, if any, must come fr[illegible] Washington.

But it is not at all easy for Uncle Sam [illegible] move out of a naval base that represent[illegible] huge investment and occupies a key positi[illegible] for the defense of the Panama Canal.

In case of war, Soviet strategy would [illegible] most certainly provide for a blockade of t[illegible] shipping routes through Panama. It [illegible] known that Soviet submarines were being [illegible] fueled at Guatemala 4 years ago, when [illegible] pro-Russian regime was in power there.

MOVE TO ST. LUCIA?

These are points that were stressed in t[illegible] London talks by the two top spokesmen [illegible] the United States Navy—Rear Adm. H[illegible] Collins, Assistant Chief of Naval Operatio[illegible] Logistics Division; and Comdr. George [illegible] Dress, of the office of the Chief of Na[illegible] Operations.

Chief spokesman for the West Indians [illegible] the man generally touted for the office [illegible] Prime Minister when the West Indian fe[illegible] eration comes into being in April. He [illegible] Norman W. Manley, chief minister of t[illegible] colony of Jamaica, who bears a certain phy[illegible] ical resemblance to calypso singer Ha[illegible] Belafonte.

Manley is a persuasive pleader. He fi[illegible] appreciates the United States view that th[illegible] must be at least three bases, as at pres[illegible] to act as pincers in controlling enemy su[illegible] marines. The United States Navy is [illegible] Chaguaramas, Jamaica, and Antigua un[illegible] the 99-year destroyers-for-bases deal of 1[illegible]

SEES BASE AS ONLY POSSIBLE CAPITAL SI[illegible]

Manley says that the smaller island of [illegible] Lucia possesses a splendid natural har[illegible] that would suit the purposes of the Uni[illegible]

States Navy in every way. It could replace Chaguaramas.

But why must the West Indians regain possession of Chaguaramus?

Manley's argument is that this spit of land, jutting out into the Caribbean 6 miles from the town of Port-of-Spain, is the only possible location for a capital. When the Navy bulldozers moved in in the spring of 1942 there were only swamps and tropical forests running down to beaches of golden sand. Today Chaguaramas is a parklike area with well-tended lawns, sweeping roads, and harbor facilities for warships and seaplanes. Since it was deactivated a year ago it has been maintained by a skeleton force of 15 officers and 180 men.

Elsewhere in densely populated Trinidad there is no clear area like this. Steep mountains plunge into the sea and in the narrow valleys the tenement dwellers huddle in close packed wooden huts.

Three million West Indians, says Manley, cannot afford to pay compensation to Uncle Sam. What is wanted, he declares, is an outright gift—an act of imaginative statesmanship.

[From the New York Times of August 11, 1957]

NAVY AIMS TO KEEP BASE ON TRINIDAD—MISSILE TRACKING STATION IS RISING AT CHAGUARAMAS DESPITE OUSTER THREAT

(By Tad Szulc)

CHAGUARAMAS NAVAL BASE, TRINIDAD, August 8.—Confident that it will be able to retain this vital Caribbean naval base, which is also a slice of tropical paradise, the United States is erecting a guided missile tracking station here as a part of its South Atlantic testing range.

Work on the tracking station is in progress on a site of this 18-square-mile reservation studded with tropical growth and surrounded by picturesque bays. The base is 8 miles from Port-of-Spain on Trinidad's northwestern peninsula, which points toward Venezuela across the Gulf of Paria. The work progresses as Trinidad's government and the infant West Indies Federation continue to insist that the United States give up the base so that a new federal capital can be built here. The base is operated by the United States Navy under terms of the 1941 agreement between the United States and Britain in which 50 destroyers were swapped for a 99-year lease on this base and others to the United States.

AIR FORCE INSTALLATION

The missile tracking station is being installed by the United States Air Force, which is completing a network of such facilities along a 5,000-mile range extending from Patrick Air Force Base in Florida to Britain's Ascension Island in the middle of the South Atlantic.

However, the importance of Chaguaramas to United States defense—and to that of the Western Hemisphere—lies primarily in its naval facilities, which for practical purposes cannot be duplicated in this area.

Situated off the coast of South America, Chaguaramas is an anchor point in the United States defensive system of Panama Canal, the Caribbean and the South Atlantic. As such it falls within the scope of plans of the Inter-American Defense Board, which would be just as unhappy as the United States if the base would have to be moved.

In World War II, Chaguaramas was used as staging point for convoys of tankers with oil and fuel from Venezuela and refineries on Aruba, a Dutch island to the west. It could be used for the same purpose in a new emergency.

SUPPORT POINT FOR FLEETS

It is a logistic support point for fleet movements to and from the North Atlantic and to the Panama Canal, and was used in the war as a base for new ships on shakedown cruises. The importance of Chaguaramas as a refueling center was again demonstrated during the Suez crisis, when naval reinforcements were rushed for the 6th Fleet in the Mediterranean and to the Persian Gulf.

Chaguaramas likewise provides logistic support for vessels rounding Cape Horn on the way to or from the Pacific, as well as for ships operating in the South Atlantic.

One of Chaguaramas' foremost advantages is its natural deepwater harbor which allows cruisers, destroyers, and smaller craft to tie up in base docks, while battleships and aircraft carriers can anchor near shore in a small bay that can easily be closed by antisubmarine nets.

For all these reasons the Navy opposes West Indian demands that it evacuate Chaguaramas. Trinidad's chief minister, Dr. Eric Williams, said in a speech before the legislature here yesterday, that the Navy should find a new base on the island. He said that although the base originally cost more than $100 million, to give it up and build a new one would be a small price for West Indian friendship. He added, that if compensation were to be paid to the United States it would have to be done by Britain, a viewpoint unlikely to command much sympathy in London.

NAVY SAYS SITE IS BEST

The United States Navy contends however, that in the first place, there is no site so naturally suited for a base on Trinidad as Chaguaramas. It says also that to build a new base today would cost at least $350 million.

Installations here include underground fuel storage and underground ammunition dumps in the Tuckers Valley section of the reservation, one of the hemisphere's best seaplane ramps, roads, sewage water systems, and much permanent and temporary housing including a hospital and powerplant.

At a London conference last month with United States and West Indian representatives Britain informally suggested that the Navy give up part of the base, including Tuckers Valley, for the Federation's new capital. But the Navy thinks this is impractical because would leave it only the mountainous section of the reservation and shoreline facilities.

Such a solution would also create a difficult security problem. Under the command of Captain John D. Shea, the base operates now with skeleton garrison of 240 officers and men, including a marine detachment. Their duties are to provide support for visiting vessels and keep the base in shape. In World War II 5,000 men were stationed here, and the Navy says that under mobilization plans Chaguaramas could be returned to fully active status in 48 hours.

The Navy hopes the government and Trinidad politicians will not seek to make too much of an issue of Chaguaramas. A joint commission will soon be appointed to study the matter as a result of the London conference. Meanwhile old and new work is progressing here.

Relations between base personnel and the Trinidad population appear to be excellent. The base employs about 1,000 local workers and has a local payroll of $578,000 annually. This is important for the island's economy, and for this reason it is believed that Trinidadians would be unhappy to see the base moved, politics notwithstanding.

There is also here a fund of goodwill toward the United States, dating from wartime. And Chaguaramas ranks high with Navy personnel as a duty area. It has the scenic beauty of green mountains, blue sea, tall palm trees, banana groves and wild flowers, and manmade comforts that include a lovely beachhouse on Maqueripe Cove, one of the Caribbeans' most striking beaches; a boating club, a hilltop officers club, and sports fields and outdoor movies.

Aside from strategic considerations, men stationed here would be sorry if the United States ever has to leave it.

Comment on United States Foreign Trade Policy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. HUMPHREY. Mr. President, the St. Louis Post Dispatch for June 14, 1957, contained an article by Mrs. Eleanor Roosevelt on United States foreign trade policy.

I ask unanimous consent that the text of Mrs. Roosevelt's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMENT ON UNITED STATES FOREIGN TRADE POLICY

(By Eleanor Roosevelt)

DENVER.—I am afraid that too few people in this country fully understand how much the present protectionist backsliding in our foreign-trade policy is playing into the hands of Soviet Russia, which has started an economic and propaganda offensive based on it. In Italy, for instance, the Communist sympathizers have put out a slogan: "The United States is willing to take our sons, but not our goods."

President Eisenhower has endorsed a recent statement by the United States delegation to the U. N., which said, "We could lose this economic contest [with the Russians] unless the country as a whole wakes up to all its implications."

A most interesting fact sheet and a pamphlet called The Returns Are In have been issued by the Committee on Foreign Trade Education, Inc. I wish everyone could see them. The aim of this committee is to expand public interest in the United States tariff trade policy and to stir broad, popular support for a liberalization of that policy.

Trade is important to good will and understanding among the nations of the world. Some of our leading businessmen understand this. But many of us, who have not made a careful study of trade problems, fail to realize that if we wish to sell goods to the rest of the world we must also buy goods from the rest of the world.

Countries like Great Britain and Japan are beginning to trade with Red China and Russia. They are seeking these new markets because they cannot depend on us and they do not think we understand their situation.

We are expanding our field of protective influence tremendously and our own population is growing rapidly. Both facts mean that our foreign trade must grow, also. The fact sheet before me says, "Imports and exports combined should reach well over $30 billion by the end of 1957. Even now, however, 4 million American families are directly dependent on foreign trade."

Those who believed in high tariffs and a system of protection for our infant industries many years ago must revise their thinking. Today we need a new kind of protection for a forgotten man who is left out in the tariff-trade fight—the consumer.

It is obvious that in making trade agreements someone always must be hurt, so one must make them in the interests of the great majority of the people. It has been suggested that when any particular group really is hurt by a trade agreement with a foreign country, some adjustment can be made in that particular industry. It seems to me we have the intelligence to make these adjustments.

I think it is essential that the United States become a member of the Organization for Trade Cooperation this year. This is one of the moves necessary to give an efficient, day-by-day administration to the General Agreement on Tariffs and Trade (known as GATT), which is the international trade agreement to which we and 34 other nations have belonged since 1947.

Already, through GATT, the United States has received well over $7 billion worth of tariff concessions from foreign countries—which is more than the concessions we have given in return. With the help of OTC (Organization for Trade Coopeartion), GATT would become even more useful to us than it has been.

Proposed Investigation of Broadcast Music, Inc.

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Hempstead, N. Y., Newsday on June 26, 1957, involving an important matter of public interest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JO COPPOLA SAYS: BMI NEEDS PROBING

Bing Crosby's evaluation of popular music today which he reduced to so much trash, is simply an echo of what a lot of persons, in or out of the music field, have been saying. Crosby, in what has come to be known as the ASCAP-BMI controversy, is on the side of such celebrities as: Oscar Hammerstein, Richard Rodgers, Frank Sinatra, Abe Burrows, Arthur Schwartz, Billy Rose, and even Paddy Chayefsky. These and many others have been blasting BMI (Broadcast Music, Inc.) which is a pool of about 2,000 publishing companies and which is owned and operated solely by the broadcasters. Now, a song cannot become a hit unless it is played often enough on radio and television. These celebrities claim, as did the House Judiciary Subcommittee report following an investigation of monopoly practices in broadcasting, that BMI has exerted great pressure to promote BMI songs on the air and kept off tunes written by members of ASCAP (American Society of Composers, Authors, and Publishers).

The BMI control of what music the public hears is, like the Grand Canyon, something that needs looking into. The ABC of BMI, which was distributed to all affiliated broadcasters, contains this statement of philosophy: "The public selects its favorites from the music which it hears and does not miss what it does not hear."

Even a glance at the hit tunes shows that the bulk are always BMI numbers and most often of the All Shook Up or Hound Dawg quality. Now it doesn't seem possible that all of the ASCAP composers—who are the cream of American songwriters—have suddenly dried up and can no longer turn out a Night and Day or a Dancing in the Dark. That isn't the answer. It's just the old story of how taste can be manipulated.

BMI was born out of desperation. In principle, it was a good thing for it provided what might have been healthy competition for the then monopolistic ASCAP. In practice, it wasn't. It was in the wrong hands: the broadcasters—the networks and station owners—who could make or suppress a tune.

ASCAP began in 1914 as a cooperative to license broadcasters to play songs written by its members. ASCAP collects fees for each performance to be distributed to composers and publishers. In 1940, when ASCAP presented a new contract to broadcasters, they refused to accept it. For 9 months, no ASCAP tunes were heard on the air. Music in the public domain was played instead but because radio and the audience couldn't exist on Jeanie With the Light Brown Hair the big three—ABC, CBS, and NBC—started to buy up music publishers. The next step was a sort of company union, to control the music played on the air and to dictate terms of payment. So BMI—owned by the networks and individual stations—was born. For 8 years, ASCAP and BMI lived side by side until 1948 when The ABC of BMI was published.

Then, BMI tunes began to dominate the hit list. How this came about is an intricate story but a few illustrations can give a part of the overall picture.

The subcommittee's report charged that BMI paid substantial sums to orchestra leaders to induce them to play BMI tunes. Two music men named were: Xavier Cugat and the late Tommy Dorsey.

Disk jockey Martin Block, according to the report, who is now at WABC, received substantial subsidies from BMI. Introduced at the hearings were letters to and from BMI to the Martin Block Publishing Co. and one contains this interesting sentence: "BMI agrees that with respect to each network performance received by any five musical compositions published by you and licensed through BMI and which receive professional exploitation by you during the period commencing November 1, 1944, and ending October 31, 1946, you will receive a payment credit of $48 for each such network performance." The letters also mention sums in thousands of dollars in royalties. The disk jockey also published a column in a BMI trade paper called Poor Williams Almanac.

In a June 27, 1944 issue of the paper, Block in a column called Platter Chatter, quotes some rave notices for BMI records and follows these with this warning: "I have not mentioned the backs of these disks. That will come another week," promised Block. "May I warn you, however, to watch the backing of Cugat's Amor. It is not BMI."

It would be foolish to assert that all of the ASCAP tunes are good and all the BMI ones are trash but as Abe Burrows described BMI tunes * * * "Most of them are not even good enough to be insulted." ASCAP composers have written some "beauts" but they have also written the best in popular American music: the music of Cole Porter, Hammerstein, Rodgers, Lerner and Lowe, Arthur Schwartz, and others. The broadcasters know it. Everytime they want music for a spectaular, they go to ASCAP writers. They went to them for Cinderella, High Tor, Bell for Adano, Our Town, Ruggles of Red Gap, and Jack and the Beanstalk. Yet, except for Frank Sinatra's Love and Marriage from Our Town, which he recorded separately, none became hits.

The broadcasters have created their own Frankenstein. Even though they get the best composers to write music for TV, it is seldom heard on radio. Yet, one of the fastest selling albums today is Polly Bergen's renditions of old favorites which the public heard on the recent Playhouse 90 production recreating the life of Helen Morgan. It is also no accident that more and more people are turning to station WPAT, for this station, too, plays the old standards. The BMI tunes, as one songwriter put it, will "never become standards. They just aren't good enough. Who will want to hear All Shook Up 10 years from now? Who wants to hear it now?

Liquor Drinking on Planes a Threat to Air Safety

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 13, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement before the Senate Interstate and Foreign Commerce Committee in support of the basic principles of S. 4 and S. 593, which ban the consumption or the serving of alcoholic beverages aboard commercial and service airliners as a safety measure for commercial air safety.

The statement follows:

LIQUOR DRINKING ON PLANES A THREAT TO AIR SAFETY

(Statement of Congressman THOMAS J. LANE before the Senate Interstate and Foreign Commerce Committee, supporting basic principles of S. 4. and S. 593 August 15, 1957)

Mr. Chairman, by serving or permitting the consumption of alcoholic beverages on aircraft while they are airborne, the commercial airlines and the Department of Defense are asking for trouble. By giving in to the demands of a few, they are jeopardizing the safety of all.

We have the testimony of passengers who have been annoyed and frightened by the offensive and irresponsible actions of those who insist on having their own way as a result of drinking liquor on a plane while it is in flight.

The people best qualified to give an objective opinion because theirs is the responsibility of coping with the problem, are opposed to the servicing and consumption of intoxicating beverages aboard aircraft.

The pilots, stewards, and stewardesses are not theorizing about this. They have had the harrowing experience of trying to control and even subdue passengers who are not in full possession of their faculties. The human discipline that is essential to safety in air travel is seriously weakened when any individual is encouraged or permitted to drink any kind of intoxicating beverages that make his actions unpredictable.

Due to military secrecy, we have no way of knowing how many accidents or fatal crashes can be traced to this cause. No matter how few they may be, we feel that the ban proposed in the legislation under discussion, should be applied to military as well as commercial aircraft, as a further precaution.

The present policy on many commercial airlines, of serving liquor to passengers, is difficult to understand in view of their otherwise excellent record in living up to the highest standards of mechanical and operational efficiency and safety. The serving of liquor adds an unnecessary and worrisome burden to the responsibilities of the crew. It hardly inspires confidence in the majority of the passengers when they observe that the airlines, in effect, offer this special service to those who want cocktails in the sky.

This easygoing policy could precipitate a major disaster. It is our duty to anticipate and prevent such dangers by proper legislation. This is not a question of a person's right to drink or not, as he may desire. Safety is the most important factor in air travel and it must be paramount over the minor wishes or inclinations of the few.

We had hoped that the airlines in particular, and of their own volition, would realize

the chances they are taking, and would abandon this custom.

Two years ago, on August 21, 1955, I served notice that; "unless the airlines cooperate by discontinuing the practice at once" or the CAB takes action, I would introduce a bill making it a Federal offense to serve alcohol in the air.

That warning has been disregarded.

Since then, the pilots, stewards, and stewardesses, have had to put up with a number of distressing indidents that have accentuated the need for legislation to prevent the service or consumption of firewater on commercial aircraft, and military planes.

Even many people who take a drink themselves, acknowledge that a line must be drawn here, in the interest of public safety.

When air travel is concerned, there is no such thing as being too careful. An unruly passenger in a plane is a far greater menace to the safety of others than he would be on a bus, a train, or a ship. Is sobriety too much of a sacrifice to ask of a person aboard a plane, as his contribution to the safety of all?

My correspondence indicates overwhelming support for legislation to outlaw the serving or consumption of alcoholic beverages aboard commercial passenger aircraft and military aircraft.

Public opinion insists on this reasonable regulation to protect the planes and their passengers.

Freight-Rate Increase

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. ABERNETHY. Mr. Speaker, I feel sure that I will be joined by all my colleagues from areas served by the Southern Railway in applauding the position taken by Southern's able and distinguished president, Harry A. DeButts, in reference to the latest freight-rate increase granted by the Interstate Commerce Commission.

Southern's policy in regard to this increase is not to apply it in any situation which, according to Mr. DeButts, "will price us out of the market and reduce our income."

I wish here to quote briefly from Mr. DeButts' statement.

All railroads—

He declared—

need more money, for the rate of return on investment has been discouragingly low in the railroad industry for years. But it is our opinion that higher freight rates simply mean a merry-go-round ride to nowhere for us in today's bitterly competitive transportation business.

Mr. DeButts has put his finger squarely on an important point. It is important to railroads and business in general. Higher and higher prices, whether for transportation, services, commodities, or goods, will lead to an economics of scarcity. Higher and higher freight rates—and they have mounted enormously since World War II—will not produce new business for the railroads. They will not, as Mr. DeButts fears, produce in the end a greater overall income for the railroads for the simple reason that shippers will be forced to use other means of transportation. To raise rates continually and consistently as has been done will result in driving business from the railroads, and placing an ever-increasing burden on the products of our farms, mines, and factories.

There is no doubt whatsoever that rising transportation costs have had a large share in advancing inflation. No increased costs are passed on to the ultimate consumer more quickly than transportation costs.

According to the classic ideas of the economists, competition tends to reduce costs. Yet, as Mr. DeButts points out, competition in the field of transportation is bitter in its intensity. It is a remarkable reversal of economic practices and traditions that the reaction of the railroads is always to seek higher rates in such situations. Everyone knows that railroads do not have command of their costs as may exist in other industries. But there is a question of simple prudence. Is it prudent to follow a course which inevitably, through increases in charges, will mean less and less business? Less and less business through the imposition of higher and higher charges has never been the American way. American industry has grown great and has become the envy of the world by following precisely the opposite theory.

I hope Mr. DeButts' voice is not one crying in the wilderness. I hope that his voice will be heard and his conclusions and judgment studied not only in the railroad business but in all industry.

We are treading on dangerous ground. Through inflation we may lose many of the gains we have made in the past. The security of millions of families is put in doubt. A continuation of the present trend will lead us all to an economic bust.

M. Sgt. Thomas F. Bell

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. IKARD. Mr. Speaker, recently I had the privilege of visiting in my office with a very distinguished constituent of mine, M. Sgt. Thomas F. Bell, from Vernon, Tex. Sergeant Bell entered the military service in 1942 as an infantryman and transferred to the Air Force in 1943. He was with the 15th Air Force in Italy during the early part of 1944 as a flight engineer and gunner in the 781st Bomber Squadron and flew 56 combat missions in B–24 heavy bombers. His missions included bombings over Ploesti, Munich, and Frankfurt, and during one of his missions he was wounded over Bologna, Italy. Since the war he has served as line chief in B–26, test engineer at Frederick Air Force Base, Okla., and later sent to Sheppard Air Force Base as a liaison sergeant for the Air Force Reserve and returned to flying status when he was transferred to Walker Air Force Base, N. Mex., where he also served as a flight engineer on B–29 and B–50 aircraft.

Sergeant Bell was in Korea with the 27th Fighter Bomber Wing and served for 9 months as a line chief on F–84 thunder jets. In 1951 Sergeant Bell returned to the United States and took his discharge from the Air Force. He returned to Vernon, Tex., as a civilian and served as chief of police in Vernon from 1952 to 1955 when he decided to go back into the Air Force. He was voluntarily recalled to active duty in 1955 and became a line chief for F–86 Sabrejets while stationed at Perrin Air Force Base, Tex. He went overseas to Naha Air Force Base, Okinawa, and served as line chief in the 16th Fighter Interceptor Squadron.

The occasion of Sergeant Bell's visit to Washington was for the purpose of attending the golden anniversary of the United States Air Force as the representative of the Pacific Air Force. He was chosen for this honor in competition with other Pacific Air Force noncommissioned airmen and was 1 of 21 outstanding noncommissioned airmen selected for this honor. Sergeant Bell is married and has three sons. He is presently serving with the Air Force in Okinawa.

I consider it a privilege to call attention to the splendid record of Sergeant Bell, and to publicly commend him for his distinguished service to his country, both in time of war and in time of peace.

Republican Support of Civil Rights

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. SHEEHAN. Mr. Speaker, I noticed last night that one of the syndicated columnists, Doris Fleeson, said:

There are Republicans, too, who can take credit, but any veteran of the congressional galleries will certify that there have consistently been more Democrats favoring civil-rights legislation through the years than Republicans by a fairly wide margin. The number in Congress who have a passionate conviction about the issue is another story entirely.

It has been brought to my attention that other columnists are using this same line to the effect that Democrats favor civil-rights legislation more than the Republicans.

In order to set the facts straight and to inform the public of the erroneousness of the statements of Miss Fleeson and others, the record proves that it is the Republican Party that actually supports civil rights.

In this year's civil-rights legislation in the Senate, all 18 votes cast against the measure were Democrat votes. In the House of Representatives, 168 Republicans voted for the civil-rights bill and only 19 against. The Democrats voted

118 in favor and 107 against. In other words, the Democrats were practically evenly split down the middle on the civil-rights issue whereas the Republicans in the House were about 9 to 1 in favor of civil rights. A review of the previous civil-rights legislation several years ago proves the same story.

On July 23, 1956, last year's civil-rights legislation on H. R. 627 in the House of Representatives, there were 279 votes cast in favor and 126 votes against final passage on this measure. The Republicans voted 168 in favor and 24 against, whereas the Democrat vote was 111 in favor and 102 against this issue. Therefore, the great Republican support of civil rights is most readily discernable.

In spite of all of the ballyhoo of the Democrats and the liberal columnists who support Democrat causes, the truth is that it is the Republican Party that has consistently supported civil rights through the years. In the period from 1933 through 1952 when the Democrats controlled the Nation, of the 19 important Senate votes on civil rights, the Democrat majority voted against civil rights in every single case with the exception of 2. On 2 of these 19 occasions, not a single Democrat voted favorably, and on 2 occasions, only 1 Democrat joined the Republican majority in sponsoring and being for civil rights.

In this same period from 1933 to 1952 in the House of Representatives, the Democrats failed in 7 out of 14 votes to cast a majority in favor of civil-rights legislation.

The Republican record in the Senate during this same period shows that the majority of Republicans voted in favor of civil rights in every single case with the exception of one. In three of these votes, the Republicans were 100 percent in favor of civil rights. In 14 major votes in the House during this period, the Republicans supported civil rights on every single vote with the percentages varying from 68 to 100 percent.

The following table during this period from 1933 to 1952 should be noted:

Percent-favorable votes of each party's Members present and voting on civil-rights issues, 1933–52

Apparently, the Democrat Party and certain segments of the press use the "big lie" technique assuming that if you tell a lie often enough, the public will begin to believe it. The review of the facts should disprove the false claims of Democrat support of civil rights.

A Break for the Teachers: Tax Deductions for Further Training

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. WRIGHT. Mr. Speaker, I have introduced a bill which I believe will do much to further the interests of education in this country. This measure not only will have the effect of raising the standards and increasing the quality of instruction in our schools, but it also will be of considerable financial assistance to our thousands of teachers now struggling along on miserably inadequate salaries.

WHAT THE BILL WILL DO

My proposal, in short, provides for the deduction as business expense of any additional expenditures made necessary because of a teacher's attempt to improve his professional standards through summer school. This deduction would be applicable not only to those who are forced to further their training to hold their present jobs, but also to teachers who feel it desirable for any one of many reasons to increase their academic proficiency.

Under current internal revenue interpretations, businessmen and executives may take advantage of section 162 of the 1954 Revenue Code and deduct a wide variety of expenses. Teachers, however, are prevented from deducting similar expenses unless they can certify that the stipulated summer work is required for them to retain their current jobs.

This seems almost ridiculous. It is no more logical than it would be to require a businessman to establish that an expense were necessary to keep his profit on a par with last year's and to deny him the right of deducting a business expense which had the effect of improving the business position of his firm.

My bill would allow teachers to claim up to $600 in additional deductions for expenses while attending an accredited institution of higher learning. This tax relief, which I think is due as a matter of justice, would furnish a major incentive for more teachers to further their preparation and to work for higher degrees.

NUMBER OF TEACHERS IN NEED OF FURTHER TRAINING

We can obtain a fair estimate of the number of teachers who need to do further study by considering the number of teachers operating on substandard certificates.

According to reports from various State departments of education, there were in 1956 some 89,000 full-time teachers with substandard credentials. This represents an increase of 11,800, or 15.3 percent over the previous year. Full-time teachers holding inadequate certificates constitute fully 7.5 percent of all those now teaching.

In addition to these verifiable figures, there are literally thousands of additional teachers who must be hired each year because of the tremendously increased enrollment in elementary and secondary schools. A really alarming number of these "emergency teachers" are without proper training or certification.

TEACHERS LEAVING THE PROFESSION

This problem of securing properly trained teachers is further aggravated by the tremendous number of professionals now leaving their teaching careers for more lucrative fields of endeavor.

It is true that some of those leaving the profession do so for family reasons, or for retirement; but by far the greatest single cause is the inadequate compensation coupled with additional expenditures made necessary by desirable summer training. Of the 26 States on which figures are available, nearly 35 percent of those leaving gave as their reason better jobs in industry, or the need for an adequate, stable, year-round income without the continual necessity and attendant expense of further schooling.

Forty-two States reported overall figures for those leaving the teaching profession, and they add up to an annual turnover of a full 9.1 percent. In the 1956–57 school year there were some 97,000 professionals leaving teaching for good.

ADDITIONAL TEACHERS NEEDED ANNUALLY

Anyone at all familiar with the school problem is aware, too, of the fantastic increases in the number of school-age children in this country these past 6 or 7 years. The impact of these increases on the schools and the attendant need for thousands of new teachers will justify a brief review of enrollment statistics.

The following figures are from the United States Office of Education:

In the 1950–51 school year, there were 19,900,000 students enrolled in the elementary schools of our Nation and 5,806,000 in the secondary public schools. By 1956–57, these numbers had skyrocketed to 25,478,000 in the elementary grades and 7,175,000 enrolled at the secondary level.

This gain of some 6 million in the elementary schools coupled with 1.5 million in high schools represents a demand in less than a decade for 250,000 additional teachers in the public schools.

Still further studies show that if we are to take care of only the present new enrollments, without considering projections for the future, we must make up the accumulated deficit of 180,000 teachers as of this year.

Our teacher-training institutions throughout the country produced last year only some 87,000 qualified persons, and of these only about 58,000 entered upon a teaching career. This leaves an obvious gap of 120,000 between the number we are producing and the number that is required. This year's overall deficit will approximate 200,000.

These figures do not take into account the burgeoning growth of enrollments in the colleges and universities of our Nation. These higher institutions are often understaffed today, and the problem will assume truly critical proportions within a very few years unless effective incentives are provided for many thousands of teachers to qualify themselves with higher degrees to take up the growing slack on university and college faculties.

Make no mistake about it: When there are not enough teachers to go around, it is our children who suffer. The teacher suffers, of course, through the necessity of doubling up. But the ever-increasing classroom load inevitably leaves its mark upon the quality of individual instruction, and the real victim is our Nation which is becoming increasingly dependent upon the skills and training of an educated citizenry.

PARTIAL ANSWER

A partial answer to the enigma has been sought by many school administrators when they have been forced to go out into the community and persuade college-trained housewives, clerks, and others to serve on an emergency basis. These individuals are performing a great service, and happily, many of them so enjoy their new work that they are tempted to stay with it.

This expedient cannot completely fill the gap, however, and even on a temporary basis it can suffice only if these "emergency instructors" are encouraged to go back to school, obtain additional advanced training, secure certificates, and achieve greater professional standing through graduate work.

The present severe interpretation of the statute by the Internal Revenue Service will permit no such encouragement, however, without amendatory legislation. This reform would be accomplished by enactment of my bill.

A PROPER FEDERAL ROLE

I offer here today no panacea for the ills of education. The enormous deficits of classrooms, playgrounds, and other facilities will continue to plague school officials and the States for many years, and there is relatively little we in the Federal Government could do to relieve this situation short of direct Federal aid.

I do believe, however, that this bill offers one important way in which the Federal Government can at least help to ameliorate the problem without any danger of becoming involved in the controversies over segregation, Federal control, or any of the other major issues which have prevented enactment of the various plans for full-scale Federal aid to education.

This plan, Mr. Speaker, attacks the problem in its most sensitive part—instruction. I would remind my colleagues of the dictum "A thousand buildings can never be a school without a teacher, but one teacher revealing the truth to eager young minds is a school regardless of where the instruction takes place."

Newspapers Are Not at Beck and Call of Pranksters or No Ruse Is Good Ruse

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD. I wish to include a front-page editorial written by Edmund R. McCullough, editor of the Stamford Advocate, explaining how his newspaper was used as an instrument to perpetrate a hoax which began as a party gag and developed into a national news story.

How Mr. McCullough was able to restrain his natural newspaperman's temperament in his front-page "apology" is probably best explained in the prose itself—a subtle, satirical tome bristling with wry Irish wit.

The newspapers of the Nation are vested with a tremendous responsibility to the public. This responsibility has been traditionally upheld. It is unfortunate that pranksters at times circumvent the many safeguards thrown up around the editorial curtain to bore into the front pages and perpetrate their foolish rhubarbs on the Nation's readers. Their faith in their newspapers is built up after years of conscientious reporting and editing.

Sometimes the newspaper, the real victim of a hoax comes out looking silly. In the incident in Stamford this week, the verbal spanking administered by Mr. McCullough deftly puts the whole affair in its proper perspective.

[From the Stamford (Conn.) Advocate of August 13, 1957]

AN APOLOGY

To the Dave Becks, Sr. and Jr.:

This is an apology.

If you'll just read along, you'll understand why an apology is coming out of the blue Connecticut sky on August 13, 1957.

They had a real big do at the palatial estate of the George Skakel, Jr.'s, in Greenwich on Saturday night. George's sister married Bob Kennedy, that fellow on the Senate committee, and she was there and they had a great crowd. The daughter of old Frank Hague of Jersey City, you must remember him, was there with her husband, Paddy Loughran, of New York. And lots of others of the best people.

It appears they had more fun than you fellows ever had at a teamster's clambake. Somebody had the gay idea that two of the guests would be named Dave Beck, Sr., and Dave Beck, Jr.

And so Mrs. Skakel reported to representatives of this newspaper as early as 6 p. m. on Saturday and several times as the evening wore on toward Sunday. And then on Monday morning from his New York office, Mr. Skakel solemnly confirmed that you two fellows had been his house guests on Saturday night.

Well of course, you fellows know that when the kin of the Kennedys are reported entertaining the Becks of Oregon during this session of the Senate, that's big news.

Within a few hours after the news broke, Mr. and Mrs. Skakel were the objective of several score reporters. And after a time, Mrs. Skakel said the whole thing was a prank and hoped she hadn't caused any inconvenience.

Frankly, we believed the Skakels on Saturday night and Monday morning, and we suppose we've got to go along with their latest story.

Outside of this incident things have been pretty quiet up this way. Some poor fellow lost all his money at the racetrack the other day and reported to police that he was held up and robbed in order to have an excuse for the wife. The cops discovered it was a prank and they hauled him off to the can. That happened in Greenwich too, so you can see it's not such a dull summer.

Hope you both are well. If you have any thoughts on adult delinquency, I wish you'd drop me a note.

Sincerely,

E. R. MCCULLOUGH,
Managing Editor.

Mr. Brownell Finds "the Law of the Land" Entirely Unacceptable

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks in the Appendix, I am including

two thought-provoking editorials, as follows:

[From the Jackson (Miss.) Clarion Ledger of July 16, 1957]

MR. BROWNELL FINDS "THE LAW OF THE LAND" ENTIRELY UNACCEPTABLE

While fully prepared to use force if necessary in compelling the South to obey Supreme Court decisions, Attorney General Brownell has flatly refused to accept as "the law of the land" the same Court's ruling that suspected Communists must be given access to confidential FBI records in trials involving subversion.

Instead, Mr. Brownell has rightly demanded and is receiving congressional action to circumvent our highest tribunal's ruling in favor of subversives. Every citizen with his country's welfare at heart approves legislation requested by the Attorney General which will largely nullify the Supreme Court's ill-advised ruling.

In seeking such legislation, Mr. Brownell clearly proves that he does not regard the United States Supreme Court as sacrosanct, nor its ruling in favor of Communists as a final immutable "law of the land." On the contrary, his rather frantic action in this matter proves he realizes that the Court is capable of judgment potentially disastrous to the national interests.

This is precisely the same realization upon which the South's steadfast resistance to racial integration is based. Therefore, from now on, Southern States will merely be following the example set by Mr. Brownell in refusing to accept an arbitrary Court decree as "the law of the land."

Our observations are not intended to reflect against the Attorney General for declining to accept the tribunal's pro-Red decision as final law. Meekly bowing to such prepostrous judicial reasoning would seriously imperil the national security. By the same token, the South would invite chaos and bloodshed by meekly bowing to the Court's integration decree, which stems from sociology rather than constitutional law.

Despite pious insistence that Supreme Court rulings are "the law of the land" and must be obeyed, it is quite obvious that our politically-minded tribunal does not always decide in the Nation's best interests. Apparently Mr. Brownell is just discovering what the South knew all along—that Court decrees can be dangerous enough to require corrections, or even evasion by every legal means—if proper remedies are not forthcoming from Congress.

[From the Nashville Tennessean of July 23, 1957]

BROWNELL'S COURT LOYALTY TURNS INTO QUICK DEFIANCE

A few days ago in Federal district court in Bowling Green, Ky., an agent of the FBI refused to turn over to the defense records of information in an important case.

He did this in spite of the judge's order to the contrary, in line with a recent decision of the Supreme Court that an accused man is entitled to see the information on which he is accused. Furthermore, he did it on instructions from his superior, the attorney general of the United States, Mr. Herbert Brownell.

Now this is strange, since Mr. Brownell until recently has been among the foremost defenders of the court of last resort.

The leading article in the July issue of the American Bar Association Journal bears the attorney general's name, and urges full obedience to the Supreme Court as the "symbol of orderly, stable and just government."

Going further in the same article, Mr. Brownell quotes Abraham Lincoln to the effect that "whoever resists the final decision of the highest judicial tribunal, aims a deadly blow to our whole republican system of government—a blow, which if successful, would place our rights and liberties at the mercy of passion, anarchy and violence."

In the abstract it thus appears, that the Nation's chief legal officer is 100 percent loyal to the principles laid down by Lincoln. Whenever the high court agrees with him, as it has done on many occasions, it is a noble institution which can only be assailed at the Nation's peril.

In his law Journal contribution he was moved to these conclusions:

"As attorneys and officers of the court, we have an important stake in the independence of the court and a greater duty to it. The court relies on us for assistance. We must give it our support by our own example. We must do everything possible to preserve its reputation. We can stir fuller recognition of the court's distinguished role in our government, in our history, and in our development as a leader among nations."

Hardly had these patriotic words gone into print, however, before he gave the court definance, rather than support by orders to disobey its clear ruling on the use of secret testimony in certain cases. He is revolted by the idea that secret FBI files, which he himself has used for political purposes, should be made available as a matter of justice to some defendants.

Lofty principles are easy to enunciate or transscribe as they apply to the Supreme Court, but putting them into practice is something else again when they affect a subagency of the Department of Justice.

If the court relied greatly on Mr. Brownell for assistance by reason of his special position of trust, it would be in a bad way indeed.

Address by Rear Adm. Lewis L. Strauss, Chairman, United States Atomic Energy Commission, at the 38th Annual Encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States Held at Harrisburg, Pa., July 10 Through July 14, 1957

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. VAN ZANDT. Mr. Speaker, at the 38th annual encampment of the Department of Pennsylvania Veterans of Foreign Wars of the United States held at Harrisburg, Pa., July 10 through July 14, there were several outstanding addresses delivered by prominent officials of the Federal Government in keeping with the theme of the Encampment, Defense Means Freedom.

On July 11, 1957, the following address was delivered by Rear Adm. Lewis L. Strauss, Chairman, United States Atomic Energy Commission:

ADDRESS BY LEWIS L. STRAUSS, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION, AT THE VETERANS OF FOREIGN WARS, DEPARTMENT OF PENNSYLVANIA, 38TH ANNUAL ENCAMPMENT DINNER, PENN HARRIS HOTEL, HARRISBURG, PA., JULY 11, 1957

Commander Fromm, Congressman VAN ZANDT, officers and members of the Pennsylvania Department of the Veterans of Foreign Wars, ladies of the auxiliary, and distinguished guests, it is a pleasure and a keenly felt honor to have this opportunity to speak to the members of this organization of veterans who, individually and together, have served our country so devotedly in times of both peril and peace. The demands upon you today, by your Government and your fellow citizens, for wise leadership and vigilance are no less exacting than the claims that were made on your patriotism and gallantry in time of war. You have reason to be proud of your record in both roles, as defenders and as custodians of American freedom and liberty, and it is a privilege to salute you here in this State where that liberty was cradled.

It is a pleasure also for me to revisit the home State of my good friend and yours, JIMMIE VAN ZANDT, who has twice served with dictinction as your departmental commander and three terms as commander in chief of your national organization.

Many of you, of course, know JIMMIE VAN ZANDT most intimately as a fellow veteran who, during the nine terms he has served in Congress, has represented his constituents faithfully and well and who, by reason of his military experience and wide knowledge of veterans' affairs, has become one of the Nation's foremost authorities in legislation touching upon your welfare and interests. The scope of his interests and his statesmenship, however, is broader.

It has been my good fortune to work in close and—for me—rewarding association with JIMMIE VAN ZANDT for a number of years, because of the important place he holds on the Joint Congressional Committee on Atomic Energy, and I know of the wide range of his interests in serving the public welfare. If he should find my references to him slightly embarrassing, then I can only say that this imposition upon his modesty is the penalty to which he unwittingly exposed himself when he conveyed your invitation to me to be here this evening to speak to you.

I have come to know him as a man of outstanding ability and exemplary integrity. My life has been made richer by his friendship and I know, beyond any question, that the Nation's atomic-energy program—both in providing the weapons essential to the defense of our freedom, and in unfolding the munificence of the peaceful atom—has benefited incalculably from his understanding, his diligence and his wise counsel.

Mr. VAN ZANDT and his colleagues on the Joint Committee have never denied to the Atomic Energy Commission their wholehearted cooperation, nor have they ever stinted us in the matter of support for the proper functioning of the atomic-energy program, either in regard to weapons or developing the peaceful uses of the atom.

The people of Pennsylvania are fortunate to be represented in Congress by a man of his rich talents—a leader who rose from enlisted man to captain in the Navy, in which service I share with him, in addition to our other common interests, a mutual pride. He is a man whose life for 40 years has been marked by high devotion to public service—as a civic leader, Member of Congress, and a hero of three wars.

The theme of this 38th annual encampment—defense means freedom—is one that appeals strongly to me, for the Government's atomic-energy program is firmly based on the concept of security, freedom, and peaceful progress. It is a program of power for peace. We who are associated with that program are entrusted by the Congress with the paramount responsibility of using the energy of the atom to develop and produce the nuclear weapons essential to the national defense and survival. Yet, on the other hand, we work to channel that same energy into the arts of peace.

Until the day when sanity prevails over man's propensity for self-destruction, until wisdom succeeds in bringing an end to wars, we have no prudent course but to provide ourselves with the most effective weapons to assure our security and survival. That

means development, testing, production, and stockpiling of such weapons.

With strength we can negotiate for a sound and reliable basis for peace and disarmament—as we are now doing under the leadership of our President. From a position of weakness negotiation would be impossible.

But as we perserve along the difficult road toward the goal of peace and disarmament, we are developing and sharing the bright promises of atomic energy even while we work to suppress its menace. It is my belief that the United States leads the world in peaceful development of the atom.

Our program is firmly in the American tradition and—regardless of the propaganda efforts of the Communists to dispute this fact—it is a program of peace. The development of atomic energy for peaceful purposes is a natural and inevitable course for us, since it is an expression of our devotion to peace and our deep and genuine abhorrence of war. History has shown us that civilization flourishes in peace. We know also that a third world war in this 20th century would bring disasters without precedent and a regimentation destructive of the liberties which we treasure most.

These convictions, which are ever poignant to you who have experienced war, are basic to our national policies. We are exposed, as all men are exposed, to nuclear war and the wake of disease, misery and destitution which would follow it. Therefore, cost what it may to forestall such a catastrophe, we must exert our utmost of material and spiritual strength to do just that.

Yet, our retention of nuclear military strength while we strive to banish the menace of nuclear war has been badly misunderstood in parts of the world and there are some among our own people who express sincere misgivings that our country should possess weapons of such destructive capabilities. These misgivings arise from an innate decency and could only be voiced in a free country. Certainly no one who is familiar with the capabilities of atomic weapons can be entirely free from moral reservations about them. In the world at large, the misunderstanding about our nuclear weapons of defense is due, not alone to the failure thus far of the nations possessing atomic weapons to arrive at a meeting of minds for controlling them, but to a very great degree this misunderstanding exists because of studied efforts by the Communist enemies of freedom to distort and falsify our motives.

Those who strongly share misgivings about our possession of those weapons of mass destruction should reflect on the condition we would face today if atomic and thermonuclear weapons were in the arsenal of Soviet Russia and not in ours. Would we, in such a circumstance, be allowed the opportunity to sit down with the Soviets—as we are now doing in London—and negotiate on proposals for disarmament? The answer seems to be self-evident, in the light of experience of certain weak nations during the past 12 years. Even the names of some of them have been erased from the map of the world. Lithuania, Estonia and Latvia are no longer in modern geographies. Hungary, Poland, Rumania, Czechoslovakia and others have retained their names but their liberties have been lost and their patriots have been liquidated.

I share with many other Americans—and with many others of the free world—the firm conviction that the United States possession of nuclear weapon superiority during the past decade has been a main deterrent to the kind of aggression which would spell the outbreak of another world war.

We pray for the day when all nations agree to workable international controls over weapons of every sort—controls which provide more than mere promises or affirmations of good intentions. But until that day dawns, we have no reasonable course but to remain strong. We must continue to produce and test weapons and perfect the systems for their delivery as the only effective deterrent to war.

Let us think back to the situation as it existed 12 years ago this summer, at the end of World War II.

At that time, within the space of 10 months, we disbanded and scattered an armed force of 8 million men. We turned wholeheartedly away from the instruments of war and passionately devoted all our thoughts and energies to the prospects of peace. It came as a rude shock to the American people when they realized that there were nations in the world whose appetites for aggression had been actually whetted by the bloodshed of the great war just ended.

We, alone among all nations of the world, possessed at that time an arsenal of nuclear weapons. A dictator, had he been in sole possession of such weapons, would have enforced his will upon others. We, however, gave tangible evidence of our desire for peace. We offered to give up our most powerful instruments of war—nuclear weapons. We announced that we stood ready to share the nuclear technology we had achieved at great price, and to internationalize control of the atom to the end that a basis for durable peace might be found and mankind's fears of atomic destruction might be banished. We offered all this in 1946. We asked in return only that a comprehensive system of disarmament with dependable international safeguards be established.

You know, without recital by me of the dreary train of events, the discouraging reception which our efforts received. We tried then, as we have tried in the years that have followed, to find within the prudent requirements of our security and the security of the free world, some way to limit the use of atomic energy to peaceful pursuits, by all nations. At each step we encountered new frustrations and roadblocks, and as the years passed the Soviets acquired atomic and thermonuclear weapon capability.

President Eisenhower, from the day he took office, sought to find some way out of this deadlock. First of all, he was determined that no opportunity should be overlooked which might offer even a slight point of beginning for international disarmament and that, however discouraging progress might be, he would never relax our efforts toward that end.

In this he has persevered during the past 4½ years, and continues to persevere. Under the President's leadership—and as a means of fulfilling his objective, in his own words, "to strip the atom of its military casing and devote it to the arts of peace"—we seek to head off the nuclear arms race and lift the dead weight of the world's fears. To this end, the United States proposed that we and the other atomic powers suspend nuclear weapons testing and that production of fissionable materials be channeled, not into weapons, but into peaceful uses. We proposed this as a step in a comprehensive system of disarmament.

We insist, however, as is only reasonable and prudent, that any suspension of tests must involve a wider, more effective agreement embracing reductions in other weapons and components of military strength, and that there be ample safeguards including careful inspection and controls. We dare not, in the earnestness and impatience of our desire for disarmament and peace, abandon our most essential weapons of defense, or the improvement of those weapons, unless we are adequately insured against attack by surprise.

The Soviets, for some years past, have used their extensive propaganda resources to play upon the world's fears—first in seeking the banning of nuclear weapons by mere agreement, without safeguards, and secondly, by grossly exaggerating the effects of nuclear weapons testing. Since Russia has a distinct advantage over the West in sheer weight of military manpower, it is to her advantage to stigmatize our nuclear weapons and to create a climate of fear of those equalizers of manpower.

It must be regretfully conceded that the Communist propaganda for this end has been astonishingly successful.

For instance, there are well-intentioned Americans, unaware of the advantages which would accrue to the Communists, who have succumbed to the doctrine, wholly false, that the gravest danger which we face is the continued testing of nuclear weapons. These good people believe the assertion that if we stop testing, and if the Russians stop testing, or, shall we say, if they agree to stop testing, we will then have received an adequate quid pro quo in terms of our security. But let us keep in mind that the threat to our well-being and our freedom lies, not in the consequences of testing weapons, but in the danger of the large-scale use of weapons in nuclear war. That is the danger we seek to avoid. The suspension or abandonment of nuclear testing alone cannot solve the threat of war. Indeed, it would give a false sense of security.

Whatever risks may be incurred in the testing of nuclear weapons, particularly in the rigidly controlled manner in which we conduct tests, I think no informed person will contest that those risks are dwarfed by the consequences of all-out nuclear war which would produce horror and devastation beyond imagining. We must try to make this clear to our friends.

Mr. VAN ZANDT's Joint Congressional Committee on Atomic Energy has only recently concluded highly worthwhile hearings on this subject, taking the testimony of many eminent scientists. To be sure, there were areas of disagreement, as there always are in any precise scientific symposium.

However, it is noteworthy that various scientific leaders—objectively analyzing the voluminous testimony presented at the hearings—have found little or no disagreement with the fact that weapons testing—at the present rate—is not producing detectable harmful effects on the world population.

Our testing program is not "poisoning" the atmosphere. The Communists have been spreading that scare for years now, whenever we announce our tests, while conveniently neglecting even to mention their own nuclear tests which—in contrast to ours—are conducted in secret.

Furthermore, our weapons tests are not capriciously conducted nor in order that we may develop and stockpile weapons of ever greater destructive force. As President Eisenhower has stated on several occasions, we do not test merely to make larger and yet ever larger weapons. Our recent tests are for the purpose of producing weapons better suited to strengthening our defenses against nuclear attack launched by others. We test also that we may produce more weapons having maximum effect against the designated military target, but with little or no widespread radioactive fallout at a distance from the target.

Our recent tests have placed heavy stress on the development of defensive weapons, including nuclear warheads for missiles to be used against attacking enemy planes, troops, and armored forces, and against submarines. In perfecting these new-type nuclear weapons, the size and explosive yields of the devices tested during the past 2 years have been considerably smaller than those tested prior to 1955.

One of the most satisfactory results of the tests during the past 2 years has been the development by scientists of the Commission's laboratories at Los Alamos and Liver-

more, Calif., of weapons having drastically reduced radioactive fallout.

Perhaps some of you are thinking, in that connection, why we should take any comfort from such weapons in our possession since, in event of war, it is the enemy's nuclear weapons which would be used against our cities, and when we have no reason to suspect that an enemy would be even remotely interested in developing cleaner weapons.

I can answer that best by stating that, first of all, we regard it as our responsibility to our own people and to humanity to do all within our power to confine the effects of our nuclear weapons to military objectives.

In the second place, there are sound tactical reasons for the development of clean weapons. For example, in event of war, our cities and industrial centers might be attacked by enemy planes carrying atomic bombs, or by missiles with nuclear warheads. Our defense, using nuclear weapons with insignificant radioactive fallout against those attackers, could save our people from the otherwise dangerous fallout from the battle being fought near our borders, or even overhead.

Also, in a tactical sense, such clean weapons would be of distinct advantage to our ground forces.

Had we suspended our tests a year ago, we would not today know surely how to produce these weapons.

Let me sum up: Nuclear weapons are not in themselves the dark danger of our times. The real dilemma is war, and nuclear weapons have only served to make more urgent and more logical the solution of that dilemma of war or peace.

But we desire one thing as much as peace—and that, of course, is freedom. To remain free, we must have the means of defending ourselves against surprise attack.

In other words, we must remain strong until there is international agreement for the control of armaments, safeguarded by adequate, dependable supervision and inspection. Only from a position of obvious, clear, demonstrable and unquestioned strength can we negotiate soundly and in safety.

Our survival, and the survival of the free world, demands of us that in these critical years we shall be prudent, undiscouraged and strong.

Sewer Delay Costly: Get on With Planning Now

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to call attention of the Members of the House to an editorial which appeared in the Nashville Banner on August 9, 1957.

As the editorial points out, the Nashville-Davidson County community must have an adequate sewer system to serve its urban population, and the reasoning of the Regional Administrator of the Housing and Home Finance Agency in disapproving the Nashville-Davidson County application for a planning loan for a sewer program has no sound basis.

The editorial follows:

SEWER DELAY COSTLY: GET ON WITH PLANNING NOW

Rejection by Federal authorities of the Nashville-Davidson County application for a planning loan to project metropolitan sanitary sewer programing presents. The Banner believes, a shortsighted and untenable reasoning on the part of the Regional Administrator of the Housing and Home Finance Agency.

The fact that this community had plans underway for a unification of local government under a metropolitan charter is not a sound basis for delaying the planning of a metropolitan sewer system.

This metropolitan community must have an adequate sewer system all of its urban population both inside and outside the present city limits. The proposed Federal loan for planning and design of such a system can advance this project by at least 2 years and place the new metropolitan government in position to carry out the work expeditiously.

The reasoning of Regional Administrator Walter Keyes that consideration of the joint city-county-loan application should be held up pending the referendum on the metropolitan charter now being drafted, has no sound basis.

The Banner agrees fully with the thinking of Mayor Ben West that the sewer planning project can and should go forward immediately.

Under terms of the legislative enabling act the new government must assume the covenants and obligations of each of the two local governments unified by the metropolitan charter.

There can be no question of a default in carrying out the terms and conditions of the Federal loan contract. The credit of both existing governments, as Mayor West points out, is excellent. The credit of the new government must be—and will be—as strong as the governments it consolidates.

It appears to this newspaper that the regional administrator is temporizing and using the metropolitan government proposal as an excuse which is not valid in the face of facts.

Mayor West, the Banner believes, is right and is fulfilling an obligation to the people of this total community when he strongly protests the ruling of Mr. Keyes and makes an appeal directly to HHFA Administrator Albert Cole.

The Banner is sincerely hopeful that the metropolitan charter will be adopted by an overwhelming vote of the people of Nashville and Davidson County if it proves—as the Banner believes it will—to be a sound and workable document.

Whatever the future holds there is a vital necessity for projecting sanitary sewers throughout the urban area. The requested Federal planning loan will enable both existing governments to advance that project to a point where the metropolitan government can carry it through.

If the metropolitan charter is rejected the necessity for sewer construction remains as a top priority need which must be met by concerted action of the community and the city and county governments.

Mayor West is to be commended for his refusal to allow this initial rebuff to discourage his efforts to push forward with a most important project.

It is to be hoped Administrator Cole will overrule the decision of Regional Administrator Keyes and approve the planning loan requested by Nashville and Davidson County.

Communist Russian Plot Strongly Organized in the United States

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. SHEEHAN. Mr. Speaker, Mr. Borris Morros, the well-known Hollywood producer and composer, has rendered great service to our country in his role as a counterspy working under cover for the FBI.

In a recent press conference, Mr. Morros very emphatically pointed out and emphasized the fact that the Communist Russian plot is far more strongly organized in the United States and throughout the world than is generally understood by our people.

It has become popular in recent years to discount the Communist movement in this country, and it is worth while to present to the attention of the American people that this treasonable conspiracy still flourishes within our own country.

These thoughts are very aptly contained in the editorial of the Washington Evening Star of August 14, and are as follows:

SPY AND COUNTERSPY

Further evidence that Communist espionage and subversion are a continuing threat that can be taken lightly only at grave risk to national security is provided in the case of Counterspy Boris Morros. Mr. Morros, well-known Hollywood movie producer and composer, has revealed a cloak-and-dagger story of undercover work for the FBI, while posing as a Soviet agent, that rivals the more lurid spy plots of the movies or novels.

Following so closely on the arrest of Rudolf Ivanovich Abel on charges of Soviet spying, the Morros disclosures show that Russia still seeks to maintain an expert espionage apparatus in tihs country, despite severe setbacks from the FBI and other Federal intelligence agencies. As far back as the Kremlin knew, Abel and Morros were trusted members of the apparatus. But there was a difference known only to the FBI. Mr. Morros was reporting secretly to the FBI everything of importance he learned about Russian espionage. For, at great peril to himself, the Russian-born American citizen had accepted an invitation to become a Soviet agent only after consulting the FBI about the offer. During his years of hazardous duty as a double agent Mr. Morros collected and gave to the Federal authorities valuable data about the Communist conspiracy to undermine our Government. His testimony played an important part in the recent indictment as spies of Mr. and Mrs. Jack Soble, Jack Albam, and Mr. and Mrs. George Zlatovski.

Mr. Morros, his usefulness as an American counterspy at an end as a result of these indictments, told a press conference that it was a mistake to brush aside the Communist threat as fanciful. "I want to emphasize," he said, "that the Russian plot is far more strongly organized in this country and throughout the world than is generally understood by our people." He may have had in mind some of the recent Court decisions which have made it easier for the Reds to

operate in this country. There has been too much of a tendency in some high quarters to treat the Communists as harmless political agitators instead of conspirators in the subversive sense.

Congress right now is considering legislation to undo the harmful effects of the Supreme Court decision in the Jencks case—an ambiguous decision which, if interpreted broadly, could seriously hamper the FBI in its counterespionage work. The Jencks decision requires production in court of certain reports by FBI agents who appear as witnesses. Since such reports may contain confidential matter, including the identity of undercover agents, the Government faces the prospect in some cases of dropping prosecution of known spies. Certainly it could not betray the confidences of such daring operatives as Mr. Morros and others who may be serving the Government as counterspies. Pending legislation would provide safeguards against such betrayal. Congress before it adjourns should see to it that these safeguards are written into the law.

A Reader's Philosophy

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. NEAL. Mr. Speaker, as one who was a schoolteacher for a brief period in his formative years, I was particularly impressed with the following column of Mr. George E. Sokolsky which is also carried daily in my hometown newspaper, the Huntington (W. Va.) Herald-Dispatch. I feel that Mr. Sokolsky's comments on the present state of public education are extremely timely. I am certain there is not a Member of this House whose mail each day does not reflect the alarming fact that a great many of our schools are not producing literate nor skilled artisans in the field of building coordinated thought through the tools of words.

So many today do not reflect the general idea that language should express thought. Rather, they use it as a medium to conceal the basic things they seek to convey.

A READER'S PHILOSOPHY
(By George E. Sokolsky)

This is as the letter came:

"I've written a letter on these days. But I just wonder if you will dare print it. If you do, and I hope you do, please don't use my name. Not that I'm ashamed of a word of it for it's all true. I just don't want to receive insulting letters from our older people."

The lady who writes the attached letters says that she is 38 years old and a mother. "This older generations make me sick to my stomach running our future generation down all time."

Then she writes:

"Let me tell you older folks just what I think of you some of you any way did you ever stop and think of the filty examples you set today for our young people to see & hear. For one thing these night clubs they call them. Just places to go and do things in the dark behind your kids back. Ha! Ha!"

I shall give you no more of this. What I want to point out is that we have had more than a century of public-school education in this country, paid out of the pockets of the taxpayer. It is surprising how many letters I receive which contain faulty sentence structure, incorrect spelling, and lack of evidence of reading or of memorizing poetry which gives one a vocabulary. I have one here from a soldier stationed in Washington who believes that Gen. Douglas MacArthur is corny because, I presume, the general writes English. This is what the soldier says:

"Your suggestion that General MacArthur should speak to the American people more often is obviously an attempt to boost phonograph-record sales.

"Such 'gems' as 'Old soldiers never die; they just fade away,' and this latest remark '* * * the earth has spun through the black vacuum of space from the sun * * *' are 'gold mines' for the purveyors of trashy music.

"Please don't assume that I am taking these phrases in their literal sense. I enjoy much of the classic literature which contains the metaphor. I believe that the general is being just a bit too corny."

Unfortunately, language has gone to pot in this era of rock-'n'-roll thinking and this young soldier has probably never been required to read the prose of Milton or Carlyle or Macaulay.

The question then arises, in my mind, whether our people are really going to school for knowledge or for attendance.

When I went to elementary school, decades ago, we had to memorize practically everything. English, for instance, was really a course in memory and now, half a century later, when perhaps I do not remember the name of my next-door neighbor, I recall almost perfectly what was implanted in those early years.

Education is not a cultivation of prejudices nor the formation of friendship. Education is designed to train the mind, to develop an appreciation of knowledge, to learn of the past, to gain skills according to one's fitness and aptitudes. All the fancy stuff such as social adjustments may be a product of the process of education but they do not make the man or woman.

The engineers shriek that the students do not know enough mathematics; everybody complains about the spelling of the younger generations; it is obviously so that Americanized English has become a jargon in its spoken form and what is called clever writing is the attempt to reproduce on paper the horrible sounds of a corrupted tongue. The soldier who regards a simple sentence of well-written English as corny is a product of inadequate schooling. Had he had the advantage of familiarity with the masters of English prose, he would have found that that to which he objects is not corny but English—a beautiful language if well used.

The 15th and 16th of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the 15th and 16th of a series of editorial letters by F. F. McNaughton appearing in the Pekin Daily Times, Pekin, Ill.

The letters follow:

[From the Pekin (Ill.) Daily Times of August 7, 1957]

THE EDITOR'S LETTER
(By F. F. McNaughton)

We saw Galina Ulanova—Ulanova the incomparable.

(Pronounce with accent on lan.)

It was at a gala performance of stars in the sport palace. (From looks of press box and scoreboard, it may be where that great Russian basketball team plays.

Fourteen thousand were present.

We had good $2.50 seats.

Much had come before, with long intermissions with nearly all 14,000 filing out and back in 20 minutes.

Then came the announcement that a great old conductor who helped make Ulanova famous, but who now is so blind that he can not see music (can merely see the form of Ulanova on the stage) would conduct the orchestra for Ulanova to dance the famous Death of the Swan.

The announcement was met with tremendous applause.

Then came the dance.

Now there is no use of me trying to describe Ulanova's dancing. You see a thing like that—you don't have it described to you; especially by me.

Here, dancing on the stage, is one of the most honored, and decorated, and probably highest paid persons in Russia.

All Russia is at her feet.

In her, Russia is supreme.

You've seen a crowd come to its feet for a play at the plate. You've seen a crowd come to its feet for a winning touchdown pass.

Even so, as Ulanova, at the end of the swan's dance, fluttered and sank to the floor in graceful death, the 14,000 came slowly to their feet, as Ulanova sank slowly to her death.

Then the applause broke.

I looked at my watch.

The applause roared for 6 minutes.

Finally the old blind conductor took his place again.

The beautiful music that the whole world knows so well come again from 50 string instruments.

And Ulanova did the entire dance again.

For us it became another unforgettable memory.

[From the Pekin (Ill.) Daily Times of August 8, 1957]

THE EDITOR'S LETTER
(By F. F. McNaughton)

An Australian University man came in as I was talking to the beautiful woman who heads the English Department of Moscow University.

He speaks Russian.

He saw that I was having trouble understanding what happens to the wife and children of a student while he is in medical school.

And she (the English department head) was having difficulty understanding what I meant by the question—of course a woman takes care of herself.

So the Australian spoke up and said:

"Your trouble is that you have different outlooks at life."

And so it is.

Here is another one.

Yesterday I took a short trip with a young university professor from Ohio. (Most Americans we meet here in Russia are professors here on grant for some fund.)

This professor had been hunting books to be found only in libraries in scattered Russia cities.

He had been on a 3-week trip.

His "girl Friday" (his attractive young interpreter guide) had gone along with him on the 3-week trip just as she would have walked over to the Kremlin with him here in Moscow.

He looked like the kind of fellow who probably was superintendent of his Sunday School at home; and I imply no wrong.

A bit ago I asked our "girl Friday (a university girl) if she went on such trips and she replied: "Of course."

And she told me of men whose magazine articles she had later read, or whose published books or pictures she had later seen, with whom she had gone on trips of several weeks.

In London I was told that the new plan for letting tourists drive autos into Russia includes, of course, an interpreter guide, and (I was told) if the tourist is a woman, the guide will be a man; but if the tourist is a man, the guide will be a girl.

You'll understand this better if you realize that here, females work with males in all jobs—and as though they were males.

But for an American, it is a bit of a start.

The Extent to Which a Union Monopoly Will Go To Destroy an Industry

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to include a letter which I received from the Ryan Aeronautical Co., in San Diego, Calif. I do this because it points up the extent to which a union monopoly will go to destroy an industry. The Senate Investigating Committee has spent the greater part of the year exposing the misappropriation of funds by certain unscrupulous labor bosses. Embezzlement per se, of course, is unconscionable but does not in itself constitute a fatal blow to our economic system. While a nationwide boycott of one industry, if successful, would put every business, large or small, in jeopardy of unmoral practices which if perpetrated by any business or combination of businesses would immediately generate the full power of our courts under the antimonopoly law.

If the Senate committee concludes its hearings without a thorough investigation of the UAW–CIO's assault upon the Kohler Co., of Sheboygan, they will have strained at a gnat and swallowed the fly.

The letter follows:

RYAN AERONAUTICAL CO.,
San Diego, Calif., August 12, 1957.

Congressman JAMES UTT,
House Office Building,
Washington, D. C.

DEAR JIM: The contest between Walter Reuther's UAW–CIO seeking to break the Kohler Co. and that company's valiant fight to uphold the principles of free enterprise and free labor has been a matter of continuing interest to me and to the other industrial management men of my acquaintance. We have watched the Senate committee headed by Senator MCCLELLAN in the hope that the conduct of Mr. Reuther's organization would be as thoroughly investigated as has been the activities of the bosses of the teamsters' union. Mr. Beck's free and easy ways with the teamsters' union funds was, of course, a shocking affair, but in itself it presented no real threat to our economic and political system being, in essence, a case of large-scale embezzlement. Of course, Mr. Hoffa's purported plan to consolidate all transportation forms into one great union under his dictatorship is another, and very dangerous, proposition.

The record of extreme violence at Kohler, the blockading of a foreign-flag ship attempting to discharge cargo at Sheboygan, the diversion of enormous sums of money collected in dues from UAW locals all over the country to press and support the attack on Kohler, and the campaign by Mr. Reuther and his union to bring about a nationwide boycott of Kohler-made products, should certainly engage the attention of the Congress. If this union can break one company, as is their announced intention, by the violent tactics which they have employed, then it will follow that any company which attempts to preserve its right to manage its business and protect its own employee's right to choose whether or not they will belong to a union can, and will, also be broken.

Reuther's nationwide boycott of Kohler products has even reached into our plant here in San Diego. On several occasions in the past year, our UAW–CIO local's newspaper has carried long and hotly worded editorials vilifying the Kohler Co. and urging all the local's members to boycott Kohler products. Two weeks ago a building contractor completed and turned over to the company a fine, large factory building. It so happened that in the men's restroom two fixtures out of a dozen were Kohler and marked with the Kohler name. This immediately became a cause for grievance by our union officials. They foresaw all sorts of unfortunate and lamentable results unless the company removed this offending equipment. They were, in effect, demanding that this company acknowledge and support their international union's attempt to break the Kohler Co. by boycott. Of course, this the company refused to do.

I hope that you will exert your influence in the Congress to bring about a thoroughgoing investigation not only of the Kohler situation but of the deep involvement of Mr. Reuther and his top officers in political activity on every level, disregarding entirely the fact that not all UAW–CIO union members are supporters of the same party.

Important and valuable as has been the work of the McClellan committee in investigating the teamsters' union and the confectioners' and bakers' union, their work will be less than half done if they pass over the activities of Mr. Reuther in the political and company-busting field, and if the Congress fails to place big unionism under controls comparable to those placed on big business.

Most sincerely yours,
LESLIE E. GEHRES,
Manager, Personnel and Security.

Army Reform Needed

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BOW. Mr. Speaker, the very serious problems of making proper use of the young men in our armed services is discussed in a recent editorial by Ray Dix, publisher of the Wooster Daily Record. The editorial is a comment on a recent European trip. I agree with his thinking on this subject, and include the editorial as a part of my remarks.

The editorial follows:

[From the Wooster (Ohio) Daily Record of August 7, 1957]

ARMY REFORM NEEDED

One of our flying companions on the way back from Europe was a GI from Kansas who, after being "busted" three times, was being sent home to try to get his feet on the ground.

"There just ain't anything to do but drink and run around," he said. "A guy gets all mixed up and does things he hadn't ought to do."

Something is terribly wrong about our present Army set-up. The sense of futility and frustration felt among many of the GI's attests to this. We believe that something should be done, and at once.

The number of men in arms should be trimmed to a minimum. Every man in uniform should be there because he is needed in that particular spot. To feel that one is not needed makes one feel more like a prisoner than a soldier.

Men should be kept busy on constructive projects. Make-work projects are not satisfactory substitutes. The men are intelligent. They know when they are going through motions, and when they are doing something worth while.

On-the-ground schooling should be made available at regular schedules. Classes ranging from high school through university should be taught. The men should be encouraged to attend these classes and should receive special recognition for any progress made.

We don't like much of what we see. We haven't any confidence in the present program.

Our manner of raising the armies we need is out of date. It is suitable only for wartime when every man is needed. It is not suitable where only a fraction of the available young men are called.

We need some sort of NATO army, of course, but what we have should be effective. It will be only as effective as the individual men.

A Distinguished and Beloved Mississippi College President Retires After 50 Years of Service to Christian Education: Dr. D. M. Nelson Reviews the History of a Great Baptist Institution and Issues a Challenge for the Future

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, June 2, 1957, marked the end of a great and noble career. On that date, Dr. D. M. Nelson, president of Mississippi College, turned over the duties of his office to a worthy and distinguished successor, Dr. R. A. McLemore.

Dr. Nelson had rendered 50 years of service to the cause of Christian education at Mississippi College, and had been its president for 25 years.

Not only is Dr. Nelson one of the foremost educators of our time, but his life is a shining inspiration to Christian people throughout our country. No college president ever enjoyed the respect, love, and loyalty of his students more than Dr. Nelson, and none deserved it more.

Although Dr. Nelson will no longer serve actively as president of this great Baptist institution, I know that he will continue to be active in its affairs. All of us wish for Dr. and Mrs. Nelson a full measure of happiness in their well-earned retirement and we pray that God's richest blessings will be theirs to enjoy for many, many years to come.

Dr. Nelson's last act as president of Mississippi College was to deliver the commencement adress to his 1957 graduates. Under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the text of Dr. Nelson's memorable address:

MISSISSIPPI COLLEGE: PAST, PRESENT, FUTURE

Through the years multitudes have felt the beneficient influence of Mississippi College. Her past is one crowned with golden deeds and resplendent with glory and honor. Founded in 1826, just 9 years after Mississippi achieved statehood, she early became a potent factor in the growth and development of the State whose name she proudly shares and which name was taken from the mighty river that flows so majestically along the entire western border.

Her cultured sons and daughters for over a century have been serving in places of trust and responsibility and making a worthy contribution to the material, intellectual, moral, and spiritual welfare of our beloved State. Some of her graduates have sat in the governor's chair, some have occupied prominent places at the bar and upon the bench, some have served in the Halls of Congress as Senators and Representatives, many have been college presidents and college professors, many more teachers in the public schools and preachers of the Word. Still more in less prominent places as good stewards of what they possessed have been found faithful. Mississippi College, through her ministerial students alone, pastoring rural churches while in college, is largely responsible for the phenomenal growth of Mississippi Baptists from 10,000 in number a hundred years ago to 450,000 today. All of the worthy vocations and callings have furnished areas for the exercising of varied talents of her sons and daughters; nor have the boundaries of the State been able to contain all of them. They have overflowed into other commonwealths and other countries on out to the ends of the earth. Truly it has been said that the sun never sets on the head of a son or daughter of Mississippi College. They stand today around the globe in strategic places, bearing proudly the banner of truth and virtue, and valiently contending for the triumph of truth over error, of right over wrong, of God over Satan.

Mississippi College has been under three flags of ownership and control. In the beginning, educated and cultured citizens of the Clinton community envisioned the need of an institution of higher learning in the most favored spot in all the land. For 16 years these educational pioneers and lovers of learning blazed the way for the young institution and carefully sustained and nurtured and watered it with their sacrifices and devotion. As an indication of their concept of what a college should be, they had written in the charter these significant words: "Be it further enacted, That the president, professors, and trustees of said Mississippi College be, and they are hereby authorized to confer on the students at said institution, such degrees in the arts, sciences and languages, as are usually conferred in the most respectable colleges in the United States, under such rules and regulations as may be prescribed by said president and trustees of the Mississippi College."

They also showed advanced thinking in the college field when they provided for the admission of young women along with young men. In fact, the first graduating class was composed entirely of young women. And so far as is known, Mississippi College is the first institution of higher learning to grant a degree and deliver a diploma to a woman. Most of the colleges of repute have today followed her example. Even Yale is about to capitulate.

In 1842 these interested citizens of Clinton, feeling that the college would fare better with a sponsorship with an influence extending over wider areas, transferred the young and struggling institution to the Presbyterians of Mississippi. After 8 years of operation in which valuable experience was gained and some worthwhile contributions made to the young college, financial difficulties led this church group to turn back the institution to the original owners, who then transferred the property without cost to Mississippi Baptists under whose ownership and control it has been these 107 years. And in the providence of God, it seems destined to be until the end of the ages.

The first 10 years under the new management with I. N. Urner as president were characterized by growth and development and the kindling of high hopes for the new venture. The two most important accomplishments during this decade were the raising of $102,000 endowment, which soon was consumed by the fires of fratricidal conflict, and the construction of the Old Chapel, which still stands in majesty and is the pride and joy and inspiration of all former students.

While in the midst of high expectation and great optimism for the growing institution came the War Between the States, occasioned by an attempt to settle some constitutional questions by the arbitrament of the sword which the Founding Fathers had been unable to do in the Council Chambers at the time of the formation of the Government. As is well known, wars always involve youth. They cannot be fought without them. So in this instance practically the entire student body laid down their books and took up their arms to defend imperishable principles and inalienable human rights. How faithful were these college lads in the grim business of war? What of their courage on gory battlefields of awful carnage? How did they acquit themselves while being baptized in liquid flames of death? The fact that of the 104 who went out in the Mississippi College Rifles Company to the battlefields of Virginia with only 8 returning to tell the story answers in silent but eloquent tones. The poet was right:

"No nobler men were e'er by duty led;
No braver soldiers ever faced the foe;
No heroes ever marched with firmer tread;
No souls with deeper courage e'er did glow."

The supreme sacrifice of these noble sons of our great college for a deathless cause created for us a priceless heritage and indissolubly linked us to the cause for which they gave the last full measure of devotion. And if there be those today among us as this ageless struggle recurs with sympathies alien to the eternal principles for which those paladins fought so nobly and died so heroically future generations will find an appropriate term to designate them for their perfidy as was so well done in another era. So Mississippi College by blood-bought right is not only a vital part of the State of Mississippi but of the entire southern area as well. The fact that these noble souls were contending for the universal doctrine of self-determination of a free people and the eternal principle of local self-government and constitutional rights makes them and us a part of the ages without limitations or bounds. It should be remembered by the young as well as the old in this, another crucial period in our history, that an attempt to compel a free people by legal sanctions or executive pronouncement or even religious and moral implications to conform to a distasteful order and a repulsive way of life is more intolerable and indefensible than the application of physical force to gain such ignoble ends.

The returning Confederate soldier in 1865 found his home in ruins, his land laid waste, and his property destroyed or taken from him by force. The section, which before the holocaust of war was recognized as the richest in the country, was now in direst poverty. All organizations and institutions were therefore in a sad plight. Mississippi College was no exception. President Urner, devoted soul during a stressful period, persuaded the invading Federal forces from burning the college buildings, even though many of the stately mansions of the once prosperous citizens of the Clinton community went up in smoke and flames. After holding the college together during the first decade and the war period and 2 years thereafter, the first president of the college under Baptist control resigned in 1867, and President Hillman, of the Central Female Institute (later called Hillman College), with his wife, Adelia, took on the added responsibility of administering the affairs of both institutions. This they did with fidelity and devotion for 6 years. Then there appeared as leader that massive character and great heart and dedicated soul, Walter Sheldon Webb, to become the third president under present ownership. For 18 difficult and trying years he served and laid deep the foundation of Mississippi College in Christian concepts and spiritual verities.

In our humble judgment to President Webb more than anyone else is due the credit for Mississippi College wearing so well today the name Christian in fact as well as in name. Those who graduated under him were quick to pay glowing tributes to their great president who inspired them to a richer and fuller life. This speaker well remembers that soon after he assumed the presidency, one of them, Dr. B. D. Gray, came by unannounced and bade us go with him to the Clinton cemetery. He went straight to the grave of his great college president, Dr. Webb. As he stood there with his arm upon our shoulder, he delivered a eulogy on the life and character of President Webb. Then he went to the throne in prayer, thanking our Heavenly Father for giving Mississippi College the great and good president and having permitted him to sit at his feet and learn so many of life's great lessons. Then he prayed for the new president, beseeching the Lord to hold him true to the principles and the precepts lived and taught by his great leader. You can imagine how profoundly this experience influenced the future actions of the new president. We were further blessed in having two others who graduated under President Webb as members of our board of trustees. These were the Honorable A. S. Bozeman of Meridian and the late Brother J. W. Lee of Batesville. They were steadfast and unmovable for the right and always abounding in wisdom and good deeds for the college.

When age and infirmities removed Dr. Webb from the scene of action, the scholarly Dr. R. A. Venable, his son-in-law, was named his successor. He was the first alumnus to become president of Mississippi College. The question of moving the college to Meridian arose early during his administration. This provoked a great deal of controversy and no doubt had something to do with cutting short his tenure to 4 years. He was called to the pastorate of the First Baptist Church of Meridian, where he served in this capacity long and well. Later he rendered signal service in teaching Bible in Clarke College. With the closing of the administration of President Venable, the curtain on the past was drawn and the present appeared with the princely and esteemed W. T. Lowrey as president. He grew to maturity on a college campus. His father before him was a college president, and he had succeeded him to

the presidency of Blue Mountain College. He was also a preacher of power and was widely and favorably known in religious and educational circles. With his knowledge and wisdom and consecration he began the present era of Mississippi College which is now rapidly drawing to a close.

During his administration, Jennings hall, the dining hall, and the science hall were built, the endowment increased, the student body enlarged, reaching the 400 mark in 1906–07, which was the occasion for a holiday and a visit to the "Stute" with the professors as captives borne on the students' shoulders, some speeches were made, both publicly and privately, and a good time was had by all. In this administration, significantly enough, the Bible was introduced into the curriculum as a subject of study with the great soul, H. F. Sproles, as teacher.

When conditions at Blue Mountain necessituated the return of Dr. Lowrey to the presidency there, Dr. J. W. Provine, a member of the faculty, succeeded him to the presidency of Mississippi College in 1911. He had come to the faculty in 1893 fresh from the University of Goettingen with the degree of doctor of philosophy in chemistry. He could have gone to universities of high rank as teacher, but he chose to plant his life in Mississippi College as so many had done before and continue so to do. He had already served 2 years as chairman of the faculty and 1 year as president in the interim between the administration of President Venable and the coming of President Lowrey. So he was no novice in the field of college administration. With his profound scholarship and vision of what a college ought to be and tireless energy and capacity for making friends and holding them, the work of Mississippi College gained new recognition at home and abroad. Ratliff hall, Chrestman hall, the library building, the infirmary building, and alumni hall were constructed during the Provine administration. The endowment was raised from $240,000 to $632,000, enabling the college to qualify for membership in the Southern Association of Colleges and Secondary Schools. After weathering successful World War I and surviving the first shock of the world-wide depression beginning in 1929, Dr. Provine, who up to that time had served the college as president longer than any other, returned to his teaching position, where he remained for 10 more fruitful years.

To fill the vacancy, the present president was called from his department of physics. He had known Presidents Webb and Venable. He had received his diploma from the hands of President Lowrey. He had been taught chemistry and geology and German by the outgoing president and had served on his faculty for a score of years, and while so serving he was granted a leave from his department to lead in the movement to prepare all of our colleges for accreditation, so he was no novice either in knowledge of college affairs and perhaps would have been considered in the line of succession if president had been chosen after that fashion. Suffice it to say that he was chosen in the usual way and for 25 years, in this position, he has given his best to the college he loves dearer than life itself. What has been done during this administration is largely the result of a firm foundation laid by others, a sympathetic and supporting constituency, and the directing hand of an omnipotent and approving heavenly Father. With few exceptions, the governing body and the faculty have been to him as a rock in a weary land, and a shelter in the time of storm. The students, God bless them, have been like "apples of gold in baskets of silver." They have furnished inspiration and delight and their value has been far above the price of rarest rubies. During this administration there have been enrolled 12,095 different students. This number compares favorably with 12,686 who were enrolled from 1850 to 1932. Four thousand one hundred and three of this number were graduated, which is 2,203 more than had received diplomas before the beginning of the present administration. Modesty forbids and time fails to tell of the expansion of facilities and personnel and curricula and added endowment during the last quarter of a century. A scanning of the period might well provoke the exclamation of the inventor of the telegraph: "What hath God wrought."

With the close of this administration, a new era begins and what has gone before may be but an earnest of what is to be. With the proper regard for the meaning and mission of Mississippi College the future will be as bright as the promises of God. As was said by the great Churchill of his beloved country, "There will always be an England," so says an humble son of his alma mater: "There must always be a Mississippi College." A glorious past and a challenging present but presage a great future. We can but wish for a Longfellow to write of the perpetuity of our college as he wrote so truly and so well of our country:

"Thou, too, sail on, O Ship of State!
Sail on, O Union, strong and great!
Humanity with all its fears,
With all its hopes of future years,
Is hanging breathless on thy fate!
We know what Master laid thy keel,
What Workman wrought thy ribs of steel,
Who made each mast, and sail, and rope
What anvils rang, what hammers beat,
In what a forge and what a heat
Were shaped the anchors of thy hope!
Fear not each sudden sound and shock—
'Tis of the wave, and not the rock;
'Tis but the flapping of the sail,
And not a rent made by the gale!
In spite of rock, and tempest's roar,
In spite of false lights on the shore,
Sail on, nor fear to breast the sea!
Our hearts, our hopes, are all with thee.
Our hearts, our hopes, our prayers, our tears,
Our faith, triumphant o'er our fears,
Are all with thee, are all with thee!"

We of Mississippi College too need not fear sudden sounds and shocks. For our institution also is built upon a rock, the rock of eternal truth. In the long ago it was written by the Founding Fathers: "Our desire is to educate youth, not merely to hear recitations. To teach them to think as well as to remember. To improve the heart as well as the head." Again it is recorded: "Though our institution be in the hands of the Baptist denomination, we shall not deem it our duty to teach them our peculiar tenets. Yet we will rigidly require a regular attendance of prayers according to college usage, and attendance at some house of worship on the Lord's day, determined to notice any violation of the command against breaking the Sabbath." Of one thing there is assurance, doubly assured, that so long as there is firm and uncompromising adherence to her motto, "Truth and virtue," she will remain not merely a college of an age, but the college of the ages.

To achieve her manifest destiny there are some essentials that must obtain. Among these are a governing body devoted and loyal with a degree of permanence of tenure; a president, with a supporting staff, full of wisdom and strength and courage and consecrated to the glorious task in hand; a faculty such as has characterized her entire history, scholarly, spiritually minded and lovers and leaders of youth; a curriculum broad enough to provide not only a liberal arts education with the Bible at the center, but also adequate provision for graduate and professional education; a student body as now made up of wonderful young people from the best homes of the land, eager to learn and with an unquenchable desire to excel in all of the noble virtues; a constituency and a denomination committed to the great cause of Christian education and making liberal provisions for the operation of the college so that even worthy students of restricted means may be able to partake of her offerings. These high purposes realized, this college that majors upon spiritual values and Christian distinctives is well on her way toward achieving her manifest destiny.

As I was in the spirit a while ago, I had a vision. There was gathered together a great concourse of people which no man could hardly number. A speaker arose and in stentorian tones began to tell of the scenic beauty and charm of the State of Mississippi; of her healthy climate and fertile soil, of her stately hills and rolling plains and sweeping rivers, of her diversified crops and extensive forests and blooded cattle grazing in knee-deep pastures, and a people forward-looking, lighthearted and happy, in favor with God and man. He also spoke of how agriculture was being balanced with industry and capital had at last discovered that in this goodly and favored land profitable investments could be made. And with this increasing prosperity there were coming, said he, better schools, better homes, better churches, and richer living conditions for all the people. When this one sat down, another arose to ask a question. What was behind all this growth and prosperity? He wanted to know. What was the responsible factor? For a moment there was a great silence. Then one arose standing head and shoulders above them all and began to give answers to the questions propounded. Said he, "There are several minor factors, no doubt, that enter into the phenomenal growth and development of this great State, but fundamentally and basically the major cause lies in the fact that there was founded in 1826 a college in the strategic town of Clinton, in the center of the State, hard by the capital city, which is just 9 years the junior of the State, and through these more than 130 years, she has been sending a stream of cultured Christian leadership into all vocations, professions, and callings into every nook and corner of the State, making the crooked places straight and the rough places smooth. And this benevolent influence has not been confined to Mississippi alone, but the flow has extended to earth's remotest bounds."

Then another with animated voice and serious demeanor arose to offer a suggestion. "If what has been said is true and who can gainsay it, let the citizenry of the State of Mississippi of all faiths and of no faith show its appreciation and gratitude for favors and benedictions received from this benevolent institution rise up en masse and provide adequately for training and developing not 2,000 as now, but 5,000 young men and women, not only providing work in the area of the liberal arts but in all the professions and callings as well." When he sat down, the applause was so thunderous as to awake the dreamer. The hope continues to persist that the vision in due time will prove to be more than a dream. And to the members of the class of 1957, we issue the charge and the challenge to join with the class of 1907 whose living members are celebrating their 50th anniversary today and all others of the same mind toward realizing the highest hopes and fondest dreams for alma mater. Then a mighty chorus of kindred voices can make the welkins ring and the earth resound with

Fairest of all is our dear Mississippi
Rising in state as the crest of a hill;
Staunch as a rock is our dear alma mater,
Round her so noble our hopes ever live.

When in the future, our hearts may be yearning
For the bright scenes of our dear college youth,
Back to thy portals our memories turning,
Clear, gleams thy beacon of virtue and truth.

M. C., we hail thee, our dear Mississippi,
Queen of our hearts, no foes shall alarm;
Faithful and loyal thy children will ever
Cherish thy mem'ry, acknowledge thy charm.

Clear It With Alcorn—How Ambassadors Are Chosen

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Drew Pearson, which appeared in the August 10, 1957, issue of the Washington Post and Times Herald entitled "Envoys Reported 'Cleared' by GOP."

ENVOYS REPORTED CLEARED BY GOP
(By Drew Pearson)

Despite President Eisenhower's angry denial that he ever appointed an ambassador because of political contributions, the Senate Foreign Relations Committee has discovered quite by accident that the State Department clears every diplomatic appointment with the Republican National Committee.

A State Department stenographer made a slip and sent the wrong letters to Foreign Relations Chairman THEODORE GREEN, Democrat, of Rhode Island. The letters were supposed to have been sent to the ranking Republican, Senator ALEXANDER WILEY of Wisconsin. Instead, Democratic Senator GREEN was assured on two occasions that ambassador nominees had been cleared with the Republican National Committee.

GREEN has now demanded to know whether the State Department or the Republican National Committee is running our diplomatic service.

The Foreign Relations Committee is also tracing the political contributions of key ambassadors and finds overwhelming evidence that Mr. Eisenhower just didn't know what he was talking about or else wasn't telling the truth when he said campaign contributions didn't influence diplomatic appointments. The committee's findings indicate that diplomatic posts are put on the auction block and almost sold for cash on the barrelhead to campaign contributors.

MONEY RAISERS

The chief money raiser for last year's campaign, GOP National Treasurer J. Clifford Folger, was appointed Ambassador to Belgium. He and his wife not only raised money, but gave $10,500 out of their own pockets. Aside from his money-raising ability, Folger has no other known qualification for handling our complicated foreign affairs.

Total contributions of $8,500 have been traced to James David Zellerbach's immediate family. He's the California paper-box king who was named Ambassador to Italy, a juicy diplomatic plum.

The President's new Ambassador to France, Amory Houghton, coughed up $6,000 and his son gave another $2,500. John Hay Whitney, Ambassador to Britain, has long been a big Republican contributor. Ten contributions have been traced to him and his wife, totaling $30,000. Other family members also donated heavily to the 1956 campaign.

The former Ambassador to Denmark, Robert T. Cole, got his job after contributing to the Eisenhower campaign in 1952. He reportedly was asked for a more substantial donation in 1956. The records show his family scraped up $6,190.

"It was more than that. I doubled my 1952 contribution," Coe told this column by long-distance phone from his home in Cody, Wyo. But apparently it wasn't enough; he was kicked out as Ambassador.

HARD TO TRACE

It's no secret that only a percentage of the actual campaign contributions are officially recorded. The balance is often passed under the table. All Mr. Eisenhower's noncareer ambassadors are known to have donated to the political pot.

However, it's difficult to trace the individual contributions. For example, Jefferson Patterson, Ambassador to Uruguay, gave $4,000 to the Eisenhower campaign in Dayton, Ohio. The records also show another $20,000 contributed by Jefferson Patterson and his wife in Washington.

Robert Thayer, Ambassador to Romania, is listed as donating $1,000 via the American Embassy in Vienna, Austria. Two contributions of $1,000 and $2,000, respectively, have been traced to Mrs. Thayer in Vienna. Still another $2,000 shows up in the record, contributed by Mrs. Thayer in Washington.

The evidence clearly shows that the political spoils system is followed in handing out diplomatic posts. This may explain why the United States has suffered so many diplomatic setbacks.

NOTE.—The man who stirred up the controversy over political ambassadors, Maxwell Gluck, admitted contributing $36,000 to 2 Eisenhower campaigns. He was a close friend and associate of Ben Javits, attorney brother of Senator JACK JAVITS of New York. Senator JAVITS didn't want to appoint Gluck from New York, so arranged with his Republican Senate friends from Kentucky to appoint him from that State, because Gluck kept a racing stable in Kentucky.

The Late Thomas L. Blanton

SPEECH
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. VINSON. Mr. Speaker, somewhere in the great beyond a great American, the Honorable Thomas L. Blanton, has joined the heavenly hosts. Judge Blanton served as a Member of the House of Representatives with distinction, energy, and integrity from 1917 to 1937, except for one term in 1929 when he was an unsuccessful candidate for nomination to the United States Senate. Prior to his congressional service he had served as judge of the 42d judicial district of Texas.

I first met Judge Blanton in his first term in the Congress. I quickly realized that he was a man of great talent, strongly devoted to his country, extremely conscious of his duty to his constituents, firm in his convictions, and ready at all times to fight for what he thought was right. He was undoubtedly one of the best informed and one of the hardest working Members that it has been my privilege to meet. I respected his knowledge and admired his courage.

I always considered Judge Blanton as a personal friend and I shall always cherish the memory of that friendship.

Judge Thomas L. Blanton made his mark on the American scene. There was never any question as to where he stood on national issues so important then to our national welfare.

I am saddened by the news of Judge Blanton's death, and I express my deepest sympathy to Mrs. Blanton and to the many friends of Judge Blanton who, like I, respected him and admired him.

The Determination of Tariff Levels by Wage Differentials

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. CURTIS of Missouri. Mr. Speaker, on February 18, 1955, the House passed H. R. 1, a bill to extend the authority of the President to enter into trade agreements under section 350 of the Tariff Act of 1930 as amended. At that time I took the floor of the House to explain an amendment I had sought to make to this act. These remarks appear on page 1479 of the RECORD.

On March 9, 1955, I appeared before the Senate Finance Committee in behalf of this amendment, and my remarks appear in the Senate Finance Committee hearings on H. R. 1.

In essence, my amendment sought to enable the Reciprocal Trades Act to accomplish what it advocates and professes to do. At the same time, it will not do the damage to American domestic industry that the opponents of the act claim it does.

Personally I do not believe that the Reciprocal Trades Act has accomplished what its proponents claim for it. During the period that the Reciprocal Trades Act has been the law of our land, international trade has not become more liberalized. Quite the contrary, international trade has become clogged with more trade barriers than ever before. I think it is properly argued that there were other forces at work which created this clogging of international trade and, as a matter of fact, I think it can be successfully argued that, but for the Reciprocal Trades Act, international trade might have become even more clogged than it has. Be that as it may, the number of barriers erected in international trade is legion and they have increased, not decreased.

Certainly the evidence of maintaining friends abroad as a result of our trade policies is questionable. Despite the impression that the press releases of our State Department give to the American public, the United States is by far the freest trader of any industrial national in the world today. Yet, with all this liberalization, world trade is in the clogged state I have described. Furthermore, any fair analysis will show the use of the tariff to regulate foreign trade is the most liberal of all regulatory devices. Such regulatory devices as licenses, quotas, systems of dual currencies, and so forth, are much more rigid, arbi-

trary, and restrictive than are tariffs. What regulating the United States does is done essentially through the tariff device.

We have not been building the economies of what are termed the friendly nations in a really solid manner, either through our aid policies or our trade policies. Our aid programs are, in essence, socialistic inasmuch as they are channeled through the political government of the country involved. Our trade, which is essentially private enterprise so far as the United States is concerned, meets with a highly protected and subsidized enterprise system in most of the foreign nations. Furthermore, the benefits derived from industry in most of these allegedly friendly and allegedly free nations is such that labor takes little and capital takes much. No domestic markets exist in most of these countries and no domestic markets are likely to exist so long as the country concerned permits its labor to be exploited in a sweatshop fashion.

Our own domestic industry is required to obey social legislation designed to build a sounder and more abundant economy such as minimum wage laws, health laws, antitrust laws, and so forth. Very obviously, if our Government does not permit a price differential to exist to reflect the added cost of these socially desirable restrictions on our industries, the sweatshop operations abroad—frequently under American capital gone abroad to escape the domestic socially valuable legislation—can take over the great domestic market. In the long run, of course, if unchecked this will destroy the great American domestic market.

The best way, of course, for us to combat communism in these friendly nations abroad is to help them build their own domestic market. This is done by encouraging them to give their laboring group enough take-home pay so that they can become customers for the products they assist in making. We do not do this, even though it be in the guise of friendship, by giving them readymade markets for sweatshop labor.

The amendment I proposed to the Reciprocal Trades Act sought to tie in our tariff reductions with the minimum wages paid in an industry abroad seeking to sell its product in the United States domestic market. In my appearance before the Senate Finance Committee I had developed a formula somewhat more realistic than the crude one I proposed to the House Ways and Means Committee which simply tied minimum wages of foreign countries with our minimum wages. In the perfected formula I threw in an additional factor of ratio of per capita GNP of the foreign country with the United States per capita GNP. This was necessary in order not to have an industry manufacturing for export into the United States wages too greatly out of line with the national wage scale of that country. However, the essence of the formula was to have our tariffs go down on a particular product as the wage scale of the foreign industry making the product for export approached our minimum wage scale. It was not required to approach the wage scale paid in the United States domestic industry which, of course, would be 2½ and sometimes 3 times greater than our national minimum wage scale.

The State Department said this approach was too impractical. They also said it would interfere with the economies of countries abroad. Actually, the problem is not an easy one. But a little brains applied to it should be able to make it practical. The point that it would interfere with the economies of nations abroad should hardly be dignified by an answer. Our present policies are interfering with nations abroad in a manner which, in my judgment, has caused damage. The interference such as a purely voluntary program, as my amendment suggests, would be a great step forward in lessening interference and, at the same time, accomplishing the main thing we say we want to accomplish; that is, to build the economies of our friends abroad and help to make the peoples of that country free and beneficiaries of the good things in life.

With this preamble, I am placing in the RECORD a suggested amendment which seeks to grapple with the solution to this problem in more detail. I am certain that one reading this proposal will immediately comment, "how complicated." But I believe if attention is kept to the issue at hand the reaction will be that this is a further step forward in reaching the objectives for which we should all be looking. I hope the officials of our State, Commerce, and Labor Departments will read this over carefully and start applying a little constructive criticism to it. In my judgment, if action along this line is not formalized the entire Reciprocal Trades Act may go by the boards. The Eisenhower administration has often spoken of bold new programs. Most of these programs I have seen have been neither bold nor new. This, indeed, would be a bold new program that could start a new era in American foreign relations.

The suggested amendment follows:

THE DETERMINATION OF TARIFF LEVELS BY WAGE DIFFERENTIALS

The new and dynamic kind of capitalism created in the United States during the last 40 years depends not only upon the capacity to produce but the ability to consume, broadly shared by the great majority of citizens. The high level of wages paid to production workers here, made mandatory by the Fair Labor Standards Act, is an integral factor in this ability to consume.

By contrast, foreign nations of the so-called free world, with the exception of Canada, continue to follow the kind of capitalism which was characteristic of the United States in the 19th century. Wages paid to production workers are low, and the ability of the average man to consume extends not much beyond subsistence items. Abject poverty exists side by side with great wealth, and the market for consumer goods other than basic necessities is restricted to the few.

Since no nation exists as an economic entity unto itself, this difference in the two forms of capitalism causes thoughtful people much concern. Rigid immigration quotas imposed by the United States prevent a flood of foreign labor from undermining our wage structure. But if the product of cheap labor is permitted free access to our markets, the effect is the same. If the foreign manufacturer, by reason of a lower labor cost, can undersell American producers in their own primary market the rates of pay of American workers, and their very jobs, are in jeopardy.

The tariff policy of the United States should have two objectives. First, product by product, it should offset the extra cost, if any, of wages to production workers paid by the American producer. Where the American producer's cost of production is penalized by manmade rules, that penalty must be balanced by other manmade rules to the extent, and to no more than the extent, of that penalty.

Second, the United States tariff policy should be used as the instrumentality to extend this concept of capitalism abroad to the end that workers elsewhere will receive a fairer share of the product and the increment of industry. This can be accomplished by making the level of United States import duty on a specific product contingent upon the level of wages paid by the foreigner who sends his product to this market. To grant concessions in our markets to the owners of foreign businesses may increase the profits of the few, but so limited a benefit will neither bolster the sagging economy of our allies nor will it arrest the spread of Communism. Wherever great wealth and abject poverty exist side by side, the situation is ripe for the cancer of the Communist cell.

The problem of determining levels of United States import duties on various products by the relative cost of wages to production workers is not as difficult as importers, manufacturers who produce abroad for the United States market, and doctrinaire free traders, would have us believe. The very variety of objections they raise indicates their awareness of the essential fairness of this approach provided that it could be done realistically.

It is true that a simple comparison of average hourly wages paid to workers in domestic and foreign industries neglects the relative productivity of labor. It is likewise true that it would not be practical to compare the total labor cost content of the United States made product with the total labor cost content of the foreign made product, because reliable data would not be available from the foreign producer. And it is true that fringe benefits which do not appear in workers' take-home pay, are a higher percentage of hourly earnings in many foreign countries than they are here.

But there is no reason why we should follow a blind alley, or omit factors which should be included. The average hourly wage comparison is important if we are to accomplish the purpose of recognizing better levels of foreign wages. There is, however, no reason why it must be used alone in a formula without a weighting factor. Likewise, total labor cost content is important, and if foreign figures are unobtainable, the figures of each domestic industry can be readily obtained and can serve as a basis for calculation.

The following method is suggested as an equitable way to determine ad valorem duty rates, product by product, using wage differentials as a basis:

1. Determine a weighted foreign hourly wage rate that can be equitably compared to the competitive United States industry wage rate.

2. Determine the man-hours per dollar of sale to measure the effect of the difference in wage levels and establish difference in actual labor cost.

3. Determine the ad valorem duty necessary to offset the computed difference in actual labor cost.

The calculations to accomplish the above are described below:

1. Determine a weighted foreign hourly wage rate.

(a) Divide the foreign wage rate by the domestic rate, both rates to include fringe benefits which constitute a direct charge on

the manufacturer. The domestic rate shall be the United States industry average for that product. The foreign wage rate shall be attested to by the foreign manufacturer who shall list the hourly average wage to all production employees, plus a list of applicable fringe benefits so that the document constitutes a basis for ready investigation by the responsible agency of the United States Government.

(b) Divide the foreign per capita income by the United States per capita income.

(c) Divide the ratio of wages (I a) by the ratio of per capita incomes (I b). This results in a weighting factor to adjust the foreign wage so that wages paid by foreign and domestic producers can be compared in the economic climate in which each is paid.

(d) Multiply the attested foreign wage rate by the weighting factor (I c). If the foreign wage rate represents a higher relationship to the domestic wage than the foreign per capita income does to the domestic per capita income, the attested wage rate is adjusted upward. If the reverse relationship exists, i. e., the wage ratio is lower than the income ratio, the attested wage is reduced for purposes of computing United States duty.

2. Determine the man-hours per dollar of sale and establish difference in actual labor cost.

(a) The average United States industry percent of labor cost to product selling price is considered to be the cents of labor cost per dollar of United States selling price.

(b) Divide the cents of labor cost per sales dollar (II a) by the United States industry hourly wage rate to determine the man-hours required per dollar of domestic sales price.

(c) Multiply the man-hours required (II b) by the weighted foreign wage rate (I d) to determine the weighted foreign labor cost per dollar of United States selling price.

(d) Subtract the weighted foreign labor cost (II c) from the United States labor cost (II a), both based on a dollar of domestic sales price, to determine the difference in labor cost.

3. Determine the ad valorem duty necessary to offset the computed difference in labor cost.

(a) Subtract the domestic labor cost per dollar of sales (II a) from a dollar of domestic price to determine all factors besides labor included in the domestic price.

(b) Add the weighted foreign labor cost per dollar of domestic sales price (II c) to the domestic cost of all factors besides labor (III a) to establish a foreign price base, i. e., a price that includes all domestic price factors except labor and includes labor on a foreign weighted cost basis.

(c) Divide the difference between weighted foreign labor cost and domestic labor cost (II d) by the foreign price base (III b) to determine the ad valorem duty necessary to equalize the labor cost differential.

An example of how this formula applies in a specific situation is attached as an addendum to this memorandum.

The system outlined above is clearly based on the real differential in the cost of wages to production workers. It does not prejudice the product of any country by reason of the current stage of that country's economic development. It uses nothing but obtainable statistics. It is easy to calculate the United States ad valorem duty on any product made in any country.

It preserves the most favored nations concept, because it need be applied only to those nations now so considered. Others would continue to pay the pre-Trade Agreements Act rates of duty.

It answers the categorical objection of the International Chamber of Commerce to the effect that United States industries paying the lowest wages are those most likely to seek protection. Obviously, just as this system rewards foreign manufacturers who pull their weight in the boat as far as other wages in their own countries are concerned, so this system would penalize United States industries paying substandard wages according to this country's economy.

It would put international trade and trade agreements on a sounder basis. Since the abandonment of the gold standard as a dependable reference point, such agreements have often been warped or nullified by one country depreciating its currency. With this system, there would be no advantage in such a course because of the cross relationship of per capita incomes and hourly wages, and the relation of both to the United States dollar.

It would identify United States trade policy with the interest of peoples abroad, and would become a powerful countervoice against the appeals and promises of communism.

ADDENDUM NO. 1

Following is a list of 20 countries and their latest per capita income figures as given in the 1956 United Nations Statistical Handbook. Figures for other nations are available from the same source, and should be translated into United States dollars at the free rate of exchange prevailing. These per capita income figures, together with assumptions as to domestic and foreign average hourly wages, can be used to calculate ad valorem duty on any product which would be imposed in accordance with this formula:

Australia	$1,032
Austria	444
Belgium	814
Canada	1,335
Denmark	770
Finland	787
France	821
Greece	230
Israel	557
Italy	353
Japan	212
Mexico	164
Netherlands	582
Portugal	188
Spain	279
Sweden	1,101
Switzerland	1,092
United Kingdom	832
United States of America	1,960
West Germany	603

ADDENDUM NO. 2

Problem: To calculate the ad valorem duty imposed on XYZ product made in Japan and exported to the United States of America.

Facts: United States per capita income, $1,960; Japanese per capita income, $212.

Assumptions: United States XYZ industry average hourly wage, including fringe benefits, $2.10; Japanese XYZ manufacturer's average hours wage, including fringe benefits, $0.33; United States XYZ industry's average labor cost percent of selling price, 28 percent.

Formula paragraph:

I. (a) $0.33÷$2.10=15.7 percent (foreign wage percent of United States wage); (b) $212÷$1,960=10.8 percent (foreign per capita income percent of United States per capita income); (c) 15.7 percent÷10.8 percent=1.45 (weighting factor to adjust actual foreign wage); (d) 1.45×$0.33=$0.478 (weighted foreign average hourly wage).

II. (a) 28 percent×$1.00=$0.28 (United States XYZ industry's labor cost per sales dollar); (b) $0.28÷$2.10=.133 (man-hours per sales dollar); (c) 0.133×$0.478=$0.064 (weighted foreign labor cost per United States sales dollar); (d) $0.28−$0.064=$0.216 (difference in labor cost per United States sales dollar).

III. (a) $1.00−$0.28=$0.72 (United States XYZ industry's price factors other than labor); (b) $0.72+$0.064=$0.784 (foreign price including all United States factors except labor and adding weighted foreign labor cost); (c) $0.216÷$0.784=27.5 percent (ad valorem duty).

The Civil Rights Bill

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. HOFFMAN. Mr. Speaker, this country needs a civil-rights bill about as much as, but no more than, a hungry man with an empty pocket, no food, and unemployed needs an additional appetite.

There is on the books ample law to protect the right to vote. If we have had as little enforcement of that right as we have had of some others, the impatience of the American people with the practices existing in a few States is understandable.

At the same time, we might well keep in mind the fact that, in elections where the franchise is free, voters are continually coaxed by the candidates to go to the polls, yet a large percentage of the population just ignores the privilege. For example, at many a municipal, township, and school election, no more than 25 percent of the eligible voters take the trouble to express their will.

In truth and in fact, whatever may be the real situation in some States, where it is said certain groups are not permitted to vote, the cold, hard fact is that all this furor over the civil-rights bill grows out of a struggle of politicians to corral the vote of certain minority groups.

The bill not only gives unjustified power to an Attorney General, power which in the hands of a wicked, ambitious man might enable him to establish himself as a dictator, but it creates a new and expensive agency—an agency which will be dominated and controlled by self-seeking members of minority groups who have their own personal political advancement in mind to a greater degree than their desire to serve others.

This week's Saturday Evening Post has this to say:

HAS TRIAL BY JURY LOST ITS STANDING AS A CIVIL RIGHT?

The civil-rights bill would have stirred up less opposition than it did if its proponents had been willing at the beginning to include in the bill the civil right of trial by jury for those accused of violating the law. The device by which persons accused of disobeying this one isolated statute were to be charged with contempt of court, in order to make possible their conviction of a Federal offense, left a bad taste all round.

The reasoning behind this attitude was ably stated at the convention of the Americans for Democratic Action. Efforts to insert a guaranty of trial by jury into the civil-rights bill were denounced as a "hoax," since it is well known that "southern juries can be counted on not to do justice." In other words, if you can't hang 'em according to

the rules, change the rules. In view of the fact that the qualifications of voters have long been in the hands of the States, this effort to control it from Washington might well be approached with greater caution.

Opportunism is not original with liberals. Back in the Presidency of John Adams, Federal judges raced up and down the eastern seaboard jailing editors and others accused of violating the sedition laws, by which was meant that they had attacked the Federalist Party. Local government was not trusted by conservatives then for the same reason that it is not trusted by liberals now: it could not be relied on to convict the right people. Alexander Hamilton, whose views on this point have been summarized by John Dos Passos in a fascinating book, The Men Who Made the Nation (Doubleday), "would like to see the large States subdivided into small States and these cut up into districts, each presided over by a Federal court appointed by the President to enforce the Federal laws at the county level."

The American people had a taste of that idea a century and a half ago and, as soon as they could, they threw it in the trash can. James Kilpatrick, editor of the Richmond Times-Dispatch, who has written another good book, The Sovereign States (Regnery), is confident that the people will repudiate new efforts to advance one set of civil rights by denying others. But "the States," Mr. Kilpatrick declares, "for their own preservation must insist upon shouldering those proper responsibilities they too often have abandoned by default."

It should be added, of course, that one of the proper responsibilities of the States is protection of the essential civil rights of all their citizens. Those who fear civil-rights legislation might ask themselves whether they have always gone as far as they reasonably could to welcome the Negro as a full citizen. And some of the advocates of hurry-up civil-rights measures, including the denial of jury trial, might think more profoundly about the Bill of Rights and all its implications.

Do Most People Know Where Government Gets Its Money?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville (Ind.) News of August 8, 1957:

DO MOST PEOPLE KNOW WHERE GOVERNMENT GETS ITS MONEY?

In these relatively enlightened times, it would seem almost fantastic that most Americans do not know where government—and particularly Federal Government—gets the money with which to provide countless services which have increased at a phenomenal rate in recent year. But with many millions of citizens now receiving Federal payments of one kind and another, and with many others demanding that Uncle Sam do for them what they could more properly do for themselves, there appears to be no great hope for a reversal of this paternalistic trend.

To many people the mere thought that there are great numbers of our countrymen who fail to understand where the Government obtains the funds it spends, is nothing short of ridiculous. But, nevertheless, there is ample reason to believe that such is the case, and that a failure to understand this basic truth—that the Government can give only what it first takes away—threatens our future economic progress. Indeed, this failure threatens our entire way of life.

And because of this failure by so many people, the Government is persuaded to believe that it has to do more and spend more to meet the desires of the people. Our Government leadership, it would seem, reasons that if the majority of people appear to want the Government to go on giving and taking, the people really understand the consequences.

First of all, there are many who apparently believe that the Government has some mysterious and endless supply of money—not even understanding the fact that Government can get money from just one source, taxes. And then there are others who, while understanding that Government obtains all its funds from taxes, believe that Government can soak business for taxes and thereby make things monetarily more easy for the private individual. Nothing could be further from the truth. Businesses can operate only at a profit, and there soon would not be enough profit for operation if businesses sought to absorb a near-confiscatory tax burden. Businesses do the only thing possible for them to do—they pass on the taxes to their customers as a part of the price of the commodities they sell.

No, there is no magic money tree for Government. It must be supported only by millions of individual Americans who must dig down into their pockets and give. Government cannot give anything which it does not first take from the people. That's a good thing to keep in mind the next time you hear someone say Government is going to give you something for free.

Farmers Hold the Key to Future Hog Prices

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. HOEVEN. Mr. Speaker, farmers hold the key to future hog prices. If the favorable prices and feeding ratio now enjoyed by producers prompt overexpansion of hog production, heavy supplies could easily bring about lower prices as past experience clearly demonstrates.

Too many hogs leads to inefficient use of resources with accompanying low prices and incomes as producers well remember from their experiences in 1949 and 1955. In 1949, hog producers increased the pig crop by 10 million head and hog prices dropped $5 to $6 per hundred. Again in 1954, producers increased total production by 9 million hogs followed by another 9-million-head increase in 1955. Hog market prices dropped sharply.

On the other hand as production is reduced, prices go up. Hog producers made a cut of 7½ million hogs in production in 1956. Hog prices have been running from $18 to $21 per hundred at midwestern markets during recent weeks. A year ago prices, while markets were recovering from heavy 1955-crop marketings, were as much as $5 per hundred less.

There have been periods when prices have held when hog numbers expanded but usually this was during a period when demand was high due to emergencies such as World War II and the Korean war. In 1941, the United States Department of Agriculture asked for an increase in production and prices held in the war period. With stable production in years following the war, prices stayed high in 1946, 1947, and 1948.

Hog production was increased in 1950 and 1951 but prices held due to the Korean war. Sizable reductions in 1952 and 1953 production increased the price of hogs in 1953 and 1954.

The past shows that when production is balanced with demand, hog producers receive satisfactory prices. If production remains on an even keel during the coming months, price prospects for hogs should be favorable.

The Department of Agriculture has expressed the hope that producers will continue to avoid excessive increases at the time of breeding for the 1958 spring pig crop. It should also be pointed out that the trend toward production of meat-type hogs is continuing which indicates that producers are becoming increasingly aware of the need for producing quality pork for effective marketing.

Farmer Unable To Cope With Redtape

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. HOFFMAN. Mr. Speaker, some farmers want less Federal aid or meddling. From a farmer in the Fourth Congressional District of Michigan, who received a request from the Department of Agriculture to furnish certain information on the June 1, 1957, nursery products inquiry, together with a franked addressed envelope for its return, came this reply, which he requested that I forward to the Department:

I received three of your requests and promptly filed them in the wastebasket.

Will you lay off wasting Government money—my tax money—writing me?

We have altogether too many State and Federal employees who have nothing to do but write out to the farmers for information that will only take a few moments of our time.

As far as being confidential, nothing you birds get is confidential, all you want is something to broadcast to the winds. Besides, what I do is none of your——business. As far as I am concerned, you can tell——.

As far as "no stamp is needed," it would be a —— of a lot cheaper for me if it needed a stamp; since I have to pay for the frank in taxes anyway, besides paying some Government employee to write me to tell me that the frank privilege doesn't cost anything. How dumb do you think we people are?

Reading the letter, I gather that this farmer is rather thoroughly convinced that one policy of the Department, that is, of preventing unemployment in it, is and will continue to be quite successful.

He's Brave

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. HENDERSON. Mr. Speaker, a real problem in Government today is that of obtaining high caliber men for top appointive offices. Washington has seen great men come and go—men who have deprived themselves of the security and salary and comfort of their established way of life in an effort to be public servants—only to find that when they have crossed the bridge into Washington life they have subjected themselves to the painful criticism and cross-examination so characteristic. Neil McElroy will be no exception in being fair game for the politicians, cartoonists, and reporters just as have been so many people who have made great sacrifices to come to Washington.

The following is an editorial from the August 14 issue of the Zanesville, Ohio, Signal, which aptly describes the future for Neil McElroy. I commend him for his courage in agreeing to come to Washington and to devote his vast experience in the service of the Nation as our new Secretary of Defense.

HE'S BRAVE

Only time will show the full range of attributes possessed by Neil H. McElroy, named by President Eisenhower to succeed the resigning Secretary of Defense Charles E. Wilson.

But at this stage there can be no doubt of his bravery.

A man who undertakes a top cabinet job in the Washington of this era is either brave or utterly foolhardy. And McElroy has given no indication that he is anybody's fool.

He must therefore be brave because if he is confirmed in his new post:

He will be giving up a relatively high-paying job as president of Procter & Gamble, soap manufacturers, to take a lower-paying assignment with the Government.

He probably will have to divest himself of any stock holdings he has, in order to avoid any conflict of interest between his public and private activities.

Most likely he will have to maintain two homes—one in Cincinnati and another in Washington—on less money than he now has to keep one going.

Instead of worrying just about what his company board of directors may do he will have to worry over what some 531 United States lawmakers may say and do relative to his operations.

On top of this he will have to adjust his actions to the White House, to his fellow Cabinet officers, to the various agencies and departments which affect his own field. And he will have to worry over what foreign governments think of the Defense Department's pronouncements and activities.

He may find he's spending as much time answering congressional and other inquiries about his activities as he is performing them.

He may discover, too, that he'll be criticized as inaccessible if he sticks to business and doesn't talk publicly, or that he'll be just as roundly assailed as a "popoff" if he talks freely.

In short, he'll be playing a course that's nearly all sand traps, and rough, and practically no fairway. It takes nerve. And after he's chopped his way along for awhile, McElroy may find himself dreaming of the old days in Cincinnati, when, by comparison, it was all fairway.

The Wilderness Bill

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. SAYLOR. Mr. Speaker, on July 25, 1957, the gentleman from Oregon [Mr. ULLMAN] received unanimous consent to insert in the RECORD, an article from the Christian Science Monitor of July 22, 1957, entitled "Forest Service Opposes Sealed Wilds." At this time, I would like to point out for the benefit of my colleagues several misunderstandings of the purposes of the Wilderness bill and one outright misstatement of fact which are included in this article.

In the eighth paragraph, the author of the article, Mr. Roscoe Fleming, writes:

> Under the conservationists' bill as it is framed, the Wilderness Council it would set up could lessen, add to, create, or abolish any wilderness area, and the order would become effective unless either House of Congress vetoed it within 120 days.

This statement would seem to have no basis in fact. Quoting from Dr. Richard McArdle, Chief of the Forest Service, in his statement on S. 1176, the Wilderness bill, before the Subcommittee on Public Lands of the Senate Committee on Interior and Insular Affairs, June 19, 1957, we find the following:

> The Wilderness Council would have no administrative responsibilities but would act as a repository for information, sponsor and coordinate surveys of wilderness needs, advise with governmental officials, report annually to Congress, and transmit to the Congress proposed changes in wilderness boundaries.

Quoting directly from section 3 (a) of the bill itself, we find:

> The council shall have no administrative jurisdiction over any unit in the system nor over any agency that does have such jurisdiction.

I feel this is an obvious misunderstanding on the part of Mr. Fleming and hope it may be corrected in future coverage of this bill.

As far as "freezing" all present wilderness areas into law is concerned, as referred to by Mr. Fleming in paragraph two, this is an expressed viewpoint of the Department of Agriculture. It is, of course, the purpose of this bill to ensure the preservation as wilderness of the present areas so designated. As such this is the preservation of status quo. The bill, however, provides a procedure for making changes—additions, modifications, or eliminations. These changes would be made in the same way as at present. The only difference under this legislation is that before such changes become effective, Congress would have a 120 day period during which a majority vote of either house could reject the decision. The only situation when such a vote could be secured on such short notice would be a case of clear violation of sound policy. Thus, this safeguard against an unwise decision of a future Secretary of the Agriculture should not be interpreted as a freezing of the status quo.

Regarding Mr. Fleming's reference to the Wilderness Council as being composed of a "minority of Federal officials and a majority of conservationists," it should be pointed out that amendments have already been proposed to the wilderness bill which would add the Director of the Bureau of Land Management to the Council and reduce the number of citizen members from 6 to 3—thus giving the Council a composition of 5 Federal land administrators and 3 citizen members. So constituted, the Council could effectively carry on the functions for which it was designated, yet not threaten either to outvote or override the land administrators.

In an attempt to clarify the intent of the bill with respect to what the Forest Service has termed an interposition of another layer of authority between the executive and the Congress, an amendment has been proposed which will provide that reports of proposed changes in wilderness areas shall be submitted directly to Congress by the Secretary of Agriculture. Copies only of such reports will go to the secretary of the Council, as a matter of information.

Regarding the Department of Agriculture's substitute bill, which would apply only to national forests, the Bureau of the Budget has advised: "Congress may not wish to deal with the problems of preservation of national wilderness assets except in a general and uniform statute applicable to all affected agencies." Therefore, our opportunity would seem to be one of integrating the suggested provisions of the substitute bill into the general statute. If this can be acceptably done, the objective we are aiming for will have been achieved—the preservation of a portion of America always wild.

I certainly hope this may clarify some of the misunderstanding of the wilderness bill set forth in Mr. Fleming's article. Thank you, Mr. Speaker.

Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks, I would like to point out that Governor

Williams and the AFL–CIO have sold the Negro down the river on the civil-rights issue.

The executive council of the AFL–CIO in reversing its stand, made a deliberate attempt to play for southern votes in the Democratic convention in 1960. Governor Williams has White House fever. He is willing to sacrifice whatever principles he may have once possessed in this regard in a desperate effort to become a candidate for President.

The Governor dragged the AFL–CIO right along with him in the sellout of one of our most basic constitutional guaranties—the right to vote.

Governor Williams has charged that President Eisenhower killed the civil-rights bill. This is ridiculous, and he knows it. It is a desperate effort to wiggle off the hook. The record will show that it was the Democrats—not the Republicans—who voted against an adequate civil-rights bill in the Senate. Only 9 out of 49 Democrats supported the President in this measure compared to 33 Republicans.

What happened to the rest of the Democrats? Apparently, they still want to use the civil-rights issue for campaign purposes rather than to show concern for equal rights for all of our people.

What Gluck Achieved

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the New York Times of August 12, 1957]

WHAT GLUCK ACHIEVED

(By James Reston)

Maxwell H. Gluck may not be the smartest ambassador nominated by President Eisenhower, but he has succeeded in doing these things nobody else has been able to do in the last 10 years:

By his failure to know the name of the Prime Minister of the country to which he was appointed, Ceylon, and his failure to pronounce Jawaharlal Nehru, he has focused attention on the odd ways in which ambassadors are selected by the President and confirmed by the Senate.

He has forced the Senate Foreign Relations Committee to reconsider its practice of confirming ambassadors in secret.

And finally, he has forced the State Department to release information it has previously refused to make public on the high cost of being a United States ambassador.

COST FIGURES DISCLOSED

For example, it has long been known that the root of the trouble in getting the best Americans available for these jobs was that the Government would not foot the bill. But not until the administration had to defend itself against criticism of the Gluck appointment would it release the figures that illustrated the problem.

This has now been done. Christian A. Herter, the Under Secretary of State, called before the Senate Foreign Relations Committee to explain "the case of the innocent ambassador," produced a memorandum showing what the United States pays its Ambassador in London, John Hay Whitney, compared with what the British Government pays the British Ambassador, Sir Harold Caccia, here in Washington.

This illustrates why the United States feels it has to select its top diplomats only from the ranks of the wealthy, for according to the Herter figures, Sir Harold gets $42,468 more a year for salary and allowances than Mr. Whitney, and while this is not likely to bankrupt Mr. Whitney, it is still an interesting statistic.

"The American Ambassador to Great Britain," the Herter memorandum says, "receives a salary of $27,500; a representation allowance (limited strictly to official functions) which does not even pay for the Embassy's annual Fourth of July party and an official residence allowance of $11,312.

SIXTY-FOUR THOUSAND FOUR HUNDRED AND FOUR DOLLARS VERSUS ONE HUNDRED AND TWO THOUSAND EIGHT HUNDRED AND SEVENTY DOLLARS

"The total salary and emoluments is $50,812. If we add to the $50,812 figure the items of expense that are paid directly by the [London] post through operating allotment and which are included in the British allowances, we would have to add the wages of a local chauffeur who drives the Ambassador's limousine and the wages of gardeners and janitors. This amounts to $9,592, and makes the new total $60,404.

"The $60,404 of the American Ambassador to Great Britain and the $102,870 of the British Ambassador to the United States are comparable in that the two figures exclude identical categories of expense."

In addition, the British, who are supposed to glory in austerity and maintain they have less money than the United States, give their Ambassadors other advantages. For example, a British Ambassador receives a transfer allowance for every change of post that comes to 10 percent of his salary if he has two children. A United States Ambassador's transfer allowance is $200.

The British, moreover, pay much more liberal clothing and educational allowances. One example is that the British Ambassador, for example, would be given allowances for his children's education in the United Kingdom as well as at his post of duty.

In questioning Mr. Herter on the Gluck appointment, Senators pointed out that all the most desirable ambassadorial posts overseas recently went not to career diplomats, but to political appointees: London, Paris, Rome, Bonn, Brussels, The Hague, Stockholm, Madrid, Copenhagen, Dublin, New Delhi, and the North Atlantic Treaty Organization in Paris.

The Congress had great sport with Mr. Herter about this, but he was able to point out that the Congress itself had repeatedly rejected the requests made by the administration for funds to enable the administration to appoint men who could not afford to pay the costs of entertaining Americans, including visiting Senators and Congressmen.

Mr. Herter was also able to note that the Congress had cut its request for representation allowances to be given to needy United States diplomats overseas, and that recently the top career officers in London and Paris had requested transfers because they were out of pocket between $5,000 and $10,000 each in the last year.

Thus, Mr. Gluck, who has been condemned by the Congress and the Foreign Service as a terrible example of the practice of appointing well-heeled party contributors to important posts, may very well prove to be the best thing that has happened to the Foreign Service in a long time.

FIGURES WERE REFUSED

Others have tried to throw some light on this expense problem. The New York Times, for example, asked for precisely these figures on the British and American Ambassadors immediately after the last election, before the recent wholesale change in United States Ambassadors took place. The State Department refused to cooperate. Now that there are no more posts to fill, it is more cooperative.

This newspaper also urged that the Senate Foreign Relations Committee open its hearings on ambassadorial appointments so that the public would know something about the quality of the people who were being sent abroad to represent the United States at such a critical period of negotiation. This, too, was refused.

Mr. Gluck, however, has thrown a shaft of light on what is generally regarded here as an anachronistic system that cannot be reconciled with the Nation's responsibilities.

At present the defense budget is running to over $38 billion a year while the Congress, which votes these funds, is boggling at a few million dollars to take diplomatic appointments out of the pork barrel.

To put a man without financial means in the London Embassy, the State Department says it would have to do the following to bring him up to the standards paid by the British to their career Ambassador in Washington:

Give him an additional $13,188 for the expenses of his official residence.

Add another $20,000 in representation allowances.

Provide $13,000 for clothing, secretarial help, printing and engraving, and club memberships.

The question, therefore, is not whether the Congress wants the best available men in these jobs—as it has been maintaining recently—but whether, as Mr. Gluck has demonstrated, they want to pay what it costs to get them.

Achievements in Agriculture—Cooperative Extension Service

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. LAIRD. Mr. Speaker, as an integral part of the United States Department of Agriculture land-grant college system, the Cooperative Extension Service is concerned with helping people apply the results of research and experience to the solution of their problems.

To this end, Extension is committed to the philosophy of helping people to help themselves by assisting them to develop educational programs for solving their problems. At the same time, it accepts the responsibility of helping people to identify problems, evaluate situations, plan programs, and develop procedures which will help them to achieve the goals they set forth.

This system of offcampus extension education has helped farm people accomplish the almost unbelievable. Agricultural progress in this country during the past half century has been greater than that which occurred in all previous history of mankind. Today's farmer is over 100 percent more efficient than he was a mere 25 years ago. He now produces food and fiber for himself and 19 others—1 more than it was just a year ago. And in contrast with 25 years

ago, there are now 37 percent fewer workers in agriculture producing over 50 percent more products. These workers are doing this in fewer hours, with less drudgery, and with more time for family and community interest than ever before.

Such progress, however, has not come easy. It has been characterized by an agricultural revolution that has had as great an impact upon farming as the industrial revolution had upon industry and labor. Developments in agricultural technology brought about by this revolution have progressively increased in number each year since the end of World War II. To the farmer, this has meant mechanization, greater management efficiency, adjustment to market demand, and farming systems based on the long-time demand outlook. To extension workers, it has meant working intensively with individual farm families in analyzing their resources and opportunities, comparing alternative courses of action, and selecting and implementing those which offer the best solutions in terms of the family's needs, wants, abilities, and resources.

Extension doesn't limit its work, however, to the tiller of the soil. To rural youth it offers opportunity through its 4-H Club program for the development of their inherent capacities in the fields of agriculture, home economics, and rural living on a par with the opportunities provided youth in other fields. Currently, some 2,156,000 rural youth, the greatest number in the history of extension work, are taking advantage of these opportunities.

To the rural homemaker, Extension provides the opportunity to apply the science of home economics to the creation of improved diets, better time and money management, laborsaving practices, and new skills, all directed at fuller development of each family member and better family living.

Although Extension directs the results of research and experience primarily to the problems of agriculture, marketing, and rural living, its work is of value to all of our citizens. Extension work with consumers of agricultural products, for example, is doing much to bring about a more orderly movement of agricultural products. Such work helps to encourage the development of better diets through greater consumption of health-protecting foods and, in many other ways, contributes greatly to producers, processors, and consumers alike.

Closely related to this is the whole field of Extension educational work with those engaged in the distribution of agricultural products, which has direct benefit to producers, processors, and consumers. As a result of this work, agricultural products are moving to consumers in better condition, with less waste, and at lower per-unit costs.

Another significant facet in Extension progress is that of helping farm people to better understand and to cope with forces operating outside the boundaries of their farms but that have major impact upon their welfare. This work is frequently referred to as public affairs education. Such public affairs vary all the way from matters of only local concern to those of national and international concern. In this endeavor, Extension is striving to help farm families understand and to appraise those matters of joint concern so that they may, as informed citizens, do their part in deciding upon the best courses of action to pursue.

The Miraculous World of Change

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. O'MAHONEY. Mr. President, Mr. P. C. Spencer, president of the Sinclair Oil Corp., who graduated almost 50 years ago from the high school at Cody, Wyo., and later was secretary to the late Senator Francis E. Warren, of Wyoming, delivered the graduation address this year at his old high school in Cody.

His subject, The Miraculous World of Change, is one that demands the attention of all who seek an adjustment of the standards of human liberty with the marvelous technological and scientific developments of all time.

Mr. Spencer's address is an earnest and practical analysis of the problem involved in winning progress in human affairs.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MIRACULOUS WORLD OF CHANGE

(An address by P. C. Spencer, president, Sinclair Oil Corp., before the graduating class, Cody High School, Cody, Wyo., May 27, 1957)

Governor Simpson, members of the board of trustees, members of the faculty, members of the class of 1957, and friends of my old hometown, needless to say, it is a tremendous thrill to be here today. It would be difficult to imagine an occasion which could stimulate more pleasant memories for me. You will never quite understand the full measure of this thrill unless by some stroke of good fortune you, too, should happen to be honored with an invitation to speak to a graduating class of your high school alma mater almost 50 years after your departure from the scene. Just to be remembered after all these years is something to gladden the heart.

While the occasion is a happy one accompanied by many joyous emotions, it nevertheless carries with it certain serious responsibilities. During the few fleeting moments one occupies this platform, one should at least try to say something of lasting value to the members of this graduating class—some constructive word of counsel and advice which will be of assistance to them in the future.

• • • • •

A MIRACULOUS AGE

We live in a wondrous and miraculous age—no words are adequate to express it. The great phenomenon of our times is change—endless, ceaseless change, not just change in the ordinary sense to which we have become accustomed in recorded history from time immemorial, but a vastly accelerated rate of change which leaves one breathless when he pauses to contemplate it objectively.

Some 150 million years ago the ground upon which we now stand was not a bench high above the Shoshone River surrounded by mountains and inhabited by man, by Indians and cowboys. It was a hot, steaming jungle in which roamed huge creatures called dinosaurs and such, and no Indians or cowboys. Many changes have taken place in the last 150 million years, but one need not go back that far to find great changes on the Cody scene. Even those which have occurred during the past 50 years are quite amazing.

My boyhood memories bring back a picture much different than that of today—memories of water hauled up from the river at 25 cents a barrel, with some cactus thrown in to settle the dust; very few bathrooms with running water; kitchen stoves that were fueled with wood any thing else handy which would burn; schools which were small and plain, but good; quite a few churches, but many more saloons; mostly board sidewalks; 2 policemen—1 by day and 1 by night—and a fire department which operated wholly on a volunteer basis; a few bicycles, but mostly the horse and "shank's mare" were our means of transportation.

THE ETERNAL HILLS

Some 50 years later the scene is hardly recognizable except for the 2 mountains to the west which still stand guard over the city like 2 huge sentinels. There have been stupendous changes here and elsewhere. Automobiles speeding on modern highways everywhere; airplanes taking wing to the four corners of the earth; radio and television bringing the news, entertainment and culture of the world to your door; modern schools and buildings of all kinds; modern homes filled with an abundance of modern conveniences and labor-saving devices—automatic washers, deep freezers, air conditioning units, and so on—modern hospitals to care for the sick and the injured; modern churches; modern this and modern that—the astounding wonders of the scientific and economic advances of the last few decades are all about us, but not so many cowboys and Indians or woodsheds in which to find firewood or a paddle in case the young man needs discipline.

And yet, as great as these changes of the last half century have been, I am certain that the changes in store for us during the next 50 years will be even greater. As a matter of fact, many of them are now on our doorstep and many more are just around the corner.

MORE KNOWLEDGE

No one can foretell with exactness all of the new wonders which our scientific and technological forces will produce tomorrow, but we can be sure of this—that more and more of the unknown secrets of the vast universe in which we dwell will be unlocked, and as each secret door is opened even just a small crack (as in the case of atomic energy) it will have a profound significance on our lives and the lives of those we love.

That these important and far-reaching changes are all about us and are crowding in upon us with ever-increasing speed and pressure, I think we can all agree. The big question is what can you and I do about it? To many it may appear that there is not much that any individual can do about it, that there is some kind of manifest destiny carrying us along inexorably on the crest of a great scientific wave and that one might just as well relax and try to enjoy what comes.

In my view, this attitude may be philosophically pleasant and tranquilizing but still much too passive, much too pessimistic,

much too defeatist. There are things that we can and should do about it. Even though one may never aspire to master these great changes, he can still strive to understand them and to adjust and adapt himself to them to the maximum of his capacities. That, to me, should be the aim and goal of every member of this graduating class. Equally, it should be the aim and goal of every man who thinks and reasons, which after all marks the principal difference between him and other members of the great animal kingdom.

AGE OF THE DINOSAUR

The dinosaur, which I mentioned as having inhabited these parts some 150 million years ago, passed on, and is no more. Why?—because he was unable to adjust himself to changing conditions. Someone has written that great hordes of little ants and other insects harassed and worried him to death. Be that as it may, he exists today only in a fossilized form, and thereby hangs another interesting tale, especially in my business. The remains of the dinosaur and a lot of his ancient friends and foes are being resurrected from the depths today in the form of crude oil to make petroleum products to drive your automobile, your tractor, your airplane, your diesel engine and hundreds of other engines which do an infinite number of important jobs today (150 million years after) to add to the comfort, convenience and well-being of mankind. Sometimes I wonder if we shall prove to be as useful 150 million years hence.

In order to exist successfully, every living creature must have the capacity—by instinct or otherwise—to adjust to changing conditions, to take advantage of favorable change and to protect and defend against unfavorable change. If a nation is to remain strong and self-sufficient, it must not only adjust to change, but ofttimes it must lead the procession. If a corporation is to remain strong and prosperous, its management must be ever alert to changes of all kinds, or suffer the penalty of falling by the wayside. And in this great drama of change which encircles us, there is no place for fear or apprehension no matter how stupendous the approaching changes may appear.

In my own business, we are interested in converting petroleum raw materials into fertilizers, such as anhydrous ammonia. Recently a scientific friend said to me, "You are wasting time and money with your synthetic fertilizers. Why don't you bypass the soil, the alfalfa, the hay and the grains and put your carbohydrates in proper food form to feed directly to the cow?" That seemed to be such an intriguing idea that a bystander suggested, "Well, why not bypass the cow, too, and feed your converted carbohydrates directly to the man?"

ADAPT AND ADJUST

I can't imagine life—the good life—without ranches, alfalfa fields, and cows, but it is possible that may come to pass one day if we want it that way. You now have nightshirts made from petroleum products, and you could have food from the same source, no matter how boring it might be. The point is that changes—rapid and all-important changes—are inevitable. In themselves, some will be good and some will be bad, but as to you and me, they all will be bad unless we learn to adjust and adapt ourselves to them, unless we learn to roll with the punches, so to speak.

There are different degrees of adjustment and adaptation—some passive, some active, some defensive, and some offensive. One can adjust himself to the hot sunshine by lying down and going to sleep in the shade. A measure of peace and tranquility may be thus attained, but not much progress is made. Let me emphasize this: a changing world means a world full of challenging opportunities for anyone who has the spirit and the talent not only to accept them, but to benefit by them.

An old friend many years ago gave me an interesting sidelight on change. "Watch successful men," he said, "and you will note that they have an instinctive sense of impending change. They have a keen perception of things that are out of balance by reason of change, and they take advantage of it." One harnesses a river on its way to the sea to make electric power, a change which follows the law of gravity. Another harnesses the wind to sail his ship or to pump water for man and beast. Another senses a future shortage of a commodity and he commences to acquire a surplus. Another senses a future surplus of a commodity and he commences a selling program.

Our current shortage of skilled specialists—particularly engineers, scientists, and technologists—is a classic example of what I am talking about. Here is a supply and demand situation which has been out of balance for years. No young man, or woman for that matter, with a technical education need search for a job today. In fact, if you but let your whereabouts be known, the world (including my own company) will be beating a path to your door.

YOUNG MEN WANTED

I have here a special section of a recent Sunday New York Times, which contains nothing but appeals by business firms (large, medium, and small) for the services of qualified young men and women in technical fields. More than 10 solid pages of it in fine print offering the highest wages and every conceivable incentive from swimming pools and country clubs to babysitters. It is indeed a strange new world in which we live. I daresay if this great change in demand for professional talents of all kinds could have been foreseen clearly by our high school graduating classes 10, 15, 20, or more years ago, the lives of many young people seeking productive ways of life would have been vastly different.

But the changes in our ways of life which should have been foreseen in the past are only of academic interest here. The important question is, What are the changes to be expected in the next 5 or 10 years and thereafter? And this brings me to my forecast for the future as it affects particularly the lives, the business, and affairs of the members of this graduating class.

I firmly believe the young people of today are entering into the most hazardous and yet the most challenging and the most promising period in our history. The host of developments in science and technology of today are but the forerunners of many more and miraculous triumphs across more fascinating new frontiers in medicine, transportation, communications, and industrial production, triumphs not only in the physical world, but—let us pray—in the area of the mind as well. Somehow, sometime—perhaps sooner than we expect—we shall begin to solve this complex business of human beings living together in a world of peace and spiritual well-being.

MASTERS NEW FORCES

Our times have been called the atomic age—the age of nuclear energy, the age of atomic bombs, hydrogen bombs and guided missiles—labels which are so awesome and frightening that we are all too apt to be hypnotized by the almost supernatural resources man now has at his command. But granting the magnitude and the power of these great forces, I am still confident man will find the way to be their master and not their servant, and that these newly discovered resources and powers will be the means of creating a far better human society than that we know today. I am supported in this confidence by my boundless faith in millions and millions of young folks like yourselves. Each generation has passed on and will continue to pass to the next generation many problems (including debts) which at the time seem to be insoluble, but somehow they are solved and with not too much difficulty either. Your generation and those that follow after you will not, I am certain, fail to respond to the challenges that new world forces present.

There are many ways to prepare yourself for these great challenges, these great opportunities. Education and experience are the obvious answers. In the field of education there are at least as many ways to acquire an education as there are educational institutions, and to be sure not all of the wise and successful men of tomorrow will have had the opportunity to go to college. As for experience, there is really no substitute—one has to have experience. In one way or another, one must learn the rules of adjustment and adaptation, the sense of rhythm, one might call it, which goes with a well-timed life. Some people go through life with what seems to be perfect timing, in time with every change, forever adjusted to whatever happens. Others seem to be less fortunate. I am sure that there are rational explanations for both cases.

Riding home recently, I found in my newspaper a very cynical article headlined, "Science and Medicine Pouring Childhood Adages Down Drain." The writer suggested that medical progress has made us so aware of such conditions as ulcers, inner tensions, overworked hearts and on-the-job fatigue that people are reluctant to work hard any more. The writer recited some of the modern versions of once tried-and-true proverbs:

"Never do today what you can put off, period."

"Early to bed and early to rise makes a man puny, looney, and cuts him down to size."

"The slug-abed is full of lead; but, then again, he won't drop dead."

And finally, it is no longer "swim or sink" but "tread water until the life raft drifts by."

Now I have no prejudice against doing things the easiest way, but I am sure that individual initiative and enterprise have not gone out of style. Times will never change that much. In any society, the real payoff will continue to come to the person who concerns himself first with blazing the trail ahead and not with keeping the road behind open—and that is a lesson to learn early in life.

NEED FOR INITIATIVE

I believe wholeheartedly in the great progress in human affairs represented by social security, benefit plans which protect the individual against unforeseen events, and measures which would help insure a steady income. But if you happen to be young and facing a world filled with wonderful opportunities, as you are, then you should not start out by depending on anyone else or any system to give you a guaranty of a happy, prosperous life.

The men who pioneered in the development of Wyoming were certainly not afraid to go it alone. They set their eyes on a goal and pushed toward it with a singleminded-ness that left no room for worrying about next year, let alone the next 10, 20, or 40 years. These men and those who followed them built a great State and a great country. The Nation's need for such individual spirit, drive, and initiative has not changed, except possibly to be more necessary today than ever before.

With confidence in your own abilities and faith in the wisdom of the goal you have set in life, you will be able to adjust and to adapt to winds and storms, come what may. You won't be thrown far from your course, I am sure.

And if fate is exceptionally kind to you, you may one day find yourself where I am today, on a platform like this delivering some of your pet philosophies to a captive

dience. If such should be your happy ivilege, keep in mind one side of human ture that does not change: a graduating ss is attentive to and tolerant of its eaker only so far. Try to quit while you e ahead, as I hope I am doing now.

This is your day, to hold and to cherish your own. Enjoy it, revel in it, and so nduct yourselves in the future that you, ur family, and your friends will always be proud of it as you are today. And may od bless you and bring you the best of ck.

Water: How Fast Can We Waste It?

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. SMITH of Mississippi. Mr. peaker, under unanimous consent, I inlude the following article from the Atntic Monthly:

WATER: HOW FAST CAN WE WASTE IT?
(By John Robbins)

I

A Yale University study published in 1939 dicated that the minimum daily ration of ater necessary for an individual was 20 llons. It allotted 1 gallon for drinking, for laundry, 5 for personal cleanliness (but thout tub or shower), and 8 for the toilet. ven if the individual takes an occasional 5-gallon bath in the tub, or a 5-gallon-per-inute shower, he isn't likely to build up a tal for personal use of more than 50 gallons a day. But all this is pure theory. The mount of water which an American is tually using in 1957 is something over 1,500 llons a day.

Most of the 1,500 gallons is essential in e cultivation of the food he eats and in e manufacture of nearly every article he es in his daily life. The production of a ce of bread, including the growing of the heat, has been estimated to require 37.5 llons of water. A steer, in order to create ch pound of beef, must consume somening like 4,000 gallons, not so much from s drinking trough as from its pastureland. Each ton of steel, in being produced, requires 40,000 gallons of water, or 160 times s own weight. Ten gallons of water are ployed to refine one gallon of gasoline. he brewing of a gallon of beer takes eight llons of water in addition to what actually ds its way into the bottles.

As an educated guess, we as a nation are w using around 275 billion gallons of ater a day. Less than 10 percent of the tal is for domestic purposes, either through unicipal water systems or from rural wells. ore than a third, around 100 billion gallons day, is necessary for irrigation. The rest, ell over half, goes for the needs of industry.

There is nothing inherently alarming bout the magnitude of these figures. merica is well blessed with water resources. he average rainfall over the surface of the ited States is 30 inches. About 70 perent of this returns to the atmosphere by aporating or by the transpiration of aves. The equivalent of 8 inches remains to flow through the streams and rivers the ocean, or to soak into the ground, here it forms deposits in the porous subrranean formations. This annual increment to our surface water and our ground ater is four times the amount of water e use in a year.

The distributing aspects in all this are not generally appreciated. The first is the unequal distribution of our water resources. The second is the tremendous growth of our water usage, particularly by industry. The third is the possibility that a long-range change in the climate is going to dry up parts of the country that are already on a marginal basis. Taken together they add up to an almost inevitable conclusion: water is going to play an increasingly important role in determining the economic geography of the United States.

The uneven way in which nature has distributed our water resources must be obvious to anyone who has traveled any distance around the country. We have our deserts and we have our swamps and rain forests. In between we have a full range of climatological conditions, from Maine with 40 inches of rainfall annually, only 15 of which evaporate, to Arizona with 14 inches, 13.3 of which evaporate. The 17 westernmost States—North Dakota to Texas and westward—average less than 4 inches of water yield or runoff after evaporation a year. The 31 eastern States average 16 inches. Within the western States there is another general division. Eastern Texas, northern California, and the Northwest are generally well watered. But half the area of the 17 States, constituting a third of the territory of the United States, has a natural water yield of less than 1 inch.

In many parts of the country the water table, the top level of the underground storage water, is falling. In most of these areas it isn't a case of drought but of overuse. In Milwaukee, for instance, when a large brewery recently began pumping at high volume from a big new well, water levels of another manufacturing plant 7 miles away dropped 75 feet within a few hours. The spring water has sunk so deep in the city that the great breweries may have to switch to Lake Michigan from the wells that helped make their beer famous. Outside Phoenix, Ariz., Goodyear established a farm 35 years ago to grow high-grade cotton. Originally the irrigation water was brought a mere 20 feet to the surface by small pumps. With every passing decade the water table has dropped ,and the pumps have had to be replaced with more powerful models. The lift is now more than 100 feet, and the table is still sinking.

The same pattern has been repeated in hundreds of other localities. Geologists have traced water in rare instances to limestone formations as deep as a mile below ground. The pumps to lift it more than 600 feet, however, are so expensive as to make the use of the water uneconomic.

A half century of growth in water usage was spelled out by the President's Materials Policy Commission (the Paley Commission) in 1952. In 1900, according to its estimate, we withdrew from our streams and wells about 500 to 600 gallons a day per capita. By 1950 our population had doubled, and so had our per capita use, quadrupling our total usage. As it did with other natural resources, the Paley Commission projected its estimates of water use forward to 1975 and predicted that it would nearly double again in the 25 years.

It already appears that the Commission underestimated the rate of growth. A second Hoover Commission study based on 1955 figures reported that in the 5 years since 1950 water use had soared from 185 billion gallons a day to 262 billion, almost halfway to the Paley Commission's 1975 estimate of 350 billion. Admiral Ben Moreell, chairman of the Hoover Commission task force on Federal policy toward water resources, made a new stab at a 1975 figure—453 billion gallons a day. In other words, less than 20 years from now our demand for water is likely to exceed our available supply by more than 25 percent.

It is interesting to analyze where this growth is occurring. It isn't in personal use, although an increase in suburban lawn watering is putting a strain on some municipal systems. It isn't in irrigation. The lands most easily and economically irrigated have long since been utilized. Any suitable land left to be irrigated would require a large capital investment for a relatively small rate of profit. The application of irrigation to land is, in fact, a classic example of the law of diminishing returns.

The increase, then, is concentrated in the need of industry for cold, clear water—cold because 75 percent of the water employed by industry is used for cooling; clear because dirt, minerals, and salts clog up pipes, form deposits on boilers, corrode equipment, and generally raise hob.

The amount of water required by industry is staggering. Steam generators of electric power alone use 40 billion gallons a day for their boilers and for cooling their condenser coils. The steel industry last year used a total of 5 trillion gallons, and petroleum refining another 2½ trillion. Between Buffalo and Cleveland along the south shore of Lake Erie, powerplants and chemical works built just in the past 8 years use more water than the combined municipal water systems of both those cities.

New types of industries increase the use of water still further. Prime examples are the new synthetics plants. Rayon, nylon, and the miracle fabrics, for instance, need far more water than the cotton and wool they replace, and the manufacture of synthetic rubber needs American water instead of the rainfall in the jungles of Malaya.

Unlike irrigation water, which either evaporates or soaks into the soil, most industrial water is returned to its source or to the surface. It may or may not have been polluted by its use. It has certainly been heated. A big industrial plant, therefore, needs a big body of water so that the water temperature won't be raised beyond the point of efficiency.

Water has always been a factor in the selection of factory sites, either as a source of power or as a means of cheap transportation. Today it is a prime factor. The areas of the country with assured water supplies are enjoying the fruits of the economic boom. The shores of the Great Lakes, the banks of the Ohio River, and the borders of Lake Pontchartrain, for example, are sprouting with new power and chemical plants, and prosperous industrial complexes are building up around them.

This is not to say that even a heavy industry cannot settle in a water-short area in order to take advantage of some particular situation in relation to raw materials, labor supply, or markets. But it must pay the price. Any lack of water is reflected in increased costs for washing or cooling equipment. Kaiser Steel chose to settle in Fontana, Calif., for instance, knowing it would have to install a recirculating system able to use partially treated municipal sewage as a coolant. Even so, Kaiser can compete in West Coast markets with water-cooled eastern steel mills because of its lower transportation costs.

II

The prospects of the water-short areas, and especially of the Southwest, are complicated by the possibility that the North American continent is growing warmer and drier. Weather records indicate that most parts of the northern United States during the past half century have warmed up by 2 to 3 degrees. As to just what this means, there is wide disagreement. Some scientists think we have reached a climatic optimum, and that the climate is about to reverse itself and start growing cooler. They suspect that the spring rains which flooded Texas this year and which, at least for the moment,

have broken the 5-year-old drought in the Southwest are the signal that a change has occurred. A second school, more noncommittal, talks only in terms of short weather cycles of 7 years or so. A third group is convinced that the warming-up process is still under way.

A leader of the group predicting a 50-year cold-and-damp spell is Hurd C. Willett, professor of meteorology at Massachusetts Institute of Technology. He bases his reasoning on the sun-spot count. The United States Weather Bureau, led by Harry Wexler, Chief of the Scientific Services Division, takes the more cautious stand that long-range predictions are dangerous, and that the warming trend and the drought in the Southwest represent short-term cycles. A proponent of the warm-dry thesis is Paul Sears, head of the conservation department at Yale, whose studies have shown how changes in the glaciers affected the culture of the corn-eating mound dwellers, by altering the rainfall pattern of the midcontinent.

In its report to Congress 2 years ago, the National Science Foundation noted, "Glacier studies have given clear indications that we are now in a cycle of warming which began about 1900. It is estimated that if the indicated warming continues for another 25 to 50 years, the ice will melt out of the Arctic Ocean in the summer, making it navigable. In addition, the warming cycle, if continued, may melt enough ice, now tied up in glaciers, to add to the sea level sufficiently to affect the lives of millions of people living along low-coastal lands." Our shores may get plenty of water, all salt.

If America proves to be really drying up, the Southwest will be the first area faced with tragedy. Even to a greater extent than during the Dust Bowl days of the thirties, families will be forced to leave their homes. The great investment in irrigation facilities, much of it subsidized by the taxpayers of other parts of the country, will be wasted. Even if the drought is broken and a damp wave is about to begin, the water capacity of the Southwest won't be able to keep up with the national expansion of water use. The attorneys of the American Bar Association, who found the tap water at their Dallas meeting place last summer so salty that it ruined the taste of their whisky, aren't likely to advise industrial clients to expand into such a chancy area.

What is a sensible program for a country facing a tremendous increase in the load on a stable or declining water supply? A tempting suggestion is to recommend an all-out study by our scientists of how we can control the long-range climate or the short-range weather. Let them figure out, as an east coast newspaperman urged this spring, how to provide gentle rainstorms every Tuesday and Thursday, with sunshine between, especially over the weekends. His recommendation isn't so farfetched as it might seem. The great mathematician, John Von Neumann, remarked shortly before his untimely death last year, that the control of the force of the climate was the greatest challenge facing science today.

Unfortunately, the prospect in the field for the immediate future is bleak. Scientists aren't even sure what starts the climatological changes that affect the earth—solar radiation, cosmic rays, sun spots, or clouds of dust circling through the ionosphere in the wake of volcanic eruptions. Even the experiments on promoting rain by seeding clouds with dry ice or silver iodide look less promising than they did when the principle was first discovered a decade ago. After studying the evidence, the Council of the American Meteorological Society issued a gloomy statement this spring. Cloud seeding has been perceptibly effective, it said, only where conditions were such that natural rain might have occurred anyway. Over flat country it has been notably ineffective. "Present knowledge of atmospheric processes," it added, "offers no real basis for the belief that the weather or climate of a large portion of the country can be significantly modified by cloud seeding."

III

Another hope for the distant future is the conversion of sea water into fresh water. The minimum cost yet achieved for distilling the salt out of sea water is $1.50 per 1,000 gallons, even for large-scale operations. That is 90 times greater than the cost of treating the poorest grades of water now used by cities and industries. The Paley Commission recommended against investing in more research on distillation. The Interior Department went ahead and issued a cheery statement early this spring, indicating that new experiments would make large-scale conversion of sea water economically feasible in the near future. The Department's watchdog committee in Congress quickly came back with a report that officials of the Department were misleading the American people while letting the research program drift along. And there the matter stands.

Two more likely paths to progress are efforts in the direction of conservation of water and pollution control. Government and industry, as they have become aware of the problems involved, have shown more willingness to spend money on programs of both sorts.

For industry, conservation means the use of more complicated equipment to recirculate cooling water, to reclaim used water, and to employ alternate methods of cooling such as refrigerants or air. For governments, particularly at the State level, it involves stream regulation, antierosion devices, small dams, artificial recharging of ground water reservoirs, and the proper use of plant life.

Industry is also accepting antipollution measures as part of its normal production costs. Partly from public spirit and partly under the pressure of public opinion and State laws, most new industrial plants have incorporated waste treatment devices. General Petroleum's new refinery at Ferndale, Wash., releases an effluent so thoroughly cleaned that salmon have been caught 100 yards below the outlet. The installation of antipollution measures in older plants, however, is often such an expensive process that it throws their costs out of line with those of newer competitors. No town likes to see an industry shut down, cut off its payroll, and stop paying taxes. Industrial pollution, therefore, continues to exist.

The pollution problem for towns and cities is easily stated. Any government body can install sewage systems to keep from fouling its own or its neighbor's nest as soon as its voters are convinced that clean water is worth paying for. That conviction is slowly spreading around the country.

But neither conservation nor antipollution measures, wholesome though they are, can solve industry's need for water. The best solution at the moment seems to be the importation of water by pipeline from water-plus to water-minus areas. Such pipelines will be expensive. They aren't likely to be built in large numbers around the country until the shortage of water and the shortage of industrial space adjacent to bodies of water both grow more stringent than they are today.

The most famous existing water pipelines are those serving Los Angeles, a city which has outgrown its water supply. It now supplements its limited local reservoirs with water from the Owens River on the east side of the Sierra Nevada, 240 miles away; from Mono Lake, 350 miles away; and from the Colorado River, 450 miles away. It hopes to expand its system to reach the better watered, less densely populated northern part of the State.

An example of how a pipeline can be used to protect the interests of a regional economy is the story of Saginaw and Midland, two cities in central Michigan. After nearly dying along with the Michigan lumber industry 40 years ago, Saginaw, thanks to a set of General Motors factories and foundries, made a strong comeback. Midland, the younger city, grew from a small town with the expansion of the Dow Chemical Co. During World War II a serious water problem threatened both cities and their industries when the rivers through the towns grew so polluted and the water so hard that treatment was almost impossible. They joined forces after the war to build an 80-mile pipeline to Lake Huron. It cost the communities $10 million, but it can deliver a total of 43 million gallons a day of pure, fresh water. Added to existing supplies of ground water, that is enough for all their needs for years.

From an engineering point of view, Great Lakes water could be piped for hundreds of miles to thirsty cities outside their basin. Because of a legal technicality, it can't be. Thirty years ago when Illinois sought from Congress the authority to drain water out of Lake Michigan to flush Chicago's sewage into the Mississippi, the other Great Lakes States and Canada protested violently. They charged—with some reason— that any lowering of the lake levels would affect their trade and prosperity. The parties involved reached a compromise. Chicago got limited permission to dig its drainage canal, but by international agreement a complete prohibition was clamped on any other device that might move Great Lakes water outside the natural drainage area of the lakes. The effect of the agreement is going to be felt and soon.

In the Mahoning Valley in eastern Ohio, for instance, are clustered the steel mills of Youngstown, Warren, and Niles. Although the headwaters of the Mahoning River are within 25 miles of Lake Erie, the stream flows southeast into the Ohio. Twenty years ago the Mahoning had a worldwide notoriety among geographers as the hottest river in the world. The steel mills were so concentrated along its banks that they warmed its water beyond the point where it was useful as a coolant. New dams and reservoirs have corrected that situation for existing mills, but the possibilities of expansion of industry in the valley are inhibited by the limits of the water supply. To pipe Great Lakes water into the river would be technically simple and fairly cheap. Legally it can't be done.

Akron, on the other hand, lies just inside the edge of the Lake Erie basin. Should its need for water expand, some Akron and Cleveland interests have a plan for a 16-mile pipeline from the lake through which water could be pumped into the Cuyahoga River at its source. The Cuyahoga flows south to Akron, then north to enter Lake Erie at Cleveland. Such a pipeline would only pose a problem in finance.

The Province of Ontario would like to open up the water-short area around Kitchener and Guelph to industry by piping water out of Lake Huron near Goderich and letting it drain into Lake Erie. The water would never leave the Great Lakes Basin. It would, however, bypass Detroit, which needs every inch of depth in the St. Clair River for its harbor. Legally, the project is somewhat doubtful. Ontario might be able to swing a deal in which, as the quid pro quo, streams in the Hudson Bay watershed would be reversed and piped into Lake Superior.

Only circumstances will determine when such pipelines as these will be economically feasible to build and operate. By 1975, however, a network of water pipelines is likely to be growing that may eventually rival in scope the oil pipelines which now trace their way throughout the country.

A Subversive Court

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. DAVIS of Georgia. Mr. Speaker, om time to time I find in the Methodist hallenge, published at Los Angeles, alif., articles which are full of commonnse and truth.

I regard the editor of that paper as able, consecrated minister of the gosl.

In the September 1957, issue of the ethodist Challenge is an article entitled Subversive Court." It deals with the st and loose manner in which the Sueme Court has been usurping legislae functions, and trifling with our Conitution and laws. Under unanimous nsent previously granted, I insert this ticle herewith:

A SUBVERSIVE COURT

Every good American owes it to himself d to his country to respect the Supreme urt of the United States, so long as its tivities and decisions deserve respect. But honest citizen should succumb to softss or stoop to compromise in appraising Court that betrays its high mission and ds itself to the criminal element in our dst or plays fast and loose with the treanable subversion that threatens the surval of our Nation. In my judgment, we e one of the most serious hours since the olution. Undoubtedly, there is widespread distrust of the Supreme Court. The st citizens within this Republic have lost nfidence in what our fathers planned ould be one of the most important, if not e most important, institution within our ire federation of States.

Hundreds of critical editorials, expressing ubt and disappointment, have been writ- and published concerning recent deions of our highest Court. Not only have me of these decisions been slanted in vor of criminals and served to protect their lless activities, but the subversive element our population has found a city of refuge recent findings of these Justices. A group acknowledged Communists, who were conted of plotting the overthrow of our coun- and seeking to undermine our American stitutions have been freed and permitted continue unhindered their treasonable tivities.

Possibly the most menacing findings of s Court have been aimed at crippling and sibly wrecking the splendid services of e FBI, trusted as a shelter and defense for r Nation, in this hour when communism s even invaded the sacred domains of blic office. For many years this godless, alitarian system of organized tyranny has de every effort, even within our own rders, to drive back the congressional and natorial committees that have actively ght to protect human freedom and the hts of true Americans. Such committees the Committee on Un-American Activity ve been hindered and blocked in every hion imaginable. I am sorry to concede at certain high churchmen of the Metho- Church have been discovered in cooperon with the anti-American activities of e Communists at home and abroad.

A Supreme Court decision has recently en rendered which would in effect make e FBI impotent and helpless. This follows er decisions of a less potent character, ed undoubtedly at the FBI and the congressional and senatorial committees that seek to counteract subversion.

The members of the Supreme Court who have, without reasonable doubt, conspired to befriend the criminal and subversive elements within our borders, are now well known. Unfortunately, they are members of this Court for life, unless their fellow Judges should find them guilty of bad conduct, the only manner in which the Court could be redeemed at this time would be some impeachments. The prospects of "cleaning up" this high Court are meager indeed.

When our several States became a federated nation, our Founding Fathers went to great lengths to protect inviolate the administrative, the legislative and the judicial branches of our Government. They sought studiously to see to it that no one branch of Government usurped the prerogatives of the other. We have watched two most dangerous trends of recent years: First, an increasing trend toward centralization in the administrative branch of Government. Second, a disposition on the part of the judiciary to operate outside its allotted field and dominate both the administrative and legislative branches of Government. Recent decisions of the Supreme Court have been aimed deliberately at Congress, and the evident purpose of the Court is to legislate as well as construe the law.

The integration decision, written by Chief Justice Warren, was not in fact a decision at all. It was an act of legislation. Since that so-called decision was announced, the Court has attempted to go further and take over the administration of the law. If permitted to continue its un-American activties, it will become a kind of politburo, very similar to the governing group of the Soviet Union. It is clear that it is at the present moment seeking to destroy the rights of the States and hinder in every manner possible the activities of Congress that would preserve the American way of life.

We have heard from childhood that the Supreme Court was set for the preservation of the Constitution of the United States. No thinking student of the decisions and opinions handed down by that Court within the immediate past would dare claim that they were thought out and written for the purpose of preserving constitutional law. Over and over this Court has reversed the laws by which we have operated for generations. In its boasted determination to protect the rights of dope criminals, gangsters, Communists and traitors, this high court has in fact enacted new laws that have taken from law-abiding Americans and honest taxpayers their God-given rights to remain free and be given protection from gangsters, bandits, Communists and traitors. The Supreme Court has competed with our Congress. It has gone further. It has proceeded to annul the laws passed by Congress. In no instance, with which I am familiar, has it thus proceeded, in an effort to protect law-abiding citizens. Its activities have invariably been favorable to the criminals who threaten our Nation. They call it, "protecting minorities." We constantly hear of the "rights of minorities." Could it not be possible that majorities sometimes have rights?

We are told that the President is "outraged" at certain decisions for which appointees of his on the Court are largely responsible. The question is: Why did he appoint such men? Another question: Why did the United States Senate confirm them?

The cure is seemingly so impossible that it now behooves us to turn our attention to prevention. The way to prevent our courts from flirting with criminals and subversives is to put a different variety of judges on the bench.

In the same issue of the Methodist Challenge in the column entitled "This Changing World," there appears another thoughtful article regarding the question of impeaching the Supreme Court. I think this is also well worth reading, and insert it herewith:

IMPEACHING THE SUPREME COURT

Impeaching the Supreme Court might be a most healthful exercise but it is not the way to do it. The appointment of genuine American judges, who know the law, love the Constitution, and despise the cheap politicans who seek to use them, is a far more effective cure of the disgraceful situation that now curses our country than impeachment would be. If you should impeach the Court, it would be necessary for the same politicians or men like them to replace them. There seems to be no question of the general feeling of disgust that greets the mere mention of the Supreme Court. This is most unfortunate. But the cure begins before the members of that Court are appointed. We have a political court because the last three Presidents of the United States have appointed politicians to that Court. America needs a different character of men to make the appointments and a different character of men to be appointed. In other words, America sorely needs men right now.

Achievements in Agriculture—Dairy Herd Improvement

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. LAIRD. Mr. Speaker, we all know that one of the best ways to cut the cost of livestock production is to use more efficient, higher-producing animals—thus reducing feed and labor required to meet demand for livestock products. Research and experience have shown that animals can be bred for high production and economic-feed utilization through the use of superior-breeding stock.

The proved-sire system of dairy breeding—applied in the national dairy herd improvement program—is a fine example of what can be done through breeding for higher production through the program of the Dairy Herd Improvement Association, developed and sponsored by the United States Department of Agriculture, the average milk production of the 1½ million cows enrolled has risen to 9,500 pounds and has helped to bring our national average to 6,000 pounds.

Dairy farmers in Wisconsin are especially outstanding in their progress in dairy herd improvement work. The State stands first in the Nation in milk production of cows enrolled in the Dairy Herd Improvement Association—exceeding the national Dairy Herd Improvement Association record by more than 600 pounds. The average for all cows in the State is some 1,354 pounds above our national average milk production.

A logical outgrowth of the proved-sire system of breeding is the artificial-breeding movement, which is giving tre-

mendous impetus to our progress. Today, about a fifth of all dairy cattle in the United States are being bred artificially—a fivefold increase in the last 10 years. The net effect is a gradual reconstruction of the genetic makeup of our dairy population to carry the productive ability of the best breeding stock in the country. The result will be more efficient, lower cost milk production—nationwide.

Thus, the cooperative Federal-State research, which showed that high-producing bulls, proved on the basis of their daughters' production, will continue to pile up ever-increasing dividends for American people in the years ahead.

Grants From the William Green Memorial Fund

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. WILEY. Mr. President, one of the great citizens of this land whom we all recall with fondness was the late William Green, president of the American Federation of Labor.

The other day, newspapers carried word as to the initial grants which have been made from the memorial fund, which was established in his honor.

The grants went to a variety of deserving organizations in many fields of endeavor.

It is altogether fitting that the trade unions of this land remember this fine leader of organized labor in the form of these grants which are living memorials. Bill Green, like Samuel Gompers before him, is the kind of American of whom we can all be proud.

All Americans will be benefited, directly or indirectly, by the constructive use of these contributions in Bill Green's name.

I think it is well to recall these facts, particularly considering the fact that, these days, much of the news from our Nation's Capital concerning organized labor relates unhappily to gangster infiltration of the trade union movement.

Fortunately, the disturbing story which is coming to light through the efforts of the McClellan committee does not characterize the overwhelming proportion of the legitimate trade union movement. Fortunately, it is the exception, not the rule. Fifteen million trade union members should not therefore, be condemned, nor should their bona fide leaders.

I send to the desk now the text of the Associated Press story of Tuesday, August 13, describing the grants from the Green fund.

May they help to add further luster, not simply to Bill Green's memory, but to the trade union movement, as a whole, and to the spirit of man's service to his fellow man.

I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE HUNDRED AND FORTY THOUSAND DOLLARS GIVEN BY GREEN FUND

Grants of $140,000 from the William Green memorial fund were announced Monday.

They included $40,000 to Deborah Tuberculosis Sanatorium, Browns Mills in the Pines, N. J.; $25,000 to the National Research Foundation for Cystic Fibrosis for establishing a cystic fibrosis research clinic at Children's Hospital, Washington, D. C.; $25,000 to the Foundation for Religious Action in the Social and Civic Order, Washington, D. C., for establishing a library for use by the foundation's national committee on American education in communism; $25,000 to the Arthritis and Rheumatism Foundation, New York City, to finance research; and $25,000 to the Religion and Labor Foundation, Inc., Columbus, Ohio, to establish fellowship groups of clergymen and representatives of organized labor around the country.

The fund, named for the late president of the American Federation of Labor, William Green, was raised by contributions from unions. About $200,000 remains to be allocated from the fund.

Achievements in Agriculture—Statement on CCC Inventory

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. LAIRD. Mr. Speaker, a great sales job, a first-rate demonstration of handling a topheavy inventory, has been accomplished in recent years by the Department of Agriculture.

Once the millions of pounds of butter stored around the country, bought up by the Government to help dairy farmers, was a matter of concern to every citizen of this great land. Today, the 521 million pounds of butter once in the hands of the Commodity Credit Corporation, has been moved, and as of August 7, 1957, the present CCC inventory shows only 78 million pounds. It was not plowed under, but was made available for human consumption.

At one time the Government held 110 million pounds of eggs; today, there are no surplus eggs in warehouses. At the peak, the Government held 1,013,000,000 pounds of cottonseed meal and 878 million pounds of cottonseed oil. All of that has been moved in one of the most remarkable merchandising jobs ever accomplished. There were burdensome holdings of tung oil, honey, and flaxseed, and these too have been reduced to zero in the CCC inventory.

While the soil bank is coming into stronger use as an instrument to prevent the pileup of future crop surpluses, it should be noted that the Department of Agriculture has, and is, accomplishing a noteworthy job of disposing of old surpluses.

Mr. Speaker, I would like to insert in the RECORD at this time a list of the several commodities in which holdings have been completely liquidated, or reduced to a minimum:

Commodity	Peak inventory		Year
	Unit	Amount	
Butter [1]	Pound	820, 847, 000	1954
Cottonseed oil	do	877, 738, 000	1956
Cottonseed meal	do	1, 013, 428, 000	1956
Linseed oil	do	528, 208, 000	1956
Flaxseed	Bushel	9, 494, 000	1956
Seeds	Pound	427, 963, 000	1955
Tung oil	do	38, 516, 000	1955
Honey	do	6, 168, 000	1955

[1] Present inventory (as of Aug. 7, 1957) 78,000,000 pounds.

Barter Theater Observes 25th Anniversary

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. JENNINGS. Mr. Speaker, the world famous Barter Theater, located in Abingdon, Va., in the Ninth District, is observing its 25th anniversary. Founded in 1932 by its present director, Robert Porterfield, Barter Theater is the State theater of Virginia.

I know that the Members of this body who have visited Barter and are acquainted with Bob join me in wishing Barter every future success on the occasion of this 25th anniversary celebration.

Bob recently came to Washington to appear before a subcommittee of the House Committee on Education and Labor. His statement in support of legislation to establish a Federal Advisory Commission on the Arts was excellent and I commend it to the attention of my colleagues.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a column from the Washington Post and Times Herald of Wednesday, August 14. Mr. Richard L. Coe, drama critic of this newspaper, has just returned from a visit to Barter and has written this column which follows:

ONE ON THE AISLE—RURAL SETTING SERVES BARTER

(By Richard L. Coe)

ABINGDON, VA.—The Barter Theater is a play in itself, with plot setting, atmosphere and characters.

We'll have to leave the large cast of characters till tomorrow, but notes on other ingredients may give you the idea. Virginia's partially subsidized State theater is dedicated to the idea that theater in our country can prove a lively regional factor. Right now Barter has been giving three different plays a week during the Virginia Highlands Festival. On August 26 it will be offering a week's run for a world premiere.

Qualifications are in order. That State subsidy is a modest matter—$15,000 this year—but its value lies in giving it official recognition; hence statewide respect. Although manuscript plays are always a problem of Barter's plot, they don't always crop up—that is, manuscripts clearly worth the risk of production.

Undisputed star of the characters is a man who manages to do the impossible by being pretty casual about it. Robert Porterfield

founded this theater in 1933 for actors who couldn't get work in the Gotham Theater, but whose work, Bob thought, could earn them livings on the regional level.

His hunch has proved exactly right. His discovery of acting talents has been remarkably rich. Olney's William Prince, Gregory Peck, Hume Cronyn, Patricia Neal, Margaret Phillips, Larry Gates, Fritz Weaver, and Ernest Borgnine are among those who tried their wings here.

The old townhall can bulge up to over 400 souls a night, mostly on the orchestra floor. There's a trim balcony running around three sides.

Atmosphere is added by the curtains, chandeliers, drapes, chairs, carpets, and paintings from Broadway's old Empire Theater, obtained for Bob by Virginia-born Lady Astor.

The company includes 10 Equity members, twenty-odd apprentices, a good-sized technical staff, many of whom stick on from year to year. All the players try out for roles in open readings, and sometimes apprentices manage to outpoint the Equity members.

So far this summer they've offered The Great Sebastians; The Teahouse of the August Moon; The Desperate Hours; Thieves' Carnival; Anastasia; The Reluctant Debutante; Anniversary Waltz; Come Back, Little Sheba; with The Rainmaker, The Fourposter, and the new one, The Golden Lantern, still to come. This is a drama by Rebecca Franklin and M. K. Stewart, the writing name of the late veteran actress, Marie Doro.

LITTLE LEISURE

All this activity means very little leisure. The actors have Equity contracts, but in their zeal, wink at some demands for they would rather be working than not. Rehearsals are underway at 10 a. m., resume after lunch, with perhaps two or three plays and casts practicing simultaneously. Evening performances are at 8:30, with Wednesday and Saturday matinees.

Considering the usually emotional atmosphere of theater people, one is struck by the nonbickering ease with which these varied talents get along. Porterfield lays it to his ability to pick people.

"I want ladies and gentlemen as well as gifted talents," he muses. "Boors cannot maintain a schedule like this." Some of his ladies and gentlemen are from humble homes, some from wealthy ones, but they seem to share the vital secret of human courtesy.

There's another side to Porterfield which accounts for how he keeps his unique operation moving. Nothing seems to rattle him in the erratic maze of public support, personnel nerves or the everpresent need to keep strict balances. His payroll is over $2,000 a week. His tickets cost $2.50 each, with children admitted to the unreserved matinees for 50 cents.

Porterfield lives with his company at Barter Inn, a onetime college dormitory, with a cafeteria downstairs. But ever so often he manages to slip away to the family farm, 12 miles away. It's a real farm, too, cattle, tobacco, corn, outbuildings and the latest in dairy equipment.

On the lawn are twin oaks, said to have been there since Columbus, on a farm whose only owners have been the Indians and seven generations of Porterfields. Bob is a childless widower, but he's got a brother, all sorts of cousins and relatives throughout the area.

OF THE EARTH

Here, you feel, is that closeness to earth that makes the Barter possible.

A load of old canvas drops had been dumped in a field on the farm and the sight of Bob leading a cow away from evidently an appetizing dish of painted backdrops seemed to sum up the whole inspiration of grassroots theater. You've got to stick close to the ground to keep your head in the clouds.

Tomorrow I'll tell you about some of Barter's characters, including the lady who was born the year the Yanks invaded Abingdon.

Senator Talmadge Lauded on Birthday

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator TALMADGE Lauded on Birthday" from the August 11, 1957, issue of the Augusta (Ga.) Chronicle-Herald.

I offer this editorial for the RECORD because it demonstrates that the people of Georgia have already come to respect and place full confidence in the distinguished Senator's ability to ably represent his State with honor and dignity in the greatest deliberative body in the world.

He has been a Member of the Senate but a short time, but in this brief period he has laid the foundation for one of the most distinguished careers in history as a statesman and Member of the United States Senate.

The people of Georgia are justifiably proud of the record he is compiling, and I am sure that I can speak for the people of South Carolina in saying that they have also been highly impressed by the performance of his duties and his strong adherence to the principles of constitutional government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR TALMADGE LAUDED ON BIRTHDAY

And many happy returns.

It's a belated happy birthday to Georgia Senator HERMAN TALMADGE we're sending, hoping that his 44th birthday, Friday, was a happy one.

He couldn't have asked for a better present than the fine words of Senator LYNDON JOHNSON, who pointed out that the Georgia junior Senator has made "a great impression on this body since he came here. He has served only a few months but he has already demonstrated that he is one of the most diligent and one of the best Senators in the Senate."

Georgians can be justly proud of the accolade and can be justified in their pride in having two of the outstanding legislators in Washington. The State has been most fortunate in having men of the stature of the late Senator Walter F. George, Senator Richard B. Russell, and Senator Herman Talmadge.

No State we can think of has ever had such three outstanding men representing its interests in overlapping terms. Senator TALMADGE'S thorough knowledge of law and his astute reasoning power have played and will play an important part in the civil rights fight and corresponding legislation.

Senator TALMADGE has conducted himself on numerous occasions when he has been the direct butt of attacks from the press on television interviews with the utmost of integrity and intelligence. He has what Senator RUSSELL has and what Senator George was so well known for—class.

Senator Kefauver's Trap

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, the use to which a congressional investigative committee puts the testimony of a staff employee of the Democratic Advisory Committee throws a political shadow over the committee's deliberations. It causes one to wonder whether the committee is in search of economic facts or campaign fustian.

A committee to look into "administered prices"—whatever that is—called, with some fanfare, as a leadoff witness, the notorious Prof. John K. Galbraith, of Harvard, relict of the let's-hate-all-businessmen era.

Perhaps all should be advised that the good Dr. Galbraith is also economic adviser to the Democratic advisory committee.

Dr. Galbraith wears two hats—one as an employee of a political organization, the other as an eager witness before a politically-oriented committee. The investigators might well look into Dr. Galbraith's conflict of interest.

Under leave granted, I include an article from the Journal of Commerce of August 5, 1957:

SENATOR KEFAUVER'S TRAP

The second round of Senator KEFAUVER'S attack against big business is about to start. Beginning August 8, the steel industry will be on the carpet. The first scheduled witness is the chairman of the United States Steel Corp., R. M. Blough.

Some traps have been carefully set for him by the Senator from Tennessee where folks know a thing or two about traps. The Senator and his staff are eagerly standing by to spring them.

This puts the spotlight not only on the Senator but on the economist who is expert-ing the hearings for him and the committee, Dr. John M. Blair, former Federal Trade Commission staffer and a trust buster from way back. One of the committee's earlier witnesses, Prof. John K. Galbraith, of Harvard, also had a hand in setting the stage for the second phase of these hearings.

The KEFAUVER hearings, although carefully camouflaged as an inquiry into administered prices, actually are an episode in a much broader campaign; the campaign to undermine and ultimately destroy big business.

Talking about alleged monopoly control in his opening statement, on July 9, Senator KEFAUVER spoke about two possible approaches to the problem—"either try to destroy the power or attempt to control it." Describing the "antitrust approach * * * as most in keeping with our American traditions," the Senator from Tennessee stated that the logical approach would "involve dissolution suits on a widespread scale; trust busting in the literal sense."

That is verbatim the same recipe prescribed by Dr. John M. Blair in his 1938 book, "Seeds of Destruction," and, as late as 1949, in a paper on "Dissolution" delivered before the economic workshop at the University of Minnesota.

On this occasion, Dr. Blair said: "The hard core of the monopoly problem is the concentration of economic power, specifically the ownership and control of a large

proportion of the industrial economy by a small number of giant corporations. Within the framework of the antitrust laws, the problem can be met in only one way, namely, through dissolution—trust busting in the literal sense."

In outlining such a dissolution program, Dr. Blair left no doubt that, in his opinion, "great size and power, in and of themselves and unaccompanied by unlawful practices," ought to be destroyed as injurious to competition.

This reminder to those spokesmen of industry who are to appear before the Kefauver Committee and to those who will have to evaluate these hearings is not an attempt to dig into the past in order to discredit the committee's economist because of ideas he may have held in his youth.

What bothers us is that, as the record shows, Dr. Blair never changed these views and is now feeding them to Senator KEFAUVER, as evident in the use of Dr. Blair's point of having the Senator pick up his 1949 phrase of "trust busting in the literal sense."

This stamps the Kefauver hearings as something more sinister than a technical exposé of administered prices—whatever that term may mean.

The committee brain trust obviously expects spokesmen for the steel industry to justify the recent steel price increases as the logical aftermath of rising costs.

That gives the following sentence in Professor Galbraith's testimony before the committee (on July 11) special and somewhat ominous significance.

Said Professor Galbraith: "The United States Steel Corp. justified its price increases of 2 weeks ago by the contention that its costs had risen. In doing so, it not only conceded its ability to pass higher costs, including higher interest charges, to the consumer but based its policy on the need to do so. But no such opportunity is open to the farmer or the smaller businessman. They cannot raise their prices, for these are market-determined. They shoulder themselves the effect of the policy."

Some astute observers believe that the Kefauver committee will use this Galbraith quotation in an attempt to trap the steel industry into the admission that its prices are administered without any regard to supply-and-demand forces.

If such a trap is sprung, the steel industry's economists should have no difficulty in exploding the myth that the steel industry can work outside the market system.

The record is full of instances where large companies in such fields as steel, nonferrous metals or petroleum products tried to raise prices but couldn't make the increases stick because of competitive conditions in the market place.

The trouble is that, even if the Kefauver hearings succeed in showing up administered prices as mere figments of the imagination of those who are constantly finding fault with the capitalistic system, this is not likely to end the drive against "bigness per se" once and for all.

If the current attack proves a dud, they will think of something else.

Tight Credit for Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter, dated August 12, 1957, which I received from Arthur J. Geoghegan, president of the First Westchester National Bank, New Rochelle, N. Y.

FIRST WESTCHESTER NATIONAL BANK,
New Rochelle, N. Y., August 12, 1957.
Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MULTER: Unfortunately, I was away for a month and didn't get your note as to any comments I might have in relation to your remarks made before the House of Representatives on Thursday, July 25.

Without being a traitor to the American Banking Association, I must agree more with your feelings on what the tight-money policy effect has been on small business. Possibly the ABA's remark "the tightening of credit which has occurred over the past 2 years has not borne with undue severity on small business" can be interpreted many ways. Undue severity can mean extreme hardship. Probably, if that is the meaning of the association's remarks, I could go along with them.

I would prefer to say that small business has unquestionably been penalized to a considerable extent by the tight-money policy and that in many cases I am sure that credit has been withheld due to the severity of the shortage of available credit, whereas 2 or 3 years ago that same small business would have readily been advanced the funds requested.

I feel more strongly than ever the need for the continuance of the Small Business Administration. I also feel that the tight-money policy will continue to adversely affect many small businesses as the unfortunate tendency for business to become bigger and bigger in the United States is forcing the small business, if he wants to stay competitive, to invest in more fixed assets. With this type of investment his current ratio of assets to liabilities becomes adversely affected and the banker is forced to restrain himself in the amount previously loaned.

The Small Business Administration could be a tremendous help in these circumstances, and I would encourage you to continue the splendid work you are doing in keeping this program very much in the forefront.

Sincerely,
ARTHUR J. GEOGHEGAN,
President.

Achievements in Agriculture—50 Years of Meat Inspection

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. LAIRD. Mr. Speaker, last year the Federal Meat Inspection Service of the Department of Agriculture celebrated its golden anniversary. The meat industry, retail distributors, newspapers, and radio-TV stations, chambers of commerce, and many other public agencies all joined in commemorating this anniversary.

During the year hundreds of items on the Federal Meat Inspection Service appeared in the Nation's press. Radio and TV stations contributed many hours of public-service time. Paid advertising space totaling many thousands of inches was used in promoting inspected meats and meat products and to tell the story of wholesome meats through inspection. Chambers of commerce and other civic agencies publicly honored the men of the Inspection Service. Here, for example, is a statement from one newspaper editorial:

What can you buy for a dime? Not much. Offhand, an ice-cream cone, a cup of coffee, or a bottle of pop—all things that give fleeting satisfaction but have little permanent value. But the dime per person the Government spends annually on its meat inspection program buys assurance for you and your family of a wholesome meat supply, probably saves you from illness and doctor bills, even means the saving of lives.

During these last 50 years, the Federal Meat Inspection Service, with the full cooperation of the meat industry and of the consuming public, has guarded this Nation's meat supply. Largely as a result of this Service, Americans take it invariably for granted that meats available at the market are clean and wholesome, as well as nutritious.

This work is also important to our farmers. Livestock and livestock products account for one-half of the total farm income. Inspection contributes immeasurably to the stability of these markets.

Public interest in and acclaim for the work of the Meat Inspection Service has been earned by hard work and devotion to the ideals of public service. It deserves the full support of every Member of the Congress.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. LONG. Mr. Speaker, once again we are faced with the proposition of spending the American taxpayers' money on a program about which the average American is all too familiar. The continuation of our foreign-aid program, which has squandered billions upon billions of dollars with doubtful and haphazard results, is completely without sound justification.

The theme of the foreign-aid program is to fight communism, win friends, and establish world security through foreign aid. The foreign-aid portion of this theme, that is the reckless spending of billions of dollars, certainly stands true, but the remaining portions, that is fighting communism, winning of friends, and establishing security, falls completely short of even the most liberal interpretation. We have only to look at the countries of the world, who are receiving this aid, to see how far we have fallen short in purchasing their friendship and buying freedom from communism. One of the brightest features of the foreign-aid program is the ever-increasing awareness of the American public to the foolhardiness of the idea and the increasing

resentment and opposition toward its continuation. I am convinced that by in large the American public understands fully the shortcomings of the program and the complete lack of progress in the attainment of its so-called objective.

The fantastic spending program, which we know as the foreign-aid program, had its beginning prior to World War II in the lend-lease program of 1940. The billion dollar year really began to pick up momentum with lend-lease. The money expended under that program was neither lend nor lease. There had long been extravagance in Federal spending, although it had been restricted to domestic fields. With lend-lease, our spending branched out into the foreign field and, before the program had run its course, the taxpayers were soaked to the tune of $48,674,000,000.

Lend-lease set the trend of American thinking toward extravagant foreign-aid spending, and we have been suffering from that malady ever since. With the expiration of lend-lease in 1946, the United Nations Relief and Rehabilitation Administration was left as the vehicle to funnel American dollars abroad. The United Nations Relief and Rehabilitation Administration was supposed to be a joint project, financed by allied powers, but Uncle Sam paid the tab to the tune of over $2½ billion. The United Nations Relief and Rehabilitation Administration money was indiscriminately spent all over the world, including Communist-ruled countries, and did much to strengthen the communistic concept. Larger than the United Nations Relief and Rehabilitation Administration was the real successor to the lend-lease program, namely, the Marshall plan.

This program as it is now known was established in 1948 to administer the gifts and loans that were appropriated to assist the countries of Western Europe in rehabilitating their economies. This was the mission of the European recovery or Marshall plan.

This goal was soon accomplished but then came the Korean war and the signals were changed. Emphasis then was placed upon military assistance and the economic cooperation was transformed into the Mutual Security Agency. Then came the Foreign Operations Administration and the International Cooperation Administration. Present international Cooperation Administration programs incorporate all aid, other than that given for direct military assistance, which comes under the Department of Defense. They included so-called defense support—economic aid to countries to which we are giving substantial military assistance—aid for economic development, and technical cooperation.

Although the programs have had different targets, they have one thing in common. They are based upon the belief that the continued giveaway of taxpayers' dollars can solve the free world's problems. Indeed, in some quarters the belief is prevalent that, by giving away dollars, we can buy the friendship of foreign peoples. Too often we resort to this easy way out of difficulties which, in fact, can be solved only by a realistic, and clearly stated, consistent, and properly implemented foreign policy.

One cannot buy trustworthy friends with money, regardless of the price. To attempt to do so amounts to plain bribery, which is hardly the way to win friends. Even in those cases where aid may not be looked upon as bribery, it is looked upon as something for nothing, and what is obtained without effort is never valued as much as what has been acquired at some cost.

Certain interests are now working and trying to move heaven and earth to retain the foreign-aid programs for their own benefit. On both sides of the aisle, Republicans and Democrats, are using high pressure methods to keep Congress in line to forward foreign aid. We hear of meetings at high levels in which the leaders of both parties are called in, but we do not hear of any mass meetings of the constituents whom we represent. If the voters of the United States could be sounded out, we would find, I am sure, that 2 out of every 3 are against foreign aid, especially the business interests upon whom taxes fall so hard. Ninety out of every one hundred letters I received mention the fact that we could do away with foreign aid as a means of relieving the tax burden.

Foreign aid started out as wartime cooperation, when we and our allies were fighting the common Nazi enemy. We pooled our resources, recognizing that cooperative effort in wartime is quite different from peacetime lending.

We even went a step further. After hostilities were over, we recognized that economic rehabilitation of the countries that were devastated by the war was part of the phenomenon of war itself. We had been fortunate in that our own fields and factories had not suffered damage, whereas much of Europe had been laid flat. So, we extended our hands to them in humanitarian assistance to help them rebuild their economies. Under the Marshall plan we gave them vast quantities of food, fuel, fertilizer, and industrial equipment for this purpose. The goal was accomplished and, by 1952, notwithstanding the Korean outbreak in 1950, Western Europe was well on the road to recovery.

But, termination of the Marshall plan did not extinguish the concept that the way to solve knotty foreign problems is to make large grants of money. Those advocating direct foreign assistance have become quick to substitute direct military assistance to take the place of economic rehabilitation. Paralleling this was the idea, first incorporated in the so-called point 4 program, that the United States should make substantial grants in order to assist the development of economically backward countries.

I am afraid that we have long since reached the point where the advocates of direct foreign aid are more anxious to give aid, as such, than they are to achieve the ostensible objectives of the aid programs. Vested interests have been created, in the form of a vast bureaucracy, both in Washington and abroad, that have a direct interest in the continuation of aid programs. It is something like a snowball rolling down hill. It picks up larger and larger amounts of snow until it becomes dangerous. The philosophy of foreign aid has been picking up more and more advocates until a powerful pressure-group has been created.

I am afraid that we are disposed to increase our foreign aid appropriation whenever the world situation becomes more tense. If we were to think through the problems first and define our objectives clearly with regard to each country, taking into account the personnel that we have available to accomplish our objectives, we would accomplish more than we do now, by first deciding to appropriate more funds and then, later on, wondering how to spend them advantageously. The real question, in each case should be, not how much but, what why, and how. All too often, I am afraid, we have placed the cart before the horse.

Take the case of Iran, which is one of the greatest examples of waste and extravagance in foreign aid spending.

For a long time the program there was headed by William E. Warne. The story is clear and known to many, since it has been the subject of investigation and publicity. The Administrator of the program went to Iran in 1951, to help build prosperity in that country of 20 million inhabitants. The Iranian economy was at a low ebb due to the expropriation of the British-controlled oil wells there. With the Administrator's arrival there began a furious spending program which has cost American taxpayers some $300 million to date, and which is the equivalent of income taxes paid by more than 700,000 average American families in a year.

One glaring example of wasteful spending was the construction of a beet-sugar refinery before sugar beets were being grown in Iran. To make matters worse, a second refinery was built and much of the machinery bought and stored. A novel twist was added when United States Treasury checks were distributed directly to Iranian ministers. Money was provided the Iranian Government to meet payrolls and, in fact, salaries were raised at about the same time. A staff of more than 400 assistants in 10 regional offices were built up and apparently these staffs lived in the lap of luxury.

One office, with 55 employees, including clerks and office boys, required 53 automobiles and 41 chauffeurs.

Vast sums were spent on farm equipment which could not be used, owing to the nature of the terrain. Millions upon millions of dollars in physical assets were scattered about without rhyme or reason and have since been entirely lost.

Teheran, the capital of Iran, badly needed electric power and sought $500,000 to be used in constructing steam generators. This was logical because Iranian oil could easily provide the necessary fuel. Because of his background the Administrator decided that a public-power-type hydroelectric dam would be more suitable. Accordingly, a terrific spending program was launched to support the construction of a dam on

the Karadj River. The population of Teheran, something over 1 million plus, was thus to have an electric supply sufficient to handle a population of an American city of some 15,000. Over 40,000 applications were pending and about the same number of customers were being served. The available electric supply was totally inadequate to take care of the requirements. Beyond home use for electricity many industrial plants required electric power which, in turn, would improve the economy of the area.

Under the foreign-aid program Teheran received $2¼ million for the construction of a model cotton mill but, unfortunately, the mill had no power to turn its wheels.

In an effort to solve this pressing problem Iran had planned to build stem-driven oil-powered generators which could be constructed with the $500,000 sought from the foreign-aid program, combined with their own funds. The dam which the Administrator proposed had first come up for consideration in the 1920's and would span a narrow mountain stream which practically dried up in the summer and became a torrent during the spring flood season. The original idea was abandoned as impractical, and inadequate to supply the country's needs for electricity.

A French company began some work on the dam which was halted in 1951. The initial pledge toward construction of the dam was $1,400,000. One estimate toward the total cost amounted to $17,300,000 while another estimated the cost amounted to $28 million.

Work began immediately on the dam and continued until June 1955. Considerable controversy was raised about the merits of the dam and 1 estimate reached the figure of $90 million. It was finally agreed that the dam was too expensive and work on the dam has ceased. About all that exists is an uncompleted stretch of road through the mountains, a construction camp, complete with swimming pool, which cost $3,500,000, but no dam.

The Iranians got around the problem, however, because they decided that the money was not forthcoming from the foreign-aid program so they built the necessary steam generators themselves.

In the period immediately following World War II, few argued against the principle involved, which was to extend a helping hand to destitute and war-ravaged peoples, even though some of the methods for distributing the aid were questionable. The theme, in the beginning, was to combat communism by combating poverty. The logical approach to this objective was to strengthen those nations by building prosperous economies. If their economies eventually got on their feet and could do for themselves, that would be fine, but unfortunately that has not been the case.

Today our national debt is around $270 billion, a sum which is almost twice the combined debts of all the other principal nations of the world. Some $64 billion can be attributed to grants and loans to foreign governments in the postwar period. If to this are added the amounts granted during the war period 1940–45, in the form of lend-lease and other grants-in-aid, the total is raised to cover $113 billion. Statistics, inconclusive as they may be, show that about $3 billion of our taxpayers' dollars have been used by foreign governments to reduce their own national debts. This same $3 billion has been added to our national debt.

Some of the proponents of foreign aid giveaway programs like to point out that our economy is bolstered by foreign aid in that our own products and services are bought with the money. Since we give away the money that is used to purchase our products and services, is not this a rather absurd way to promote trade? Our Nation has grown and prospered through the self-interest of private enterprise and industry. Let us keep it that way. Now, let us take a look at a few of the recipient nations to see how the program has failed to work. Consider France. Since 1947, we have given more than nine billion dollars in aid to France, which is second only to England as far as benefits under the foreign-aid program are concerned. Today everyone is aware of France's resentment of the United States and of France's response to a communism which can be noted most clearly in the results of her national elections. The average citizen of France is indifferent toward our giveaway program, because they feel that they do not personally receive any of the money. They feel that aid has been funneled through the hands of a favored few.

In Greece, the United States has spent over $1.3 billion, plus military assistance. Yet, the feeling there toward the United States is certainly not a friendly one. Fairly recently, Greek voters gave strong support to a Communist-backed ticket.

In Italy, even the strongest proponents of foreign aid are conceding the obvious fact that communism remains an important factor. Reports from southern Italy, where vast sums of our taxpayers' dollars have been squandered, indicate that if anything, more persons are becoming Communist than anti-Communist.

In Yugoslavia, where more than $700 million of our taxpayers' dollars have been spent, plus military aid, the Nation has its own brand of communism. By no stretch of the imagination can anyone concede that we have made progress in that nation.

In Egypt, over $45 million has been spent for economic and technical aid, yet few Egyptians appear to be aware of the fact. Developments there clearly show that the United States does not rank very high in the Egyptians' estimation.

There is continuing argument that American generosity is merely building a host of ingrates all around the globe. For example, India, which has received millions of dollars in American aid for its village improvement program, seems more friendly to the Soviet Union than to the United States. Krishna Menon, its delegate to the United Nations, and now to become its defense minister, is a glaring example. In votes and statements during the past 5 years, at least 23 times he supported the Communist Party line against the United States and the majority of the free world; 4 times he abstained—including the vote on our request for an important investigation of Communist charges of bacteriological warfare in Korea; twice only he opposed the Soviet. Within the last few months he called the Soviet terror in Hungary "just a civil conflict" and refused either to condemn the Soviet or—presumably until instructed otherwise—to call for removal of military pressure.

Turkey continues to demand all sorts of industrial equipment and nonwar supplies. This would be fine for Turkey, which is burdened by a large Army, but why should our taxpayers be called upon to finance Turkey's whole modernization program?

Finally, let us take a look at Great Britain, to whom our taxpayers have contributed vast sums. It is no secret that the average Britisher looks with unfriendly eyes upon us. He seems to feel that we owe Britain the aid it has received and that Britain should not be required to make any effort to repay.

There is an expression to the effect that some people cannot see a tree because of the forest, and this certainly applies to the manner in which our foreign aid program is being handled. What more fertile place could the Communist forces seek to plant their seeds of discontent than in the politically and economically unstable Latin American Republics? These nations, our neighbors in the Western Hemisphere, have suffered historically from political strife and the hand of dictatorship. Would it not be wise, since we have foreign aid hanging over us, at least to try to make the most of its intentions and apply more than we have so far applied toward the improvement of our neighbors who are literally in our own front yard, in preference to helping those on the other side of the world?

The $673 million that we have made available to the Latin American Republics since the close of World War II is small in comparison with the $49,095,000,000 that we have given to other areas. To be precise, it accounts for only 1.4 percent of the total.

Yet, we and the Latin American Republics have common interests which make that part of the world especially important to us. Latin America tends to be politically unstable and provides enticing targets for dictatorship and communism. It certainly would be in our self-interest to enhance our prestige throughout the Western Hemisphere. If ever we should be called upon to enforce the Monroe Doctrine it would be essential that the ties which bind together all the Republics of the Western Hemisphere be as strong as possible. We have not done as much as we could to keep the good neighbor policy alive and vigorous.

There is danger that we overlook the composition of our existing foreign aid programs. Although, prior to 1951, the bulk of all aid was economic, the bulk of it today is military. Of the almost $5 billion included in the aid program submitted to Congress last year for fiscal

1957, approximately $3 billion was for direct military assistance. Another $1.1 billion was for defense support, or economic assistance to countries receiving substantial military assistance. Inasmuch as the purpose of defense support is military, it is logical to consider that portion of economic assistance as military also.

Thus, more than four-fifths of all aid recommended for fiscal 1957 was either directly, or indirectly, military.

Much as I believe in military preparedness, I cannot help but doubt whether this policy is wise, even though it might cost more if we were to provide for military defense exclusively with our own defense establishment. With the world as unstable as it is, there is the ever-present danger that some day we, ourselves, may have to face the very guns, and other military equipment that we are giving so liberally throughout the world.

I am not a military expert and I do not intend to pose as one. But, I am of the firm opinion that we need to reexamine our military assistance programs in the light of the new weapons that are being developed so rapidly. We need to rethink this matter through, particularly since the United Kingdom only recently decided to rely almost exclusively upon new weapons systems. I hope that the Military Affairs Committees, of this House and of the Senate, are giving this problem the careful and mature consideration that it deserves. Since it is more economical to support Korean and Nationalist Chinese troops than it is to support American troops in the field, it may be that we are jumping to the conclusion that we should rely too exclusively upon traditional military thinking.

I have never noticed that our military leaders are disposed to change their traditional manner of thinking between wars. Neither have I noticed any disposition on their part to think in terms of true economy.

The people of the United States have a right to expect that the dollars they are spending for military purposes are being spent just as efficiently as the dollars they are spending for other functions of government, including economic foreign aid. Let us stop military foreign aid, at least for the time being, at least until we know what kind of weapons will really be useful.

The question uppermost in the minds of our taxpayers today is why continue this burdensome program. I for one, am opposed to its continuation in anything like its present scale. There are ample funds appropriated, but as yet unspent, to carry the aid program on through an adjustment period. We would gain immeasurably from an economic standpoint, as well as from a moral standpoint if for the time being at least we stopped with the billions already appropriated but not yet spent. Each of us could then feel a measure of relief in reduced taxes. Each of us could see a better chance of a balanced budget and there would be more money for development and improvement within the United States. I cannot see where there would be dire and earth-shaking confusion if we should discontinue much of our foreign-aid program. Let us cease thinking in terms of buying friends.

Railroad Retirement Legislation

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert a letter from Mrs. Martha Flett of Cloquet, Minn. Mrs. Flett writes about railroad retirement and the general question of our treatment of the older folks. She doesn't ask for anything, nor does she complain. She only tells us her story in hope that we could aid someone else. To all those who say that we never had it so good and that things are better than ever, I commend this letter for reading; to all those who think that our social security and railroad retirement systems are adequate, I urge you to read this letter; to anyone who thinks that we do not need some form of Federal medical insurance, I urge you to read this letter; because in her very simple and forthwright manner Mrs. Flett has more eloquently told of the need for these things than any of the long speeches that are so often heard on this floor. The problem will not solve itself, Mr. Speaker. We must get moving and improve our social security program, railroad retirement system, and medical care provisions so that the people of the Nation will have true social and economic security in their later years and so they can share in the tremendous benefits of the great wealth of our Nation.

CLOQUET, MINN., *July 22, 1957.*

The Honorable JOHN BLATNIK,
House of Representatives,
Washington, D. C.

DEAR SIR: I wish to tell you about our own particular situation regarding railway pensions.

My husband was retired in June 1955 from the Duluth, Missabe, and Iron Range Railroad where he had worked for over 30 years in the electrical department. He was 69 at the time of retirement, but because we had 2 teen-agers in high school, we pleaded that he be allowed to work 2 more years, since he was in good physical condition and able to work. This was not granted. The summer following retirement was a nightmare of adjustment. We did not receive enough compensation to carry on insurance, sick benefits or any necessities which are essential to good living. His pension was based on wages from 1926–31 when he was receiving 77 cents an hour in comparison to $2.25 an hour in 1955. Because our income was insufficient, we skimped on medicals. In 1956, around the holiday season, Mr. Flett was taken ill with what we thought was a stomach flu. We struggled along until after Christmas, when medication was necessary. It was found to be cancer. Mr. Flett died on February 19, 1957.

While my husband worked, his life insurance with the Equitable was $5,250. After retirement, the amount is reduced to $1,250. We could not pay the premiums to keep its original value.

I am 56 years old. Our son, 19, is considered an adult as far as the railroad company is concerned. Our daughter was 18 in May. There is no compensation until I am in my sixties. Yet my husband has paid thousands of dollars into a fund from which he never benefited and from which I do not receive compensation when I most need it.

My son worked last summer to be able to go to U. M. D. My daughter has been unable to find a good-paying job this summer to help her go to college in the fall. Yet the Nation is crying for young folks to be engineers, scientists, and so forth.

I have a part-time job as cook in a school cafeteria. I applied for work at a local plant which would bring more income. But at 56, you are too old for work, and too young for compensation.

To get Mr. Flett into the university hospital, I had to mention the Welfare Department as a possible source of paying bills. This is a rather terrifying situation after a man has worked for the same company for over 30 years.

Before my husband died, he asked that I send this material to our Senators and Representatives, in hope that we could aid someone else.

Thank you.

Yours truly,

MRS. MARTHA FLETT.

The Excise Tax on Coconut Oil

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. ALLEN of California. Mr. Speaker, I strongly believe that the 3 cents per pound excise tax on coconut oil has no reason left for being and that it will serve the best interests of our country if it be repealed. Accordingly, I introduced H. R. 3652 some months ago to repeal the tax. Similar bills were introduced by the gentleman from California [Mr. KING] (H. R. 7315), and by the gentleman from Michigan [Mr. DINGELL]. Recently, Mr. KING's bill was unanimously approved by the Ways and Means subcommittee to which it was referred.

I wish to call the attention of the House to an editorial that appeared in the New York Times of August 13. The Philippine Ambassador to the United States, Gen. Carlos P. Romulo, has ceaselessly advocated the repeal of this tax because he says it affects 8 million of his fellow countrymen who depend on the coconut industry in the Philippines. General Romulo believes that it will strengthen the friendship between our two countries for us to abolish this tax and he has so expressed it in a strong note to the State Department.

As the New York Times very well says:

The logical and sensible thing to do is to repeal the act.

We should not allow this session of Congress to adjourn without acting on

this measure because, to quote again from the New York Times:

The arguments for repeal are economically sound, politically wise and fundamentally humane.

The editorial to which I referred reads as follows:

UNFINISHED BUSINESS

Among the important bills at this session of Congress that are in danger of losing out in the pressure of unfinished business is the House measure to repeal the 3-cent-a-pound excise tax on coconut oil. This has already had unanimous approval in a Ways and Means Subcommittee, but it should be brought out, passed by both Houses and sent to the President.

This excise tax on coconut oil was originally adopted in 1934 as one of a series of emergency measures designed to protect struggling American interests. In this case, the dairy farmers feared the competition of coconut oil that found its way into the manufacture of margarines. However, as a matter of conscience, the proceeds of the tax were remitted to the Philippines, principal supplier of the oil, and they served a good purpose in stabilizing the Philippine economy during trying days.

Now things have changed. The dairy farmers no longer need the protection, since coconut oil has virtually disappeared as a base in margarines. Moreover, the proceeds of the tax have not been remitted to the Philippines since the advent of independence in 1946. The coconut producer—and there are 7 million persons dependent upon the industry in the Philippines—is being penalized to protect a now nonexistent American need.

Meanwhile, the soapmakers in this country are losing out to synthetic detergents because of the artificially high price of coconut oil. A natural flow of useful products at a reasonable market price is being impeded by legislation that has long ceased to correspond to needs or facts in the case. The American soap user is footing the bill, on the one hand, and the Philippine coconut grower is paying his share, on the other.

The logical and sensible thing to do is to repeal the act. Any loss in revenues should be offset by economic gains, especially those to the ultimate consumer. If the Philippines is not to have any advantage from the imposition of the tax it is no more than fair that its needful producers should have the advantage of a more favorable market. The arguments for repeal are thus economically sound, politically wise, and fundamentally humane. Action should be taken.

A Civil-Rights Bill This Session

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 8, 1957

Mr. CELLER. Mr. Speaker, Members of the House will make their final judgment on the pending civil-rights bill on the basis of their conscience and their understanding of the issue. It might be helpful to them in making their judgment to know the position which has been taken on the bill by groups that have been in the forefront for many years in the promotion of meaningful civil-rights legislation.

Two of the leading groups are the National Association for the Advancement of Colored People and the American Federation of Labor and Congress of Industrial Organizations. I believe it is a mark of courage that each of these organizations in recent days has found it possible to declare publicly in favor of a measure which does not fully meet their own goal. Members of the House will recall that both of these organizations, along with many others, gave us strong and unflinching support when we successfully resisted the addition of a jury-trial amendment covering both civil and criminal contempt to H. R. 6127. Both the NAACP and the AFL–CIO supported the House-passed bill as a minimum program for the protection of human rights.

It would be easy for these organizations, as it is apparently easy for some Members of the Congress, to keep waving the flag for the full measure of justice which they so justifiably demand. They could take an intransigent position now and thus remain simon pure. But the leaders of these organizations are both realistic and idealistic. They are determined to have action this year on the maximum bill that can pass both Houses of Congress without any further risks to the bill itself.

In a statement which Mr. Roy Wilkins, executive secretary of the NAACP, sent to all of his organization's chapters this week, he says:

We believe the Seante bill, with some modification can be useful.

After stating his disappointment at some of the changes made by the Seante, Mr. Wilkins continues:

However, in the Senate version of the bill there are residual potentialities for (a) increasing the number of Negro voters in the South; (b) discovering whether, as has been claimed, the vast majority of voting cases will be disposed of in civil actions without a jury; (c) determining whether or not, for the official record, southern juries can render verdicts in voting cases on the basis of the evidence and the law; (d) investigation and exposure by the Federal Government of the deprivations of voting rights; and (e) establishment of an effective and fully manned Civil Rights Division in the Department of Justice.

He then very realistically and significantly comments:

We believe that if the bill is passed it will break the stalemate of 87 years and will get us off of the very discouraging dead center on which we have been operating because we could not secure the passage of a perfect bill. We believe this bill will constitute a start toward our goal, and a start is better than standing still.

Mr. Wilkins is a courageous man as well as a realistic one.

This position may not be popular at this time—

He says. He points out that some of his own members will be bitterly disappointed but his answer is:

We believe that we have chosen a course which is practical rather than emotional.

In making this decision, Mr. Wilkins has told his people that he has relied on the intimate knowledge of his Washington representative, Mr. Clarence Mitchell.

To those who advocate delay in an effort to get a stronger bill, Mr. Wilkins makes some very wise and realistic observations. Briefly, he says:

We doubt a stronger bill (that is, with the jury-trial omitted) can be passed at this session.

We consider it doubtful that a stronger bill (that is, without a jury-trial amendment) can be passed next year.

We do not believe that if this bill is passed, it will be 10 or 20 years before we can get anything more done on the civil-rights legislation.

Similar to the action of the NAACP has been that of the AFL–CIO. This great labor organization, representing 15 million working men and women, including millions of Negro workers, has been in the forefront of the fight for the best possible civil-rights bill. Their support for part III in the bill and their opposition to a jury trial amendment needs no reiteration now. But they have faced the practical situation which exists, and their top leadership, meeting just 2 days ago in Chicago, has called upon the Congress to pass a bill this year. The Senate bill is disappointing to them but they recognize the potential good in the bill. They declare "We will not join with those who would defeat the present weakened measure in an effort to obtain a political advantage."

This declaration by the AFL–CIO executive council was adopted unanimously by the 29 members of that body.

One final word: Both the NAACP and the AFL–CIO, and many other organizations, fought against the jury trial amendment as it was presented to the House. Although these organizations also resisted the amendment as adopted by the Senate, it must be recognized by all that the Senate amendment covers criminal contempt only and therefore constitutes much less danger to the efficacy of the bill than would have the amendment which the House rejected. The position of these organizations would probably be different if the jury trial amendment offered to the House were now still under consideration.

Is the attitude to be a little is not enough, but nothing is sufficient?

Consumerism—Latest Economic Frontier

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 17, 1957

Mr. MULTER. Mr. Speaker, the following article, written by Joseph Arnold Livingston, syndicated financial columnist, is must reading for all Americans who are interested in the economic future of themselves and the country.

Mr. Livingston's article appeared in the July issue of Western World and is as follows:

CONSUMERISM—LATEST ECONOMIC FRONTIER

(By J. A. Livingston)

Poor Mr. Foofram. He's an elderly business executive well known to readers of

American comic strips. But he's not up on modern economics.

"I can't figure it," says he. "They (the workers) stand around talking most of the morning. * * * Then they leave for coffee at 10. At 12 o'clock they go to lunch and straggle back about 2. Another coffee break at 3—then they leave early to avoid the rush hour. And we're still making more money than we have ever made in our history." That's America in the 1950's.

Foofram, Inc., which epitomizes all the great United States corporations—General Motors, United States Steel, American Telephone & Telegraph, Radio Corporation of America, Ford, Du Pont—is making money because of, not in spite of, shorter hours of work. American workers have time to enjoy their record incomes. They have time for television, movies, vacations at the seashore and countryside, visits to Europe and other foreign lands, do-it-yourself work around the house and garden, automobile trips in the evening. Golf once was a rich man's pastime. Now it's everyone's.

American prosperity is a two-way trickle up as well as down. The Fooframs are well off only when the Joneses, Smiths, Pilsudskis, Pihauds, Swansons, Schmidts, Rossos, Kellys, and Cohens are busy as consumers. For America in less than 250 years has fashioned a society undreamed of by early economists, a consumeristic society. General Motors can't sell cars unless it finds customers. It can't find customers unless wages are high and people have time in which to use American highways. Consumerism has replaced geography as America's latest economic frontier.

To the economists and Fooframs of the 18th century low wages were necessary to make the lower classes of people do more work and become more careful and industrious. Adam Smith rejected this subsistence theory of wages, but Malthus came back to it. He felt that workers were condemned to live on the verge of starvation. Their wages should be just enough to provide a continuing supply of workers to operate capitalistic machines. This suited Karl Marx, to whom profit was booty pumped out of the laborer—surplus value. To Marx, periodic depressions, accompanied by widescale unemployment, were capitalistic essentials to force down wages toward subsistence living.

SUNRISE TO SUNSET

America's consumeristic growth rebuts the Marxian hypothesis. A hundred years ago, the worker went to his job at sunrise and was set free at sunset. For this treadmill existence, he got less than $250 a year, a sum he now earns in 2 or 3 weeks. A philosophy of hard work while you work was already established in America in 1857. Philadelphia and Its Manufacturers records that "nearly every citizen has some regular occupation and prizes himself upon diligence in the transaction of business and punctuality in fulfilling his engagements. The circle of those, at least among the male population, who aspire to distinction because of their uselessness, is like a wart on a man's nose, more looked at than important."

And technology—the use of machines—had ready acceptance. American workmen were not Luddites, who destroyed knitting machines in England in the 19th century. Philadelpha and Its Manufactures notes that "one American girl can accomplish as much as two English girls," and that British workers do more than French workers. Already America was groping its way toward an accounting concept of wages: "The only standard by which to estimate the cost of labor is the amount of work done for the money paid—the per diem earnings of the workmen being in itself no criterion by which to judge the cost of labor."

By 1895, American workmen were getting $450 a year, nearly double their pay of the 1850's. But they were still putting in a 10-hour day—to the distaste of Wendell Phillips, a New England reformer. Said Phillips: "When shut up an excessive number of hours in labor, the workman comes out but the tag end of a man, without the brain to think. Now, therefore, it is a fair division to give him 8 hours for labor, 8 hours for sleep, and 8 hours for his own use as he pleases * * *." The Consumeristic Society began with agitation for the 8-hour day.

THE COLONIAL TRADITION

Social and economic gains inevitably spring from workers' backgrounds. The country was settled by immigrants who had broken away from tradition, from class and caste distinction, American workers seldom said: "That's not for the likes of me." When improvements came—when gas light supplanted the kerosene lamp and electricity the gas mantle; when the automobile began putt-putting over the dirt roads; when indoor plumbing and running water ousted the outhouse and the pitcher pump, the American worker wanted not only to keep up with the Joneses in the flat next door, but also with the Astors and the Vanderbilts who lived in stately Fifth Avenue mansions.

Further, the colonial foundation of America—the coming here of settlers who had to battle winter, Indians, and an unknown land—fostered teamwork, a spirit of mutual help (it was necessary to survival), and compassion for fellow men. To Americans misery, poverty, and low standards of living are a personal affront. Hence, laws doing away with child labor, laws limiting the hours of work for women, and, finally, in 1937, the Fair Labor Standards Act, which requires overtime pay beyond a 40-hour week.

Unions have carried the trend toward leisure and consumerism further. Many contracts set 35 and 37½ hour weeks. George W. Taylor, one of America's outstanding authorities on labor, figures that the average hours worked per year in America at regular pay would be closer to 35 hours than 40 hours considering that workers now get 2 weeks paid vacations plus about 7 holidays.

Workers early attained an economic dignity in the United States. They were granted credit ratings. Not by banks, but by merchants. If a railroad could buy locomotives and freight cars on time—paying while using—why couldn't a worker buy a living room suite or a bed at so much per week? And so began installment credit. But not without its social stigma. Credit stores delivered their furniture in unmarked delivery trucks—so that neighbors wouldn't know that the Smiths or the Joneses were paying by the week.

Today, the best families do it. Some 70 percent of automobiles are purchased on installments. You buy refrigerators, clothes, jewelry, sewing machines, frozen foods, clothing—nearly anything—on time. Personal loans of $300 to $500 are easy to get. You travel to Europe—plane or ship—and pay when you return. You purchase gasoline anywhere in the United States on credit—merely show your credit card. You can go into restaurants and sign the check and pay later. And, wonder of wonders, banks compete actively for consumer loans.

As recently as the 'twenties, the Fooframs in the banking business considered consumer lending a perversion. Bank credit must be confined to production. If a householder coudn't pay for a piano, a sewing machine, a dining room table outright, he should wait. He should save up for it. But merchants—in their own self-interest, in their quest for ever more sales—had a keener understanding of consumer psychology. To most persons, saving comes hard. It is easy to put off buying a piano or sewing machine until tomorrow in order to spend money for flowers, fancy foods, or bric-a-brac today.

Installment credit had its beginnings in America early in the 19th century when Cowperthwait, a New York furniture store, advertised "the most reasonable and accommodating terms." The Singer Co. sold sewing machines on time starting around 1850. Yet, installment credit is hardly an American exclusive.

In the late 19th century in France, the Grands Magasins Dufayel sold merchandise extensively on credit in Paris and through branches. This is a French Horatio Alger story. Dufayel was a groom for a Mr. Crespin and acquired Crespin's merchandising and credit business, greatly expanding it. Dufayel actually financed the time sales of other stores, taking customers' notes or bonds. In this, Dufayel was a forerunner of the American finance companies that were organized to handle installment paper for automobile dealers. The Dufayel business ran down rapidly after his death in 1916.

EUROPE'S FEAR OF CREDIT

Yet, Europeans distrust installment credit. They are alarmed by the rapidity of its growth in America, from $4,500 million to $30 billion since 1939. Suppose, runs the argument, business should decline, people lose their jobs. New installment purchases would cease. Families would be unable to pay off old purchases. Retail sales would drop. A depression spiral would uncoil.

A reasonable argument. But how valid?

It presumes that installment credit is granted unthinkingly. It isn't. Bankers carefully examine borrowers. How long have they worked? What do they earn? Do they have references? Automobile dealers also check up. Are the car buyers responsible? Finance companies crack down on dealers who make bum loans. And the record of losses, of repossessions, over the years is low enough to encourage creditors and merchants to expand installment operations.

Consumers—borrowers—are not reckless. People borrow when they feel secure in their jobs. When they are nervous, when the business outlook is uncertain, they will be anxious to get out of debt. So, neither the lending nor the borrowing is indiscriminate.

Besides, no longer is the individual in America a bit of economic flotsam, adrift and alone on a vast, impersonal sea. We have learned a little from the great depression of 1929–33. In times of trouble, the Government—society—comes to the rescue of the economically injured. In that way we hope to tame the old-fashioned business cycle.

LAWS TO PROMOTE CONSUMPTION

In 1946, Congress passed the Employment Act to promote maximum employment, production, and purchasing power. A Council of Economic Advisers to the President constantly studies economic developments and confers with employers, bankers, and union leaders, so as to detect, in its incipiency, any downward trend. The administration has available at all times a shelf of public works to arrest a down spiral in production and employment. Further, the compensatory spending teachings of Great Britain's renowned economist, John Maynard Keynes, are accepted doctrine in America. In poor times, when consumers haven't money, the Government overspends, runs deficit, thus pumping out purchasing power. This cushions against any runaway consequences of overexpansion of installment credit.

In earlier years, nations had sumptuary laws to limit extravagance, consumption. Now we have consumer laws to limit impoverishment nonconsumption. In the United States, when persons lose jobs, they receive unemployment compensation. Persons over 65 get regular social-security remittances.

To help farmers, the United States has a system of support prices, which guards against the bottom falling out of the market. All this to stop a recession before it gains accelerating headway.

To Adam Smith, consumption was the main purpose of the economic process. And nowhere in the world has this concept been more exalted than in America. Industrialists believe in cheap things for dear people. Prices of goods must be low enough, cheap enough, so that workers, who are paid well, can buy them. Or, conversely, wages must be high enough so that things workers buy will be cheap. Henry Ford, in the heyday of the Ford car, believed that the end of consumption was best served by a standard car at a low price: "The customer can have any color car he wants, so long as it is black." But, as America became richer, consumers wanted more, better quality. The standard of consumption rose. Alfred P. Sloan, Jr., for many years chief executive of General Motors, observed: "Each year we build the best car we possibly can to satisfy the consumer, and then the next year we build another to make him dissatisfied."

Some 50 percent of American families own their own homes; about 75 percent their own automobiles. And mechanized refrigerators, dishwashing machines, air conditioners, washing machines, and general appliances are the common aspiration of all families, rich and poor, white and dark-skinned. Consumerism is a limitless frontier.

And it is a democratizer. One of the finer streets in Philadelphia, Lincoln Drive, now has a sprinkling of Negroes—something which would never have been possible 20 years ago. Economics draws no color line. People with similar consumption habits can share experiences. Negro families own their own cars, have television sets, modern kitchens. In the North, they have a common bond—an area of conversation—with the whites that did not exist 50 years ago.

Consumerism can develop only in countries with high standards of living. Only citizens who possess discretionary income, who earn more than they need for food, clothing, and shelter, can capitalize their future income, can save while consuming. No businessman or banker would extend credit to a family that needs all its income just to eat and pay rent.

Up to now, installment credit has been impermissible in the Soviet Union. The average Russian is hard put to buy the necessities of life. Food is scarce and hard to get. Clothing is poorly made and expensive. A man's suit will run to 900 rubles, or more than a month's wages for the average worker. In the United States, a man's suit of far better quality than in Russia will cost $60, or three-quarters of a week's wages. Women's rayon dresses, which sell for $3 in the United States—a fifth of a day's wages—will cost 100 rubles, or one-seventh of a month's wages in the Soviet Union.

PRODUCTION FOR POWER OR CONSUMPTION

The Soviet Union is one of the most capitalistic nations—and therefore one of the least consumeristic nations—on earth. The rulers of Russia produce for power—military power, industrial power—not for consumption. Roughly, about 25 percent of the total production goes for armaments; another 25 percent goes for plant and equipment—industrial expansion. About 50 percent is left for consumption goods. By high prices, the state draws off consumer purchasing power. This is regressive taxation—ne plus ultra.

In contrast, only about 15 percent of America's production goes for capital formation. Another 10 percent goes to the Armed Forces. Thus, proportionate to the U. S. S. R., only half as much of America's energy goes into industrial and military sinew. But since American output is about 2½ times that of the Soviet Union, our total industrial expansion and military effort (including the Navy) each year still exceeds that of the Soviet Union.

American consumerism has become a stabilizing force in the economy, and not a destabilizing force as worriers about installment credit suggest. Heretofore, depressions have been associated with capital booms: An extraordinarily large outlay of energy and dollars on new plant and equipment, on schools, highways, hospitals, and homes followed by a rapid cessation. But consumption has advanced so rapidly that even in the present boom, capital formation, percentagewise, is less than it was in the 1870's, 1880's, and 1890's, as you can see:

Period	Annual average		Capital formation as percent of total output
	All goods and services	Capital formation	
	Billions	*Billions*	
1869–78	$7.0	$1.3	19
1879–88	10.7	2.0	19
1889–98	12.7	2.7	21
1899–08	21.6	4.3	20
1909–18	40.1	8.3	21
1919–28	81.2	16.9	21
1929–38	78.2	9.0	12
1939–45	156.3	15.2	10
1946–55	303.0	52.7	17

Marxists who have always talked about the violent ups and downs of capitalism, about the inherent instability of the American production system, would do well to ponder the implications of that table. The tail which once wagged the business cycle is getting smaller.

Often the argument is used that American consumerism is a threat to the Western World. Americans are softies, living on the fat—the tin, iron ore, petroleum, rubber, and coffee—of the world, spending so much on consumption that not enough is devoted to sinew.

Conversely, the Soviet Union is the hungry prize fighter. He trains hard, wants to knock out the champ. Therefore, he will. But no fighter, no matter how determined, can succeed without the physical equipment and know-how. And America is still the industrial champ. We produce four times as much oil as Russia, 3 times as much electricity, almost 3 times as much steel.

Consumerism, far from being a drawback, is a constant industrial goal. The competitive pressure among producers to sell more and more results in a continuing expansion of industrial capacity, technology, and know-how. United States industrial expansion—tons of oil, tons of steel, and kilowatt hours of electricity—continues to exceed Soviet Russia's. This not only adds to economic strength, it is a margin that allows for sacrifice—in time of war. Because America could divert resources and manpower from consumption to military production, it became the arsenal of democracy in World War II.

To many Europeans, the American idea of greater and greater consumption accompanied by higher and higher wages is a primrose path to inflation. Money—credit—is created just to generate sales. Consumers are persuaded to go into debt. Thomas Jefferson's moralistic injunction, "Never spend your money till you have it," is ignored.

Europeans have an inflation psychosis. Frenchmen read in the history books about assignats. Parents know firsthand the inflation after World War I. The younger generation has personal experience with the franc after World War II. And Germans have watched the debauchery of the mark after two World Wars.

Emotionalism is poor economics. Demand for goods did not cause the German and French inflations after World Wars I and II. Lack of supply, lack of industrial capacity, did. People were hungry, people were ill clothed. And the stores were empty.

In America, the postwar inflation has been comparatively mild. The capacity to produce—to satisfy wants—rapidly filled store shelves. Great productive capacity has made possible a continually rising standard of living without violent price advances.

HIGHER WAGES AND OUTPUT

Higher wages do not necessarily result in higher output per man—great productivity—which has been the history of the American workman and workmanship, as already noted: A good day's work for a good day's pay. Workers, themselves, by enjoying a high standard of living—by seeing what higher productivity brings—are willing to accept new machines and new methods of doing things. And the constant outpouring of goods by machines tends to keep down prices.

Consumerism imparts a broader stability to economic life. Demand for homes, refrigerators, washing machines, television sets is well nigh insatiable. It doesn't run in waves—fits and starts—as does capital investment of coporations.

Consumerism has just started. It will spread as living standards improve in England, France, Italy, and other European countries. Epecially if customs barriers are reduced, especially if Europe can develop the common market necessary to maximize efficiency. For then the benefit of low cost mass production will extend throughout the continent. The workers will reap the benefits of technological improvement in the form of lower prices, and, I would wager, higher wages. Mass production begets higher productivity—more goods—and more leisure for consumption.

Installment credit is sure to gain greater status abroad among merchants and bankers. Governments nowadays assume responsibility for the welfare of their citizens. When workers get unemployment benefits and old-age pensions, they can afford to use a large proportion of current income for current consumption. They can afford to mortgage future income. They have capacity to repay. And they have less need for rainy-day funds. Modern institutions—economic and political—protect the lender and the worker. Thereby, they abet consumption. They reinforce consumerism as the latest economic frontier.

On Polish Provinces East of the Oder-Neisse Line and Economic, Historical, Legal, and Political Aspects Involved

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. MACHROWICZ. Mr. Speaker, on the 16th of May of this year, Mr. REECE of Tennessee submitted to the House a lengthy statement concerning the situation in east-central Europe. He stated that he had given a great deal of attention and time to studying this situation in its economic, historical, legal, and political aspects. In his quest for truth, however, it seems that the learned gentleman from Tennessee has been led into error by false allegations, openly proclaimed or surreptitiously whispered by the stanch militants of German revisionist propaganda. As a result the pic-

ure presented was a distorted one, rongly biased in its general tendency, r removed from reality and danger- usly misleading in its conclusions.

In view of the paramount importance the present Polish-German frontier hich awaits the final confirmation on e part of the Western Powers, it would em appropriate to call your attention a number of outstanding facts and gures. Factual evidence, corroborated the lessons of history, may help us grasp the true nature of this intri- te problem and to set it in proper per- ective.

GENERAL REVIEW

In his opening remarks the gentleman om Tennessee said that "12 years ago e of the greatest tragedies in history ok place in central-eastern Europe." ere he should have reached back in his emory to the source of the tragedy hich started 6 years earlier. On Sep- mber 1, 1939, Nazi Germany invaded oland in violation of fundamental rinciples of international law. In the dgment of the International Military ribunal for the Trial of the German ajor War Criminals "the war initiated Germany against Poland on the 1st September 1939, was most plainly an ggressive war, which was due to de- elop in due course into a war which mbraced almost the whole world, and esulted in the commission of countless rimes, both against the laws and cus- oms of war, and against humanity."

The Polish nation, undeterred by the erwhelming superiority of the invad- g armies, accepted the open challenge nd fought with courage and determina- on to defend its sacred right to inde- endent existence. Poles proved true their tradition as a freedom-loving eople; they confirmed by their example he profound maxim of the great Ger- an jurist Rudolph von Jhering, quoted Mr. REECE:

The surest test of character is a man's or people's reaction when facing the violation f right.

The 1939 autumn campaign in Poland as not yet finished, and the German rmies had not yet been able to over- me the heroic defense of Warsaw, the apital of Poland, when, on September , a pact of friendship was concluded etween Germany and Soviet Russia. hile the shattered Polish divisions ere still fighting fiercely, the two ex- lusively interested powers—as the Ger- an-Soviet declaration ran—divided be- ween them the territory of Poland, as ey had done 150 years before at the me of the partitions of Poland. After viding the country the two powers, cting in collusion, set to work method- lly to break the spirit of the Polish ation, to weaken its strength, and to estroy the foundations of its centuries- d culture.

Hundreds of thousands of Poles were illed from the Soviet-occupied eastern rovinces to Siberia and central Asia. t the same time the Germans proceeded ith ruthless brutality to expel the Polish opulation from the western parts of oland and to settle German colonists in eir place.

The Germans carried out their devilish work of destruction with a cruelty unmitigated by any considerations of humanity. The process of mass extermination assumed the character of premeditated genocide. Over 6 million Poles and Jews perished as victims of German mass executions, gas chambers, and concentration camps. Over 2 million Poles were deported as slave labor for German industry and agriculture. Warsaw, the ancient capital of Poland, was obliterated in a wanton excess of German fury. Art treasures and historical monuments went down in flames to satisfy the German lust for revenge. For 5 long years terror ruled supreme in that part of Europe.

All these crimes belong to recorded history of our time, but history is easily forgotten. The gentleman from Tennessee [Mr. REECE] remembers reading in his schooldays "of wars in the ancient age of barbarism, when cities were sacked, people were slaughtered or driven into slavery." He does not seem to remember the untold horrors of the Nazi New Order in Europe. For him the tragedy of Central-Eastern Europe started at the end of the war which was launched by Hitler and fought to the bitter end by the German people.

DIVIDED GERMANY

Lack of proper perspective is bound to obscure political issues. The learned gentleman from Tennessee claims that "the problem of a divided Europe is almost entirely the problem of a divided Germany." This is a misleading oversimplification. The problem of a divided Europe goes much deeper and much farther. Europe presents a delicate pattern, closely interwoven, varied and colorful; its organic unity was formed by centuries of common history. Beyond the present eastern frontiers of Germany there stretch wide areas, still underdeveloped but rich in natural resources and full of promise. These regions are inhabited by millions of people who have grown under the dominating influence of western civilization. Pressed against their will into the Soviet orbit, they are longing to be free and to be able to develop their resources in friendly cooperation with the Western Powers, and in particular with the United States. They belong to Europe and form an integral part of it. To ignore their fate is to ignore the true nature of the problem of Europe.

Divided Germany is undoubtedly one of the big problems of our day. But it is only part of a still bigger dilemma which is awaiting a bold and constructive solution. The whole future of Europe, and—maybe—the future of our Western World depends on it. The two problems: the reunification of Germany and the liberation of Central-Eastern Europe are closely interrelated. Such is the compelling logic of the situation, confirmed and amply demonstrated by recent developments. Were Germany reunited and Central-Eastern Europe left under Soviet domination, the European problem would remain unsolved. It is, therefore, neither politically wise nor morally just to separate the Germany problem from the whole problem of Eastern Europe, still less to give it a definite priority over the needs and sufferings of our true friends to whom we owe considerably more.

FROM TEHERAN TO POTSDAM

In his further remarks the gentleman from Tennessee attempted to sap the legal foundations of the present Polish-German frontier. He contended that "Poland's right to administer the area of Germany which it now occupies arises from a unilateral act of the Soviet Union, the conquering occupant, permitting it to occupy this area until a peace treaty eventually determines the status thereof." I beg to disagree with this statement which is not borne out by the evidence of historic facts.

It appears that the first agreement regarding the extension of the Polish territory to the West was reached during the Teheran Conference of the Big Three, November 1943.

The British Prime Minister, Mr. Winston Churchill, referred to this agreement in a memorable speech in the House of Commons on February 22, 1944. He revealed that he had agreed with Stalin upon the need for Poland to obtain compensation at the expense of Germany both in the north and in the west. He added that there would be no question of the Atlantic Charter applying to Germany as a matter of right and barring territorial transferences or adjustments in enemy countries.

It is clear in the light of successive developments that at Teheran President Roosevelt, Mr. Churchill, and Marshal Stalin went beyond a general recognition of Poland's right to territorial accessions. On October 13, 1944, during a conference in the Kremlin, attended by Mr. Churchill, Mr. Eden, Marshal Stalin, Mr. Molotov, the then Polish Prime Minister Mr. Mikolajczyk, and the Ambassador of United States of America, Mr. Harriman as American observer, the British Foreign Secretary declared:

It had been said at Tehran that the new Poland's frontier in the west would go as far to the Oder as the Poles would wish it.

Mr. Churchill and Mr. Molotov firmly assented.

Three weeks later this declaration was formally confirmed by Sir Alexander Cadogan, at that time Permanent Under Secretary of State for Foreign Affairs. In his letter of November 2, 1944, addressed to Mr. T. Romer, Polish Minister of Foreign Affairs, Sir Alexander wrote:

The Prime Minister, after consultation with the Cabinet, has now directed me to give you the following replies:

You asked in the first place whether, even in the event of the United States Government finding themselves unable to agree to the changes in the western frontier of Poland foreshadowed in the recent conversations in Moscow, His Majesty's Government would still advocate these changes at the peace settlement. The answer of His Majesty's Government to this question is in the affirmative.

Secondly, you inquired whether His Majesty's Government were definitely in favor of advancing the Polish frontier up to the line of the Oder to include the port of Stettin. The answer is that His Majesty's Gov-

ernment do consider that Poland should have the right to extend her territory to this extent.

President Roosevelt returned to the subject after his reelection in November 1944. In his letter, addressed to the Polish Prime Minister, Mr. Mikolajczyk, on November 17, the President wrote:

In regard to the future frontiers of Poland, if mutual agreement on this subject, including the proposed compensation for Poland from Germany, is reached between the Polish, Soviet, and British Governments, this Government would offer no objections.

On the transfer of population President Roosevelt told the Polish Prime Minister:

If the Polish Government and people desire, in connection with the new frontiers of the Polish state, to bring about the transfer to and from the territory of Poland of national minorities, the United States Government will raise no objections and as far as practicable will facilitate such transfer.

Mr. Churchill reiterated his former statements in his review of the general situation he made in the House of Commons on December 15, 1944. The British Prime Minister was very outspoken on the subject of the transfers of populations. He said:

The transference of several millions of people would have to be effected from the East to the West or North, as well as the expulsion of the Germans—because that is what is proposed: the total expulsion of the Germans from the area to be acquired by Poland in the West and the North. For expulsion is the method which, so far as we have been able to see, will be the most satisfactory.

At the issue of the Yalta Conference, February 1945, the chief representatives of the United States, Great Britain and the Soviet Union recognized, once again, in a joint declaration that "Poland must receive substantial accessions of territory in the North and West."

At the Conference at Potsdam, July 1945, the three heads of Government—President Truman, who succeeded Roosevelt; Mr. Attlee, who succeeded Churchill; and Marshal Stalin—agreed that—we quote the text of the official protocol:

Pending the final determination of Poland's western frontier, the former German territories east of the line running from the Baltic Sea immediately west of Swinemunde and thence along the Oder River to the confluence of the Western Neisse River and along the Western Neisse to the Czechoslovak frontier, including that portion of East Prussia not placed under the administration of the Union of Soviet Socialist Republics in accordance with the understanding reached at this conference and including the area of the former free city of Danzig, shall be under the administration of the Polish State and for such purpose should not be considered as part of the Soviet Zone of occupation in Germany.

The protocol of the Potsdam Conference contained two important provisions. The first said that "the final delimitation of the western frontier of Poland should await the peace settlement." The second dealt with the transfer of the German population. It said:

The conference reached the following agreement on the removal of Germans from Poland, Czechoslovakia and Hungary:

"The three Governments having considered the question in all its aspects, recognize that the transfer to Germany of German populations or elements thereof, remaining in Poland, Czechoslovakia and Hungary will have to be undertaken. They agree that any transfers that take place should be effected in an orderly and human manner."

There is nothing in the protocol to substantiate the opinion, advanced by Mr. REECE as to the unilateral character of the Potsdam decisions. The text of the protocol, clear and precise, does not lend support to the allegation that the Oder-Neisse line was only meant as a temporary arrangement. Were it so, the Great Powers would not have recognized that "the transfer to Germany of German populations will have to be undertaken." Military authorities may—in some exceptional cases—remove the inhabitants of a strip of territory, engulfed in military operations. But no responsible head of Government would dream of removing the whole German population from a province, which it was intended to maintain within the limits of Germany.

FOOD BASKET OF GERMANY

The gentleman from Tennessee claims that "the part east of the Oder-Neisse line was known as a food basket of the German people." This clever definition which has found wide currency in the West does not correspond to the hard economic facts. It is true that the territories in question covered nearly 25 percent or one-fourth of "the effective agricultural land of Germany"—as Mr. REECE puts it. But the surpluses in basic agricultural produce, which they exported to the western Provinces of Germany, were relatively small:

A study of interregional trade in prewar Germany reveals Western Germany as more self-sufficient than is popularly supposed and the "separated areas" as rather more dependent upon Western Germany than Western Germany upon them." (Germany's Eastern Neighbours by Elisabeth Wiskemann. Issued under the auspices of the Royal Institute of International Affairs, London 1956, p. 171.)

In the period between the two wars, the "German East" was in a state of permanent economic crisis. Successive German governments mobilized huge sums of money in order to forestall the steady decline of agriculture and to arrest the flight of the population to the West. Large subsidies, lavishly distributed among east-German landowners poured from Berlin in a steady flow. During the period of 15 years, 1922–37, they reached RM2,600,000,000—over $1 billion prewar value.

German economists of the prewar period investigated the whole situation with German thoroughness. One of the most prominent among them, Prof. Wilhelm Volz of the University of Leipzig, whose opinions the gentleman from Tennessee now tries to disparage, got to the roots of the trouble. As a German patriot, Professor Volz was deeply alarmed by the decline of the eastern Provinces of the Reich. As a man of great scientific integrity, he did not shirk from presenting his conclusions, however unpopular these might have seemed at the time.

If one still hears that the German East is the food base (Nahrungsgrundlage) of the German Reich—said Professor Volz—then the contention is a fallacy (Trugschluss). The East might be this, if the rest of the Reich did not satisfy its food demand partly by its own production, partly by overseas imports. The Reich does not need the East. This is a bitter truth, but unfortunately it is a truth. It should at last be said in plain words. (Wilhelm Volz, Die Ostdeutsche Wirtschaft. Eine Witschaftspolitische Untersuchung uber die natürlichen Grundlagen des Deutschen Ostens und seine Stellung in der gesamtdeutschen Wirtschaft. Berlin-Leipzig, 1930, p. 85.).

It is true that in the last years before the Second World War Germany made great efforts in order to achieve the highest possible measure of self-sufficiency. German agriculture was stimulated and forcefully developed by diverse means in order to be able to meet the pressing requirements of war economy. Economic self-sufficiency was inscribed on the Nazi banner. On the eve of the war Germany's self-sufficiency in food, computed on the basis of its caloric value, rose to 83 percent—as against 65 percent in 1928. After having secured such a high measure of independence Germany could now risk the supreme effort: the well filled food basket increased her chance of winning a war of aggression.

This self-supporting economy, tuned to the pressing needs of a powerful war machine, belongs now to the past. In 1945 Western Germany, so happy to live in a free world, set to work with sustained energy which earned her deserved admiration. Germany economy, rising from the ruins and quickly recovering its strength, seems to have found a new balance of productive forces.

In August 1946 the prominent English economist and social reformer, Lord Beveridge, expressed the view that 70 million Germans could perfectly well live in the territory west of the Oder-Neisse line if the country were more intensely industrialized and if it expanded its foreign trade in order to be able to buy its requirements in foodstuffs.

The economic development of Western Germany has vindicated this opinion. German economy expanded under the powerful stimulus of American aid and of the mass influx of Germans transferred from the east. American dollars, so generously given, and the skilled labor of the industrious newcomers from the east contributed mightily to the process which was so justly called the miracle of German recovery.

Western Germany has to import from abroad a part of her food supplies. She has no difficulty, however, in paying for these imports by exporting her manufactured goods. At the present degree of self-sufficiency in food, estimated at 60 percent, Federal Germany is more secure than is Great Britain, whose own production covers only about 48 percent of its food supply.

The food situation will still improve after the reunification of Germany, which is bound to shift the balance of the German population in relation to its agricultural basis. It is worth recalling

that only some 28 percent of the total German population live in the Soviet zone which contains nearly 40 percent of Germany's arable land.

WHAT IS GENOCIDE?

The gentleman from Tennessee has given much attention to the mass transfer of the German population from the eastern territories. He maintains that 10½ million were summarily expelled and, in 1945 and 1946, were forced to leave the land which had been theirs and their ancestors. Of these 10½ million human beings more than 7 million reached west and middle Germany; about 1 million people were able to remain on the soil of their fathers. Mr. REECE forgot to mention that the majority of the last category are people of Polish origin. But, to quote again Mr. REECE:

Two and two-tenths million human beings is the heavy toll of those who did not survive the process.

The gentleman from Tennessee concluded by saying that—

Factual evidence that has since been submitted shows that they (viz, the 2.2 million human beings) and the other 7 million were victims of the crime of genocide.

If one wishes to pass a judgment on a crime he must first define the nature of the crime and then indict the guilty criminal. If he fails to do this, his judgment may turn out to be an act of wild injustice.

What is genocide? The matter was debated by the General Assembly of the United Nations which on December 9, 1948, unanimously adopted a convention on the prevention and punishment of the crime of genocide. The text of the convention contains a number of clear definitions. It would seem proper to quote here from the official publication of the United Nations.

Genocide is a new name for an old crime—

We read in the background paper.

It derives from the Latin words: "genus," a group, and "caedere," to kill. It means the destruction of whole groups of people just because they belong to particular groups. The group may be racial, national, or religious; it may be a particular ethnical or racial group. Its destruction may take the form of massacres, of executions, of subjecting the group to such conditions * * * that it cannot continue to live.

These were all techniques used by the Nazi Government of Germany as part of its deliberate policy. They were used particularly against a racial and religious group—the Jews—and against a national and linguistic group—the Poles." (United Nations, Department of Public Information, Research Section Genocide, Background Paper No. 38.12, November 1951.)

In the light of these definitions it would seem just and fair to examine the whole process of the mass evacuation of the Germans.

On the eve of the final collapse of Nazi Germany the population of the eastern territories, swollen by large numbers of new German settlers—Umsiedler—and Luftkriegevakuirten who had taken refuge from the British and American air bombardments, amounted to nearly 10 million. This huge mass of human beings, kept in complete ignorance of the desperate situation, was taken by surprise. The German military authorities, obeying strict orders from Hitler who refused to accept defeat, entirely neglected an orderly evacuation of civilians. In face of the imminent Soviet advance, millions of people, driven by despair and stricken with fear of a savage Russian retribution, rushed westwards and got entangled with the retreating German troops. There followed wild scenes which stagger imagination. The advancing Soviet troops machine-gunned the unending convoys of refugees.

One ship alone, the *Wilhelm Gustloff*—

I quote the gentleman from Tennessee—

took more than 6,000 refugees, mostly elderly people, women and children, from East Prussia to their grave.

Mr. REECE was justly indignant about that disaster which he compared to the sinking of the *Titanic*—though he should have been more explicit with regard to the Russians who actually sank the *Wilhelm Gustloff*.

Thousands of innocent people found an untimely death amid the chaos of a disorderly evacuation. Hundreds of thousands were deported to Russia. The fate of many remains unknown. But their disappearance has no connection whatsoever with the removal of the German population, authorized by the Potsdam agreement. It would be utterly unjust to hold the Polish people responsible for the heavy German losses, sustained in the course of military operations or caused by savage Soviet retribution.

TRANSFER OF THE POPULATION

When Germany capitulated on May 7, 1945, about 4.4 million Germans remained east of the Oder-Neisse line. The mass exodus of the German population continued and at the date of the Polish Census—February 14, 1946—there were 2,288,000 Germans within the present limits of Poland. By the end of 1947 a further 2,171,000 had been transferred to Germany.

The mass transfer of the German population was carried out in most difficult conditions. The country, utterly disorganized, devastated by the retreating Germans and then stripped bare by the advancing Russians, had to face tremendous difficulties. Food, fuel and medicaments were in short supply; rolling stock—utterly deficient. In the first stage the technical difficulties involved in the mass transfer might have overwhelmed the erratic administration set up by the new Communist regime which had been enforced upon Poland. In some cases there might have occurred individual acts of cruelty or harsh treatment, regrettable but comprehensible amid the fresh ruins and smouldering ashes of the Nazi gas chambers. All these incidents and transient difficulties may have cost some lives: they do not justify, in the least, wild accusations levelled against the Polish people.

ECONOMIC FACTS

Poland, extending to the West in accordance with the Potsdam Three Powers decisions, entered a desert. In 1945 the Territories to the East of the Oder-Neisse line persented a picture of ruin and desolation. Once prosperous towns suffered heavily during the last months of war, many towns, which had served as German strong-points, were practically obliterated. In Gogów—Glogau—and Kostrzyn—Küstrin—95 percent of all buildings were destroyed or damaged; in Koobrzeg—Kolberg—Gubin and Nysa the degree of destruction reached 80 percent; in Brzeg—Brieg—70 percent; in Elblag and Legnica 60 percent; in Wrocaw—Breslau—and Szczecin—Stettin—over 50 percent. It was generally the center of the town, with its historic churches and buildings that suffered most. In the nights of August 16–17 and August 20–21, 1944, Szczecin was the target of two heavy air raids by RAF Lancaster bombers. On March 12, 1945, Swinouiscie—Swinemünde—was bombed by USAF Flying Fortresses. In addition all the towns in these areas suffered badly from ruthless Soviet dismantling of industrial plants, from pillage by Soviet soldiers and sometimes from a senseless destruction by hand grenades and fire after all fighting had ceased. The old town of Gdansk—Danzig—was thus transformed into a heap of charred ruins.

The situation of the agriculture was no better. In the countryside, out of the total number of 434,000 houses, barns, stables, and other buildings, 123,000—28 percent—were destroyed or heavily damaged. At the end of 1945 the total number of horses in these areas shrank to 10 percent of the prewar figures; the number of cattle fell to 7 percent and the pig population to 4 percent. As the chemical industry was destroyed by war or dismantled by the Soviet authorities, there was a general lack of nitrogenous and phosphatic fertilizers. The loss of Polish Kalusz potash salts, annexed by Soviet Russia, seriously hampered a rapid restoration of agricultural production.

Capital was deficient, agricultural machines and tractors in short supply. After 6 long years of a devastating war Poles had to rebuild the appalling ruins out of their meagre resources. On specific orders from Moscow the Warsaw Communist Government was forced to refuse the benefits of American aid, which had been generously offered to Europe within the framework of the Marshall plan.

Skilled labor and managerial experience were lacking. During the whole period of their most ruthless occupation the Germans were busy exterminating the best among the Poles of all classes of the population. In the Katyn Forest and in other, still unknown localities of Russia, the henchmen of Stalin murdered another 10,000 or so.

To complete the picture we should add the impact of a wrong policy, stubbornly followed by the Communist regime. The new settlers, coming from other Provinces of Poland, had to work in most precarious conditions. Many Polish farmers were forced, against their will, to join the collective farms. Early in 1955 the Polish Communist press published a number of articles which condemned harsh treatment of peasants and complained of the exorbitant taxation to which they were subjected. Trybuna

Ludu, a Warsaw newspaper, on February 26, 1955, carried an article which attributed peasant desertion of the land in the county of Niedzica in the county of Olsztyn precisely to these things.

And, in spite of all these difficulties which might have seemed unsuperable, Poles rushed in large masses to the western Provinces. They filled the empty desert, cultivated wasteland, rebuilt destroyed buildings, and repopulated deserted towns.

On January 1, 1957, the recovered territories had a population of 7.3 million. The dynamic race which settled in these areas expanded rapidly: Its natural increase which reached the level of 27.5 per thousand stands far above the high average in Poland—19.1 per thousand in 1952–56. Towns are throbbing with life. Out of a total of 63 towns with 10,000 inhabitants or over, 28 towns had a population higher than in 1939.

In spite of heavy errors of Communist policy, the hard work of the newly settled Poles is beginning to pay handsome dividends. Agriculture is recovering from the acute crisis of the most difficult afterwar period. In the years 1953–55 production of the 4 principal grains in the western Provinces reached 71 percent of the prewar level—3,500,000 metric tons against 4,861,000 in 1934–38; production of sugar beet attained 68 percent of the prewar figure—2,300,000 metric tons against 3,422,000 in 1934–38.

However, the greatest efforts went into the reconstruction and further development of industry. Coal is the basic raw material on which the growing industrialization of Poland is being built up. In Polish Silesia in 1938 coal production amounted to 38.1 million tons, in the prewar German part of Silesia it reached 32.5 million tons, making an aggregate of 70.6 million tons. In 1955 the figure for the now united Silesian coalfield was 94.5 million tons—a rise of 34 percent.

THE COAL PROBLEM

In his further remarks the gentleman from Tennessee recalled the fact that before the war "the hard-coal production of the industrial part of the region, i. e. Silesia, went to meet the requirements which Western European countries had in addition to their own production." He assumed that "today the coal from German Upper Silesia would suffice to offset West Europe's present deficiency of hard coal."

I entirely agree on that important point with the learned gentleman. The rich coal-basin of Polish Silesia forms an integral part of the European economy. In conditions of political freedom it could make a most valuable contribution to European recovery. But Mr. REECE seems to have forgotten that after the war Poland lost her freedom of choice. Pressed against her will into the Soviet orbit, she had to export very large quantities of coal to meet the exacting demands of her Soviet overlords.

On August 16, 1945, an agreement was signed in Moscow by Mr. V. M. Molotov, then the Soviet People's Commissar for Foreign Affairs, and E. Osóbka-Morawski, the so-called Polish Premier. This agreement forced Poland to deliver to the Soviet Union, at the ridiculous price of $1.25 per ton, 8 million metric tons of coal in 1946, 13 million tons in each of the years 1947–50, and 12 million metric tons per annum thereafter until the signature of a German peace treaty. True, in March 1947 the quantities of the coal tribute were reduced by 50 percent; but even so, the "liberator" still extorted from the "liberated" an exorbitantly low price. From 1946 to November 1953, when this tribute ceased, Poland delivered to the Soviet Union about 54 million tons of coal for which it received the ridiculous sum of $67.5 million. If we assume that the average world market price of coal was $16 per ton, we shall have no difficulty in calculating that in this typically colonial transaction Poland was robbed of nearly $800 million.

In the light of my foregoing remarks it is hardly surprising that a delegation from Warsaw wished "to get from this Government a fat loan with which to purchase grains, fats, oils, farm machinery and other equpment." I quote here again the gentleman from Tennessee. I feel I must say that on this matter of vital importance all Poles were unanimous. They all agreed that a broad-minded American aid was urgently needed in order to redress the balance of the Polish national economy which had been badly shaken by 12 years of Communist misrule.

True, the Communists are still at the helm in Warsaw. But millions of Poles, living under Communist control, are trying hard to take full advantage of the new opportunities which they have gained in slightly relaxed conditions. The irresistible pressure of the peasant masses swept away the abhorred collective farms. Life is returning to the countryside. Agricultural production, relieved of the exacting burden of compulsory deliveries of grain, is beginning a process of organic regeneration.

I am glad to add that millions of Poles in their hardly tried country greeted with satisfaction the first installment of the American loan to Poland. They saw in it a most welcome proof that their cause is not forgotten in the West and that their efforts to achieve genuine independence are duly appreciated.

HISTORICAL SURVEY

The historical arguments which the Congressman from Tennessee developed at such length betray false sources of information based on clear political bias. For what is the impression left by his account of the thousand years of German-Polish relations? It is that the Poles and not the Germans were the imperialists through the ages, that it was the Poles who subjugated German lands and not the other way around, that history tells of a Polish expansion to the west in search of living space and not of the German Drang nach Osten—which formula Mr. REECE describes as an "absurdity," "hazy," and "malicious."

To a doctrine which would stand historical truth on its head history itself provides the answer.

Hitler's Germany which began the conquest of Eastern Europe in 1939, occupying first "ancient German" Cracow and then "ancient German" Lwow, was in fact faithfully carrying out an imperialist design whose foundation had been laid 1,000 years earlier by Emperor Henry I. In the years 927 and 928 it was this German ruler who, forcing the Elbe which divided the Slav tribes from the west, established two German marches with the object of subjugating by force and intrigue the territories of the western Slavs who were then entering the European scene. With a break under Otto III, this task has been taken up by Holy Roman Emperors, Margraves of Brandenburg, Teutonic knights, electors and kings of Prussia and rulers of the German Reich.

Two unchanging features of German policy throughout a millenium—territorial acquisitiveness and ready recourse to force—are absent from Polish political history. Polish policy was always defensive. If any idea is strange to Poles it is imperialism. This does not of course mean that other nations were not associated with Poland in the Polish Commonwealth. But this came about through voluntary federal relationships, which are historically of the greatest interest. It was a specifically Polish method, thank to which unions of nations emerged which, according to the German historian Jacob Caro, cannot be matched in European history. It was the way of charity which, in the words of the rector of Cracow University, Paul Wodkowic, to the Council of Constance—1414—acknowledges the right even of pagans to freedom and land. We read in the Polish-Lithuanian Act of Union of 1413 that this charity which "creates laws, governs countries and establishes towns, will lead the estates of the Republic toward a better end, and he who despises it will lose all." Poland concluded a number of these voluntary relationships based on moral principles of respect for the freedom of the nation and of the individual. In 1466 there was a union between Prussia and Poland, and in 1561 another voluntary union with Courland, while in 1569 the original dynastic union with Lithuania was crowned by a solemn covenant.

These differences in the political background of Germans and Poles, as evidenced by the history of a thousand years, are highly relevant to any consideration of German-Polish relations. Mr. REECE forgets these differences when he discusses the present Polish-German frontier with the result that his historical arguments lack not only substance but plausibility.

These arguments deal with the alleged ancient German character of Pomerania and Silesia, the successes of the Teutonic knights and the rolé of Prussia in the 18th century partitions of Poland. Let us consider each in turn.

POMERANIA

Mr. REECE does not deny that Slav peoples lived in Pomerania in the 10th century. And in 962 Pomerania is in fact found in the hands of the first historic Polish ruler, Mieszko I. A document of the greatest significance for the proper understanding of Polish history in the 10th century, is the so-called

Dagome judex, dating from 990–992. It contains the donation of Poland to the Papacy, with detailed descriptions of the country's boundaries, from which it appears that the whole of Pomerania, between the lower Oder and the lower Vistula, belonged at that time to the Polish State. The description in the document begins as follows:

A primo latere longum mare fine Bruzze usque in locum qui dicitur Russe.

That is, "from the first side along the seacoast of Prussia to the place which is called Ruthenia," and ends with the statement that from Olomuniec the border runs to the land of Militz, that is, between the Oder and the lands of the Milchanians and the Lusatians—which is the present line of the western border of Silesia—and along the line of the Oder to "Schinesghe," identified by both German and Polish scholars with Szczecin—Stettin.

Mr. REECE, however, believes that the Pomeranians fought the Poles who "wanted to subjugate them," but that "all this ended in 1181 at the time of the German Emperor Frederick Barbarossa, when the dukes of Pomerania became princes of the empire." What did happen in 1181? It was indeed the year of the final defeat of the northwestern Slavs, of western Pomerania, by the Germans under Saxon Duke Henry the Lion and Margrave Albrecht. Albrecht established on Slav territory, between the lower Elbe and the lower Oder, the new German duchy called Brandenburg from the Slav town of Branibor which its ruler Przybyslaw was tricked into surrendering.

While Mr. REECE describes as "aggression" the process of integration which went on between Slav and Christian Poland and Slav but pagan Pomerania in the century and a half between 967 and 1130, the forcible German conquest of Slav lands from the Pomeranians is not to be so described. Yet their motives were none other than those which Archbishop Adelgot of Magdeburg was already urging in 1107:

These pagans (that is, the Pomeranians) are the worst people in the world, but their land is the best, so overflowing with meat, honey, flour, birds that none can be compared with it. Therefore go east, o Saxons, there you can save your souls and win the best land to live in.

Then, as the historian says, the Slavs beyond the Elbe laid down in their graves, and were replaced by German villagers, whose settlers' documents included a routine phrase "ejectis Slavis"—"after the Slavs had been thrown out."

The Congressman from Tennessee would like to give the impression that Pomeranians and Poles, although Slavs, were distinct nations. But apart from the fact that it is impossible to use the term nation in the modern sense in discussing the 10th century, the words of the 12th century chronicler Nestor may also be borne in mind:

Of the Lachs (i. e., the Poles) some called themselves Lusatians, others Mazovians, others Pomeranians.

This chronicle, an authoritative source on all counts, thus plainly asserts that the Pomeranians were one of the Polish tribes.

It should also be understood that until the 13th century, internal conditions in Pomerania differed in no way from those in other Polish territories. The ducal court, the entire town and country population and the clergy in large proportion were Polish. Afterward, when the dukes in particular succumbed to Germanization, the picture began to change. German elements were reinforced when the victory of the Reformation brought the German Bible to Pomerania. But the native dynasty of Pomeranian dukes, descended from a branch of the Piasts, preserved until its extinction with the death of the last duke, Boguslaw XIV, in the middle of the 17th century, a strong sense of difference from Germans. They perpetuated male family names like Warcislaw, Boguslaw, Barnim, Racibor, and female names like Miroslawa, Dobroslawa, Przybyslawa, and always called themselves dukes of the Slavs, Pomeranians, or Cassubians (dux Slavorum, Pomeranum, Cassubie).

SILESIA

Mr. REECE is of the opinion that Silesia, in particular the region east of the Oder and Neisse—so-called Lower Silesia—was never the homeland of Poles or of any other Slavs but is ancient German land. The name Silesia, on this theory, is derived from the German Syling tribe.

The German chronicler Thietmar, writing in the 10th century, remarked of an area now in Silesia that Sleza Hill—Zobtenberg in German—on the Sleza River—Lohe in German—was the center of a secret Slav pagan cult. After a contemptuous reference to this cult, he added:

There are as many temples and gods there as there are lands.

Let us pass at once to the 19th century and quote two views expressed by Bismarck on Silesia. When Wilhelm I expressed doubt about his right to take Schlesvig and Holstein from Denmark, Bismarck reassured him with the words:

Did the Great Elector or Frederick have more right to Prussia and Silesia? All the Hohenzollerns have been aggrandizers of the state.

And to Prince Buelow, who had expressed similar scruples, he said:

Frederick the Great stole Silesia and nevertheless he is one of the greatest statesmen of all time (v. Buelow Bernhard, Denkwürdigkeiten, vol. 4, p. 10).

Thietmar and Bismarck supply the answer to Mr. REECE. Let us add the evidence provided by excavations near the castle church in Wroclaw begun in 1946 by Prof. Rudolf Jamek, of Wroclaw University. Initial investigations showed the existence of ancient settlements which were Polish beyond doubt. No trace of Scandinavian influence was found, which disposes of yet another German theory that Wroclaw fortress was organized by Vikings.

Mr. REECE emphasized the service performed by German settlers in founding towns in Silesia. But the most recent researches into the history of Polish law make plain that not all founders of towns were German and that such foundations were usually made at places where local markets and craftworkers' settlements had already grown up round a castle or fortress. These investigations have shown that for example 81 out of 95 market centers which existed before the Germans arrived later became towns under German law.

The fact that the Polish King Casimir the Great recognized the Czechs' right to the Silesian duchies in 1335 was not the final historic decision in favor of Germany that Mr. REECE implies, but a politically imposed renunciation. He does not mention that the Polish King simultaneously arranged for ecclesiastical jurisdiction over Wroclaw to be exercised from Gniezno, an arrangement which lasted until 1821.

Finally, Mr. REECE passes over in silence the most important fact of all, which is that the Silesian population, despite 600 years of rule by foreign states and the unparalleled germanization methods of Prussian governments during 200 years, have preserved not only their religion, language, and customs but their national consciousness.

THE TEUTONIC KNIGHTS AND EAST PRUSSIA

According to Mr. REECE the Teutonic Order took up the conquest and Christianizing of the Baltic Prussians by the direction and with the consent of the German Emperor and the Pope, proceeding in due course to organize the most modern state of the Middle Ages. Poles, in alliance with Lithuanians, invaded Prussia and inflicted a heavy defeat on the knights at Grünwald. But the knights held on to East Prussia, although the Polish King gained sovereignty over it. Western Prussia, however, was illegally incorporated into Poland by a coup d'etat performed at the Lublin diet of 1569. The links between Poland and East Prussia were finally broken in 1660, when the elector of Brandenburg, heir of the knights, won Prussia's complete independence from Poland.

The facts of history are different. In the first place, there is no mention in Mr. REECE's account of Poland's part in introducing the knights, although they could not have begun their action against the Prussians except by passing through Polish territory with the consent of the Polish ruler. In fact it was the Duke Conrad of Mazovia—of the Piast dynasty—who in 1226 suggested that the knights come to Poland. He did so because at the time Poland was divided into duchies and was struggling to acquire the Cracow throne, and so authority over the whole country, for himself. To this end he wanted relief from the threat of incursions by the pagan Prussians among whom, ever since the murder of St. Adalbert in 997, the Piasts had fostered Christian missionary activity. Conrad's invitation to the knights was an ill-considered move: he had ignored the warning implicit in the King of Hungary's expulsion of the order from Transylvania, whither it had been invited to convert the pagan Kumans, for aggression, exclusiveness and disloyalty in the previous year. When he ejected them the Hungarian

King complained that to him they had been "like fire in the chest, a mouse in the wallet, and a snake in the bosom."

The hiring of the knights to repel pagan attacks was not unusual in the Christian world at the time and certainly did not affect Poland's sovereignty. When he granted the order property in the district of Chelm, Conrad could not foresee that the knights, contrary to all law and their own undertakings, would transform their endowment into a separate state, not only independent of Poland but actively hostile toward her. The well-known German historian Roepel remarked that Conrad would improbably have divested himself of his sovereign rights over the Chelm lands or over the Prussian lands which were to be occupied by the knights. Subsequent historians maintain that the document from Conrad produced by the knights in self-justification was in fact forged.

Towns and the modern methods of which the gentleman from Tennessee [Mr. REECE] speaks approvingly were introduced into the Baltic countries by the knights at the cost of the physical and national extermination of the indigeneous inhabitants, Prussians, Latvians, and Samogitians. Baptism at the hands of the order involved in practice extinction of the national individuality of the converted. Toward the end of the 14th century, the Lithuanians, taught by historic evidence of these missionary methods, sought refuse in union with Poland. The great scholar A. Brueckner has contrasted German methods with those employed by Poland in the work of Christianization:

The Poles were pioneers of Christianity and culture among the Prussians; and if this natural course had not suddenly ceased with the introduction of the knights, the Prussians would have become Christian as the Lithuanians did, that is, without losing their national character in the process (Brueckner A. Archiv fuer Slavische Philologie, XX, 1898, p. 481).

Laudatory terms, so lavishly used by the gentleman from Tennessee with regard to the Teutonic knights, do not stand the test of history.

The truth of history is that wherever they were active, the knights' name was synonymous with violence, robbery, murder, and germanisation, an object of universal hatred.

When in 1410 Ladislas Jagiello, King of Poland and Grand Duke of Lithuania, defeated the knights at Grunwald he was acting in defense of two countries which had united a quarter of a century earlier in face of the aggression of the order, whose presence on the Baltic ceased to have any justification after the conversion of Lithuania. In 1409, the archbishop of Gniezno, Michael Kurowski, warned the grand master of the order that aggression by the knights against Lithuania must provoke a Polish reaction, and was told in reply:

I consequently prefer to strike at the head rather than at the members, and I will move against Poland, a country populous and cultivated, rather than against the Lithuanian forest wildernesses.

Mr. REECE admits that the gentry and the Prussian townsmen—the so-called League of Lizards—were already in revolt against the oppression of the order in 1454, when they sent a mission to the Polish king to ask for the return to Poland of the lands seized by the knights. But it is not true that West Prussia, which was joined to Poland by a personal union in 1466, was somehow illegally incorporated into Poland in 1569. In that year the Sejm in Lublin extended Polish law to West Prussia—leaving the area its separate treasury and courts—and Prussian deputies and senators present endorsed the reform.

Mr. REECE, who regards East Prussia as German land, and Poland's historic and legal claims to it as absurd, who mocks the Poles' use of the expression "regained territories," says that in the partition of Poland in 1772, Prussia "merely regained the lands conquered by Poland in the 15th and 16th centuries."

GERMANY'S PART IN THE PARTITIONS OF POLAND

Discussing the first partition—which took place at the instigation of Frederick II—Mr. REECE claims that in "regaining" these lands from Poland, Prussia was only "repairing the partitioning of Prussia in 1466." And yet the fact, not concealed by Mr. REECE, is that the knights began to conquer the land of the Prussians, who were Balts and not Germans, in 1230. At the Peace of Torun—1466—Poland received back Pomerania, which had never been German, but had been taken from King Ladislas the Short in 1308 by the knights, who by then controlled Danzig and other Pomeranian towns, having put their populations to the sword. At the same time East Prussia became a fief of Poland—the Polish king was henceforth known as "lord and heir of Prussia"—also in accordance with historic tradition, for the Prussians had owed allegiance and paid tribute to Poland since the 10th century. So it becomes understandable that in the 16th century a Polish envoy, Dantyszek, was able to convince Charles V that Prussia semper subfuisse regno Poloniae—Prussia was always subject to Poland.

The subsequent partitions, in 1793 and 1795, which gave Prussia Polish territory as far as Warsaw, are justified by Mr. REECE on the grounds that "it was largely a question of preventing Russia from grabbing all of it." The well-known American Historian, Prof. R. H. Lord, puts forward quite different Prussian motives. He suggests that Frederick William was not afraid of Russia's growing preponderance in Poland; on the contrary, he regarded it as advantageous to Prussia.

He determined—

Says Professor Lord—

without any real necessity or compulsion whatever, to exploit the situation in order to satisfy his long-repressed covetousness for Polish territory. (R. H. Lord, The Second Partition of Poland, Cambridge, 1915, p. 496.)

Against Mr. REECE's comments on the Poles, "political gluttony" and "dreams of aggrandizement" may be set the considered views of Professor Lord on Prussian policy in Poland:

This policy—

He says—

was essentially one of territorial and selfish aggrandizement. The great • • • was the acquisition of new territories in any quarter—Lusatia, Swedish Pomerania, Dantzic, Great Poland, or the whole left bank of the Vistula; acquisitions by any means. • • • This aggressive policy was not dictated, of course, by any ideas about Prussia's German Mission or the duty of recovering lands of German nationality. Its basis was simply the conviction that this Prussian Monarchy must take on flesh and bulk, and acquire a defensible frontier. (R. H. Lord, The Second Partition of Poland, Cambridge, 1915, pp. 492–3.)

It would be difficult to find a more telling answer.

PLEBISCITES AND VOTES

After a survey of history, reaching back into the Middle Ages, the gentleman from Tennessee discussed at some length the results of the plebiscites which took place after the First World War. He stated that the Treaty of Versailles "imposed these plebiscites upon several regions of East Germany." It would seem more appropriate to say that these plebiscites were imposed upon Poland. Carried out in most unfavorable conditions, they vitiated in many cases the genuine feelings of the Polish population of the territories concerned.

It is worth recalling that in the peace proposals, submitted to the German delegation on May 7, 1919, it was intended to transfer the whole of Upper Silesia to Poland. The German delegation in its counterproposals presented on the 29th of May, very strongly objected to this paragraph of the draft treaty.

Only with Upper Silesia—

Stated the German memorandum—

can Germany fulfill the obligations arising from the war, but without it never.

When the German counterproposals had been examined, the British Prime Minister Mr. Lloyd George advised that a plebiscite should be held in Upper Silesia. President Wilson, rather reluctantly and after some hesitation gave his assent. He stated, however, that "the people in Upper Silesia were entirely dominated by a small number of magnates and capitalists," and that his experts "did not believe that a free plebiscite was possible in these conditions"—The Paris Peace Conference, volume VI, pages 147 and the following.

The cautious judgment of the President and of his American advisers was fully vindicated by the event. German big landowners and industrial magnates exerted a very strong pressure on the working people of Upper Silesia. Coertion and intimidation reinforced the dominant influence of the German Catholic hierarchy, headed by the Archbishop of Breslau—Wroclaw—Cardinal Bertram. At the plebiscite, held on March 20, 1921, many Poles cast their vote under duress. For many of those 479,000 who voted for Poland the vote was an act of self-abnegation and great moral courage.

The plebiscite in East Prussia was carried out at a very critical moment—July 1920—when the Red army stood at the gates of Warsaw. The population stricken with terror voted under the

threat of imminent danger. Fear is sometimes the worst adviser. Before Poland, engaged in deadly struggle, won the decisive battle on the Vistula, the vote was cast. That part of East Prussia was safe for Germany, as a springboard for a future invasion of Poland.

SOUND POLISH VOICES

Contradicted by history and by factual evidence, the gentleman from Tennessee patiently pursued his search for acts or declarations which might help to invalidate the present frontier on the Oder-Neisse line. In this laborious pursuit, he was however ill-advised to quote the historic protest of the Polish Government in exile against the decisions of the Yalta Conference. That government, headed by the veteran Socialist leader Tomasz Arciszewski, in 1944 lodged a solemn protest against the seizure by Russia of the eastern Provinces of Poland and against the subjection of the whole country to an ill-disguised Soviet domination. In this protest, which was intended as an appeal to the conscience of the free world, there is not a single word about the present Western frontiers of Poland. In no circumstances could this declaration of the Polish Government be made to serve the purposes of those who are trying to impugn these frontiers.

The gentleman from Tennessee was no better advised in quoting an opinion, falsely attributed to General Anders, the gallant Polish military leader. It appears that the general most emphatically denies having expressed such views. In a letter to Congressman REECE, which has since been made public, General Anders stated:

To enforce your point of view you quoted an opinion which was falsely described as the text of an interview which I allegedly gave on December 14, 1946. This opinion ascribed to me was, it is true, published at that date in Die Tat. It was completely untrue and the editors of Die Tat were immediately informed of the fact, while the Polish Press in the free world at once published my official denial. For instance the Polish dailies in London: Dziennik Polski, Dziennik Zolnierza, and Slowo Polskie on January 1, 1947, gave the statement on the utter falsity of this alleged interview. The same was printed by the weekly Orzel Bialy at that time.

Moreover, the editor of Die Tat in a letter dated as recently as July 6, 1955, has expressed his regret for the incident.

General Anders is very outspoken on the subject of the present Polish-German frontier. He says in his letter:

For my part, during all these years, in public appearances, radio speeches, and press publications I have repeatedly emphasized my conviction of the intrinsic justice and inviolability of the present Polish western frontiers.

LOOKING FORWARD

There is not much, indeed, I would wish to add. To my mind the position is clear. Poles in Poland, and Poles living in the free world speak with one voice. They do not admit the possibility of a peaceful revision of the present western frontiers. And after all their ordeals and tribulations they will not be deluded by the alluring words we have heard here from the honorable gentleman.

Mr. REECE said:

The argument is sometimes advanced that the newly settled Poles * * * have struck roots in the German provinces and can no longer just be turned out. Of course, there has never been any suggestion of that kind by any group of German expellees.

I believe that the Poles understand the meaning of these words. Since the overwhelming majority of German refugees have settled for good within the limits of the Federal German Republic, there are relatively few Germans who would like to return to the former eastern Provinces of the Reich. The hard labor of the millions of Poles who are living and toiling there would be badly needed if German revisionists had their way. Thus, the new cloak of noble humanitarianism—"stay, where you are"—covers the old German expansion, eager to conquer both land and people.

I agree with the gentleman from Tennessee that the present situation is fraught with dangers. The very fact that the Soviet Union, alone among the big powers, did recognize the present western frontiers of Poland is bound to increase Poland's dependence on Russia. If the Western Powers would join in an explicit recognition of that frontier, they would greatly assist the Polish nation, anxious to secure genuine independence and would earn the deep gratitude of many peoples behind the Iron Curtain.

I would wish to strike a note of warning. It is true that words cannot shift frontiers. But careless talk here might only nourish dangerous illusions in Germany. It could embolden the extremists among the Germans and distil the heady spirit of German nationalism which has cost the world so much.

Let us not try to undermine a territorial settlement which has come to stay. Let us not discourage millions of people who are deeply attached to it. They are our friends, as they still believe in freedom and democracy. Driven to despair by a lack of understanding on our part, they could fall victims of bitter disillusionment and that vital part of the old continent of Europe would be lost forever.

Let us face the future with courage and imagination. One day the waves of the Soviet flood will recede to the East. A new pattern of things will emerge in Central-Eastern Europe. Let us hope it may bring a better and happier world, based on the foundation of four freedoms: freedom of expression, freedom of belief, freedom from want and freedom from fear.

Arms and the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 14, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of August 14, 1957:

ARMS AND THE MIDDLE EAST

Russian arms continue to pour into the Middle East. Syria is where the main buildup has been taking place this year and Egypt has been receiving replacements for the arms lost to Israel, plus some new features like the three submarines recently delivered.

Now Yemen is becoming a major center for Iron Curtain arms. The British announced officially from Aden yesterday that another shipload of arms—the seventh—just reached the Yemeni port of Salif. Along with the planes, tanks, and light arms have gone some 50 Communist technicians and advisers, including a number of pilots.

The idea, in theory, is that the technicians will train Yeminis to handle the planes and arms. However, at the time of the Suez crisis last year the Egyptians demonstrated their complete inability to make use of the enormous stores of materiel the Russians gave them. The Syrians and Yemenis are still less likely to make good use of these deadly gadgets. Why then, are the Russians continuing to flood the Middle East with arms?

There are few questions one can ask about that crucial part of the world more important to answer. It could be that the answer is obvious and simple. The Russians naturally want to build up those countries which are especially anti-Western and which are willing to deal with the Soviet bloc. The arms are generally not the latest models and they can easily be spared.

This would be worrying enough, but an even more important reason probably lies in the Soviet determination to strengthen their influence and position at this vital crossroads of Asia, Europe, and Africa where the oil is produced that is necessary to the economic functioning of Western Europe. Since President Nasser of Egypt made his arms deal with the Czechs nearly 2 years ago Russia has become a power in the Middle East. The British and French fought in Egypt last year partly because they realized this fact.

Now the buildup is again assuming large proportions. The time may be approaching when the United States will have to do something effective, in or out of the United Nations, to meet this growing danger.

Crime and Civil Rights

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial that appeared in the Philadelphia Tribune of August 10, 1957:

CRIME AND CIVIL RIGHTS

"All that is necessary for the triumph of evil is for good men to do nothing."—Edmund Burke.

Many writers are proclaiming the defeat of the Eisenhower civil-rights bill as a great victory for the astuteness and political skill of Texas' Democrat LYNDON JOHNSON. It would seem to be nearer the truth to say that the bill was made ineffective because some of the so-called great liberals did nothing to prevent its death.

Senator JOHNSON now wants Americans to believe that he, the executioner, is a sincere advocate of civil rights. He declares that those who refuse to accept the bill after all of its teeth were pulled are not sincere; that he is the true friend of civil rights. The Senator will soon find out that Americans are not as stupid as he seems to think.

His fellow Senator JOHNSTON of South Carolina let the cat out of the bag when he was joyously telling the people of his State that it was not the Republican Party that helped to water down the bill. "It was the Democratic Party leadership from the West, some from the North, and some from the Eastern States that joined the southern ranks. Quite frankly the South alone would have been beaten to death on this issue without help."

The New York Post says: "But pity the nonsouthern Democrats who must swallow the dubious compliment paid them by Mr. JOHNSTON of South Carolina. For what he is saying is a clear confession that the chance for truly effective civil rights legislation was finally at hand and that only the capitulation of a bloc of liberal Democrats saved the day for the southern diehards."

Here is why this newspaper thinks the bill as amended in the Senate is absolutely worthless: Ever since the adoption of the 14th and 15th amendments to the Constitution all citizens have had the right to vote and serve on juries. So the right to vote was not involved. It is the exercise of those rights that was at stake in the civil rights bill. Since the effective enforcement of the law has been eliminated, it is worthless; and Senator JOHNSON and those who supported him know that to be the truth.

Crime is a $40 billion operation in America. The Director of the FBI has declared that his agents, the several police departments, and other law enforcement agencies lack the power to curb the rapidly increasing crime rate in the United States of America. He thinks that the only way to stop it is by an aroused public; by the citizens of all segments of the population fighting crime and all its works.

There are those who believe that unless all laws are enforced none can be; that unless the rights of all citizens are protected, none will be safe. Those who killed the civil rights bill joined forces with those who have declared that they will never obey the United States Constitution or the orders of the Supreme Court. In so doing they have strengthened the hands of criminals both in public office and in private life.

"Well Done" Admiral Radford

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. LATHAM. Mr. Speaker, the Nation and the Congress should send today a hearty "well done" to Adm. Arthur W. Radford, who today retires as Chairman of the Joint Chiefs of Staff.

It is my belief that no man has made a greater contribution to his country.

His calm, clear thinking has been a tower of strength to the administration in the difficult days past. While he has earned a rest it is hoped that his wise counsel and advice will be available in the days to come.

I would like to set forth the following editorial from the New York Times:

ADMIRAL RADFORD RETIRES

Today a man who has grown gray in the service of his country relinquishes the highest ranking and most important military position in the United States Armed Forces.

Adm. Arthur W. Radford, Chairman for the past 4 years of the Joint Chiefs of Staff, and a veteran naval airman, richly deserves the rest and ease from tension that retirement will bring. Often a storm center of controversy, never one to speak the fair beguiling words of the compromiser, Admiral Radford has taken the part of the "strong man" who said what he thought.

His judgments may not always have been right—certainly they have been challenged by many who do not place as much reliance as he appears to on the deterrent effect of "massive retaliation." But Admiral Radford's rugged honesty, his unrelenting drive, and his unflagging ardor in the service of his country commend him to history.

Is the House a Rubberstamp?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. MULTER. Mr. Speaker, in all kindliness, I commend to the attention of our colleagues the following article which appeared in the New York Times of August 11, 1957.

Is it not time that we, as Members of the House, had a heart-to-heart talk among ourselves about this matter? And then proceed to do something about it?

The article follows:

IS THE HOUSE A RUBBERSTAMP?

(By Allen Drury)

It has been a long time since anyone criticized the House of Representatives, but of late the accumulated irritations and annoyances growing from the record of recent sessions have begun to find expression in many quarters. Upsetting though it may be for its Members to acknowledge, the idea is getting about that the House is not carrying its weight in the present era of American Government.

It is said, for example, that the House is letting the innumerable demands of its constituents bog it down. It is said that the House is using this as an excuse to follow the easy road of flaccid obedience to a handful of party leaders. It is said that the House is lazy, that it is sloppy, that it is relying on the Senate to do its job.

These, it may be, are serious charges, but there is no doubt that the House has among its Members stanch and outraged defenders. "Don't we work expeditiously?" they demand. "Don't we whip legislation through in double time? You don't see us engaging in any filibusters. You don't see us dilly-dallying with the public business. Brother, when we legislate we legislate."

And they rattle off the standard figures on so many bills introduced, so many considered, so many passed, with an arch intimation that the gentlemen in what they always refer to as the other body are lagging far behind and are in every way inferior as spokesmen for the people.

According to the critics, this final argument in particular does not comport with the facts. Actually, they say, were it not for the gentlemen in the other body the House would be exposed in an uncomfortable nakedness for all to see. The Senate, they hold, is a great shield and coverup for what goes on in the House.

They point out that, while it is frequently said as a joke on Capitol Hill that "the House proposes and the Senate disposes," the reality of it may not be quite so jocular. They say that there is considerable evidence that this is so, and that the country may be thankful that it is so, for if it were not so things would be in a pretty pass.

Consider specifics for a moment, they say. A civil-rights bill, cluttered up with devious and dangerous language devised for their own clever purposes by the bright young men of the Justice Department, roars through the House with a whoop and a holler under tight parliamentary restrictions that divide debate neatly between the indignant and the innocuous. It then goes to the Senate, and thereupon everybody is vastly surprised to find that a sober and careful appraisal, a reasoned and cogent and deliberate debate, reveals all kinds of peculiar worms in the woodwork.

There is a part III, for instance, harnessing the bill to reconstruction force statutes, making it possible—unlikely, it is true, but none the less legally possible—for the President to send the armed might of the Federal Government into the South to enforce a whole range of civil rights extending far beyond voting to school desegregation, joint use of entertainment facilities, equal employment opportunities, and the like. Whatever the merits of these rights standing alone, force, the Senate and most responsible observers believed, is not the way to achieve them; yet the House dismisses this aspect of the bill as though it doesn't exist.

There is also the matter of the jury-trial amendment. It is offered in the House, but the House votes it down with a will after a cursory debate. There are the powers of the special Civil Rights Commission set up in the bill, the provision that its members need not be confirmed by Congress, the provision that they may hire unpaid voluntary workers to roam the country in the search for civil-rights violations, the provision that newsmen who reveal the proceedings of secret Commission meetings may be subject to fine and imprisonment.

The House pays these no mind, although anyone who knows Washington knows exactly the uses to which the unpaid volunteers and the secret Commission meetings would have been put.

Nor does the record need to be limited to recent days. Go back a bit to a proposal such as Harry Truman's bill to draft the railroad strikers in 1946, quite possibly one of the most fundamentally dangerous propositions ever put forward in this free land. Again, the story is the same. Through the House it goes with a hue and a cry and a view halloo—in a debate lasting just 40 minutes. It reaches the Senate and a number of responsible people, led by the late Senator Robert A. Taft, of Ohio, begin talking. Time passes, the frenzy evaporates, the fantastic hysteria of the House is revealed in all of its bald outlines. The bill dies—in the Senate.

Or take a foreign aid bill, intelligently trimmed in the Senate, shredded to ribbons in the House; or a labor bill, loaded with wide-open dangers in the House, patiently reworked into sound legislation in the Senate; or a bill—but the examples the critics cite are manifold, and multiplication can make their point no stronger than it inescapably is.

This is the way the House legislates, its critics say, and it must be admitted that

there is a deal of evidence that the House knows it. Everyone who covers the Congress has had the experience at one time or another of talking off the record to House Members about the shortcomings of some particular piece of legislation that has gone through with all the calculated deliberation of a greased pig. The reaction never varies: a shug and a grin and the private comment, "Well, it's the Senate's worry now. Let them stew about it and when it comes back to us for conference we'll take another look at it."

All very well, except that the House in some fields of legislation, such as appropriations, has the sole initial responsibility, and in any event is supposed to have a responsibility fully equal to that of the other body.

This sort of legislative buck-passing is particularly noticeable in such controversial areas as civil rights, labor, foreign aid, the military, Government salaries. It grows more arrant when sheer politics is involved. The popular thing to do at the height of the railroad strike was to mirror the country's frenzy; the popular thing to do on the civil-rights bill was to bow to the weight of every passing pressure group that said "boo." To be responsible took guts.

The explanations for this condition to which the critics point are inherent in the structures and the practices of the House, subject to change by the House if the House will change them, but in recent decades ratified by custom and the fear of the leadership's displeasure.

One such explanation resides in the way in which a little handful of oldsters, sitting in committee chairmanships, is allowed to ride roughshod over regular committee procedure, shutting off committee debate and study so that even there the free flow of opinion is stifled, a situation not present in all committees, but in far too many.

There is the exaggerated power of the House Rules Committee, so great that a bill must leap not only the hurdle of its own committee's approval, but then must meet the arbitrary and cantankerous objections of the Rules Committee as well, before it can reach the floor for debate.

There is, in many communities, the ease with which election to the House comes to citizens whose qualifications equip them, perhaps, to be good businessmen or leaders of fraternal organizations, but do not equip them for the more sophisticated and thoughtful business of participating in National Government. And possibly, most fundamental of all, there are the much-vaunted debate rules of the House, with all their cute little 5-minute limitations and other gimmicks that permit the party leaders on both sides of the aisle, to choke debate as ruthlessly as a fox chokes a rabbit.

Out of all this, in recent years, there has come an air of conspicuous desuetude which is perhaps understandable but nonetheless of serious import to the future of responsible representative government in the United States. A certain lassitude pervades the atmosphere of the House; few seem to care very much. Last year's election is just over and next year's is already claiming attention, and the way the rules are rigged and the show is run, why should anybody do anything anyway but go along supinely with the will of the leadership?

So the House becomes in essence a sometimes uneasy but far more often compliant rubber stamp, for a strong Executive in the periods when the country has one, for the party leaders in the Chamber in times like the present, when a mood of spasmodic disinterest prevails at the White House.

Inevitably, this makes the task of those who really run the House—the Speaker, the leaders of the majority and minority, their aids and satellites and the committee chairmen—that much simpler. Inevitably, it narrows the focus, brings to the forefront only those who are either so idealistic or so ornery that they can't be silenced. In a House of 435 there are today perhaps 30 or 40 men and women who take the lead in debate; their names come to the top of the news again and again because there just isn't anybody else. Sometimes they are able, more often they are either loud, or persistent, or both. The ideas before the House, in the main, come from these few minds—and some of them are very tired.

Are there solutions for it? Some have suggested that the 2-year term be expanded to 4, with the whole House being elected at the same time the President is chosen. This, it is said, would remove the nagging pressure of having to run for reelection every time a Member turns around, the nagging desire for personal publicity at any cost. Others have suggested a drastic overhaul of the rules, so that debate can really be debate and matters of the most serious and fundamental gravity can be given the attention they deserve.

And some hold that there should be a modification of the committee seniority system, probably the least practical suggestion of all in the light of the deadly and divisive ambitions and horse trading that would inevitably follow upon such a change.

In any event, it seems likely that none of these could in the long run be any real substitute for a greater determination and a greater responsibility on the part of the individual Member. He is the key to the House, and it is upon him, or her, that the ultimate burden falls.

The plea is made—and in some ways it is a valid one and fully deserving of sympathy—that the average member is weighed down with the endless demands of an insatiable constituency. This, it is argued, keeps him too busy to pay attention. But he is elected to pay attention, and it is just possible that paying attention to a major bill involving some sensitive area of democratic government is a trifle more important than running enough errands to get reelected. It is understandable why these values go skew-gee in the mind of the average member, but it is not excusable. Too much is at stake in this crossroads century, and too, much is in his hands.

But, as they say, there is always the Senate. Its prestige has risen steadily in recent years as that of the House has declined, and essentially there is only one corrective for the imbalance. It lies in a greater attention to duty, a greater independence and a greater attitude of personal responsibility by the individual Member on the floor of the House.

For, when all is said and done, the House, of course, is a great institution with a great and obviously indispensable role to play in the governance of the American Republic. That is why it is so desperately important that it live up to its place in the scheme of things.

The House ought to legislate as if the Senate were not there. For too often, as its critics truly say, it legislates as if nothing but the Senate were there.

The Pollution Control Act—A Year Later

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. BLATNIK. Mr. Speaker, Public Law 660 of the 84th Congress, the Federal Water Pollution Control Act of 1956, has now been in operation for 1 year. This act, as you know, represents the greatest forward step that the Federal Government has ever taken to assist the States in preserving the quality of the Nation's precious water supply.

Of late, Public Law 660 and especially the section pertaining to sewage treatment plant constructions grants has been subjected to considerable criticism. The charge has been made—and just recently on the floor of this House—that the construction grant program has held back rather than accelerated construction of needed sewage treatment plants throughout the country. Attempts were made this spring to actually eliminate funds for this vital program from the Health, Education, and Welfare appropriation bill. And again the charge was made that the program was holding back construction of treatment plants.

The facts available to us now after a year's experience under the program do not justify these attacks. As I have maintained from the time I introduced this idea into the water pollution-control bill if this program is given a chance to succeed it will succeed. That is why the critics were so anxious to destroy the program in its infancy. They knew that given the opportunity this program would prove itself successful.

With a year's experience behind us we can now fairly ask the question, Is Public Law 660 a success? And have the grants-in-aid stimulated construction? I am happy to report, Mr. Speaker, that the States say "Yes"; the municipalities say "Yes"; and the figures say "Yes." These facts are reported in the authoritative publication Engineering News-Record for August 15.

In an article by Marc Leggiero, assistant editor, it was pointed out that the first year of the Federal construction program helped build interceptors, treatment works, and outfalls—all essential to the control of pollution—at a rate exceeding any previous year's construction. And this despite the fact that the municipal bond market is in the worst shape it has been in since the blackest days of the depression.

In the program's first year grant offers were made for 446 projects involving $166.8 million of construction. Of special interest is the fact that 54 percent of this amount went to towns of 10,000 or under and this same group accounted for 78 percent of the projects. In short, Mr. Speaker, the construction program under Public Law 660 is in high gear and contributing greatly to the abatement of the Nation's pollution problem.

The article and an editorial which appeared in the Engineering News-Record are as follows:

Public Law 660, with its Federal construction grants for sewage works, has gone through its first year of life and $38 million, part of the first $50 million of a $500-million, 10-year program.

The 1956 Federal act has a big job to do: Stimulate sewerage construction in the United States and its Territories by paying part of the cost of a municipality's pollution abatement project.

Is it doing so?

Yes.

And is it proving an administrative success?

Again, yes.

As of June 30, end of the program's first year:

Four hundred and forty-six projects had been approved and offered Federal grants;

Total estimated construction cost involved is $166.8 million, with the Federal Government's share at $37.9 million; and

One hundred and forty-one projects, totaling $54 million worth were under construction, and 4 projects costing $241,867 had been completed.

States, municipalities, and the United States Public Health Service—the administering agency—are all pleased with the way the program has gone and gives indications of going.

THE STATES ARE FOR IT

Checking with a number of State pollution control officials to get their reactions to the Federal grants, has produced almost unanimous praise for the program.

Although an extremely small minority still contends that the program will hinder rather than speed sewerage construction, the overwhelming majority gave general assent that the program has supplied a real impetus to added sewerage construction. To quote a few:

Charles E. Carl, director of the sanitary division of the South Dakota Department of Health: "* * * has undoubtedly given impetus to the sewage treatment works construction program in South Dakota. A majority of the projects (offered grants) have been planned or designed since the Federal-grant program was established."

Clarence W. Klassen, technical secretary, Illinois Sanitary Water Board: "We feel that the program has given impetus to added sewerage construction in Illinois * * * however difficult to determine based on comparison with other years * * * conditions are not the same. We feel that without the program construction would have dropped behind * * * because of particularly bad bond market."

Dr. Berwyn F. Mattison, secretary of health, Pennsylvania Department of Health: "Among the 11 projects approved for grants during the 1957 fiscal year, we believe that a few would not have proceeded with construction without the grant program * * * hoping continuation of Federal construction grants will result in a larger number of municipalities constructing * * * who would have been unable to finance such projects."

The fear that municipalities would hold back necessary construction until they could get a Federal grant, has not been realized, according to those State people who are in a position to know.

THE MUNICIPALITIES ARE FOR IT

Next step was to check with a number of municipalities that had been offered Federal grants. Again, the concensus was that the program was a good thing. It could be cynically said that it would be a rare municipality that would not be in favor of getting money for nothing. But both State officials and regional PHS officials agree that, by and large, the municipalities have proved to be exceedingly conscious of the goal of the Federal program and have been acting accordingly responsible. It was, after all, the American Municipal Association that conceived the Federal-aid idea and fought for its inclusion in the law.

Every municipality contacted, without exception, felt that its Federal grant had turned the trick in some way. Some would not have been able to build without it. For others, it meant the difference between a hardship situation and one of minimum comfort in paying for the planned project. And for still others, the grant is making possible a faster, more comprehensive and more complete pollution abatement program than would have been possible had they had to go it alone.

A number of municipalities reported that the promise of a Federal grant made the difference between voters approving or not approving a bond issue to finance construction of the sewerage project. This is true even where State aid, too, is available. In Vermont, for example, some municipalities are able to get outside help for 50 percent of the project cost, up to 30 percent from the Federal Government and 20 percent from the State.

The majority of the grants are going directly for construction. There are a number of cities, with big programs, that are using the grant to help pay the important overhead expenses such as bond issue financing fees.

To sum up, municipalities can now build what previously had been impossible, exceedingly difficult or somewhat incomplete.

THE FIGURES ARE FOR IT

There was the fear when the law was passed sewerage construction would suffer, not gain. It would now seem that this fear may be laid to rest.

The Federal act went into effect July 1, 1956, although its first grant offer was not made until December. A comparison of sewerage construction figures for the first half of 1956 with those for the first half of 1957 makes a good case for the Federal-aid program as a stimulant to construction.

Latest ENR sewerage contract award figures, for the first 31 weeks of both years, make 1957 a better year than 1956—the record year for such awards. For 1956, $354.3 million in sewerage contracts were awarded; in 1957, the figure is $341.3 million. However the 1956 figure includes the $80 million Allegheny County, Pittsburgh, Pa., sewage works project. Subtracting this from the 1956 figure—and for this comparison, it would seem legitimate to do so since such a project comes along but rarely—puts 1957 ahead by nearly $65 million. And according to ENR projections, by year's end the sewerage contract awards could top last year's record high, even without subtracting the Allegheny amount.

Still other figures point to the effectiveness of the Federal construction grants. According to USPHS totals, which include only those elements eligible for Federal aid—treatment works, interceptors, and outfall sewers (ENR figures include laterals as well)—1957 is turning out to be a better year than last year's record year. January through June, the 1956 total was $223.7 million; for 1957, the total is $165.7 million. Again excluding Pittsburgh's $80 million (contracts awarded in January, 1956), the first 6 months of 1957 are $20 million ahead.

And the clinching argument is that this is being done in the face of unfavorable conditions, foremost among which is the tightened revenue bond market, a popular source for sewerage construction funds. The rising interest rates have been a depressing factor on the volume of new construction work, especially so in the case of smaller communities.

A special survey made for PHS by an outside consultant showed that 18 smaller communities in North Carolina, Maryland, and Wisconsin met considerable difficulty in selling bond issues for sewage treatment works construction. This was true even for several of the communities which had been assured Federal grants.

The ENR figures also are a strong argument. They have gone to the high level in 1957 even though industrial building and mass housing—major affectors of the dollar volume of sewerage contract awards—have dropped off sharply.

WHO AND WHAT GET MONEY

It had been planned and hoped that the Federal aid would make the biggest impact on the smaller municipalities. The act provides for the Federal Government to pay up to 30 percent or $250,000—whichever is the lesser—of the cost of a municipality's sewerage construction project. Grant offers would be made upon application by the municipality to the regional PHS office for approval. State bodies, and not PHS, would decide which project had priority over others in their State for the State allocation. Payments would be made in three parts, the last coming with the completion of the project.

The program's aims in this respect are being realized. Of the 446 projects approved and grant offers made in fiscal 1957, only 38 fall in the $1 million or over category. The maximum grant offer of $250,000 has been made to only 43 of the 446.

Smallest project for which an offer was made is a $6,430 extension to a treatment plant at Unity, N. H. Federal share here amounts to $1,929. Largest project is listed at $5.9 million for extensions and additions to a treatment plant in the District of Columbia. Federal aid offered is the $250,000 maximum.

Municipalities with populations of 10,000 or under account for 78 percent of the 446 projects and 54 percent of the $38 million. Cities of 50,000 and under are sponsors of 94 percent of the projects and have been offered 80 percent of the Federal money. The really big cities of 500,000 or over, hold only 4 percent of the projects and account for about 7 percent of the Federal money.

The Federal grants for fiscal 1957 are going for projects that are concerned almost exclusively with new sewerage construction. Only 15 of the 446 projects entail simply remodeling or altering existing works. Brand-new projects are the receipients of 334 of the Federal grant offers. The remaining projects include some new work or some degree of extension and addition to present systems.

One example is North Dakota's 19 projects for which Federal grants have been offered. All are stabilization ponds and appurtenances—17 brand new, one remodeling and alteration job and one extension and remodeling.

A very high number—335—of the 446 disposal projects include treatment plants. In addition, 78 projects include stabilization ponds. Only 33 do not include some sort of treatment works and are instead concerned solely with interceptors or outfall sewers.

WHY ONLY $38 MILLION

Although Congress appropriated $50 million for construction grants for the first year, fiscal 1957, only $38 million had been committed by PHS by June 30, the end of the fiscal year.

The reason for this is simply that it took some time for the program machinery to be set up and operate smoothly. First grant offer came through in December 1956, and then they started pouring out. So that, actually, the $38 million was committed in the short period of 7 months.

The $12 million represents money that had not yet been asked for by municipalities in the States for which the allocations had not yet been used up by June 30. However, it is permissible under the law for unused funds from one year to be held over and allocated in the next fiscal year. Most of the States concerned have already indicated that even though it has been a slow start they will easily use up last year's and this year's Federal money.

SIXTY-TWO MILLION DOLLARS FOR 1958?

When Congress made appropriations for fiscal 1958, it cut $5 million, appropriating only $45 million at the insistence of the Senate Appropriations Committee, which said it intended doing the same for fiscal 1959. The Senators did this after the first year's experience showed that not all the States and Territories were likely to submit projects for the full allotment. The Virgin Islands for example, says PHS, is not expected to ask for Federal grants for sewerage construction.

But this $5 million drop is not likely to deny eligible requests. Congress permitted

PHS to set up fiscal 1958 allocations on the basis of $50 million. And if such areas as the Virgin Islands do not pick up their full allotment, the money will be there for those States that subscribe for their full allocation. And should it be necessary, indications are strong that PHS won't have much trouble getting supplementary appropriations from Congress up to $5 million before June 1958. This then brings potential Federal money up to $62 million for fiscal 1958.

Already, on the basis of applications in process, there are unmistakable indications that all the $57 million will be offered in what is now the current fiscal year.

Since June 30, over 40 grants have been approved. And right now, PHS regional offices and State pollution control agencies have under review over 600 applications calling for $60 million of Federal construction grants. In addition, municipalities are preparing another batch of projects that will call for some $12 million more as the Federal Government's share.

So there are in process projects totaling $72 million of Federal aid money. However, some of the projects are sure to be ineligible for Federal funds and there will also be a number where the voters will turn down a bond issue to construct the projects. Therefore, the Federal money that will be available will probably cover the projects on hand.

As far as the States go, they are generally satisfied with the amount of Federal aid allocated to their State. The feeling was that, of course, if they were given more money, they could use it, but recognized that the Federal program was, to paraphrase one official's statement, merely one tool in the administration of the State's water pollution control program.

THE SYSTEM'S WORKING

The check with State and PHS-regional officials showed that while it took some time for the program to get rolling, it is now going well and very little additional trouble is anticipated.

The PHS regional offices—which receive the requests, review and approve them, and then make Federal grant offers—are now in high gear and wading into fiscal 1958's lot. Although undermanned and dealing with a new program, the regional offices have received high praise from both State and city officials for the job they have been doing. They have proved themselves extremely cooperative, helpful, and patient, according to reports.

The time elapsed from time of application to PHS to offer of a Federal grant has ranged all the way from 2 weeks to 9 months. However, according to PHS officials, 2 to 3 weeks should be the time for untroublesome applications, and 3 months the latest for the worst. The important thing is for the applicant to be thorough, making certain to submit the necessary documents along with the application—and being especially certain that financial authorization and the engineer's report are correct and complete.

Illinois reports that for its 18 projects, elapsed time from application to PHS to grant offer did fall between 2 and 3 weeks for each project. And the municipality that waited 9 months tended to blame itself rather than PHS.

Generally, replies indicated that elapsed time ran from 1 to 2 months, and all parties expressed satisfaction.

PRIORITY NO SATISFACTION

States report having set up some formal system for rating a project's priority, except for a few States which said it was not necessary to do so since their allocation covered all requests for grants by municipalities.

The priority systems are going smoothly, according to the State officials, who also are generally satisfied with their own role in the program. A few did comment that the amount appropriated by the Federal Government to the States for administering the program ($2 million) should be increased to ease their burden.

Some of the priority systems reported are extensive and elaborate. Great weight was found to be given to whether or not the municipality requesting a grant was under State order to clean up a pollution condition. Many used a point system to come up with a project's priority.

Illinois, for example, assigns point values to pollution conditions, abatement progress (voluntary progress gets highest rating in this category) and prevention progress. These are then worked with financial need and cost to arrive at a priority rating.

One aspect of the program that both PHS regional men and State officials are mutually happy about is that the only one body decides priority—the State. Thus, the States don't feel interfered with, and PHS is spared the headaches of making that decision.

All in all then, the end of the first year of Federal aid for water pollution control finds all concerned happily anticipating the second.

GRANTS-IN-AID ARE WORKING

Sewage-works construction in the United States has been stimulated by a well-administered program of Federal aid. This first appraisal of the construction grants program is drawn in ENR this week after a check at city, State, and Federal levels, and after careful study of the all-important contract-awards figures in the sewage-plant field.

The well-substantiated conclusion that Federal aid is a success after 1 year is an important finding first and foremost because this sewerage stimulation program has 9 more years to go. But perhaps it is a finding of even broader significance.

It may be that champions of Federal aid for school construction could profit from study of Public Law 660, the Water Pollution Control Act. For, while school aid failed to pass in this session of Congress, the sewerage-construction aid found congressional support readily a year ago. And, while one objection to Federal aid of any sort is the presumed loss of control to the administering Washington agency, there has been little, if any, of this evidenced by the cities or States now working with grants on pollution-abatement projects.

It was not evident from the start that the program would work so well. In fact, when the notion of Federal aid to cities first came up, sponsored by the American Municipal Association, it appeared in the House bill as a loosely specified Federal dole completely lacking in assurances that it could stimulate new construction. It simply stated that "the Surgeon General shall make Federal funds available for such treatment works, in a manner which will tend to result in a wide distribution of such funds among the several areas of the United States"—a most carelessly written provision and one which would have led to all sorts of administrative difficulties.

But in remarkable short time, the sound thinking of pollution-control experts was brought to bear on and through the United States Public Health Service for the writing of a grants-for-construction provision that is now passing the test of application. These experts could support Federal aid only with assurances that it would help the cities needing help and thereby stimulate construction that might be an unreasonable financial burden on these communities without help. And that, generally, is the kind of aid now being disbursed so effectively.

It is interesting to speculate that because it was written in such haste, the water-pollution legislation came out a better law. The point is that the Federal Water Pollution Act formulated only enough details to assure that the objective of construction aid would be attained, and left many of the fine points of deciding who is to get what aid to the States. If there had been more time, we might have wound up with a Washington-spun ravel of redtape that would have stifled sewage-works construction. Instead, there is a minimum of Federal control, a maximum of State responsibility, and, it appears, a smoothly functioning, effective aid program.

All who are concerned with this sewerage program—the States, PHS, and the cities—are to be congratulated for the way things have started out. And as suggested above, there may be others who can profit from study of how the cooperating Federal and State agencies have made it work. Last July, when it was signed into law, we said the Federal aid-to-sewage-works construction "optimistically can be presumed workable." This optimism was well founded.

Civil Rights

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, August 15, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "A Jury of His Peers," published in the Standard-Times, of New Bedford, Mass., on August 9, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JURY OF HIS PEERS

In the name of preserving civil rights, one of the most fundamental rights guaranteed by the Federal and State Constitutions, and dating back to the English Magna Carta, is being threatened today in Congress.

Self-appointed zealots and politicos, with a weather eye on future elections, are attempting to take away the right of trial by jury in criminal cases in the new so-called civil-rights bill.

Fortunately, the Senate amended the civil-rights bill last Friday, inserting a jury-trial provision for criminal cases, by a vote of 51–42. Wednesday the Senate passed the bill as amended by a majority of 72–18. But the bill now must go to conference with the House of Representatives, where the so-called civil-rights bill has been approved without the jury-trial provision.

The Senate's action reaffirmed a basic American tradition older than the Government itself—the right of the accused in a criminal proceeding to place his case before a panel of fellow citizens.

No part of the young United States Government more impressed visitors than the emphasis on this right. De Tocqueville wrote 125 years ago that the jury system in America "imbues all classes with a respect for the thing judged."

What could be more illogical than to assert that reaffirming such a principle would "obstruct" justice or "weaken" the Federal judicial system, as President Eisenhower, Vice President NIXON, Senate Republican leader KNOWLAND and others are asserting?

In reality, opposition to the jury amendment has been based mostly on a cynical assumption that "southern juries" would not render "just" verdicts in civil-rights cases. Thus, to make sure of the "right" verdict,

proponents would abolish trial by jury in such cases.

Juries are not always predictable, to be sure, in the South—or in the North. Very recently a surprising verdict of acquittal was rendered in the trial of labor leader Hoffa, after distracting tactics had been used in the courtroom.

In its proposed civil-rights bill, the administration seeks to use the contempt powers of the Federal courts as an instrument of coercion and punishment in an entirely new field of Federal activity.

In this field conceivably there could be thousands of criminal cases. In none of these would the accused have the right to have his guilt or innocence determined by "a jury of his peers."

It is to the credit of Senator KENNEDY and many others that they have, while supporting civil rights, refused to go along with attacks on the essentials of fair trials and orderly governmental processes.

Nothing could be more farfetched than the accusation by a State AFL official that KENNEDY had opened himself to "suspicion" by voting for the jury-trial amendment.

No more courageous action has been taken by the United States Senate in a decade than insisting on the insertion of a jury-trial amendment in civil-rights legislation. The Senate should stand firm in conference in opposition to the ill-advised House bill.

The Business and Defense Services Administration—A Valuable Agency of Government

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. DWYER. Mr. Speaker, it seems to me that too often we in Congress are inclined to speak out in criticism of various agencies of Government without having a full understanding of the importance of the work being done by these agencies.

For example, I recall that during debate on appropriations for the Department of Commerce earlier this year, there was some questioning of the importance of that Department's Business and Defense Services Administration.

Today, I would like to speak in defense of that agency—an agency which, to date, has provided the Nation with an emergency manpower pool of more than 400 executives of business and industry, trained in the important field of Government-private enterprise relations.

These executives, who served without compensation with the agency on loan from their private jobs, provide the Nation with a nucleus of trained men to aid our Government in times of emergency.

This year, two outstanding executives from my Sixth District of New Jersey—Mr. Henry Berring of Westfield and Mr. Lawrence H. Zahn of Mountainside—have served the BDSA. From their experiences, I have obtained a much clearer insight into the importance of this agency's work.

This week, I received a most informative letter from Mr. Berring, following completion of his service with the Government. This letter comprises a comprehensive and penetrating summary of an American industrial executive's views on government service in general, and the BDSA in particular, which I feel should be of interest to all Members of Congress.

The letter follows:

The Honorable FLORENCE P. DWYER,
House of Representatives, Washington, D. C.

MY DEAR MRS. DWYER: I have, as you know, served with the Business and Defense Services Administration for 8 months from November 1, 1956 to the end of June, 1957. In that time I was able to see the agency at work and to become familiar with most of its programs. I also had a good opportunity to see how usefully the agency applied itself to its tasks and how competently it performed its work. If I should be biased in my judgment, it would be in the direction of being critical rather than indulgent, because my industry background makes me regard inefficiency, indirection, and lost motion as deadly.

The BDSA was established in 1953 as a primary organization unit of the Department of Commerce infurtherance of the Department's statutory responsibility to foster, promote and develop commerce and industry. It consists broadly of the Office of the Administrator with a number of subdivisions including the staff offices devoted to technical services, small business, and distribution; next, twenty-five industry divisions; and finally, the Office of Field Services with its branches throughout the United States.

In a release prepared for use in industry task force activities the functions of the 25 industry divisions are described as follows (abridged):

"(1) To assure the achievement of military and atomic energy programs * * * by administration of the DMS (including set-aside determinations); by issuance of directives and administration of * * * special orders for allocation and controls of materials. * * *

"(2) The performance of specific mobilization readiness and preparedness programs delegated to the BDSA by the ODM. These * * * include recommendation of expansion goals and certification of necessity for tax amortization; * * * stockpile recommendations; * * * program levels for full mobilization of * * * critical and strategic materials, appraisal of productive capacity for * * * mobilization requirements; (identification of) critical industry facilities for * * * the Industry Evaluation Board and conduct of conferences with industry on * * * plans to insure continuity of essential production; * * * preparation of standby orders.

"(3) The * * * promotion and development of domestic commerce and trade, (including) the conduct of industry conferences at which the problems of industry are discussed and programs are developed to assist industry in their solution; * * * making studies * * * of market demand and new end uses of products; making analyses of the effect of foreign trade on domestic production (and) * * * furnishing information on * * * foreign production; obtaining the viewpoints of industry * * * on national economic policy matters affecting business operations and preparing recommendations to the Secretary; * * * providing technical economic, statistical and other information relative to production, distribution, requirements, and (their) * * * trends, including advice on simplification of Government purchase contract practices, disposal of surplus and standardization of Government specifications; and the preparation and publication of basic information available only to Government through reports, pamphlets and bulletins."

It is obvious from this three-part description that through their direct contact and familiarity with individual industries and their products and problems the industry divisions form the very heart of the BDSA if not of the Department of Commerce, in all matters and areas where industry touches either the current defense effort, the planning for future security and survival and the health of the industrial economy as a whole.

For example, the Bureau of the Census leans heavily on the industrial experience of the industry divisions in BDSA in making meaningful breakdowns and groupings of statistical data so that these conform to actual industry practices and industry terminology. The National Bureau of Standards does likewise in studying the implications of standardization of products and measurements. Similar reliance on the specialized knowledge available in the industry divisions is placed upon them by the Bureau of Foreign Commerce, the Foreign Service, the Internal Revenue Service, the Council of Economic Advisers and probably any government body or agency that was ever in need of specific, reliable industry information.

I doubt that there is any other agency in the government where information is compiled on the actual processes and procedures by which our natural resources are transformed and shaped into finished products and into the tools with which finished products are shaped. I doubt that any other agency concerns itself with, and understands, the physical and economic problems of these industrial processes. I doubt that any other agency can sit together with representatives of a supplier and a user industry and debate the technical aspects of changes in methods or substitutions of materials to meet an overall objective such as a defense program. No doubt, there is fine talent available in the Armed Forces and the Defense Department; but without the moderating influence of competent BDSA specialists many an agency might attempt to achieve its goals at the expense of another or at the expense of the civilian economy.

Members of my industry remember with horror the early phases of World War II when materials began to be scarce and economists or administrative Government workers without technological background tried to enforce substitutions. However, it is not necessary to go back that far. A look at Government lists of industries and commodities of current vintage shows how much there is yet to be done to bring technological sense and industrial logic into many of them. Loopholes and inequities in the import tariff, misunderstandings in the export control procedure, misleading economic statistics and many other troubles and problems relate directly to areas of unfinished work for BDSA.

I do not wish to make this letter too long—or else I could discuss government-industry realtions of many kinds, government services to industry and business, regulatory activities, advisory and promotional aids, statistical and procedural analyses, protection of essential skills and much more. Let me conclude by saying that in all these and other phases of the work that I witnessed in BDSA I met with great ability and competence, integrity, impartiality, fairness, intelligence and diligence. If I found grounds for criticism, and I did on occasion, it was invariably on matters related to inhibitions which kept the agency from doing what it should; and these inhibitions stemmed largely from budgetary inadequacies or other retarding influences, all resulting from insufficient knowledge of what the BDSA is doing and what its work is worth to the Nation.

Incidentally, it is in these industry divisions of BDSA that men from industry

have served and are serving without compensation from the government, on loan from their industries, in order to keep the specialized knowledge of the career employees up to date, and in order to share with the government much unique, priceless information.

To suspect that some of these men might guide the Government in directions favorable mostly to themselves or their companies rather than to the good of the Nation would be to disregard not only the screening by which only men of proven integrity and responsibility are selected, but also the workings of the trade associations and of responsible management in a free, competitive industrial situation. A man who permitted himself to carry improper information from one company to another would be an outcast in the trade association which sponsored his job in the Government. And the economic laws under which competing enterprises survive and profit simply do not favor those practices which some of our legislators are much concerned about. At least in the industries with which I am familiar, monopolistic policies have never worked in this country.

My observations have been such that I would have nothing but confidence in the unselfishness of the WOC's whom I have met. Not only had their companies freed them completely from any possible conflict of conscience or interest; but I happen to be well enough familiar with the work they had to do in the Government to know that it was much too broad, much too public and much too general to even invite the possibility of a split in loyalty.

As to BDSA as an agency—it is the only home, in the Government, of all manufacturing industries. It is the only place where they can turn for advice, understanding and help, and where they, in turn, can render direct, effective assistance to the Government and the Nation. The BDSA is the only place in the Government where these industries can count on being heard, not by virtue of being either small or large, but solely by virtue of the goods they produce. Just as labor and agriculture have homes in the Government, the manufacturing industries deserve a home there—even if it be a modest home such as BDSA. If industry is important enough to this Nation, BDSA should be looked at as important enough to be maintained and strengthened.

Sincerely yours,

HENRY BERRING.

WESTFIELD, N. J.

Which Way Civil Rights?

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 14, 1957

Mr. FULTON. Mr. Speaker, we, the United States people, are entering a vital period of decision on one of the major issues of our times, the question of civil rights for everybody.

As I believe moderate voices from experienced groups are to be heard, as well as the extremes of opinion, I am offering for insertion in the CONGRESSIONAL RECORD, the excellent and thoughtful editorial of the Pittsburgh Courier entitled "Civil Rights Statute or Not?"

The Pittsburgh Courier is one of the largest papers in the United States that covers in its circulation, the colored citizens of our country. The Pittsburgh Courier is published in 13 different editions, with its home office at 2628 Centre Avenue, Pittsburgh, Pa., and with its news offices in New York, Chicago, Philadelphia, Los Angeles, Cleveland, Washington, Detroit, Houston, Miami, New Orleans, and Atlanta.

It is a pleasure to say that I count among my good friends, the publisher, Mrs. Robert L. Vann; the editor, Mr. P. L. Prattis; the managing editor, Mr. Beverly Carter, and the many members of the editorial and printing staff of the paper; I know them to be competent and civic-minded people whose opinions are worthy of consideration and high respect.

The editorial follows:

CIVIL-RIGHTS STATUTE OR NOT?

The Courier is thoroughly convinced that a civil-rights bill should be enacted into law.

The bill originally proposed by the administration was a very moderate approach to the problem of the denial of civil rights in this country. It was in line with the progressive conservatism of President Eisenhower.

As this moderately conceived bill made its way through the Congress, its power to protect civil rights, particularly of Negro citizens in the South, was effectively diminished by amendments sought by southerners, but sponsored by northern and western Democrats and Republicans.

The majority of Democrats, led by the South, voted for these amendments. The majority of Republicans voted against them.

The first crippling amendment struck out section 121 of part III. This section would have enabled the Attorney General to intervene where Negroes, or any other citizens, were denied their legal right to attend public schools, use public parks, libraries, swimming pools, or any other public facility or convenience.

The second crippling amendment was for jury trials in criminal contempt proceedings. This was the bobbytrap amendment sponsored by Democrats O'MAHONEY, of Wyoming, and KEFAUVER, of Tennessee. The purpose was to provide for jury trials in right-to-vote cases when defendants had disobeyed the order contained in a court injunction. After 39 Democrats and 13 Republicans had voted in this amendment with great glee and charity, they ran into the stark fact that the amendment forced jury trials in a broad range of criminal contempt proceedings. They had taken the teeth out of some 35 or 40 statutes already on the books.

What is left of the civil rights bill? Not much, but something.

A Civil Rights Division in the Department of Justice is left. This Division will have responsibility for concentrating on the enforcement of other provisions of the bill, such as the right to vote. That is a step forward.

A Civil Rights Commission with power to subpena witnesses and to hold public and private hearings. There is nothing to prevent this Commission from conducting investigations that cover the entire spectrum of civil rights. That is a step forward.

The right of judges to act, without jury, to obtain compliance with a court order involving the right to vote is established. That is a step forward.

The right of the United States to initiate suits on behalf of persons who are denied the right to register and vote is established. That is a step forward.

The foregoing are elements of the first semblance of a civil rights bill to pass the Senate since 1875.

We think the changes sought by the President to preserve the strength of the courts under other statutes are necessary and wise.

However, if such changes are made, we believe the bill should be signed. We do not accept it as the full order for civil rights. It is a civil rights minus bill. But it is unquestionably a step in the right direction. It is a grudging surrender to the demand of the times. These demands are insistent and continuing.

We cannot and must not be satisfied with this half-loaf. No sooner than this small skirmish is won, we must consolidate our forces and gird ourselves for bigger battles and bigger victories until America comes completely clean on civil rights.

We have just begun to fight.

Mr. Speaker, I would also like to insert a letter from my good friend, Mrs. Robert L. Vann, president and treasurer of the Pittsburgh Courier.

Mrs. Vann's letter follows:

PITTSBURGH COURIER,
Pittsburgh, Pa., August 14, 1957.

Hon. JAMES G. FULTON,
United States Congressman,
House Office Building,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: This letter has a dual purpose.

First, on behalf of the Pittsburgh Courier and its thousands of readers, I wish to take this opportunity to sincerely thank you for your support of a civil-rights bill, which was substantially the same as the program recommended by President Eisenhower.

Second, may I earnestly urge and respectfully request that you continue your efforts to secure an effective civil-rights bill.

Not only is the passage of this bill important to those who would benefit directly by such legislation, but it would strengthen America's position in world leadership as well.

Sincerely yours,

JESSIE M. VANN.
Mrs. Robert L. Vann,
President and Treasurer.

Poland's International Trade Fair

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Journal-American of Saturday, June 22, 1957, entitled "Poles At Fair Find United States Life Amazing," as well as an editorial entitled "Fair Values," from the New York Journal-American of June 26, 1957.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

POLES AT FAIR FIND UNITED STATES LIFE AMAZING—MODERN HOME ON EXHIBITION

The first American eye witness to return from Poland's International Trade Fair told today how hundreds of thousands of Polish men, women, and children reacted to a sample of what life is like in the United States.

He is Norman K. Winston, prominent New York builder and housing specialist. Winston said the Polish visitors to the fair welcomed the opportunity to taste the American way of life as offered in a dramatic United States exhibit.

The trade fair is being held in the economically hard pressed city of Poznan, scene of workers' bread riots a year ago.

This was America's first participation in a trade fair behind the Iron Curtain.

NAMED BY MAYOR

Winston had been appointed by Mayor Wagner as a New York High Commissioner and the mayor's personal representative to the Paris fair last month.

While in Paris, he was invited to attend the Polish fair as an official observer.

Here is his story:

"Our star attraction at the fair was a fully furnished model of a three-bedroom ranch-type house. The people flocked to see it. To them it was like something from another world. They couldn't grasp that people of middle income actually lived in such houses.

"One fellow asked me how much it cost. When I told him between $16,000 and $18,500, he wanted to know how an American workman could pay such money.

"INSURED MORTGAGE

"I explained that the Government insures a 30-year mortgage. That amazed him further. Imagine such interest by a government. Imagine being allowed 30 years to pay for a home.

"There was a barbecue set on the landscaped lawn. Another fellow asked me what it was for.

" 'For preparing steak,' I explained.

" 'Propaganda,' he scoffed.

" 'How'd you like it if there was a steak on it right now?' I asked.

"He shrugged and grinned. His expression said he would have loved it.

"ELECTRIC APPLIANCES

"The people who came to the house were amazed that a home could be equipped with electric ranges, driers, washers, electric can openers, a workshop, and radio and TV sets.

"The children were especially strong for the American toys. They just wouldn't leave. And it was obvious that their parents didn't want to pull them away.

"The women shook their heads in wonder at the dresses that were being modeled. They gazed with interest at the deep freezers laden with fresh foods, and at the models operating the latest types of sewing machines.

"Nickels were handed out to the visitors so that they could try American vending machines to buy cigarettes, candy, and soft drinks.

"ORANGE JUICE SERVED

"There was a frozen orange-juice counter. Those people probably haven't been able to taste an orange in a long time. They were given paper cups filled with orange juice.

"They listened to the latest American popular music and also examined Montgomery Ward and Sears-Roebuck mail-order catalogs. It was difficult for them to understand that the products were available to everyone in the country.

"When I first reached Poznan, the Communist newspapers were claiming that the American exhibit was strictly propaganda. The Red newspaper, Gazeta Poznanska, protested that the exhibit was like a rich uncle showing off his wealth before poor relatives.

"When I met with the Poznan mayor, the city council, and a group of newspaper representatives I explained to them:

"Our Government realizes and caters to the fact that life revolves around the family and home. Our system seeks to provide each family with as much comfort and convenience as possible.

"Not every nation is capable of producing large quantities of home appliances, food products, cars, and TV sets along with tractors, locomotives, and other heavy machinery. But our country does.

"I further explained that our exhibit was offering the visitors both these types of goods. They could examine either or both, if they wished.

"When the fair opened, the people gave their own answer. They swarmed to the United States exhibit. The crowds were far greater than those at the Russian exhibit where they featured equipment and other heavy machinery.

"Outside of the fair grounds, here and there in Poznan there still are scars from the riots of last year. The leaders of the riots either are no longer around or were forced to flee.

"There appears to be a feeling that the present government is liberalized and perhaps they will succeed in having it liberalized more and more.

"NOT HUNTING TROUBLE

"Basically, though, the people of Poznan are not searching for problems. They would rather find a peaceful method of bringing about self-improvement.

"Traditionally, the Polish people are friends of America. I think that the United States exhibit at the fair gave them a look into the future they hope to build for themselves."

The exhibit arranged by the United States Commerce Department, cost a little more than $400,000.

"It was money well spent," Winston declared. "We actually showed the people of Poznan our way of everyday life. We didn't have to do any talking. We showed them:

" 'This is what we have. Is this what you want also?'

"We showed them and they wrote their own editorials in their minds.

"We should concentrate our efforts on such exhibits.

"If people behind the Iron Curtain keep seeing what the American way of life is like year after year, they will begin asking why can't we have such things also?"

The next such trade fair will be held starting September 7 at Zagreb, Yugoslavia. Winston will attend as an official observer. Later this year—August 31–September 15—another fair will be held in Stockholm. Next year, there will be the Brussels World's Fair.

Winston said:

"In my discussions with workers' groups in Poland I pointed out that our citizens are fortunate in that they don't have to choose betwen production of capital or consumers' goods. We do both."

FAIR VALUES

We have had two dramatic examples recently of how the American way of life has profited from our participaion in various fairs and trade exhibitions in other countries.

Despite Communist warnings to stay away, some 85,000 eager Poles visited the United States pavilion on the very first day of the international fair at Poznan and were both amazed and enraptured by the three-bedroom, fully furnished American ranch-type home and the time-and-work saving appliances on display.

It was difficult for the impoverished Poles to believe that American workmen lived in such "palaces."

Our exhibit at the Paris Fair, built around the peacetime uses of atomic energy, did much to nullify Communist propaganda that we were harvesting this power only as a destructive force. Norman K. Winston, prominent building and housing specialist, who was New York's high commissioner to the Paris Fair, said our exhibit made many friends for America because it proved that we were willing to share our know-how to raise the world's productivity and better living standards for all peoples.

Mr. Winston also visited the Poznan Fair and found the Poles favorably impressed by our exhibits.

At the Brussels World's Fair opening next spring, we have another effective opportunity to display the benefits of the American way of life in contrast to Communist dictatorship. But we may miss the boat unless Congress provides the minimum necessary to put on a good show. The Russians are spending $50 million to $60 million on their exhibit but the United States planners feel we can do a good job for the $15 million specified as a minimum budget.

Howard S. Cullman, United States Commissioner General to the Brussels Fair, has announced he will fight against any short-sighted moves which might hamstring a good chance to do a valuable public-relations job for this country. We agree with Mr. Cullman that we should not put up a second-rate show in competition with the Russians.

Freight Rates in the Pacific Northwest

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 15, 1957

Mr. NEUBERGER. Mr. President, because the Pacific Northwest is more remotely located from major consumers' markets than any other region in the United States, any increase or reclassification of railroad freight rates is of major importance and significance to the economic life of our area. For that reason, I should like to call to the attention of my colleagues a thoughtful and informative editorial entitled "At Railroads' Mercy," which was published in the August 11, 1957, issue of the Oregonian, of Portland, Oreg. I join with the editors of the Oregonian in searchingly questioning the wisdom of the policy of the Interstate Commerce Commission in granting such major freight increases to the carriers, at a time when the Government is so eager to hold down inflation that the administration cannot even favor pay increases which will provide normal living standards for the families of our postal employees.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT RAILROADS' MERCY

Last week's authorization by the Interstate Commerce Commission of another railroad freight increase, the 13th since the end of World War II and the second in a little more than half a year, is dangerously inflationary for the country as a whole and puts the West at a greater disadvantage than ever in its attempt to compete in the national market.

The authorized increases since last December total 14 percent in the East, 12 percent in the West and 9 percent in the South. Southern railroads had not asked for as large a boost, 15 percent as against 22 percent requested by eastern and western carriers. The more advantageous rates in the South will attract to gulf ports Asiatic shipments which naturally should go through Pacific coast ports.

One might properly ask whether the southern roads are more interested in developing their part of the country than are the western roads, whose constant percentage rate increases push this part of the country farther out of the picture.

The West is at the mercy of the railroads. Although the Panama canal was built at great cost to facilitate intercoastal as well as foreign water shipping, it is largely unused for transporting western products to eastern markets. This is due principally to the high costs of handling water cargo, but the railroads themselves have acted to throttle this competition. The rate increases they obtain so frequenly are permissive, not mandatory. They can, and do, cut rates, as well as increase them.

Take canned fresh fruits and vegetables, for instance, which are one of the Pacific Northwest's principal products sold in the East. About 6 months ago, intercoastal steamship lines had a considerable part of this business. Then the railroads cut their rates drastically and made the further concession of permitting 3 stops in transit so that part of a carload could be delivered at 3 separate points. This was a convenience that the steamship lines could not meet.

Also, while asking for rate increases on commodities generally, the railroads have filed decreased tariffs on fresh meats and packinghouse products from the Middle West to the west coast. This, they contend, is necessary to meet truck competition.

The railroads didn't get nearly as much as they asked from the ICC. They have indicated that they will ask again for a rate boost to give them what they contend they need to make a fair return on their investments. Motor carriers will follow the railroad pattern in seeking higher rates, which pyramid frighteningly as products are handled time and time again.

How come the ICC, a Government agency, gave inflation such a shot in the arm, when Government leaders are urging that every one hold down inflationary demands? It could do little else, as railroads are entitled to a fair return by the laws under which the ICC operates. The carriers made a showing of increased costs of labor and supplies.

What then can be done to stop the rapidly spinning spiral? The ultimate answer may be Government controls similar to those of wartime.

Airways Must Be Made Safer

EXTENSION OF REMARKS

OF

HON. HARRY G. HASKELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 15, 1957

Mr. HASKELL. Mr. Speaker, the gentleman from Ohio [Mr. Bow] yesterday inserted a speech in the RECORD which attempted to justify the serious cuts in our air-safety program recommended by the Appropriations Committee, of which he is a member, and approved by the Congress this year. The gentleman's speech attacked remarks which I made on this subject on August 1, 2 weeks ago.

The speech made by the gentleman from Ohio [Mr. Bow] contains several factual errors and his conclusions that our air-safety program has not been hurt by congressional reductions in radar and other essential control equipment requested by the Civil Aeronautics Administration are so out of line with the facts that it is necessary for me to comment further today.

One of the main points of the gentleman's speech is that I have charged that our airways are unsafe. I have never said that because it is a generalization that I am not competent to make.

I do say that our airways are not nearly safe enough; that we must make them safer at once or we run the risk of a series of air tragedies as our air traffic increases in both volume and speed; and that we are avoiding disastrous tragedies right now only through the skills of extremely competent, dedicated traffic-control personnel in the CAA, and experienced, quick-thinking pilots who are working under unbelievably difficult conditions.

These convictions of mine are based on the following facts, many of which have been unknown by the general public and by Congress until this year. I believe these facts show clearly the seriousness of the air safety problem we face.

First. It is a fact that almost 10,000 people were aboard just half of the aircraft involved in these 783 near-collisions reported by pilots between all types of aircraft in the 7 months from September 1956 through March 1957.

Second. It is a fact that there were three hair-raising near-collisions during July involving 163 persons aboard three commercial airliners. In each incident passengers were seriously injured by the violence of the evasive action taken to avoid a crash.

Third. It is a fact that every Government official in a responsible position recognizes the seriousness of this situation and believes that our air traffic problems must be solved with all possible speed.

Fourth. It is a fact that the Civil Aeronautics Administration has presented to Congress a well-designed Federal Airway Plan specifying the minimum equipment that they must have to handle the Nation's mushrooming air traffic. In each of the past 2 years there have been congressional cuts in this program which can only be classified as serious and damaging to our air safety program.

Therefore, I feel that it is necessary to take up point by point the speech made by the gentleman from Ohio yesterday.

First, the gentleman from Ohio has made a mistake in how much money has been cut from the CAA's budget. He states that the CAA budget was cut by $45,229,475, when actually the budget was finally cut by $53,730,475, a difference of $8,501,000.

Actually his own committee voted to cut the budget by $82,224,340, and if action on the part of the House and the Senate as a whole had not taken place afterward, the budget would not have survived as it did.

Second, the gentleman from Ohio said the Appropriations Subcommittee believes "the assurance of maximum safety in flight must be the primary consideration of Congress under this program"—the CAA's program.

These commendable words have not been followed when the actual appropriations were decided. The Appropriations Committee this year cut the CAA's long-range radar program by 52 percent. These radar units, which number 11, were designed to help provide safety for planes flying between two airports, were denied by Congress. In the areas which would have been covered by these units, there were 105 near-collisions reported by pilots in a 7-month period.

The Congress refused to provide money for airport surveillance radar units at 8 cities out of 23 requested. It is interesting to note that all 23 units were denied in the 1957 appropriations, requested last year. This 35-percent reduction in air-safety equipment means that eight American cities—Detroit, Mich.; Greenville, S. C.; Harrisburg, Pa.; Mobile, Ala.; Providence, R. I.; Richmond, Va.; Roanoke, Va.; and Tulsak, Okla.—will have to wait another year to improve their air-traffic situation.

These deep cuts can hardly be used to support a claim that the Congress has provided for maximum air safety.

Third, the gentleman from Ohio inferred that because the CAA has "sizable balances of unobligated and unexpended" funds, that the CAA can't use any more money.

The gentleman knows full well as a member of the Appropriations Committee that these unobligated funds are earmarked for installation of radar and other air-safety equipment which cannot be used until previously ordered equipment is delivered. And to any businessman it would seem poor budgeting not to set aside funds, called in Government, unobligated funds to be able to install equipment to be delivered.

To repeat, the radar units which were purchased last year for delivery this year have to be installed before they can be used. That is what probably 90 percent of these unobligated funds are for.

Fourth, the gentleman from Ohio used a statement out of context from the 1957 budget hearings to indicate that the CAA could not use any more money.

Not only does this statement refer to last year's budget but it also completely ignores the fact that, when the late Mr. Lowen, Administrator of the CAA last year, said he had requested all the money he needed, the fact is Mr. Lowen, whose diligent efforts brought about the present Federal airways plan, was new in his job and he soon came back to the Congress for additional funds of $54 million in order to speed up this badly needed airways program. Incidentally, that request was cut by 35 percent.

Fifth, the gentleman from Ohio cannot shift the blame, in the minds of the public, from the Congress to the CAA for denying 11 long-range radar units at certain specific locations in the country.

Of course, the locations of this radar equipment are determined by the CAA, but the gentleman from Ohio knows that Congress and Congress alone denied these 11 radar units. If it had not been these 11 locations determined on a priority basis, previously identified in

my speech of August 1, it would have been 11 other cities.

Sixth, the gentleman from Ohio said that increased appropriations will not permit the CAA to control additional airspace all over the country, and cites the Grand Canyon crash as an example of an incident that could not have been pervented.

The fact is that the CAA has been provided appropriations which will enable them to control all airspace in the country over 15,000 feet.

We, of course, will never prevent all near collisions and accidents. However, what I have been urging is more and better equipment right now so that we can materially reduce these near collisions.

Seventh, the gentleman from Ohio said he emphatically and categorically denies that budget cuts made by the Congress have hurt our air-safety program. I say emphatically and categorically that our air-safety program has been hurt by these reductions.

The Nation's air-safety program is and must be planned by the CAA, the experts in this field. When the long-range radar budget is cut 52 percent, the airport-radar program cut 35 percent, and the overall budget cut 12 percent, it means clearly that our air-safety program has been hurt, and hurt seriously.

Eighth, the gentleman said he has the utmost confidence in James Pyle, the Administrator of CAA. I share this view completely. I believe that Jimmy Pyle and his associates are doing everything they can to provide safer and more efficient air-traffic control. But they can only work with the tools Congress gives them.

Ninth, the gentleman from Ohio said that I did not express my views before his committee, and that I did not offer amendments to increase the appropriations for the CAA.

That is correct. When this budget was discussed and acted upon, I had been in Congress only a few months. I, and I am sure many other Members of this body, must lean heavily on the recommendations of the Appropriations Committee. As our study began to reveal additional facts in respect to the cuts administered by the Appropriations Committee we became increasingly alarmed at the possible damage to our air-safety program.

As soon as these were collated, I presented them to the Members of the House. Apparently, a number of other Members and the public at large were equally in the dark, judging from the many dozens of telephone calls requesting information which came to me after my speech of August 1.

Tenth, the gentleman from Ohio said, "charges are now made that our airways are unsafe." As I said before, this charge was never made. The point was made that our airways need to be much safer than they are, and that is what I think must be accomplished.

The objectives of the gentleman from Ohio and mine are identical, and as a matter of fact the Appropriations Committee has seen fit to give the CAA a substantial budget increase. However, in my belief, they simply have not gone far enough to get the very necessary job done.

I have confidence in the future that the Appropriations Committee and the Congress as a whole working toward these same objectives will be successful in providing safe air travel for the people of this country. A great step toward these objectives has been taken by the signing into law yesterday of the new Airways Modernization Board.

Minshall Will Again Bring Traveling Office to District

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MINSHALL. Mr. Speaker, it is my privilege and honor to represent the people of the 23d Congressional District of Ohio in the Congress of the United States. As the Representative of this outstanding district, I have at all times considered it my duty to render the best possible service.

In addition to my Washington office, I maintain on a year-round basis a congressional office at room 525 of the Federal Building in downtown Cleveland where I can meet with people personally at any time during trips back to the district when my official duties permit. During the time I am in Washington attending to legislative and official duties, a competent staff is in charge of the Cleveland office.

In 1955, I initiated the idea of bringing a traveling office to the various suburban communities in the 23d District. Similar meetings were held the following year. They have been tremendously popular, and it gives me a wonderful opportunity to learn at first hand the opinions and individual needs of the people.

With the understanding that Congress will not be in session during the early part of December, I will again this year from December 2 through December 13 follow the same procedure and have a series of conference meetings so that every resident of this suburban district can conveniently meet with me. These are not group meetings but office conferences for the individual. No appointments are necessary, and I urge individuals to meet with me on the date and at the place that is most convenient. Every resident of the 23d District is cordially invited to talk over problems of national concern, to discuss personal problems they might have with the Federal Government, or to just chat and get better acquainted. The knowledge thus obtained, will better enable me to represent the residents of the 23d District in the Congress of the United States.

This is the schedule, time 6:30 to 9:30 p. m.:

December 2, 1957: Bedford, Bedford Police Station, 683 Broadway.

December 3, 1957: Brecksville, Brecksville Town Hall, 49 Public Square.

December 4, 1957: Bay Village, Bay Village Town Hall, 350 Dover Center Road.

December 5, 1957: Warrensville Heights, Warrensville Heights Village Hall, mayor's office, 4770 Warrensville Center Road.

December 6, 1957: North Olmsted, North Olmsted City Hall, mayor's office, Dover Center Road.

December 9, 1957: Lakewood, Lakewood City Hall, mayor's office, 14532 Lake Avenue.

December 10, 1957: Rocky River: Rocky River City Hall, 21012 Hilliard Road.

December 11, 1957: Solon: Solon Village Hall, Council Chambers, 6315 S. O. M. Center Road.

December 12, 1957: Berea: Berea City Hall, mayor's office, 47 East Bridge Street.

December 13, 1957: Shaker Heights, Shaker Heights City Hall, mayor's office, 3400 Lee Road.

I am most appreciative of the fine cooperation of the many officials who have made these meeting places available as an aid in rendering this public service.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Employment in Professions and Industries

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address made by William P. McCahill, executive secretary of the President's Committee on Employment of the Physically Handicapped, before the sectional meeting of the seventh world congress of the International Society for the Welfare of Cripples, held in London, England, July 24, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EMPLOYMENT IN PROFESSIONS AND INDUSTRIES

(Remarks by Mr. William P. McCahill, Executive Secretary, the President's Committee on Employment of the Physically Handicapped, United States of America, before the sectional meeting of the Seventh World Congress of the International Society for the Welfare of Cripples, London, England, July 24, 1957)

Most people who discuss employment of the handicapped with a person considering the subject for the first time are asked: "What kind of jobs can the handicapped do best?" During the past 10 years, the answer of the President's Committee on Employment of the Physically Handicapped has always been the same. Instead of trying to cite chapter and verse of accomplishments, we have emphasized that "there is no job that some handicapped person cannot do."

And, the voters of America have agreed with this thesis, for 2 of our last 3 Presidents have conquered dramatic physical disability and proved their competence in what we think is one of the most demanding jobs in the world today.

Consequently, the title assigned for my short quarter hour today posed for me the difficult question of where to start and what to cover. In my difficulty, I called upon our associates in the Employment Service, the Veterans' Administration, the Office of Vocational Rehabilitation, and the Civil Service Commission, the major branches of the United States Government concerned with employment of the handicapped. I also requested material from some friends outside of Government and was told by one that so much was available that I should visit his library in New York and select my own reference material. This last bit of advice, I quickly discarded because I already had a 4-inch stack of background material plus three bound volumes of our monthly magazine, Performance, the Story of the Handicapped, which for 7 years has been recording dramatic stories of dynamic people who have proven that disability is no drawback in the professions and industries. I shall share with you then, the highlights of several inches of printed or duplicated material and the impressions gained during the last 10 years as I traveled from coast to coast and border to border as the senior staff officer of the President's Committee.

Shortly before leaving Washington for London, we released a new bibliography on employment of the handicapped. This will be available to organizations represented at this Congress and will provide a rather complete postscript to these remarks.

Now, to the subject. Semantics being a rather inexact science, with the same word meaning different things to different people, I shall define "professions" and "industries" as I shall use them. This way, although everyone may not agree with my definitions, my remarks should be considered within this framework of reference. The "professions," then will be the groups for which advanced schooling and a college degree are usually necessary. To satisfy any purists in the crowd, I'll fire and fall back upon table 8 of the Office of Vocational Rehabilitation fiscal year 1956 preliminary report which lists some 22 employment areas plus one labeled "Other."

The "industries" will be the groups which normally are labeled "Manufacturing" in my country and which make up approximately 23 percent of nonagricultural jobs in the United States today. I have selected this somewhat limited field because it is one in which considerable research has been done. I also happen to know more about it since it has been my good fortune to have visited dozens of our large manufacturing plants during the past decade where I could observe large numbers of the handicapped at work.

Certainly since World War II, we have never considered disability as any bar to advancement in industry and the professions. As we put several million Americans into uniform a rather substantial "army" of the handicapped took over essential chores on our industrial front. And, as many of our veterans returned home with severe disabilities, we found that we had an almost astonishing number of young men and women setting their sights on the professions. The postwar rehabilitation graduates, both veteran and nonveteran, generally have moved into the professions and skilled industries in a much higher proportion than a similar number of nonhandicapped selected at random from the general population.

This, of course, didn't just happen. It was partly the result of good experiences with the handicapped during the later war years, including the special contribution of seriously impaired persons in our Manhattan project. And, it was also partly the result of top-level thinking in enlightened management which generally went out of its way to assure the returning disabled veteran his old job back or one more in keeping with new service-acquired skills or vocational rehabilitation training. This initial patriotic motive quickly proved to be such good business and employers were so well pleased with performance that the civilian handicapped also found more and more doors open to them in the professions and industries. This also provided the President's Committee with its two slogans which we are always repeating, "It's good business to hire the handicapped" and "Ability counts, not disability."

These slogans were not coined on Madison Avenue in New York City where so many of our advertising ideas are born, but in the shops and laboratories of our industries and professions. The monumental work by our Bureau of Labor Statistics, "The Performance of Physically Impaired Workers in Manufacturing Industry," which was prepared for our Veterans' Administration during the tenure of Gen. Omar Bradley has been the beacon light and basic reference work in this field since its issuance in 1948. It was this survey, conducted in 16 States and in 19 of the 20 industries recognized by our standard industrial classification which generally credits the handicapped with equal or better work performance in the vital areas of mobility, quality, lack of absenteeism, safety, output and quit rate. Some 11,000 impaired workers were compared with some 18,000 so-called able-bodied person in this survey.

Subsequently, surveys of the Chamber of Commerce of the United States and the National Association of Manufacturers gave the handicapped in industry a strong vote of confidence for performance on the job. The Atomic Energy Commission also conducted a study at Oak Ridge which again proved the handicapped could hold their own in competition with the nonhandicapped when properly placed on the right job.

As a matter of actual fact in American industry today, it is becoming increasingly more difficult to identify the handicapped in the work force. Many corporation executives tell us they have no way of estimating the percentage of handicapped in their work force because once the worker is satisfactorily on the job he ceases to be handicapped in an employment sense. The same thing, incidentally, is true in the Federal Government. The United States Civil Service Commission can proudly tell you that since 1942 they have made 138,000 placements of severely handicapped employees, many in the professions and industries. But they can't tell you how many handicapped are on their rolls on any given day this month because once the handicapped satisfy medical and job requirements, they are no longer handicapped on the job.

One final reference on industries, a quote from the National Association of Manufacturers' policy statement adopted by its board in 1952:

"Employers know from experience that the handicapped individual when matched to the requirements of the job, is no longer handicapped."

Now, let's take a look at the professions side of the ledger. Of the more than 66,000 persons rehabilitated into jobs by the Office of Vocational Rehabilitation last year there were 3,500 persons who went into short-supply professional fields such as engineering, medicine, and education. An additional 1,600 found jobs in semiprofessional occupations in addition to the 22 professional groups I mentioned earlier. The largest group were teachers, some 1,300 of various specialties. There were 426 accountants and auditors, 274 engineers, 185 trained nurses, 139 clergymen, and 136 musicians.

The above figures are just the smallest sampling and, of course, we have no figures at all on handicapped persons who went into professions without any Government assistance, either in training or finding jobs. We know there are a large number of them because we see them every day in our hospitals, schools, and courts, at meetings of professional and learned societies, and in the active file of our public employment service.

Having mentioned statistics of the Office of Vocational Rehabilitation, I should share with you some very interesting results of the Veterans' Administration program for disabled veterans. Of some 600,000 World War II veterans who accepted vocational rehabilitation services, 21 percent selected professional-job objectives and 7 percent semiprofessional. Of 44,531 disabled veterans of Korea, 29 percent went into the professions and 8 percent into semiprofessional occupations. The percentage of professional workers in our country is nowhere near this high, absolute proof not only that the disabled can enter the professions, but also of the value of training.

I'd like to condense two Veterans' Administration studies into as many sentences. A study of 388 totally blinded veterans of World War II and Korea showed that 38 percent were now working in professional, technical and managerial jobs. A study of 466 paraplegic veterans revealed that 47 percent were successfully engaged in professional work, including managerial. Both these studies, the first of a series, emphasized that the blind and the paraplegic veteran have moved into many employment areas successfully which previously were thought closed to them.

In summation, I should like to point out that the President's Committee has selected a "Handicapped Man of the Year" each year for the past 6 years from State governors' committee nominations of outstanding persons who have triumphed over disability. The six include a manufacturing chemist, an electronics manufacturing executive, a circuit court judge, an advertising executive, a physician and an insurance executive. Four were in wheel chairs, the judge was blind and the chemist was an amputee. These men certainly have proved by their lives that the professions in America welcome the qualified handicapped worker. The two manufacturers, incidentally, employ large numbers of handicapped persons in manufacturing industry, doing some of the most intricate work imaginable. This story provides a happy blending of the manufacturing with the professional and indicates that where qualified handicapped workers enter the professions they frequently move into policy positions where they are able to increase employment opportunities for skilled and semiskilled workers.

However, we have much to do in the years ahead to hold our gains and to increase opportunities for those who have as yet been unable to enter the professions and industries. We shall continue our informational and promotional efforts to change the attitudes of the many employers and workers who are not yet willing to accept the handicapped on a basis of equality.

The success of the past shall serve as the key to the future as we work toward the day when the handicapped the world over shall be limited only by their own talents, a day when all professions and all industries will be open to the handicapped all over the world.

Dr. Raymond R. Paty

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. HILL. Mr. President, an editorial in the Birmingham (Ala.) News of August 9, 1957, pays a very beautiful and richly deserved tribute to our late friend and former member of the Board of the Tennessee Valley Authority. Dr. Raymond Ross Paty.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAYMOND ROSS PATY

Dr. Raymond R. Paty came to Birmingham in 1938 from Emory University in Atlanta. He was recognized from the first by this community as an erudite, courteous gentleman and he quickly instilled in students under him at Birmingham-Southern College a feeling of respect for learning.

He came to that presidency on the heels of Dr. Guy E. Snavely. The challenge, of course, was immense, and Dr. Paty met it, and well. Later he was offered the presidency of the University of Alabama. Leaving Southern with regret, he undertook the big job at the university. Later his talents as an administrator having shown so brilliantly, he was asked to become chancellor of the university system of Georgia.

In that capacity he served equally brilliantly, though he later was to try new fields.

At the time of his death, Dr. Paty was a director of the Tennessee Valley Authority. As such, he faced up to considerable challenge. Some, we know, disagreed with his degree of belief in the necessities of expansion for TVA. But no one could have said, no one did say, that he was not totally sincere in his pursuit of the TVA objectives. In that Government post, he served as he had served everywhere else, with maximum devotion.

Dr. Paty was a remarkable man. He was vitally alive, keen, inspiring to the younger and a challenging man among his peers. He had a joviality which glinted through with a peppery quality. Quiet and dignified, he was a figure to inspire work, to create a feeling of well-being among those with whom he associated. This was of great value to all who knew him.

We have always felt it was Alabama's considerable loss that Dr. Paty did not stay longer with us. Now that he has gone, we feel a keen sense of loss, a bitter regret that he was not spared to pursue longer his devoted interest in human beings and their welfare. Such a man is rare. Birmingham should feel proud, Alabama should feel proud to have had him with us as long as we did.

The Scope, Purpose, and Activities of the Fine Arts Committee of the People-to-People Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. WILEY. Mr. President, I have been pleased to receive from the Honorable David E. Finley, chairman of the Commission of Fine Arts and former director of the National Gallery of Art, a memorandum describing the work of the Fine Arts Committee of the people-to-people program.

Mr. Finley is, appropriately enough, chairman of this People-to-People Committee. Its aim is to fulfill President Eisenhower's splendid concept of acquainting the people of the world with the very best which we of this country have to offer—in this instance, our artistic achievements.

I ask unanimous consent that this memorandum be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

STATEMENT ON SCOPE, PURPOSE AND ACTIVITIES OF THE FINE ARTS COMMITTEE OF THE PEOPLE-TO-PEOPLE PROGRAM BY DAVID E. FINLEY, CHAIRMAN, FINE ARTS COMMITTEE, AUGUST 14, 1957

In September 1956 President Eisenhower called a White House conference in Washington, designed to promote contacts and activities among individuals and nongovernmental organizations in this and other countries and in this way to promote mutual understanding and friendship among the people of the world. On February 18, 1957, a Fine Arts Committee was organized in response to President Eisenhower's request that private individuals and organizations in this country should increase their efforts to make American achievements in the fine arts better known abroad, and to bring to this country a greater knowledge of what is being done in this field in other countries. The scope of the Fine Arts Committee includes painting, sculpture, prints, drawings and architecture, but not music, which is represented by another committee.

The chairman of the Fine Arts Committee is David E. Finley, chairman of the Commission of Fine Arts and former Director of the National Gallery of Art who was asked by President Eisenhower to organize the committee and to serve as Chairman. A group of some of the most distinguished leaders in the American art world met in Washington to organize the committee and to outline a program of activities which would be effective in achieving the purposes of the committee. Dr. Leonard Carmichael, Secretary of the Smithsonian Institution, was elected Vice Chairman; C. F. Jacobsen, president of the National Metropolitan Bank of Washington, was elected treasurer; and Oscar Cox of Washington is general counsel. Thomas W. Leavitt was appointed executive director, and headquarters of the committee were established in the Corcoran Gallery of Art, Washington, through the courtesy of the gallery trustees and its director, Hermann W. Williams, a member of the Fine Arts Committee. The officers and chairmen of the various subcommittees constitute the executive committee.

The general purpose of the program, as adopted by the committee, is to make it possible for people in other countries to learn about our artistic achievements largely through their own art historians, museum directors and curators; university professors and teachers in schools; and through books and articles about American art published in their own journals and in their own languages. In order to do this we must make available to foreign museums, libraries, institutions of learning, journals and publishers, source material on American art, such as has long been available in the United States for the study of the art of other countries. The committee hopes to make permanent deposits in other countries throughout the world of color slides, photographs, film strips and color reproductions of works of art in this country, particularly by American artists. A start has already been made on this program by the gift of such material to a university in the Far East which has requested such material. The committee hopes by loan exhibitions, by exchange of lecturers, by publication of articles and books about American art, and by gifts of American paintings, sculpture and prints for the permanent decoration of our Em-

...ssies abroad, to make it possible for our ...t to become better known in other coun...es. This program is getting under way as ...nds from private sources become available. ...r. Frederick Gutheim, architect member of ...e committee, has arranged for the showing ... Edinburgh and certain cities in England ... the exhibition One Hundred Years of ...nerican Architecture, and other exhibitions ...e being planned.

Texans Pay Tribute to a Great Statesman

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. YARBOROUGH. Mr. President, ...e late Senator Walter F. George was a ...eat American statesman, and his con...tributions to this Nation have been rec...nized by people in every part of the ...untry.

The people and the news journals of ...y State of Texas have praised his ...tesmanship and mourned his pass...g. One of the finest tributes was paid ... the Austin American-Statesman of ...gust 11.

I ask unanimous consent that the trib...e in this great newspaper be printed ... the Appendix of the RECORD.

There being no objection, the article ...s ordered to be printed in the RECORD, ... follows:

STATESMAN

The late Senator Walter George was the ...nd of lawmaker who makes the American ...islative system workable and effective.

Inevitably, that system depends heavily ...on a relatively few men of character and ...elligence. This handful soberly guides ...e Congress on a generally sane course, ...ps it to balance or cancel its errors, keeps ...moving toward objectives despite its great ...herent inertia.

For many years George headed the im...rtant Senate Finance Committee which ...mes the Nation's tax laws. In this post ... was a stalwart guardian of governmental ...al responsibility.

Basically a conservative, his opposition in ... mid-1930's to some of Franklin D. Roose...lt's policies led the latter to attempt to ...rge George at the polls in 1938. The effort ...led and George continued a Senate career ...t lasted 34 years.

Despite FDR's action, George led the late ...sident's campaign to gain congressional ...roval of the vital wartime lend-lease pro...m through which we aided our allies.

Later in life, the Senator turned his in...rest to foreign affairs and took the leader...p of the Senate Foreign Relations Com...ttee.

...s chairman he was a strong advocate of ...partisanship in foreign policy. His per...al pronouncements often had important ...ct both at the White House and in for...n capitals.

When he decided in 1956 not to run again, ...sident Eisenhower gave recognition to his ...hievements in this field by making him ... special Ambassador to NATO.

Though for long years he was less in the ...blic eye, Senator George had the kind of ...cerity and intellectual honesty that ...rked the legislative career of the late Sen...r Taft, of Ohio. In consequence he was ...ld in high esteem by members of both ...rties.

George never shied from bearing the heaviest burdens a legislator could assume. In performing so wonderfully well the difficult tasks he undertook on behalf of the American people, he earned their lasting respect and won for himself a place among the outstanding United States Senators of the Nation.

Statement on Commission on Increased Industrial Use of Agricultural Products and New Uses Developed for Surplus Agricultural Commodities

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The Soil Bank Act of 1956 established a bipartisan Commission on Increased Industrial Use of Agricultural Products. The five members of the Commission were appointed by President Eisenhower and confirmed by the Senate. The duty of the Commission, as prescribed by Congress, was "to prepare and present to the Congress, not later than June 15, 1957, the necessary recommendations which in its opinion would bring about the greatest practical use for industrial purposes of agricultural products not needed for human or animal consumption, including, but not limited to, use in the manufacture of rubber, industrial alcohol, motor fuels, plastics, and other products."

The members of the Commission were Mr. J. Leroy Welsh, of Omaha, grain dealer, and nationally known farm chemurgist, who was Chairman; Dr. Karl Butler, farm counselor for the Avco Corp.; Mr. George Coppers, president of the National Biscuit Co.; Dr. Charles R. Sayre, president of the Delta and Pine Land Plantation; and Dr. Frank Welch, dean of the Kentucky College of Agriculture. Mr. Wheeler McMillen, vice president of the Farm Journal, and nationally known agriculturalist, was Executive Director of the Commission. These able, openminded, and devoted men were engaged vigorously for almost a year in fulfilling their assignment. The Commission was aided in their endeavors by Dr. G. E. Hilbert, their Research Director, and Dr. S. R. Hoover, Assistant Research Director, who were loaned to the Commission by the United States Department of Agriculture.

Since their appointment in July 1956 the Commission held more than 20 meetings. They met with and sought the advice and counsel of President Eisenhower, Members of Congress, top Government officials in the Departments of Agriculture, Commerce, and Defense, and representatives of farmer organizations, land-grand colleges, and agricultural processing industries.

In its assignment, the Commission was interested in obtaining information on: incentives that would encourage industry to undertake more research and developmental work in the field of agricultural products, developments that are worthy of trial commercialization—that is, developments which need to be translater from a laboratory to a commercial scale, and on areas of research that need to be attacked to develop new industrial outlets for the products of agriculture.

In November 1946, 16 task groups were set up by the Commission to develop and appraise ideas for the Commission to consider. These groups were organized to bring together leading technical and industrial representatives in various fields. Some of the task groups were built around commodities, such as cotton, hides and skins, wool and mohair, dairy products, poultry products, white potatoes, and others. Three distinct groups were concerned with different industrial phases of grain consumption: one was confined to the wet milling of corn and sorghum from which starch and corn sugar are the basic products; another worked upon industrial uses for grain other than alcohol, and a third dealt with the various uses for industrial alcohol from grain.

A task group on new crops was set up also. This task group gave consideration to the development of new crops which would be noncompetitive with crops already being produced in this country and which could be grown on acres taken out of production to reduce the size of the surplus problem. Castor bean, safflower seed and timber bamboo have great promise as replacement crops.

The Commission found that in every industry which uses or may use farm products there were men willing to put their services, knowledge, and judgment at the service of the Commission, and to give freely of their time to serve on the task groups. Obviously, the men qualified for these services were busy men, but they were ready to contribute their inconspicuous and unpaid service.

The reports of these task groups were studied and appraised by the members of the Commission and its staff and were used as the basis for developing their recommendations and in preparing their report to Congress.

The final report of the Commission was submitted to Congress on June 15, 1957, on which date the Commission expired.

In its deliberations, the Commission was concerned with the question: Can the economy develop profitable industrial markets capable of absorbing enough of the excess farm production to minimize, possibly even to eliminate, the need for costly restrictions, supports, and surplus-disposing operations?

The Commission believed the answer to be an emphatic "yes," provided the necessary steps are taken to make possible and encourage such a development. To effect this, there are four main needs:

The first is a sufficiently sharp sense—lacking so far—of the importance, the possibilities, and the urgency of the industrial utilization approach to farm surplus problems.

The second need is a greatly expanded program of fundamental, applied and pilot-plant research—physical, chemical, biological, economic—to learn far more about the nature of agricultural raw materials and to determine what existing or new industrial products and processes might profitably use them.

The third need is to insure, through fellowships, scholarships, grants, and other means, that much more scientific talent is trained for and channeled into this neglected field of farm-product research and development than it has engaged so far.

The fourth need is to provide in certain cases, suitable financial incentives during a temporary trial or development period—for example, new products or processes that are expensive to launch or that seem less promising than alternative uses of risk capital, or that might lead to especially rapid disposal of surpluses.

The Commission believed that the initial step in launching such a program is sound legislative action by Congress.

The Commission's report outlined 106 broad fields of research and development, including hundreds of product uses, that seemed to promise fruitful results.

Following the instructions of Congress, the Commission drew up specific recommendations for achieving the objectives it proposed.

Seven of the 10 recommendations deal with participation by many public and private institutions in an effective research network; fostering basic research; grants, fellowships, and scholarships to increase the supply of scientists; Government industry sharing of research costs; research and development work with new crops; commercial-scale trials of new products; economic incentives.

The other three recommendations are concerned with financing and administration. The amount now available for industrial utilization research in the United States Department of Agriculture is $16,145,000. The Commission recommended that this be increased at least threefold, with additional sums for new crops, development and trial commercialization and incentives.

It also recommended that in lieu of direct appropriations, 15 percent of the annual gross receipts from customs revenues be allotted for the industrial utilization program. This would be in addition to the 30 percent from the same source now available to the Secretary of Agriculture, under Public Law 320, for other designated purposes.

For the administration of the program, there are two alternative recommendations:

The first, to establish a five-member nonpartisan Agricultural Research and Industrial Board to be appointed by the President with the advice and consent of the Senate; and

The second, to place the responsibility for the program in the Department of Agriculture, under a director with the title of Assistant Secretary of Agriculture who would be in charge of research and education within the Department and would coordinate all agricultural research in the Federal Government.

In proposing this pattern of procedures, the Commission had in mind the need to achieve effective results as promptly as possible, to maintain and expand the excellent research operations of the Department of Agriculture and the land-grant colleges and experiment stations, to make effective use of the talent and facilities of other institutions, and to add as little as possible to the structure of government.

The Commission believed that the expanded program of utilization research and development which it proposed would enable agriculture to do what industry, with its bigger, better integrated units, and larger resources of money and men, has long been doing.

The Commission was convinced that this approach would be productive in view of the excellent results which have already been obtained in the Department with its limited funds in this field of research on utilization of agricultural commodities.

Much of the research work of the four regional research laboratories of the United States Department of Agriculture has resulted in the development of new and extended uses for agricultural surpluses. These contributions are of two types: (1) Dealing with seasonal surpluses of perishable commodities, and (2) concerning annual surpluses of stable commodities.

Most of the research on perishable commodities has been directed toward the development of methods for converting them to a stable, palatable, convenient-to-use form so that they are preserved and available throughout the year. This conversion to a year-round product tends to stabilize the price of these commodities. Foods in a convenient-to-use form provide an incentive for the housewife to purchase them.

Pioneering investigations to improve quality and lower processing costs on frozen foods has played an important part in the genesis and growth of the great frozen food industry, particularly that in the Pacific Northwest. Many contributions have been made in solving the new problems that were arising continually from the enormous growth and diversification of this industry which has become a major channel for utilization of many of our food commodities.

Not only the frozen food industry of the Northwest, but also the entire industry has acknowledged on many occasions, the debt it owes to the scientists and technologists of the Department of Agriculture. These men tackled problems that were entirely beyond the powers of the industry, found the answers, and by precept and example, showed the industry how to meet them.

Another important contribution made in this field is on the development of frozen concentrated orange juice. The Department, in cooperation with the Florida Citrus Commission, developed this basic process. The patent covering this process was dedicated to the Secretary of Agriculture for use by industry on a royalty-free basis.

The citrus processing industry had the vision to follow through vigorously on this development. This industry has mushroomed at an enormous rate. At the present time, no less than 50 percent of all Florida oranges produced are converted into frozen concentrated juice.

This development has stimulated the production of other frozen concentrated fruit juices. Some of these are frozen concentrated lemon, lime, tangerine, grapefruit, grape, and apple juices. Of these, frozen lemonade concentrate has been particularly well received, and its production has increased markedly in the past few years. It has had a helpful stabilizing effect on industry.

Fruit and vegetable juices also can be converted into another stable, palatable, convenient-to-use form, and that is as powders. The Department has developed a process which yields powders which have the full flavor of the original raw product. Orange, lemon, grapefruit, apple, prune, grape, and tomato powders now can be made. Due to the excellent storage stability, these powdered juices can be stored on the kitchen shelf with other staples and can be reconstituted quickly by the addition of water, even ice water.

A great deal of commercial interest has arisen in fruit and tomato juice powders. A plant in Florida has been producing orange juice powder for a number of years. The construction of a plant for the production of tomato juice powder was completed some time ago and is now making preliminary commercial runs to produce tomato juice powder. This development has great promise and is expected to have a tremendous impact upon our fruit and vegetable industry.

The commercialization of potato granules, or instant potato, has moved ahead rapidly in the last 2 years. The knowledge the Department has developed in increasing the storage life of instant potato and in developing equipment for its production has been responsible for the success of this development. The instant potato now being produced can be converted quickly and conveniently into the mash form in the kitchen. The mashed potatoes are indistinguishable from the product made with fresh potatoes. Five companies which have adopted the findings of the Department are now producing this form of dehydrated potato. The domestic demand is so great that the industry has been having difficulty in supplying the market. This industry will continue to expand. The Department believes this development will do for the potato industry what frozen concentrated orange juice has done for the citrus industry.

Powdered eggs that can be stored and still be as palatable as fresh eggs is quite a recent development. All of us remember the dehydrated eggs that were available during World War II; they simply did not stand up in storage. Several years ago, the cause of the rapid development of off-flavors in dried eggs was discovered in the Department. Through appropriate processing and drying, this difficulty was overcome. Several companies are now producing this improved type of dried egg powder. It is being used by the Armed Forces and commercially, particularly in the manufacture of baking pre-mixes. The production of dried eggs has been averaging about 20 million pounds a year. This development is making a significant contribution toward stabilizing the egg industry.

Important contributions have also been made on storable surplus commodities.

Perhaps the most important, significant contribution made in the field of cotton in the development of new equipment for lowering the cost of processing cotton in textile mills. Before cotton can be processed, the matted or compacted masses of fiber in a bale must be opened and fluffed to enable more efficient removal of the foreign matter from the fiber. A new cotton opener which the Department developed several years ago does this better than any other. With this machine, more trash, but less spinnable fiber, is removed in the processing operation. Savings are estimated by industry to amount to 50 cents to $1 per bale of cotton processed. The textile industry has already put into use enough of these machines to process 2 million bales of cotton annually, and new machines are being installed at a rate to handle an additional 500,000 bales each year. The basic patents on this opener have been dedicated to the Secretary of Agriculture.

The Department has made other improvements on equipment used in the processing of cotton. A simple attachment to a loom has been developed which permits the weaving of abnormally dense cotton fabrics having resistance to the passage of water and wind. This loom attachment is being produced commercially by two manufacturers.

Entirely new fibers with new and improved properties have been prepared from cotton by chemical modification. One such new product is acetylated cotton. It has higher resistance to heat than cotton and most synthetic fibers, and is used in laundry press covers, and ironer roll covers in commercial laundries. Two firms are now manufacturing this next textile product.

One of the disadvantages of cotton fabrics has been the problem of soiling. An antisoiling treatment has been developed by the Department which involves the use of a simple and inexpensive compound in laundry rinse waters. This makes cotton goods harder to soil and easier to clean. Preparations of the antisoiling compound are being manufactured by at least five companies for use as antisoiling treatments for cotton both at home and in commercial laundries.

Because of the lack of uniformity in cotton fibers, it is necessary to have accurate methods of measuring their properties in order to determine their best end usage. A number of new instruments have been developed by the Department and are in use for these purposes. A new dye technique for distinguishing between immature and mature fibers has been of great help to the industry in pinpointing processing problems. The relationship between length and strength of cotton fibers and the spinning of more uniform yarns has been appraised accurately and summarized in convenient-to-use charts for textile mills.

All these developments help to reduce processing costs and improve the quality of cotton fabrics, thus placing the cotton textile industry in a better competitive position with respect to synthetic fibers and aiding the cotton producer by retaining the markets for his product.

The largest new use the Department has found for inedible fats is in the feed field. When the price of these fats dropped to 3½ cents a pound a few years ago, inedible fats actually were cheaper, on a calorie basis, than almost any other feed. Before they

ould be used in feeds, however, it was necesary to show that fats in feeds had value, nd that the fat could be stabilized suitable or such a purpose; this was shown by the Department. As a result of this research, he use of inedible fats in the feed industry xpanded rapidly. The present annual conumption of fats in feeds is now about 250 million pounds. This expanded use for fats as been responsible largely for the increase n price of inedible fats from 3½ to 7 cents a pound.

Other new markets for inedble fats have been developed in the chemical industry, in the plastics industry, and in the hot dip tinning of steels.

Basic research on the development of improved grades of oleic acid has been translated to a commercial scale. Basic methods for the modification of oils and fats have resulted in their use as plasticizers or as stabilizers in plastics. From the earliest days of hot-dip tinning, imported palm oil has been used for this purpose. The work done and confirmed by pilot plant and full mill scale operations demonstrated that modified inedible tallow and greases perform even better than palm oil.

During World War II, the Department developed a new resin from soybean oil. This has been produced on a commercial scale for more than 10 years. It is used for the heat sealing of glassine paper and other food packaging materials. Recently, a paint company showed that the use of this resin in paints leads to the production of a gelled paint. More than 30 companies are now using the resin to manufacture gelled paints.

About 60 million pounds of fats and oils are now being used by industry for these various new uses.

Much of the research work on corn and wheat concerned their use as a motor fuel. The Department obtained valuable information on lowering cost of the production of alcohol from grains. The work showed also that alcohol is an excellent motor fuel either as a blend or by direct injection into the motor. Alcohol-gasoline blends containing 10 to 25 percent alcohol can be used by engines of current model cars and tractors without loss in general performance, provided the fuel is properly blended. Alcohol has definite antiknock value and its wholesale fuel value in a 10-percent blend with gasoline is estimated to be about 14 cents per gallon. To produce alcohol competitive with gasoline, grain would have to sell at from 10 to 25 cents per bushel depending upon the size, location, and efficiency of the plant.

It is now known that there is no technical problem in producing power alcohol from grain, and no technical problem in using it as a liquid fuel. It is known, also, that the use of grains for the production of power alcohol literally would burn up any conceivable surplus we could have in this country. The key problem in this whole matter is the economic one.

Several new fermentation uses for corn which the Department has developed have been commercialized. A new outlet for corn is its fermentation to produce a feed rich in the vitamin riboflavin. A number of companies are using this process now. Approximately one-half of the current production of vitamin B_{12} is produced by new fermentation methods which were discovered by the Department. Another process concerns the production of vitamin B_{12} and an antibiotic which produces favorable growth responses. This also has been translated to a commercial scale. The ready and economic availability of vitamin B_{12} for chick and swine nutrition has contributed greatly to the more efficient production of these important farm commodities. It has been an important factor in their expanded production. This, in turn, has resulted in increased utilization of large quantities of corn.

Processes which the Department has developed for the production of calcium gluconate and sodium gluconate have also been adopted by industry. Sodium gluconate is being produced in increasing quantities for use in the clarification of detergent solutions used in the bottle-washing industry.

A process developed for producing a new type of protein fiber from corn gluten was commercialized several years ago. This new type of fiber, called Vicara, is being produced in large quantities and has properties quite similar to cashmere.

The Department's research, done in cooperation with private breeders and the Iowa State experiment station, has led to the introduction of a new type of corn called waxy corn. Waxy corn produces a unique type of starch which is finding increased use in the pudding and adhesive industry. Several million bushels of this corn are now produced in the Middle West, and its production is expanding.

In part because of defense activities during World War II, less progress has been made on wheat than on any of the other commodities upon which the regional research laboratories were working. During World War II, the Department's research was concerned with extending the uses of wheat in established industries; for example, a process for separating wheat flour into gluten and starch was developed. A number of companies used this process for producing dextrose from the starch. This dextrose was used as an extender for cane and beet sugar which were in short supply. After the war, when dextrose from corn and sugar were freely available, the production of a sweetener from wheat ceased. The Department was requested by the War Production Board to coordinate all activities on the production of alcohol from wheat. The alcohol was used for the production of synthetic rubber. More than 150 million bushels of wheat were used for this purpose. This operation also stopped after the war when our need for feeding Europe was great.

Within the last 3 years major emphasis has been shifted to the development of new and expanded food and industrial uses of wheat.

All told, the developments resulting from utilization research that are now in commercial use number 141. A list of these is attached.

CEREAL AND FORAGE CROPS

1. A new textile fiber from corn protein (zein).
2. Production of riboflavin by Ashbya gossypii.
3. Production of vitamin B_{12} by Streptomyces olivaceus.
4. Fungal amylase process for industrial alcohol.
5. Commercial production of penicillin.
6. Commercial production of clinical dextran—a blood plasma extender.
7. Fermentative production of sodium gluconate.
8. Starch sponge as a hemostatic agent.
9. Saccharic acid and its salts for sequestering agents.
10. Waxy cereal grains as sources of new industrial starches.
11. Batter process for production of starch and gluten from wheat flour.
12. Freezing procedures for bread and other baked products.
13. Waxy rice flour as a thickener for sauces and gravies in prepared frozen foods and canned foods.
14. Improved drying techniques for rough rice.
15. Process for canning white rice.
16. Humidity control during rice milling to improve yields of head rice.
17. Aeration of stored rough rice to maintain high quality.
18. Preservation of vitamins and other nutrients in alfalfa meal with an antioxidant.
19. Addition of vegetable oils or animal fats to dehydrated alfalfa meal to control dusting.
20. Improvement of steeping process in corn wet-milling.
21. Safe drying of corn for industrial utilization.
22. Production of 2-ketogluconic acid by fermentation.
23. Industrial yeasts improved by hybridization.
24. Important micro-organisms made available to industry.
25. Gibberellin—a plant growth regulator.
26. Commercial production of itaconic acid.
27. Corrugating and structural boards from wheat straw.
28. Ground corncobs for soft-grit blast cleaning and other uses.
29. Mechano-chemical process, a new and revolutionary method for producing pulp from straw in high yield and with excellent strength characteristics.

COTTON AND WOOL

1. Cotton conforming bandage.
2. Heat- and rot-resistant cotton by partial acetylation.
3. Use of CMC (carboxymethylcellulose) in laundered goods to improve resistance to soiling.
4. Tobacco shade cloth with longer life.
5. Permanent flame-resistant cotton cloth with THPC (tetrakis-hydroxymethylphosphonium chloride).
6. Loom attachment for weaving dense cotton fabrics—air-permeable but water-impermeable.
7. New machine for more efficient opening and blending of cotton from the bales.
8. Differential dye test to evaluate maturity and dyeing characteristics of raw cottons.
9. Improved nep control through new techniques for carding cotton.
10. New guides for drafting cotton to improve the uniformity and strength of the resultant yarns.
11. Formulas for determining the correct distribution of zone drafts on three types of long draft roving systems.
12. New instrument for measuring fiber properties which aids the development of improved quality cottons with high elongation.
13. Printed cotton fabrics for fertilizer bags suitable for reuse in garments.
14. Stabilization of nitrocellulose in the manufacture of gumcotton from cotton linters.
15. Speedy method for conditioning wool prior to spinning and weaving.
16. Development of objective standards for grading the yellowness of wool.

FRUITS AND VEGETABLES

1. Process for recovering volatile flavor concentrate (essence) from applies and other fruits for use as a flavor. Enginering design for a fruit-essence recovery unit.
2. Full-flavor superconcentrated fruit juices from apples, grapes, strawberries, cherries, and other fruits.
3. Process for recovery of fruit essences from preserve manufacturing operations.
4. Citrus fruit juice powders—orange, grapefruit, and lemon.
5. Preparation of highly concentrated (6- to 7-fold) frozen citrus juice.
6. Development of color standards for orange juice.
7. Process for production of frozen purees of citrus and other fruits.
8. Flash pasteurization of citrus juice.
9. Frozen concentrated citrus juices.
10. Maturity test for oranges and grapefruit.
11. Method of developing color in citrus fruits by ethylene.
12. Deaeration equipment for use in canning single-strength juices.
13. Dehydrofreezing of apples.
14. Frozen concentrated strawberry and other berry juices.
15. Treatment of berry picking boxes with sodium orthophenyl phenate to control mold.

16. Method for removing thrips, etc., from cane berries.
17. Ripening procedure for freestone peaches for canning.
18. Ripening methods for juice apples.
19. Process for canning dates.
20. Pectin enzyme control in tomato product manufacture.
21. Tomato juice powder.
22. Dehydrofreezing of pimientos.
23. Objective indexes of quality deterioration in frozen fruits and vegetables during distribution.
24. Low temperature lye peeling for prepeeled potatoes.
25. Improvements in dehydrated diced potatoes and potato granules.
26. Starch-coated dehydrated diced carrots.
27. Control of delay off flavor in frozen peas.
28. Improved procedure for blanching green beans for freezing.
29. Inpackage desiccation (for citrus and tomato powders, potato chips, hard candies, and dehydrated vegetables).
30. Froth flotation cleaning of vegetables for processing.
31. Single-pass evaporator with steam-injection heating for use in concentration and pasteurization of juices.
32. Fluidized bed drier for use in the production of potato granules.
33. Airlift drier for use in the production of potato granules.
34. Belt-trough drier for use in dehydrofreezing or dehydration.
35. Design for a laboratory fermenter (the Humfeld fermenter).
36. Procedure for measuring frozen food temperature in unbroken cases without sacrifice of product.
37. Use of nuclear magnetic resonance for automatically controlling moisture content of processed agricultural products.
38. Pasteurization process for fresh-pack pickle products.
39. Reduction of losses in cucumber pickling by removing the replacing brine, thus reducing enzyme action which causes soft stock.
40. Process for preparation of chlorophyll, xanthophyll, and carotene from leaf meals.

OILSEEDS

1. Polyamide resins from soybean oil for use in gelled paints, adhesives, and printing inks.
2. Soybean protein adhesives for shotgun shell casings and water-resistant boxboard.
3. Soybean oil of improved flavor stability.
4. Improved procedures in production of isolated soybean protein.
5. A process for removing the beany and bitter flavor of soybean products and for improving their color.
6. Nitrogen solubility index—an analytical procedure used to control the processing of soybean oil meal.
7. Taste panel procedures for evaluation of soybean oil and other edible fats.
8. Dimer acid, a new industrial raw material from vegetable oils.
9. High shear agitation to improve the refining of crude cottonseed oils.
10. Improved preparation of cottonseed for direct solvent extraction.
11. New filtration-extraction process for oilseeds.
12. Nonclogging, vapor-tight, screw conveyor for continuously feeding oilseed flakes to solvent-extraction systems.
13. Improved recovery of solvent and improved color of oil from cottonseed solvent-extraction plants.
14. High-quality cottonseed meal for feeding to poultry and swine.
15. Chemically modified cottonseed oil (acetoglycerides) for use in cosmetics.
16. Methods for determining gossypol in cottonseed meats, meal, and oil.
17. Improved method for determining moisture in peanut kernels.
18. Improved tung-oil vehicle formulations for use in paints.
19. Improved methods for handling and processing tung nuts.

SUGAR AND SPECIAL PLANTS

1. Improved techniques for processing sugarcane.
2. Reduction of losses in sugar content and purity by prompt grinding of sugarcane.
3. Recovery of aconitic acid from sugarcane molasses.
4. Improved yield of beet sugar through reduction of fermentation in extractors.
5. Basic studies leading to method for removing floc-forming materials during processing of sugar beets.
6. High-flavor maple sirup.
7. Dial thermometer for use in maple sirup manufacture.
8. Sanitary handling of maple sap.
9. Color standards for official grading of maple sirup and extracted honey.
10. Honey-fruit spread.
11. Production and pharmaceutical use of rutin and quercitrin.
12. Development of steam turpentine still.
13. Development and introduction of Olustee process of pine gum cleaning.
14. Covered separateor and dehydrator for removing water from turpentine.
15. Improved removal of rosin acids from gum turpentine.
16. Steam cleaning of dip barrels.
17. Continuous still for the production of turpentine and rosin.
18. Process for production of myrcene.
19. A new chemical, maleopimaric acid, produced directly from pine gum and made available for use in plastics, photographic chemicals and printing inks.
20. The use of paramenthane hydroperoxide—produced from turpentine—as a catalyst in the manufacture of synthetic rubber.

POULTRY, DAIRY AND ANIMAL PRODUCTS

1. Processing methods for producing satisfactory dried eggs.
2. Sterilization of shell eggs by high temperature treatment for a very short time.
3. Modifications of scalding and chilling procedures in the freezing and storage of poultry to reduce labor and avoid toughness of product.
4. Feather meal for fertilizer and feed uses.
5. Dairy waste disposal system which prevents stream pollution.
6. Improved heat exchanger for high-temperature pasteurization of milk.
7. Improvements in cheese manufacture.
8. Use of whey in caramels and in other candies and foods.
9. Use of butter in candies increased by using yeast to lengthen shelf life.
10. Use of soaps made from animal fats in manufacture of synthetic rubber.
11. Improved keeping quality of farm-rendered lard.
12. Animal fats in industrial tinplating.
13. Process for making high-quality technical oleic acid.
14. Vinyl stearate from fats for use in new-type plastics.
15. Epoxidized fats and oils for use in plastics.
16. Use of technical grade fats in animal and poultry feeds.
17. Synthetic detergents from fats.

Importation of Crude Oil

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

THIRTEEN COMPANIES IN EFFECT OBJECT TO THE UNFAIRNESS OF RESTRICTIONS ON OIL IMPORTS

Mr. WILEY. Mr. President, my colleagues will recall that I have consistently opposed plans for arbitrary restrictions on importation of foreign crude oil. I have pointed out again and again that such restrictions are unfair to the consumers of this Nation because the restrictions interfere with the law of supply and demand. The restrictions artificially limit the supply of oil, especially at a time when oil demand is rising.

A further reason for my opposition to these restrictions is that they inherently discriminate between specific American oil companies. As proof of that fact, I should like to cite an article published in the August 9 Wall Street Journal. It shows that of the 22 companies affected by the administration's so-called voluntary plan to curb imports, 9 have asked the Government to change their quotas of import ceilings. Two more indicate they will need adjustments later on.

Thus, approximately 50 percent of the oil companies affected regard the limitations as being unfair. They may not be in a position frankly to say so. But they can hardly enjoy the fact that the Federal Government is, in effect, arbitrarily limiting their profits, their return on overseas investment. Uncle Sam is once again arbitrarily doing what the NRA or the OPA and other meddlesome Government agencies with slide rules tried so unsuccessfully to do—to say who can sell how much.

Even those companies which do not feel themselves too adversely affected by oil imports cannot help realizing that they themselves are a party to putting the camel's nose of Government interference under the tent. They themselves are allowing bureaucratic hands to direct them as to what they should do and should not do. The so-called voluntary facade fools no one.

All in all, slavish acceptance of Federal dictation is a strange position for a great industry which prides itself on free enterprise to put itself in.

Let me say that I well realize that the 13 oil companies which indicate they will comply for the time being are not exactly in a free and unhindered position. None of them, I am sure, particularly likes to displease the administration in Washington. So the response which the Government has received is probably nothing like an accurate indication of the real feelings of these companies. In effect, the two companies which criticized the whole plan probably speak the sentiments of many other companies as well.

of them are trying to make the best what they undoubtedly all feel is a bad uation—a situation in which the Gov- nment is meddling with free enterprise. In conclusion, I say that independent oducers of Texas who pride themselves being great champions of free enter- ise may themselves one day regret their viting the camel of Government boss- n into their tent.

I ask unanimous consent that the arti- to which I have referred be printed the Appendix of the RECORD.

There being no objection, the article s ordered to be printed in the RECORD, follows:

E OIL CONCERNS ASK GOVERNMENT TO BOOST CRUDE IMPORT CEILINGS—TWO OTHERS MAY WANT VOLUNTARY CURBS EASED IN FUTURE; ELEVEN GO ALONG WITH QUOTAS SET

WASHINGTON.—Nine of the twenty-two mpanies affected by the administration's luntary plan to curb crude-oil imports ve asked the Government for immediate osts in their assigned import ceilings. Two more have indicated they may need justments in the foreseeable future, the terior Department, which will administer voluntary scheme, disclosed.

The remaining 11 companies have indi- ted they will stick with their assigned otas, but two of these have voiced criti- m of the whole plan, which is designed to mit crude-oil imports into the United ates to 1,031,000 barrels a day on the basis current demand. Imports recently have en running at a 1,200,000-barrel daily rate.

The companies' intentions were contained telegrams sent to Capt. Matthew V. Car- n, Jr., recently named special assistant to terior Secretary Seaton to administer the luntary program. They were in reply to legrams sent out last weekend by Captain rson informing the companies of their re- ective ceilings and urging their coopera- n.

Hearings will probably have to be held to nsider complaints by seven companies, ptain Carson said. These are Atlantic fining Co., Tidewater Oil Co., Sinclair Oil rp., Northwestern Refining Co., St. Paul, ndard Oil Co. (Ohio), Standard Oil Co. diana) and Eastern States Petroleum Co., uston.

Two other oil-importing concerns, Lake perior Refining Co., Superior, Wis., and ternational Refineries, Inc., have asked for justments but apparently do not seek arings.

Phillips Petroleum Co., Bartlesville, Okla., d Great Northern Oil, St. Paul, Minn., in- ated they might need adjustments at me future date.

Captain Carson said he hopes to schedule arings beginning possibly at the end of t week and said he believes they will not long. He added he is confident com- nies will adhere to the voluntary plan, ce it is infinitely preferable to manda- y controls which, the President warned, y be necessary if the 1-year plan does work.

Under the voluntary plan, upward adjust- nts in import allotments of individual mpanies presumably would have to be at expense of other companies, assuming were using their entire quotas.

Sun Oil Co. and Socony Mobil Oil Co. also ticized the plan. Robert G. Dunlop, sident of the Philadelphia-based Sun Oil, d his company will trim imports from present 58,000-barrel daily average to its 400-barrel allotment by next April.

The nine companies offering unqualified pport of the plan are Texas Co., Cities vice Co., Gulf Oil Corp., Shell Oil Corp., ndard Oil Co. (New Jersey); Standard Oil mpany of California, Lakeland Pipe Line , Toronto, Ont.; Gabriel Oil Co., Interna- tional Falls, Minn., and Southwestern Oil & Refining Co., Corpus Christi, Tex. Together with Sun and Socony they account for about 350,000 of the 755,700 barrels allotted to the 22 affected companies.

Drought Again in the Southwest

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. YARBOROUGH. Mr. President, in Texas and in the Southwest United States, from 1950 to the spring of this year, we suffered the worst drought in 600 years. Then we had 70 days of flooding rains. The floods were so widespread that it was generally thought that the long drought was finally broken.

Unfortunately, there are signs appearing now that this hope was premature. The drought again is rearing its ugly head. These signs underscore the urgency for helping the stricken farmers in the stricken areas.

Raymond Holbrook, an Associated Press reporter, has written a story after a survey of the Southwest area. I ask unanimous consent that his story as published in the Abilene Reporter News on August 11, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DROUGHT AGAIN REARS UGLY HEAD IN SOUTHWEST AREAS

(By Raymond Holbrook)

DALLAS, August 10.—The weather-battered Southwest, whose parched scars are being slowly covered by the first real crops and grass in years, is again anxiously scanning its treacherous skies.

There has been no happy medium to the Southwest's weather.

In the past 7 months the region has been swept from one of the worst droughts in its history through a sucession of destructive blizzards, dust storms, tornadoes, cloudbursts, and floods to what some fear may be the hint of another drought.

Many crops in southwestern States are again feeling the water pinch. It is beginning to look remarkably like the Southwest of last year—a land of famine and debt.

When President Eisenhower flew to the Southwest in January he found vast areas devastated by drought in a region extending from Arizona and Utah eastward into Missouri.

Twenty-nine million acres—nearly twice the area of the old dust bowl of the mid-1930's—in Texas, Oklahoma, New Mexico, Colorado, Kansas, and Nebraska had suffered wind erosion damage.

Many ranchers had been forced to sell all cattle except a few foundation head. Farmers told of going 3 and 4 years without making a single crop. Some farms were abandoned. Reservoirs shriveled to muddy puddles.

Then in March, a blizzard that lasted nearly a week swept across the Southwest. Between 60,000 and 70,000 head died.

WELCOME RAIN

The first rains were welcomed, hailed as drought busters as they continued.

In some places they fell slowly but in many others they were violent downpours, washing away top soil, sweeping away livestock and flooding lowlands. Early plantings were washed out while in other areas farmers had to wait weeks and months before they could get into the fields.

At scores of southwestern points the downpours were the first real rain in years.

Major County, Okla., which had only 4.17 inches in 7 months last year, recorded a whooping 30.24 for the 7 months ended this June 1.

LUSH PASTURES

Once the rains and floods ended, the Southwest was like a new land. Rangeland and pastures became lush for the first times in years. For the first time in 5 years it appeared that Kansas would be able to have enough pasture and crops to feed its own livestock. Pastures there were rated 84 percent of normal July 1, compared to 46 percent a year before.

Ranges in Colorado became so good that a shortage of cattle was noted at the Denver stockyards as stockmen were able to hold their animals longer than in previous years. On July 1, the condition of all range and pasture feed in Texas stood at 86 percent, the highest for that date since 1949.

While damage from excessive moisture, hail, and wind took the edge off the highest hopes of growers, the wheat crop in most of the Southwest was considerably better than in previous years.

The soaking rains did more than revive pastures and crops. They filled stock tanks and municipal reservoirs and restored badly depleted subsoil moisture. Southwest farmers and ranchers, for the first time in years, were able to stop borrowing and to start buying.

HIGH TEMPERATURES

But high temperatures, hot summer winds, fast disappearing surface moisture—and no recent rains—are taking the bloom already from the Southwest's improved agriculture.

Some areas, especially New Mexico and far-west Texas, did not receive enough rain to revive the drought-ridden land. In other sections, pastures and crops that were verdant a month ago, have begun to turn brown for lack of moisture.

C. G. Gibson, director of the Texas Extension Service said in a recent report, "late crops, delayed by wet fields during spring planting season, now are wilting under the strain in many areas. Pastures and ranges are becoming brown."

RAIN NEEDED

Alfred C. Brittain, United States Department of Agriculture crop and marketing statistician for Missouri warned that corn, soybeans, cotton, hay, and pastures are going to need more rain during August.

Even Nebraska, which "got off easy" in the drought and has had good rains this spring, reports additional moisture needed in some sections.

Farmers and ranchers in the area have a saying: "There's nothing wrong with this country that a good rain won't cure."

But in the Southwest, there's a mighty fine line between disaster from too little water and catastrophe from too much water.

Airborne Drunks and Safety

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excel-

lent editorial from the August 15, 1957, issue of the Philadelphia Inquirer entitled "Airborne Drunks and Safety." Hearings have just been concluded on my bill, S. 4, which would promote air safety by prohibiting the service or consumption of alcoholic beverages aboard aircraft. I hope the Senate Interstate and Foreign Commerce Committee will order this bill favorably reported before the Congress adjourns.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIRBORNE DRUNKS AND SAFETY

Just about a year ago there was widespread controversy over problems raised by excessive drinking in planes. When it seemed possible that legislation might pass Congress, the airlines agreed to put their own limits on the serving of liquor aloft.

That those limits have been ineffective is suggested by the fact that Congress is considering new legislation to ban liquor sales on airliners, and by the further fact that such legislation is strongly supported by the Air Line Pilots Association and the Air Line Stewards and Stewardesses Association.

The issue here is not one of prohibition, but one of safety. Who should know better about that question than the pilots?

It is argued that there is not much point in banning liquor sales in flights when drunks are permitted abroad, carrying bottles. But the pilots point out that civil air regulations now forbid tipsy persons to board planes, but they are not enforced and drunks are able to get liquor abroad, anyway.

The answer is that, if safety will be promoted, the sales should be banned on commercial flights; while the ban on admitting tipsy passengers should be enforced.

Probably the crudest argument for serving liquor aloft is put forward by Civil Aeronautics Board Chairman Chan Gurney. He says to ban liquor would hurt United States airlines competing with foreign carriers. That certainly sets a low price on human life.

Some day a tragedy may settle this matter once and for all. Meanwhile, we are prepared to stick with the pilots on the issue.

Hog Prices

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. JENSEN. Mr. Speaker, farmers hold the key to future hog prices. If the favorable prices and feeding ratio now enjoyed by producers prompt overexpansion of hog production, heavy supplies could easily bring about lower prices as past experience clearly demonstrates.

Too many hogs leads to inefficient use of resources with accompanying low prices and incomes as producers well remember from their experiences in 1949 and 1955. In 1949, hog producers increased the pig crop by 10 million head and hog prices dropped $5 to $6 per hundred. Again in 1954, producers increased total production by 9 million hogs, followed by another 9 million head increase in 1955. Hog market prices dropped sharply.

On the other hand as production is reduced, prices go up. Hog producers made a cut of 7.5 million hogs in production in 1956. Hog prices have been running from $18 to $21 per hundred at Midwestern markets during recent weeks. A year ago prices, while markets were recovering from heavy 1955-crop marketings, were as much as $5 per hundred less.

There have been periods when prices have held when hog numbers expanded but usually this was during a period when demand was high due to emergencies such as World War II and the Korean war. In 1941, the United States Department of Agriculture asked for an increase in production and prices held in the war period. With stable production in years following the war, prices stayed high in 1946, 1947, and 1948.

Hog production was increased in 19[illegible] and 1951, but prices held due to [illegible] Korean war. Sizable reductions in 19[illegible] and 1953 production increased the pri[illegible] of hogs in 1953 and 1954.

The past shows that when productio[illegible] is balanced with demand, hog produce[illegible] receive satisfactory prices. If produc[illegible] tion remains on an even keel during th[illegible] coming months, price prospects for hog[illegible] should be favorable.

It is hoped that producers will contin[illegible] to avoid excessive increases at the time o[illegible] breeding for the 1958 spring pig cro[illegible] Production of meat-type hogs market[illegible] at 225 pounds or less, will also insur[illegible] better hog prices as well as more por[illegible] exports, which all help to stabilize ho[illegible] prices at a proper level.

Year	Pig crop	Slaughtered	Average farm price point of 1st sale per 100 pounds	
1940	79,900,000	77,610,000	$5.40	
1941	85,000,000	71,397,000	9.10	Increase production World War II; prices up; slaughter decrease.
1942	104,900,000	78,547,000	13.00	Increase production World War II; prices up; slaughter increase.
1943	121,800,000	95,226,000	13.70	Do.
1944	86,700,000	98,068,000	13.10	Do.
1945	86,800,000	71,891,000	14.00	Increase production World War II; prices up; slaughter decrease.
1946	82,700,000	76,115,000	17.50	Lower production; prices up; slaughter increase.
1947	83,300,000	74,001,000	24.10	Normal production; prices up; slaughter decrease.
1948	83,800,000	70,869,000	23.10	Do.
1949	93,200,000	74,997,000	18.10	Increase production; prices drop; slaughter increase.
1950	97,400,000	79,263,000	18.00	Korean war; price held; slaughter increase.
1951	100,609,000	85,540,000	20.00	Do.
1952	88,800,000	86,572,000	17.80	Lower production; price held until September; slaughter decrease.
1953	77,900,000	74,368,000	21.40	Lower production; price up; slaughter decrease.
1954	86,800,000	71,495,000	21.60	Increase production; price drop; slaughter increase.
1955	95,700,000	81,058,000	15.00	Lower production; price started up May; slaughter increase.
1956	89,700,000	85,216,000	14.40	Normal production; price up; slaughter decrease.
1957	90,200,000	80,700,000	[1] 17.50

America's Crusade for Free Men's Rights

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. SPARKMAN. Mr. President, recently Miss Joanne Andrews, Route 3, Ozark, Ala., won the statewide award in the VFW Ladies' Auxiliary contest. The subject of Joanne's essay was America's Crusade for Free Men's Rights.

The essay is a very fine and thought-provoking paper, which all of us can read with profit.

I ask unanimous consent that it be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

AMERICA'S CRUSADE FOR FREE MEN'S RIGHTS

"This is my country, land that I love." That is only a line from a song, but they are replete with feeling for those of us who do love America—and that is indeed all of us. What is America's most priceless asset? Is it the limitless natural resources, its matchless national wealth, or numerous other qualities? No, I think it is the character of its people, with their inexhaustible energy, their boundless courage, their indomitable self-confidence, their transcendent vision, their sleepless initiative, and perhaps above all, their inherent irrepressible optimism is the true glory of Americ[illegible]

Had it not been for those courageou[illegible] crusaders for freedom in 1776, America woul[illegible] not be the free Nation that it is today. [illegible] was not easy—winning our freedom fro[illegible] the British. Our ancestors fought for 5 lon[illegible] hard years in order for men to have the[illegible] free rights. The day we signed our Declara[illegible] tion of Independence, we could not read ou[illegible] future in the stars—there were times w[illegible] wondered. Time has proven, however, tha[illegible] it was the right road, and the only road [illegible] freedom—and proudly we walked that ro[illegible] to victory.

Today, as then, it is our job as loyal Amer[illegible] icans to crusade against the forces tha[illegible] would destroy our country. The fate of ou[illegible] Nation and of humanity is in our hand[illegible] now, and, we must carry on what our fore[illegible] fathers started.

Shakespeare wrote, "And you all know s[illegible] curity is mortals' chiefest enemy." We, [illegible] individuals must be on constant guar[illegible] against sacrificing our freedom to becom[illegible] slaves to security. For every benefit w[illegible] gain, we have to pay a price. Oftentime[illegible] that price is a part of our freedom. An[illegible] man in America has the free right to wo[illegible] at any job that he pleases. The man wh[illegible] drives the plow in the field or swings his a[illegible] in the forest, or with cunning fingers pli[illegible] the tools of his craft, is as truly a patriot o[illegible] his country as the statesman in the Senat[illegible] or the soldier in battle. Let us remember[illegible] the price of our freedom—and that to pro[illegible] tect and preserve it, we must be constant[illegible]

lant against every tendency in our politi- economic, and social life to weaken the ndation of private enterprise and free itutions upon which our Nation has been t in its greatness and strength.

e Americans have more privileges, com- s, conveniences, and opportunities than other people in the world. We get some- g out of life because we have a real in- tive to put something into life. This ntry rewards intitiative, ingenuity, and illingness to work. We dream, here in erica—then, strive to make our dreams e true. That is what we call the Amer- way and it will be that way as long as remain a free enterprising country that etermined to hold fast our rights of rty. As long as we continue to crusade all that the American way means—cru- e in our every walk of life with vision forethought, with determination and rifice: and with brotherly love and prayer. This is my country, land that I love." s just a line from a song until we put souls into it, and give it meaning. Then breathe life into these words, and make it d for anything we believe in, and refuse ive without.

Attack on the Right To Know

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

THE SENATE OF THE UNITED STATES

Friday, August 16, 1957

Mr. TALMADGE. Mr. President, I unanimous consent to have printed the Appendix of the RECORD the edi- ial entitled "A Subtle Attack on the ht To Know," from the August 14, 7, issue of the Savannah (Ga.) ening Press.

There being no objection, the editorial s ordered to be printed in the RECORD, follows:

SUBTLE ATTACK ON THE RIGHT TO KNOW

he unidentified author of the so-called l-rights bill that bears the imprimatur of Attorney General of the United States tainly had a strange and distorted view of h rights. As this fact emerged in the t of the Senate debate and the explora- into the real import of the language of bill, courageous Senators saw to it that dious sections of the bill were eliminated that the great, hard-won civil right of l by jury was written into the act. There ains, however, one provision that, in our nion, needs to be eliminated lest the right the public to know be dangerously tailed.

he provision to which we refer is one of e subtle sort of attacks on freedom of rmation wrapped up in the specious ar- ment that secrecy is essential to full in- y. In our view, and the facts of history bear us out, the contrary is true. Se- y, sessions in camera, executive sessions, se the more modern expression, or call m what you will, produce results weighted the side of those who wish them to pro- e predetermined ideas. This is so be- se the purifying light of publicity is with- d and the people know only what the ers that be want to let them know.

he civil-rights bill as it now stands, even r the vital amendments made in the Sen- gives to the proposed commission on in- y into civil-rights problems the authori- to hold hearings in the open or behind ed doors. The closed door provision is enough, but coupled with this punitive condition becomes absolutely intolerable: Any who released or used information obtained by the commission behind closed doors, in executive session, would be fined up to $1,000, or jailed for a year. This provision undoubtedly raises a question of censorship of the press, for, as succinctly pointed out by an Associated Press news analyst, the word "used" would seem to mean that a newspaperman who got such information—and used it—could be fined or jailed. A court might, and perhaps would, so interpret it.

If the bill becomes law it become one of the major news developers during the next few years. We do not believe it is to be seriously disputed that it would be a direct trespass on the public's right to know for newspapermen to be subject to fine or imprisonment for reporting executive sessions.

This newest instance of the fact that there is more to the civil-rights bill than meets the eye is to us further confirmation of the belief that the authors of the bill intended it to be that way. We urge the Senators who have been so diligently successful in protecting civil rights from invasion by juryless courts, aye, even, by Federal troops, insist that the secrecy provisions under which men of devious purpose might work, be eliminated. We ask this not in the name of newspapermen, who seek no special privileges in the pursuit of their work, but for the public—for the people who have a right to know.

Let's Remember Hungary on the Day of St. Stephen

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 9, 1957

Mr. REUSS. Mr. Speaker, on August 20 Americans of Hungarian descent will once again celebrate the Day of St. Stephen. This year, however, this national holiday has significance to more than just those of Hungarian birth and ancestry. It is meaningful to everybody who cherishes liberty and national independence, because the name of Hungary has become a symbol of dedication to those principles.

The heroic revolt of last October and November has had enormous political significance throughout the world. It provided living proof that communism as an ideology has failed completely to win the hearts and minds of men, and that it is only by brute force that the Soviet tyrants are able to hold power. The revelation of the naked terror of their power shocked all civilized mankind.

The report of the United Nations investigating committee has now confirmed the tragic evidence of last fall. We all look forward to the meeting of the U. N. General Assembly on September 10 when this report will be discussed and the hypocrisy and shame of international communism will be written on the record by the representatives of free nations everywhere.

I hope that our own Government has learned from the experience of Hungary and that no longer will it sit by just waiting for something to happen. It is time now to prepare a positive program toward ultimate liberation of Hungary and her neighbors behind the Iron Curtain. A mutual withdrawal of troops from Central Europe, so that Soviet bayonets would no longer bolster the puppet regime in Budapest, might well be the first step toward freedom.

Let us celebrate the Day of St. Stephen this year with the glory of 1956 in our hearts and the opportunities of 1958 in our minds.

Resolutions Adopted by the 82d Airborne at Their 11th Annual Reunion

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. DENNISON. Mr. Speaker, the 11th annual reunion of the famed 82d Airborne Division recently took place in Cincinnati, Ohio. These men whose fearlessness and devotion to their country was one of the brilliant chapters of World War II have continued to concern themselves with problems of our national security. The following are the resolutions of the convention adopted on July 5, 1957, which I call to the attention of the Members for their very serious consideration:

RESOLUTIONS OF 82D AIRBORNE DIVISION

Whereas veterans of the 82d Airborne Division, meeting in convention for the eleventh time, foregathering to renew the esprit d'corps for which that group of 56,000 veterans is justly proud, to join again in tribute to its honored dead, and to consider the problems of national defense; and

Whereas the United States Army maintains at least four separate parachute training centers, duplicating resources and training personnel; and

Whereas the world situation necessitates the need for fully trained and equipped airborne divisions, ready to move into any area of the world in an emergency; and

Whereas our national economy and defensive demands require the careful budgeting and expenditure of our tax dollars; and

Whereas the Parachute School at Fort Benning, Ga. proved during World War II the value of a central training center to supply parachute troops for active combat duty; and

Whereas such a central training center for parachutists would be a necessity in the event of war, when our airborne divisions would be quickly assigned military objections outside the national boundaries: Therefore be it

Resolved, That an Airborne Forces Training Center be established for the purpose of supplying trained personnel to all the airborne divisions; and further be it

Resolved, That the basic airborne training of parachutists elsewhere cease immediately on the establishment of the Airborne Forces Training Center.

Whereas the Military Establishment is desperately in need of a means for attracting and retaining persons with scientific, professional, combat leadership and management skills necessary to maintain a deterrent power; and

Whereas the Armed Forces do not presently have the means to compete for trained personnel urgently needed for the defense of this country, and a significant factor in their

inability to do so is the inadequacy of the present compensation practices now in use to bring military pay more in line with the pay standards of industry and to offer greater reenlistment incentive for highly trained personnel: Therefore be it

Resolved, That the Congress of the United States be urged to take favorable action to revise the existing pay structure now in use in the Armed Forces along the lines proposed by the Cordiner committee; and be it further

Resolved, That inasmuch as the parachute is a most hazardous form of transportation into battle, it is recommended that the hazardous-duty pay scale as provided by the Cordiner report be applicable to all paratroopers as well as to the submariners of the Navy and the fliers of the Air Force.

Whereas the veterans of America's first airborne division are fully conscious of the serious world situation and feel that it is not only their privilege but now it is their duty to express their opinion regarding the future of our Army and the survival of our country; and

Whereas we can foresee an important need for increased development of greater mobility, flexibility, and higher concentration of firepower within our Armed Forces; and

Whereas the Army, with its increased mobility and striking power stationed in strategic locations, is a major deterrent to aggression, and the role of the Army in any future wars will be decisive: Therefore be it

Resolved by this convention, That the limitations imposed on the Army by the Department of Defense regarding Army missiles, limiting the range to 200 miles, be reevaluated to be more in line with the rapidly changing concepts of future warfare; and be it further

Resolved, That the airborne forces be supplied, as an integral part of its tables of organization and equipment, with the types of aircraft such as helicopters, convertiplanes, and the C–130 aircraft necessary for the accomplishment of its missions.

Military Land Withdrawals

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. BARING. Mr. Speaker, I have taken a very active stand in opposing the proposed Navy's so-called modified application to withdraw more than a million acres of land in Pershing County, Nev., designated as the Sahwave Mountain Range. H. R. 5538, introduced by Congressman CLAIR ENGLE, chairman of the Interior Committee, would prohibit the withdrawal of any public lands in excess of 5,000 acres for military purposes without the consent of Congress. That bill has been amended by a subcommittee of the Senate Interior Committee to except from the provisions of the bill the Navy's application referred to above. If the Senate approves the bill as amended, it will in all probability go to conference.

Since it is probable that this legislation may again be considered by the House, I ask permission to have inserted in the record an editorial by Bill Jenkins that I believe tells the story more colorfully and realistic than it has heretofore been told.

The editorial which appeared in the Herald and News, Klamath Falls, Oreg., is as follows:

HOLDOUT

(By Bill Jenkins)

My admiration of John Prather, the New Mexico rancher who has so stubbornly defied the Government and the Army in their attempts to oust him from his ranch, continues to grow.

If there was anything I could do personally to help I'd be more than glad to take off for the southern regions and lend a hand.

Prather, in my opinion, is fighting for more than a piece of land. He's fighting for an old American principle and hammering the first wedge into what well may become a fresh split in ideologies.

You are all familiar with the story. Prather, who homesteaded his ranch more than 50 years ago and since has built it up into a 27,000-acre holding, has been ordered off the land because the Army wants to add it to their already huge guided-missile range. He maintains that he wants to keep the ranch for his heirs and that he wants to die there.

Prather is 82 years old.

Yesterday he left the land for the first time since the battle started and was promptly served with papers depriving him of all but 15 acres of the ranch. Deputy marshals had already moved in on the ranch and driven off Prather's cattle. They tried to drive him off, too, but quailed in the face of the old man and his trusty smoke pole and left without carrying out the orders from the court.

It poses a problem for all of us. The business of turning over huge areas of land to the various armed services for use as bombgrounds has gone too far already. The combined services already control millions of acres of land, much of it productive range and farm land, and are reaching out for more. There is no cooperation between services and they all stoutly maintain that they must have their own grounds; cannot share with the other services.

It would seem that our tax-supported national-defense agencies feel that national security rests on one shoulder only, not the combined abilities of ground, sea, and air forces. Personal initiative in business is one thing, squabbling over power and rights among the Armed Forces is another.

I think it is high time that the Pentagon and the halls of Congress took some note of what is going on. The threat is pretty close to home as far as we are concerned. The Navy is currently trying to grab off huge portions of land lying immediately adjacent to southern Oregon. The old idea that it can't happen here is out the window. It not only can happen here but just might happen any day.

If John Prather's hopes and dreams and years of hard work go down the drain he will be merely one of the first men to head down that lonely heartbreak trail. But there will be a horde behind him. And any of us could be numbered in that sorrowful troop.

Elton Layton

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. HALE. Mr. Speaker, I regret that the time was not available on July 31 when some of my colleagues addressed the House for me also to be recognized to speak about the service of Elton Layton to the Committee on Interstate and Foreign Commerce of which he has been clerk since the year 1921. All of us of the committee lament, though we cannot question, his decision to resign this summer.

There are very few records to equal his in length of service and none that surpasses his in diligence, fidelity, and efficiency as clerk of a great standing committee. The very word "clerk," when applied to an official of a committee like that of Interstate and Foreign Commerce, is misleading. The duties of the clerk are only incidentally clerical. He has formidable administrative tasks and formidable administrative responsibilities in working with the chairman of the committee to schedule all its hearings, maintaining relations with the thousands who follow the committee's legislative schedule, and overseeing the work of a staff of subordinates. Added to this there are a multiplicity of details which may not be overlooked.

Elton Layton is a paragon of efficiency. I have never known him to forget anything or to make a slip or mistake of any kind. On trips of the committee, I have seen Elton attending to his duties on at least three continents in Tropic heat and Arctic cold. I am certain he would have been equally good on the other two. I have never known him to get confused or flustered. Public service of this character deserves all the recognition that we can get. The Nation owes far more than it realizes to the experience, competence and devotion of Elton Layton and the very few people like him who run the machinery which as all Members know is indispensable to the work of a great congressional committee.

Having served on the committee for 11 years now, I have come to number Elton among my most valued friends. It is a privilege to pay him this tribute and to wish him long life and great happiness.

We shall miss him.

Southern Railway Rejects Freight Rate Increase

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following release from the Southern Railway System:

WASHINGTON, D. C., August 13, 1957.—"Southern Railway does not intend to increase any freight rate where such action will price us out of the market and reduce our net income," Harry A. DeButts, the railway's president, said today in a statement commenting on the freight rate increases recently authorized by the Interstate Commerce Commission.

outhern didn't ask for this increase, not because we don't need the money. ailroads need more money, for the rate eturn on investment has been discourag- y low in the railroad industry for years. it's our opinion that higher freight rates ly mean a merry-go-round ride to no- re for us in today's bitterly competitive sportation business.

e are tired of seeing more and more ht which by its very nature belongs on ails being carried, instead, by our sub- ed competitors. And we are convinced the principal reason is constantly ad- ing rail rates. This gives our subsidized petitors the chance to skim off the cream ur most desirable and profitable traf- while they ignore traffic they don't want arry. They happily allow us to have t's left, knowing we're obligated by law andle volume. It's our bread and but- We want more business, not less.

e believe we can get and hold the vol- of business our modern railroad now eared to handle by keeping our rates n, even lowering them when conditions ify. We know that it is through a large me of traffic that Southern can best and cheaply 'manufacture' transportation— g money for our customers, and mak- ome for ourselves. That's what we are rmined to try.

s to our position in this rate case, we that it has been a sound one, and in public interest. Certainly it already has ed those interested in the well-being of transportation industry to give serious ght to the dangerous effect of upward- ling freight rates."

West Point Plans Stiffer Selection

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

r. SIEMINSKI. Mr. Speaker, the York Times lists the following in- nation which I trust will be of in- st to the House:

m the New York Times of August 16, 1957]

T POINT PLANS STIFFER SELECTION—LEAD- SHIP, PHYSICAL TESTS ADDED TO STANDARDS N COMPETITIVE APPOINTEES

EST POINT, N. Y., August 15.—A new pro- re for selecting cadets among competi- appointees to the United States Military demy was announced today.

e new system is intended to raise the dards for incoming cadets. It will af- about 15 percent of each class, or about of the 735 young men who are admitted ually. The system will be used for the entering the Academy next July.

der the new procedure, competitive ap- tees will be selected on the basis of their tal abilities, physical aptitude, and lead- ip potential. Previously, only the scores ined on the college entrance examination d mental tests were used to establish order of entrance for these candidates.

mpetitive appointees include those ed by the President of the United States, e from the Regular and Reserve compo- s of the Army and Air Force, sons of ased veterans, and graduates of honor tary and naval schools. The noncom- tive appointees are those nominated by resentatives and Senators.

ABILITIES TO BE TESTED

Mental abilities will be determined by the competitive candidate's record in the scholastic aptitude test and achievement tests in intermediate mathematics and English composition, given by the college board in March, and his scholastic standing in his high-school graduating class.

Physical autitude will be determined by the West Point physical aptitude test, which will be given with the college board's tests.

Leadership potential will be determined by a review of the candidate's extracurricular activities at schools attended, and by confidential appraisals furnished by school principals, teachers, guidance counselors, and others.

The Academy's Academic Board will have responsibility for the final selection of all competitive candidates.

The 17th of Series of Editorials by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MICHEL. Mr. Speaker, I should like to insert the 17th of a series of editorial letters by F. F. McNaughton appearing in the Pekin Daily Times, Pekin, Ill.

The letter follows:

[From the Pekin (Ill.) Daily Times of August 9, 1957]

THE EDITOR'S WIFE SPEAKS TODAY

Here's a mystery.

Maybe it tells nothing.

But this happens.

My hearing aid is very sensitive. It is quick to detect unusual electric currents.

Last time we were in Moscow we (largely out of curiosity because the boys were along) hunted the hidden microphones in the rooms.

Russia then was a "police state." People disappeared, never to be heard of again.

So we were cautious.

But this time we came into Russia totally carefree. We are not whispering; not hunting hidden microphones; not looking over our shoulders.

But this has happened:

At two points in our rooms, my hearing aid acts up.

It beeps.

It has about the rhythm of a busy signal on a telephone line.

It could be the hidden monitor on the telephone line.

It may be an alive microphone, hidden somewhere to record all our conversation.

May not be anything.

One thing is certain: I do not get that noise anywhere else.

It is sure that, if they wanted to record our conversation, they would have no compunctions of conscience whatsoever against doing it.

Also it is sure that we are not concerned about it and are not paying any heed to it. We have nothing to say that we are not willing to have any Russian hear.

Mister Mac wrote a letter to Logan Unland telling an experience that was not for feminine reading. He started the letter off with an apology to the Russian censor (who undoubtedly would be a woman) for having to read "such stuff."

The So-Called Civil-Rights Bill With Senate Amendment

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. DIES. Mr. Speaker, the so-called civil-rights bill, which passed the House of Representatives over my strenuous objections and vote, has been amended by the Senate and returned to the House. After its passage by the Senate, however, some very serious flaws in the Senate version have been discovered. It is now conceded by the proponents of the bill in both bodies that the bill as passed by the Senate must be changed materially.

The following are some of the fatal defects in the bill which the Senate enacted and which they now want to correct. Under the terms of the bill, a newspaper reporter can be fined or imprisoned if he publicizes evidence or testimony taken in executive session before the Civil Rights Commission. In other words, if a witness who testified before the Commission tells a newspaper reporter what he testified to, and the reporter uses or releases this testimony to the public, the reporter may be fined not more than $1,000 or imprisoned for not more than 1 year. The proponents of this bill admit that this provision violates freedom of the press guaranteed by our Constitution and they promise to pass a resolution eliminating this provision.

The Senate's provision with respect to a jury trial is fatally defective, and the proponents of the bill now admit that it must be changed. According to this amendment defendants under this act can be held in civil contempt without a jury trial. But in the case of criminal contempt they are entitled to a jury trial under certain circumstances. As stated by the majority leader in the Senate, the vast majority of cases would be handled under the civil contempt, which means that the judge would order the defendant to jail and keep him there until he agreed to comply with the court's order or decree. The court would not need to resort to criminal contempt because he could accomplish what he wants to through civil contempt. In practical effect, therefore, defendants under this act are not given a jury trial. However, the provision which extends jury trial to all cases of criminal contempt will apply to 38 acts of Congress, wherein the administrative agencies of the Government are compelled to enforce their orders and decrees through injunction. It is now conceded that this will produce chaos and hopeless confusion in the administrative of our Government, and the proponents of the bill now want to eliminate this provision and to limit jury trials in criminal contempt to this act.

In order to illustrate the harmful effect which would result from the Senate amendment, let us take a typical case: When someone puts on the market a

poisonous or deleterious food or drug, the Food and Drug Administration can get a Federal judge to issue an injunction restraining the shipment, sale or marketing of such food or drug. Under the Senate amendment the defendant could demand and obtain a jury trial. Let us take the case of a "quack" who is peddling some harmful drug. He is enjoined but ignores the injunction. When he is held in criminal contempt he demands a jury trial and weeks may be consumed in the trial. He can introduce scores of deceived patients to testify regarding the efficacy of his treatment or drug. This situation applies to practically every administrative agency of the Government.

The effect, therefore, of the Senate amendment would be to do far more harm than good. It would afford very little protection for defendants accused of denying voting rights, but it would practically paralyze the administration of many laws of Congress.

Thus we have another example of a politically motivated bill which has been carelessly and loosely written for the purpose of capturing minority votes.

It is probable that many other flaws in this so-called civil-rights bill will be discovered in the course of time. For instance, under the present law, if any act is made a crime by State or Federal law every defendant is entitled to a jury trial in contempt proceedings. It appears that the Senate amendment repeals this law so that hereafter the criminal contempt will be defined by general jurisprudence. What will be the effect of this? Some very responsible authorities hold that this provision will actually curtail the present right of defendants to a jury trial in contempt proceedings.

Furthermore, the bill as amended by the Senate permits the Federal Government to prescribe the qualifications of jurors in violation of our Constitution, which reserves this right to the States. It is now conceded that the Senate amendment is unworkable, and the proponents now want to limit it to voting rights. This illustrates the political nature of this bill from its very inception.

When this bill came before us in 1955, I offered an amendment providing for fair rules of procedure, which was adopted by the House. I also offered several other important amendments which were adopted. In fact, the bill was materially changed on the floor of the House because it was so loosely and carelessly drawn that even its proponents could not defend it. The bill failed to become a law. It was hoped that this experience would persuade the proponents of civil rights to write a bill which could be understood. While this bill is an improvement over its predecessor in some respects, it is still subject to many serious objections.

Of course, the fatal defect in the bill is the basic provision, which authorizes the Attorney General at the taxpayers' expense to foment litigation. This is absolutely indefensible. There are ample civil and criminal laws on our statute books to protect the constitutional rights of every citizen. Under our present Federal laws, if any qualified citizen is denied the right to vote on account of race, color, or creed, all that he has to do is to complain to the Federal district attorney and the guilty person or persons can be prosecuted and convicted for a crime. As I said, the real purpose of this bill is political. It is designed to capture the Negro vote. In doing so, little or no consideration has been given to the mischief and ill will which will be stirred up.

I recognize of course, Mr. Speaker, that those of us who are opposed to this kind of legislation are in a hopeless minority. Any bill labeled civil rights which comes on the floor will be adopted by a majority of 3 to 1. Under the rigid rules of the House, there is no opportunity for a filibuster after the bill once reaches the floor. Our only hope has been that the other body would exercise its privilege of prolonged debate to keep such a bill from becoming a law. This was not done, and we are now confronted with a politically inspired measure which will be passed when it reaches the floor.

I am hoping that the bill can be kept in the Rules Committee until next year at least, so that the Congress and the country will have an opportunity to understand the unwise provisions of the bill. Many bugs in the bill have been discovered since it passed the House and the Senate, and many more will be discovered before next January.

I want to compliment those of my southern colleagues who have courageously and steadfastly fought this inequitous bill with all the resources at their command. It has been my privilege and honor to collaborate with them. It is my understanding that the bill was originally slated to be brought to the House on February 15th, but it was not until July that it came to us for a vote. The delay in the consideration of the bill, which has been brought about by the strenuous opposition of a minority of Members, has been responsible for the discovery of some of the glaring defects of the bill.

I want to compliment my colleagues, Hon. HOWARD SMITH and Hon. WILLIAM COLMER, for their great leadership in our fight against this bill. They have shown rare courage and resourcefulness and our country owes them a great debt of gratitude. Anyone can go downstream and move with the tide, but it takes the very rare quality of moral courage to stand up and be counted when the going is rough. Both of these great statesmen are true sons of the South. They have typified that devotion to principle which has characterized so many of our southern leaders. They have refused to bend their knees so that thrift may follow fawning. They have chosen the stony paths of self-respect to the alluring and comfortable road of political advancement. In their leadership of the opposition, they have been supported by a group of the finest men I have even known in Congress. All of them are a credit to their people. They have kept the faith and fought the good fight, uncaring consequences. They have taken seriously Shakespeare's immortal words:

This above all: To thine own self be tr
and it must follow, as the night the day, th
canst not then be false to any man.

Mr. Speaker, I am opposed to t
bill with or without the Senate amen
ment. This legislation strikes at t
very heart of constitutional governm
in America. It is another step in t
direction of stripping our States of th
reserved rights. Those who vainly ima
ine that this bill will satisfy the ad
cates of so-called civil-rights legislat
are doomed to a rude awakening. Th
success in this measure would only se
to whet their appetite for more dra
legislation. You cannot compromi
with principle and satisfy those who d
mand such compromise, or safegua
those who yield such compromi
Time will prove, Mr. Speaker, that t
is one of the worst bills that Congr
ever passed.

Ideas and Ideals, Vehicles for Perma
Peace

EXTENSION OF REMARKS
OF

HON. JOHN A. BURNS

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVE

Friday, August 16, 1957

Mr. BURNS of Hawaii. Mr. Speak
under leave to extend my remarks I
clude for printing in the RECORD an
dress by Mr. Henry J. Kaiser to
American Society of Newspaper Edito
post convention, at Hawaiian Vill
Hotel, Honolulu, T. H.

The indomitable Henry J. Kaiser h
been in Hawaii but a comparatively sh
time. When he came, he brought w
him a vision and a dream, as well as
enterprise and energy for which he
justly famed.

The result has been accomplishme
the opening of new and wider horizo
and a realization by the people of Haw
that the impossible just takes a lit
longer. Mr. Kaiser has made a ma
contribution to Hawaii today and to h
future tomorrow. I am sure that h
speech will be of general interest.

The speech follows:

My wish for your stay in Hawaii is th
May you partake of the real Aloha sp
of the friendly people of the islands.
May the melodies and beauty of t
islands enter and live in your hea
And may you store up memories her
did Mark Twain who recalled Hawaii as "t
loveliest fleet of islands that lies anch
in any ocean."

When Riley Allen invited me to speak
day, I asked him, "What do you think
editors would like me to talk about?"
"About 20 minutes," Riley said, "
more."

Then our esteemed Riley jotted dow
suggested title for my talk: "Free Wo
Travel as a Factor for Peace."

At first, my thoughts rebelled at the m
nitude of even touching on "peace" in
minutes, especially among leaders of pu
opinion who daily are giving voice to m
kind's craving for lasting peace, and rep
ing the ceaseless struggles that must
waged to attain both peace and human f
dom.

Our age can and will extend the benefits civilization to the entire human race. I lieve this will prove the surest way to ace and freedom.

In a world still half-starved, half-educated, lf-enslaved, the final victory for permant peace can be won within this century, rough ideas and ideals that move the arts of men, through helping a thousand illion people around the globe rise to lives greater abundance.

Americans have the God-given opportuty—the opportunity that is seen so crystal ar by men of the press—to lead the cruade for the revolutionary improvement in e spirits and the lot of mankind. That's course for preventing a world war of omic and hydrogen bombs from vaporizing ilization.

Now you see why I hesitated at trying to ce free-world travel in perspective as a tor for peace.

Riley Allen came back with this thought, ich I agree with:

No part of the world is more keenly cogzant of the value of travel—individual vel as well as business and official travel—n Hawaii.

"Here we regard free travel, free choice of tinations, free choice of modes of transrtation, as not merely a boon to our accelting tourist business, but as an important tor in making friendships and thereby tending commerce and peace."

As a matter of fact, speaking personally, it k my own travels through South America d to this "Paradise of the Pacific" to open eyes to certain significant things.

In 1954 and 1955, I made a number of trips, aling maybe 75,000 miles of flying, through in America. I was overwhelmed by the portunities I saw for industrial developnt and for multiplying the people's proctivity and standard of living.

I traveled a South and Central America ssessed of natural resources spread over land mass twice the size of the United te, possessed of the virtually untapped man resources of 200 million people, desed to reach a population of 500 million hin this century.

These travels gave me a sharp, first-hand lization that we cannot have a strong rth America without a strong South erica; nor, in the Pacific, can we have a ure United States without our billion ghbors bordering the Pacific also living re abundant lives.

What American enterpriser can see vast man wants and needs and not try to do nething about fulfilling them?

Travel can certainly expose and awaken to our fellow men's needs.

As I saw jobs crying to be done to assist Latin American people, I was reminded an epitaph that Andrew Carnegie wrote: e succeeded because he surrounded him-f with men who knew more than he did." was grateful to be able to call upon teamtes—men who know more than I do.

I could cable or telephone home, and the t day, there might fly into a South Amern country a team of automotive men to n the establishment of the first motor hicle manufacturing industry in the thern continent; or other teams of exts to survey opening up coal resources or er vast sources of power; or to help build other nations' infant steel industries; or e fabulously rich iron ore; or discover uxite and produce aluminum; or build ps, cement plants, oil refineries, highways, ns—the many projects basic to people ging forward.

When I was told big-scale financing of tain Latin American projects appeared imsible. I was glad to be able to turn to ancial brains back home who had a part the Kaiser companies—during our period expansion since World War II—having emyed $1,555 million of private financing. I hope you'll pardon me for underscoring private financing, and may I add that right today, our companies have overall expansion programs aggregating about $540 million.

Yet the investment of American know-how can prove infinitely more important than the investment of dollars in helping other peoples advance.

It has been profoundly stirring to witness—wherever around the globe our engineers, production managers, construction men and technicians are working today—how peoples of less developed lands respond avidly and ably to secret of mass production and to the application of science, technology, and efficient management methods.

Through Honolulu Airport, our organizations have a flow of engineers and builders going out to India to assist Tata build a $130 million steel plant; to Australia to help build the biggest project in that country's history to develop electric power and irrigation; or others going to Asia to confer on peaceful uses of atomic energy; to assist in Jeep production; or see about a new ship being built for us in Japan.

Multiply and remultiply these examples by what other American corporations are doing and you realize that the travel that takes know-how to other peoples becomes a priceless contribution to freeing humanity from want and war.

Yet I am sure, in coming years, American know-how will be on the move—on the evolution-creating move—far more than up to now.

Turning now to another aspect of travel, it has been Hawaii that awakened me to what I call a new industry—the new vacation industry. It is at the beginning already of becoming a giant industry.

I came here for a 1-week visit in 1954, and was shocked at the shortage of hotels and ships that was preventing so many people from enjoying vacations in the islands. I felt Hawaii should make it possible and alluring for five times as many visitors as then to enjoy the romance, melody, sun, and sea of the tropical islands. Indeed, eventually 10 times as many.

You witness what is taking place now.

More than a 50-percent increase has been accomplished in hotels.

More than three times more cruise-ship passages are scheduled next year than last—a total of more than 61,000 passages each way to be run in 1958 between the mainland and Hawaii.

Then will come the jet passenger planes in 1959, reducing traveltime from New York to the Pacific coast to little more than 4 hours, with another lightning flash of 4 hours on into Honolulu.

At last Hawaii has the transportation and facilities to invite major conventions. And, before long, conventions alone can double travel to the islands and require the building of a thousand hotel rooms a year.

Here you can see how the Hawaiian Village Hotel has grown to 650 rooms in less than 2 years, but master plans are to expand this vacation center to 3,000 rooms. Next I expect Magic Isle to rise off nearby Ala Moana Park, creating a beach double the length of old Waikiki and a magnificent site for hotels with a total of 10,000 rooms.

No longer is there any doubt that the vacation industry will overtake the historic sugar and pineapple industries and become the No. 1 creator of employment and businesses in the islands.

The farflung Pacific area scarcely has scratched the surface yet in attracting travel and vacation income, as compared with Europe and popular resort areas both on the mainland and abroad. There will be terrific competition to lure vacationists, and every area that is aggressively alert to the opportunities can gain.

The possibilities for some of the greatest percentage gains lie in increasing travel throughout the reaches of the Pacific—to Japan and other free countries of Asia—the South Sea islands—romantic Tahiti, American Samoa, and Fiji—the Philippines, New Zealand, Australia, and so forth.

Jet passenger planes shortly will shrink world travel time 40 percent.

Looking years ahead, the aviation industry promises that the next major breakthrough in commercial airplanes will result in flying passengers at 1,200 miles an hour and up, across the country in 2 hours or less, around the world in a day, instead of Jules Verne's 80 days.

But the jet age's boom to world travel will start being felt on a really big scale by 1959, when jet transports, as I said, will reduce present flying times by two-fifths. This will be a great impetus to world travel, which already is on the uptrend.

Can you imagine a more pleasurable way for Americans to put buying dollars into hands abroad than through travel?

Concerning the economic importance of American dollars being spent increasingly on travel around the world, I leave it to you editors to editorialize.

I won't overeditorialize, either, on how much free-world travel can inculcate friendship between people—trust, understanding, and practical cooperation—which are vital elements in arriving at international peace.

I would like, though, and quite briefly, to indicate why there is bound to be tremendous growth in the travel and vacation industry and, in fact, in all the service businesses and professions which will contribute more good things of life and the spirit for always more and more people.

The underlying answer, in my opinion, is this: Materially speaking, man has discovered far more and has advanced far faster and further in recent years than in all preceding recorded history.

Scientists have created a new scientific revolution and the limitless industry of discovery to supercharge the onsweeping industrial revolution.

Science creates new sources of power—the prime mover of industrial civilization—releasing the energy of the atom and fuels, together with an array of chemicals, from coal and petroleum.

Electronics makes it possible to do jobs in factories, offices, and laboratories heretofore too complex or laborius for human beings.

Science is at the threshold of providing man the physical means to produce ample supplies of basic materials from such ordinary things as rock and water, unlimited energy from the sun, unlimited fresh water from the sea, vast synthetic sources of food and raw materials.

And the science of medicine is in the process of making it commonplace to live healthy and vigorous lives beyond the age of 100.

Our respected economists forecast that the people of the United States will create, before the end of this century, another America about as large as the present one, with a population of 300 million and a national economy roaring considerably beyond the trillion-dollar-a-year rate.

The travel and vacation industry already is growing by leaps and bounds, because people have been given the means to increase productivity and hence their earning power to new heights. I have barely suggested the highlights of the chain reaction of progress that is underway and continuing.

I need not fill in the details as to why our people will have constantly more spendable income and leisure for world travel. The base is laid for enormously more people to gain livelihoods in the vacation industry—both in the United States and abroad. The same base of amazing progress also will result in Americans being able to go in increasing

numbers into the underdeveloped countries of the world and provide more leadership than ever before in the development of other lands.

But can we move fast enough toward a workable brotherhood of man?

We cannot afford to be content living as though on an island of unbelievable productivity and prosperity, surrounded by other peoples who have not unleashed the merest fraction of their potentials. May I reiterate my belief that the benefits of civilization will be extended to the entire human race—and then will come lasting peace.

My faith is that it is given to us to participate in the making of an ampler life for all mankind.

Thank God to be alive in such an age of lightning change and to have in it a part.

Your part as editors? It is given to few in their life's work to live as close to the people, people of all races, all faiths, all stages of rising to the sanctity and greatness of the individual. It is yours to hear and heed the heartbeats of people, to learn the motivations and aspirations of people, to report the daily lives of people, to serve, and to light with truth the ways of the people—to envision the people's destiny.

"Ye that have faith to look with fearless eyes
Beyond the tragedy of a world at strife,
And know that out of death and night shall rise
The dawn of ampler life:
Rejoice, whatever anguish rend the heart,
That God has given you the priceless dower
To live in these great times and have your part
In freedom's crowning hour,
That ye may tell your sons who see the light
High in the heavens—their heritage to take—
'I saw the powers of darkness take their flight;
I saw the morning break.'"

Reduced Workweek Support

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. ROOSEVELT. Mr. Speaker, I am finding increasing awareness of the problems of automation, and while I realize that action on the subject matter of H. R. 4695, to amend the Fair Labor Standards Act to reduce the workweek, is out of the question at this time, I do hope many of my colleagues will give the matter their careful consideration.

ALLIANCE OF INDEPENDENT TELEPHONE UNIONS,
New Haven, Conn., August 12, 1957.

Hon. JAMES ROOSEVELT,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN ROOSEVELT: The Alliance of Independent Telephone Unions, comprised of 10 labor organizations representing over 100,000 employees of the Bell Telephone System in New York, Pennsylvania, Delaware, and New England, wholeheartedly endorse and support your bill, H. R. 4695, which would amend the Fair Labor Standards Act to reduce the workweek for overtime purposes from 40 to 35 hours over a 4-year period.

The alliance feels that the amendment proposed by you is a most constructive measure to meet the inroads of automation, which is already an accomplished fact in the Bell Telephone System.

Very truly yours,
CARROLL J. DOWNING,
Chairman.

Congress Losing Control of Appropriations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial that appeared in the Janesville Daily Gazette on August 3, and call attention to the fact that the writer of the editorial has quoted from the minority views expressed by members of the House Committee on Foreign Affairs at the time the mutual security bill was being considered.

The editorial follows:

CONGRESS LOSING CONTROL

Citizens generally are not aware of the intricacies of giving and lending billions in aids to foreign countries, but they ought to know something about the plan to commit the United States to billions of payments in the future and other schemes now presented.

This is not to say that aid to other countries in the free world is all bad. We have helped them to rebuild their economies and to strengthen their defenses so as to relieve our own load in defending ourselves. It is cheaper to buy uniforms and arms for South Korean soldiers than to train and maintain an American soldier there—a ratio of $600 to $2,000.

However, some of the aid program seems even dangerous in its effect upon our controls of funds being used. Congress is losing its control over the billions it appropriates out of our taxes.

The development loan fund, for example, with $500 millions, plus another $500 million in borrowing power in 1959, plus another $500 million in 1960, is aimed to develop economies of other nations. It would be a revolving fund in local currencies. A loan is made for a worthwhile development. It succeeds. Interest and principal are paid in local currencies. The latter is reloaned for another development in that country, and supposedly the fund has a constantly expanding volume of local currency for other loans.

According to the minority views filed by members of the House Foreign Affairs Committee, "Now the Congress is requested abjectly to abdicate its powers and to grant a blank check to be cashed wherever, by whomever, and in whatever amounts as are designated by those in charge of the mutual-security program."

"Integration of the military assistance program into our regular defense program would be unwise," said the minority report. "It would conceal from the American people the exact amounts spent on military assistance overseas and would hide these figures and statistics in a mass of voluminous detail."

"The development loan fund," the report said, "is not subject to any effective congressional or other control. Congress is asked for $1.5 billion for a 3-year period without any effective restrictions as to fiscal years and without any requirement for pro planning. This huge sum is to be ma available * * * to any undefined ant without shape or form. * * * Limits on t program represent wishful thinking in t extreme.* * *

"Lack of congressional control over spe assistance authorization of 275 millio is illustrative of the degree to which co gressional control has been relaxed. * * It may be used for practicaly any purpose.

"There were no less than $6,232,734,000 undelivered materials, commodities an services in the pipeline as of June 1957, * * * plus $1 billion in counterp funds. * * *

"Every year those who oppose the progra or who advocate economies, are charged wi a reckless disregard of America's securit and with a lack of understanding or know edge. * * * Last year the request for mil tary assistance was cut by a billion dolla Despite this cut there are still 500 millio in unobligated balances from the funds ap propriated last year, clearly demonstrati that the cut last year was not too dee but rather shallow."

It is now certain that this same effect w be seen next year, despite the protest th any further economies would be reckle disregard of national security. * * * p example, in 1955 a fund of $100 million f Asian economic development was authoriz to remain available till June 30, 1958. Tw years later, however, 87 millions remai in this fund. It is readily apparent that re quests often far exceed the actual needs the program.

It would be easier for taxpayers to dig the administration's demands for foreig spending if they felt that someone, Congre or someone reliably interested in their wel fare, were actually in control of the spendi

Mrs. May Craig

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. McINTIRE. Mr. Speaker, as a member of Maine's congressional dele gation, it is my privilege to work close with Mrs. May Craig, Washington cor respondent for the Guy Gannett chai of Maine newspapers and radio station

The August 12, 1957, issue of News week carried an interesting story en titled "Lady With a Hatpin," which pre sents to the public a brief story abo this newspaperwoman held in high re gard by Maine readers in particular an by people in general who view on tel vision the excellent news program know as Meet the Press.

I want to add to the Newsweek sto my observation that it is a personal pleasure to have her as one of the corr spondents with whom I work almo daily. I find Mrs. Craig exceedingly fai in her handling of news. She place high value on integrity, and as a news paperwoman develops her daily co umns and news stories on that basis.

I agree with those who express th opinion that May has no peer in know edge of the working machinery of th executive and legislative branches of o Government. She has traveled world

ide, and attended news conferences
d interviewed leaders throughout the
orld. She has the ability to propound
ry penetrating questions and to trans-
te news into form that enables readers
her column and news stories to get
e full significance of complex situa-
ons.

Because of the privilege of working
th her almost daily, I would observe
at May is nonpartisan in her appreach
news reporting. I would question the
notation in the Newsweek story that she
s described herself as "75 percent
emocratic." Had this observation been
at she described herself as "75 percent
beral," in my opinion it would have
en far more accurate. I believe if she
ere to state her political philosophy
e would say that it is more liberal than
nservative.

As a resident of Washington, D. C.,
ay Craig does not vote, and she is not
d never has been a member of any
olitical party.

I wish to pay my warm respects to
ay Craig and commend her accom-
lishments in the field of journalism
d her knowledge of the operations of
r Federal Government.

LADY WITH A HATPIN

"My goodness," said Mr. Eisenhower on his
y out of the Indian treaty room of the
d State Department Building last week,
t gets hot in here." Indisputably, it had
en one of the warmest Presidential press
nferences on record. For almost 40 min-
es, the President fielded fast ones on every-
ing from the civil-rights controversy to
s personal finances.

In a tradition of Washington press con-
rences, one of the toughest questions of all
me, as usual, from a tiny (5 feet 2), gray-
ired lady up front. "The friends of the
hool bill," said Mrs. May Craig from her
customed seat, "say that you failed to
e your influence [to save it]. On the
her hand. * * * Senator RUSSELL com-
ained [that you] were using your influ-
ce for the civil-rights [bill]. Could you
mpare where you do and when you don't
e your influence?" The President could
d did: "You don't influence Congress, in
y opinion, by threats, by anything except
ying to convince them of the soundness
d logic of your view."

Although May Craig once described herself
"75 percent Democratic," the chief Wash-
gton correspondent of the Gannett chain's
Maine papers is no player of political fa-
rites. In a tart southern voice (she was
rn in South Carolina some 60 years ago)
e has tackled almost every governmental
gure since the Hoover administration.

SWEET HARDSHELL

NBC's Meet the Press, on which "Miss
ay" is a regular panelist, has endeared her
millions, for good reasons. "When she
ers out at you from under one of those
ts [she has 40]," says one top Government
icial, "she looks like a sweet little old
aine grandmother. But her mind is as
ugh as a very old down-East lobster." On
e show during the 1956 political campaign,
e demanded of Sherman Adams: "Gov-
nor, I don't understand why you should
ate a historical fact like all the wars come
nder Democrats and now try to get out of
when you Republicans may get into a
ar."

Three months earlier, she had jumped on
aul Butler, the Democrats' national chair-
an: "Harriman had an operation and Sen-
or SYMINGTON had an operation * * *.
hy would you take them [as presidential candidates] and still say the President's ill health is a liability?"

Miss May trotted into journalism in 1923 as an informal assistant to her husband, the late Don Craig, then Washington bureau chief of the old New York Herald. An intense fighter for newspaperwomen's rights (some years ago she got a Senate appropriation for the outfitting of a ladies' restroom in the Senate Press Gallery over the unanimous opposition of antifeminist male correspondents), she maintains a grueling editorial pace. Up at 6:30 daily, she knocks out her 1,000-word, 7-a-week column by 8:30.

Miss May rarely breaks big national stories, but fellow writers agree that her column is one of the best out of the capital. "She can shift from a corrosive account of a silly teaparty to a two-fisted blast at some official's misbehavior in the next paragraph," one editor said last week, and she can simplify complex national issues in a neat phrase. Of the President's cooled attitude on the school bill, she wrote last week: "He is against legislation that might inflate more."

Once she asked the late Guy Gannett to allow her to cut down her output, but he would not hear of it. The readers, Gannett said, "have had May Craig every day for breakfast for 20 years and I ain't gonna let 'em break the habit."

Concern Over the Inflationary Spiral

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mrs. KEE. Mr. Speaker, the chairman of the International Latex Corp., Mr. A. N. Spanel, commented recently that "we are no longer threatened by inflation but that over 90 percent of America's families bitterly wrestle with it on a daily basis." Both the administration and the Congress have also frequently voiced concern over the inflationary spiral which is rapidly taking the cost of living out of sight and reach of the average citizen.

This makes all the more illogical the administration's attitude toward two bills passed by the House last week. One bill, overwhelmingly approved by a vote of 329 to 59, provides an 11-percent pay increase—an average raise of about $518 a year—for nearly a million of the Federal Government's classified employees. It was passed over threats of a Presidential veto, as was its earlier-passed counterpart providing similar increases for postal employees.

Mr. Speaker, the administration opposes this pay raise legislation on the grounds that, by some mysterious means, it would contribute to inflation. On the face of it, this claim is patently absurd. Since July 1951, Federal employees have had only one salary adjustment—a woefully inadequate 7½ percent which Congress managed to wangle for them in March of 1955 after two previous attempts, in 1953 and 1954, were vetoed by the President. That pay raise did not bring Federal employees' earnings into line with the cost of living which, since then, has continued to rise by 5.2 percent as of June 1957.

With no signs that the steady rise over the past 17 months in the cost of living will be halted in the foreseeable future, Federal employees have been finding it more and more difficult to stay out of debt and at the same time maintain for themselves and their families a decent and reasonable standard of living. Granting them salary increases which will barely help them to keep up with higher prices will scarcely send them on buying splurges that would give appreciable impetus to the inflationary spiral.

On the other hand, Mr. Speaker, the second bill passed by the House last week does, in my opinion, do just that. The postal rate increase bill had the full support of the administration behind it and is legislation for which the Postmaster General has belabored the Congress almost from the first days of his taking office. Only recently, let me point out, the President directed an urgent plea to industry and labor to hold prices and wages down. Yet, what is an increase in postal rates, especially on first-class mail, if it is not a price increase?

As passed by the House, this bill raises the cost of mailing first-class letters from 3 to 4 cents; increases the cost of cards from 2 to 3 cents; boosts airmail rates from 6 to 7 cents, and airmail cards from 4 to 5 cents. At first glance, an increase of 1 cent in the price of sending a letter through the mails first class may not seem anything to become very excited about. The total of these increases on first-class postal rates alone will, however, raise by about $340 million the burden which the American taxpayers are already carrying in support of the services rendered by the Post Office Department.

Nor does the full cost to the public stop there, Mr. Speaker. The bill also proposes to raise rates on second-class mail—newspapers and magazines—by 15 percent in each of the next 4 years to a total of 60 percent. Similar rate increases on third-class mail—advertising and like matter—would go into effect in their entirety as of October 1. You may be quite certain that these rate rises would not be absorbed by the senders, but would quickly be passed along to the consuming public in price increases.

Yet this is not the only nudge which the administration has given to inflation and the spiraling cost of living. Just before he retired, former Secretary of the Treasury Humphrey raised the interest rate on Government bonds. Big business, the principal purchaser of large blocks of these bonds, is the gainer. The taxpayers will foot the bill with higher interest payments on the national debt.

Moreover, the raising of interest rates on Government bonds has set off a whole series of rate and price increases across the country. The Federal Housing Agency has raised interest and discount rates. The home buyer is the loser. The mortgage broker gains.

Mr. Speaker, the Interstate Commerce Commission has approved freight-rate increases for the railroads—increases which are expected to add nearly $900 million a year to shippers' transportation costs and which Mr. and Mrs. Con-

sumer are sure to find tacked on to their food, fuel, and other essential commodity bills before very long.

And while the purchasing power of the dollar steadily declines, the cost of money—the interest rate paid by borrowers—as steadily rises, as bank rates climb, propelled upward by the administration's tight-money policies.

These policies, the administration declares, represent the best possible way to hold the line against inflation. By some strange alchemy, however, they seem consistently to line the pockets of big business, big corporations, and big banks while the average wage earner, with the biggest pay envelope he has ever received, and the average white collar worker with the largest salary check he has ever had, struggle vainly to make ends meet.

The administration opposes pay increases for hard-pressed Federal employees as inflationary. The administration warns that tax cuts for the average individual would also prove inflationary. Meanwhile, in the midst of the greatest prosperity the Nation has ever known "90 percent of America's families bitterly wrestle with inflation on a daily basis."

Mr. Speaker, is it not time that the man in the street spoke loudly enough for Congress, at least, to hear him—before the disastrous boom-and-bust of the 1920's overtakes us once again?

Three Hundred Million Dollars Compensation for Germans

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. ROOSEVELT. Mr. Speaker, this is a matter about which a great many of my constituents have written and it was so well expresesd in this letter to the editor of the New York Times that I am submitting it for the information of my colleagues.

PAYING FOR GERMAN ASSETS—PROPOSED COMPENSATION DECLARED BURDEN FOR AMERICAN TAXPAYER

To the EDITOR OF THE NEW YORK TIMES:

The recent White House announcement, on the eve of the German elections, that the administration will support legislation next year in the Congress calling for payment of over $300 million as compensation for vested German assets is most distressing news for the United States taxpayer.

This move, long fought for by a myriad of wealthy lobbyists in Washington, had up to this time been resisted by the Justice Department and the Bureau of the Budget supported by our allies that had signed the Paris reparations treaty of 1946.

The principal beneficiaries of this transfer will be large German corporations, some of whom were mainstays of the Hitler regime.

In a remarkable about-face the administration has abandoned its own bill, H. R. 6888, under which all individuals who were not war criminals would receive payments up to $10,000, which would have taken care of 92 percent of the claimants. As late as April 3 the administration in a letter to the Speaker of the House stated: "H. R. 6888 represents the considered position of the administration, based upon a full and careful study."

For the Germans the chief issue is one of taxation. If the United States Treasury pays them the appreciated value of their assets, a 25 percent capital gains tax will be levied. If the German Government pays them, as it was obliged to do by the Bonn Convention of 1952, a heavy "equalization of burdens" tax will be levied.

Tht attitude of the United States taxpayer, such as myself, is entirely free of any trace of animosity toward the German people, who have made such magnificent strides on the road to democracy. The isue for Americans is simply whether we should bear this burden (in addition to foreign aid) rather than the now very prosperous German taxpayer, largely for the benefit of prosperous German corporations.

It is to be hoped that the Congress give these problems its most careful scrutiny, and reject all considerations based on foreign politics or improper lobbying activities.

CHARLES R. FOSTER.

WASHINGTON, *August 8, 1957.*

Mutual Security Appropriation

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. NEAL. Mr. Speaker, the habit of irresponsible spending of other people's money is more contagious than Asiatic flu and its incidence among Federal bureaucrats is far more general than this much dreaded epidemic is apt to become. Regardless of the economy-mindedness of agency heads, it is very difficult for them to understand and control the details of administrative allocation of appropriated funds.

I was pleased to see the House approve the bill appropriating funds for mutual security in its reduced form. To me it represents adequate provision for our national defense and recognizes the lawmaker's final responsibility to his citizens.

With military outposts around the world facing the constant threat of Communist challenge and our position of free world leadership, any other course at this time might mean loss of face, of prestige, and of influence in the cause of world peace.

Unfortunate as our world position has grown to be, there is no alternative but to accept it, however, this does not mean we should continue to involve ourselves promiscuously in new areas, the cost of which endangers our own security and national solvency. As final appropriation measures clear the Congress, there is definite evidence that dangerous overspending and inflation, our greatest enemies, are being recognized and dealt with.

I do not believe the limitations we have placed on foreign aid will adversely affect our standing among our allies. Surley they must by this time realize that the United States Treasury is not bottomless. Commonsense should teach them that unlimited aid must sometime cease.

The action of the Congress in revising downward appropriations for foreign aid will, in my opinion, have a far-reaching beneficial effect. First, it will renew the hopes of American citizens that their heavy tax burden may soon be lightened. Second, it will serve notice to Government agencies and defense leaders, that closer scrutiny of all phases of Federal spending must follow if they would stay within the limits of their appropriations. Third, it will serve to awaken free governments everywhere that the major part of their ability and preparedness to resist aggression rests with their own determination to fully utilize their own resources and national products, and their will to remain independent of outside assistance. Fourth, it will tend to assure the free nations of the world that America is determined to preserve her own economic strength and solvency in order that she may continue to maintain the balance of world power without which the destiny of recently freed nations throughtout the world would become totally insecure.

Agriculture Conservation Program

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. WILSON of Indiana. Mr. Speaker, the agricultural conservation program has been saved for the farmers of America, and I am proud to have had a part in saving it. On July 9, I made remarks on this floor which exposed a brazen effort by Assistant Agriculture Secretary E. L. Peterson to literally wreck ACP in direct contradiction of the expressed will and intent of Congress.

Mr. Peterson's proposals would have been a killing blow to many farmers, particularly the small, family-sized farms. Having been born and raised on a farm myself and having spent my lifetime in the farming regions of southern Indiana, I know—only too well—of the many heartbreaking problems with which they have been faced for so many years. Our farmers are caught in a squeeze between higher costs of operation and lower income for the food and fiber they produce. It is a vicious thing.

My speech of July 9 caused a considerable furor, Mr. Speaker. One result was a public announcement by the Secretary of Agriculture that the ACP would be left intact and administered exactly as Congress intended. Another result—that of public reaction—is one to which I would call your attention at this time. It bears out my own contention, which I have expressed frequently over the years, that the ACP is of vital importance to the Nation's agriculture and is widely appreciated by farmers everywhere.

Daily for the past several weeks I have received letters from farmers all over the country expressing their appreciation of my efforts to keep ACP as an integral part of the agriculture program. They have pointed out the vast good ACP is doing in conserving the soil of America. I will quote from a few of these letters at this time, and my colleagues are welcome to inspect the many others I have in my office.

Richard S. Winder, Route 2, Bethel, Ohio, wrote:

I wish to thank you for helping to prevent elimination of the most important practices in the ACP. The proposals of Assistant Secretary Peterson would have made the program worthless to dirt farmers.

William H. Reichling, LaPuente, Calif.:

As a citrus grower in Los Angeles County, I wish to congratulate you and express my appreciation of your efforts in behalf of the conservation-minded farmers of this county in preventing deletion from the 1958 ACP many of the practices so necessary to conservation in various areas of the country.

Marlon King, Princeton, Ky.:

Having lived in a farming area all my life, I have had opportunity to observe at first hand the tremendous value of ACP to the farmers of our Nation. I express my personal thanks for all you did to save this program.

Everett Gould, West Pawlet, Vt.:

As an eastern dairy farmer I wish to thank you for helping to save the 1958 ACP. Conservation is an investment from which everyone can benefit. It does not cost—it pays.

Martin B. Thorson, Iola, Wis.:

Farmers of Wisconsin will thank you for your work in saving the practices of ACP. Any effort to weaken it would seriously threaten their security.

Raymond A. Klopp, Route 2, Fremont, Wis.:

In my opinion, ACP has done much to preserve our irreplaceable topsoil, and in many other ways. It is gratifying to know that we have Congressmen like you who do care for the farmer.

M. E. Conley, chairman, ASC Committee of Montgomery County, Tex.:

This committee wishes to express appreciation for your help in sustaining provisions of the ACP. We feel the proposed changes would have been most detrimental to the farmers and ranchers of this and all other Texas counties.

John M. Deely, Lee, Mass.:

Thank goodness there are people like you in Congress who have the foresight and fortitude to protect the farmers. My hat is off to you.

William Reckelhoff, Route 3, Huntingburg, Ind.:

I feel that if it had not been for you and a few other good men, the ACP would have been a poor program for many a farmer. Of all farm programs, ACP stands out as the most important. We cannot afford to let the ACP be broken down.

Louis A. Burges, Jasper, Ind.:

In behalf of the farmers of Dubois County, I want to thank you for taking a stand in trying to keep our ACP effective. I have worked in the office of the Dubois County ASC committee for 18 years. The ACP has consistently helped our farmers. Considering the small cost, the results have been amazing.

The Growth of Federal Aid

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. MICHEL. Mr. Speaker, I should like to insert in the Appendix of the RECORD today an editorial from the Peoria Journal Star entitled "The Growth of Federal Aid."

This subject is drawing more and more attention. As Members of this body know, our House Subcommittee on Intergovernmental Relations has already held several days of hearings here in Washington preparatory to our hitting the road to hold on-the-spot hearings around the country after Congress adjourns on this very important problem of Federal-State-local relationships.

Following the editorial, I should like to list some very revealing, and I might say staggering, figures dug out from the various departments of Government which show to what degree my home State of Illinois participates in the multitude of Federal grant-in-aid programs.

[From the Peoria (Ill.) Journal Star of August 7, 1957]

THE GROWTH OF FEDERAL AID

President Eisenhower's suggestion to the governors' conference that the State and local governments should take over more of the functions now performed by the Federal Government has directed attention to the growth of Federal participation in local affairs in recent years.

According to Tax Foundation, the Federal Government in 1934 was interested in the operation of only 18 Federal-aid programs in which it turned money over to the States for programs to which the States also contributed. That number has increased until in the present fiscal year, which began July 1, there are an estimated 97 such Federal-aid programs (no one seems to know what the exact number is).

Every category into which grants-in-aid programs are divided has shown an increase. Whereas there was one veterans service and benefits program in 1934, today there are two. Labor and welfare programs to which the Federal Government contributes have increased from 3 to 36. Today there are 9 agriculture and agricultural resources programs instead of 4. Natural resources programs have increased from 8 to 25; and where there were only 2 commerce and housing programs in 1934 there now are 20. There were no general Government participation programs 23 years ago and today there are 5.

This shows how a tendency once developed grows and grows until it becomes a monster which threatens to undo all the benefits it was conceived to bring about. Federal aid has taken over such a big portion of the revenue available to governmental units that it constitutes a serious strain on States and local bodies. The only way it can be headed off is through the defeat of such new programs as the President's schoolroom construction bill and a determination to refrain from trying to get something for nothing from the Federal Government.

Federal grants to Illinois

Program	Type	Amount
Department of Agriculture:		
Experiment stations	Regular grants	$658,714
Cooperative extension work	do	1,347,404
School lunch	do	3,047,726
National forests fund	Shared revenues	18,440
Projects in marketing	Cooperative	42,708
State and private forestry	do	72,424
Commodity Credit Corporation	Value donated	3,016,117
Special school milk	Cash payments	3,776,071
Removal of surplus	Value distributed	4,535,764
Department of Commerce:		
CAA, Federal airport	Regular grants	2,285,377
Highway construction	do	38,977,506
Lease of flood control lands	Shared revenue	5,932
Department of Health, Education, and Welfare:		
Colleges, agricultural and mechanical arts	Regular grants	156,905
Cooperative vocational education	do	1,460,900
School construction and survey	Emergency grants	1,081,100
School maintenance and operation	do	1,988,390
Venereal disease control	Regular grants	17,730
Tuberculosis control	do	229,752
General health assistance	do	399,265
Poliomyelitis assistance	Emergency grants	91,900
Mental health activities	Regular grants	144,734
Cancer control	do	117,535
Heart disease control	do	38,055
Poliomyelitis vaccination	Emergency grants	1,194,218
Hospital construction and planning	Regular grants	564,974
Construction of community facilities	Emergency grants	225,000
Maternal and child health services	Regular grants	309,715
Services for crippled children	do	458,405
Child welfare services	do	194,730
Old age assistance	do	39,498,856
Aid to dependent children	do	20,051,897
Permanent and totally disabled	do	3,353,054
Aid to the blind	do	1,625,692
American printing house for blind	do	11,140
Office of vocational rehabilitation	do	1,491,315
Department of the Interior:		
Fish and wildlife restoration	do	517,378
Migratory Bird Conservation Act	Shared revenues	4,892
Mineral Leasing Act	do	23
Department of Labor: Unemployment compensation and employment service	Regular grants	9,860,869
Federal Civil Defense Administration: Federal contribution	Emergency grants	222,694
Housing and Home Finance Agency:		
Defense community facilities	Emergency grants	4,767
Urban renewal fund	Regular grants	830,110
Annual contributions	do	3,851,121
Veterans' Administration:		
Homes for disabled	do	651,836
Supervision of on-job-training	do	151,950
Total grant payments		148,585,175

Federal grants to Illinois—Continued

PAYMENTS TO INDIVIDUALS WITHIN ILLINOIS

Program	Amount
Department of Agriculture:	
Conservation program	$7,051,467
Administration of Sugar Act	84,542
Department of Commerce: Bureau of public roads, forest, highways	164,453
Department of Defense:	
Air Force National Guard	5,765,719
Army National Guard	6,598,175
Department of Health, Education, and Welfare:	
National arthritis and metabolic diseases institute	338,010
Neurological diseases and blindness institute	306,940
National Cancer Institute	450,196
National Institute of Dental Research	49,187
Institute of allergy and infectious diseases	167,282
National Heart Institute	510,278
National Institute of Mental Health	386,061
Division of research grants	232,817
Traineeship awards:	
Arthritis and metabolic diseases	3,815
Neurological and blindness	3,400
Cancer	9,200
Heart	21,700
Mental Health	127,360
Training grants:	
Arthritis and metabolic diseases	28,749
Neurological and blindness	58,334
Cancer	164,948
Heart	174,950
Mental health	188,026
Field investigations: Cancer	122,939
Fellowship awards:	
Arthritis and metabolic diseases	1,708
Neurological and blindness	10,293
Cancer	43,080
Dental institute	10,092
Allergy and infectious diseases	500
Heart	45,597
Mental health	33,416
Research grants	823
Vocational rehabilitation: Training and traineeships	88,628
Department of Labor:	
Unemployment compensation for veterans	1,995,212
Unemployment compensation for Federal employees	1,331,548
National Science Foundation:	
Research grants awarded	1,253,480
Fellowship awards	183,541
Veterans' Administration:	
Automobiles, etc., for disabled veterans	70,319
Public Law 346 and Public Law 16	36,449,253
Total payments to individuals	64,526,038
Grand total	213,111,213

Goodby to New York's Historic Carnegie Hall

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times commenting on the announced plan to raze historic Carnegie Hall to make way for a skyscraper:

GOODBY TO CARNEGIE HALL

We have known for some time that the days of Carnegie Hall were numbered. We have followed the plans to transfer the home of the Philharmonic Orchestra to a new and perhaps better location. Nevertheless, it came as a shock the other day to see the pictures and plans of the 44-story skyscraper that will eventually take shape at that corner on 57th Street. It just won't be the same.

No building, however imposing, is likely to fill the same place in the hearts of thousands of New Yorkers as did the old Carnegie Hall. It will be at least a generation before New York will be able to forget. The old building had to give way and come down, of course. That is the inevitability of progress. But what it stood for cannot easily be replaced.

When those walls are razed, there will be many persons passing by who will think of what was heard within them. There will be memories of Schumann-Heink, of Kreisler and Paderewski. There will be echoes of the orchestra under the batons of the world's greatest conductors. The Beethoven Fifth, the Meistersinger Prelude, and the Hallelujah Chorus. All those were a part of Carnegie Hall.

Such things are imperishable. No new building can take them away, no wrecking crew destroy them. So long as men and women can remember it, Carnegie Hall will live on.

Orlando Passannante

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. OSTERTAG. Mr. Speaker, a kind and beloved gentleman, for many years my constituent and friend, recently was called to his last rest. Over a long period of years he gave generously of his time to his neighbors and friends, and his continuing charitable endeavors and efforts to be helpful to others greatly benefited the good people of his community.

I speak of Dr. Orlando Passannante, late of Rochester, N. Y.

Born in Vietri Di Potenza, Italy, Dr. Passannante received his early education in Naples and Salerno. He came to the United States in 1908 and 6 years later was graduated from Columbia University's School of Pharmacy. In 1916 he arrived in Rochester and soon thereafter opened the pharmacy which he owned and operated until his retirement in 1954.

Dr. Passannante was a pioneer in Italian language radio broadcasting in Rochester. In 1935 he began the Italian Hour, a program of Italian news, music, and religious events, which now is conducted by his son. He was known and applauded for his efforts to advise and assist those in his community. He had a way of making their problems his own and with rare patience and understanding he strove to lighten or resolve them. It so happened that he encountered and counseled with many newly arrived Italians, and in the interest of all concerned he never failed to explain and emphasize the privileges and advantages of American citizenship. Representing, as I do, the 39th Congressional District of New York in which Dr. Passannante lived, I am fully aware of his great contribution in assisting those in need of help and guidance, particularly in regard to immigration matters.

Dr. Passannante's life was a rich and full one, and the community in which he spent it is a better one for his having lived there. His countless friends will cherish his memory.

Will Motorists See Signs or Scenery?

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waterville Sentinel dated August 10, 1957:

WILL MOTORISTS SEE SIGNS OR SCENERY?

Congress has demonstrated a remarkable indifference to the question whether Americans are going to see billboards or scenery when they drive on the new Federal Superhighway System. Either the billboard lobby has had its way, or our delegates in Washington have decided that they simply can't be bothered with this matter.

Whatever the cause, the idea of billboard control seems to have withered on the congressional vine. Unless it can be revived, motorists on the coming highway system will not see the broad sweep of the American countryside but will have to be satisfied with glimpses caught between signboards.

Controlling the size and placement of billboards among the highway would be neither an invasion of State rights, as the outdoor advertising lobby has asserted, nor an unwarranted curb on free enterprise. On the

contrary, it would be a kind of zoning to preserve the natural beauty of which Americans are justly proud. That sort of zoning has won general public acceptance. Without it, our residential areas, far from having open space and trees and lawns and gardens, would probably soon become scabrous with signboards and jerry-built structures of all kinds.

In every large city, and in many smaller communities, there are blocks and blocks made ugly by this sort of thing. Unhappily, it has become a distinguishing mark of the American urban landscape. Reasonable control over outdoor advertising along the new Federal Highway System would help to prevent the spread of such ugliness into our countryside. Billboard control is in the public interest.

The Drought, the Surplus, and Foreign Assistance

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MAY. Mr. Speaker, I think it is particularly appropriate at this time to submit the editorial from the Hartford Courant of August 14, 1957, for insertion in the RECORD.

The editors of the Courant have effectively pointed out the important factors involved in the current drought situation in Connecticut. While an excellent case can be made for aiding the drought-stricken farmers, it is unnecessary to bring in extraneous issues which have the dangerous potentiality of undermining the confidence of the public in necessary programs in operation today.

The editorial follows:

THE DROUGHT, THE SURPLUS, AND FOREIGN ASSISTANCE

At least two politicians have seized upon Connecticut's current drought situation to take gratuitous cracks at the foreign aid program. There is an attitude that tends to blame all troubles on participation in international affairs. The "foreigners" can be accused. As usual, the drought remarks are demonstrably wrong. They take the form of thinking that all feed grains and the like are being shipped overseas free, thereby making them unavailable to local farmers, and that it's easier to qualify in India for help than it is here.

What is now happening in Connecticut is that feed for cattle is going to be short this year, as a result of pastures having been dried up in this season. It has been suggested that farmers ought to be allowed to purchase commodity surplus stocks at reduced prices. If the area were declared a disaster area, they could. But the disaster law was written to guarantee survival of basic breeding herds, and Washington doesn't think this State qualifies—nor has South Dakota, New Jersey, Massachusetts, or Rhode Island, which made similar appeals.

The foreign aid crack has been dragged in by the heels. But the truth is that a recent survey showed exports of feed grains running behind last year's, while supplies are still high. A big carryover of feed grains is in prospect. The total supply is adequate to meet all prospective requirements for domestic use and exports, a Senate committee was told earlier this year. Farm Bureau spokesmen are urging a renewed effort to dispose of surpluses overseas, for production elsewhere is continuing to grow. And they recognize that unwise efforts to dump these surpluses—selling them at reduced prices—can harm domestic markets.

So the farmer's argument is with other farmers who don't want to see the Government competing with existing markets by cutting prices. There's a question of the taxpayer's interest, too, for he's the one who bought and paid for these surpluses, whether he liked it or not. The Connecticut farmer, hard hit by the drought in this extraordinary season, can make a good case for special privilege in the purchase of surplus feed. Certainly it makes sense to open these surpluses for sale to relieve a severe hardship. But there should be no reason to quarrel with other legitimate uses, covered by legislation, which are in the interest of the United States.

Ryukyuan Freedom

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. ASPINALL. Mr. Speaker, the strategic location of the Ryukyu chain of islands has fostered this archipelago into a position of prime importance in the defense and security of the free world. The main island of Okinawa has become the bastion of United States defense forces in that area of this planet. This group of islands has been under the physical control of the United States since the cessation of hostilities at the conclusion of World War II. The peace treaty with Japan provided that this physical jurisdiction would be for an indefinite length of time.

The future status of the Ryukyus recently received a great deal of attention as a result of the visit to Washington of the Prime Minister of Japan. The communique issued jointly on June 21 by the President of the United States and the Prime Minister of Japan referred to this question and mentioned that this problem was constantly being reviewed and receiving consideration at the highest levels of Government. However, as long as present international conditions continued as they now exist, final determination would have to be delayed. Finally, the communique confirmed the pertinent provisions of the peace treaty in this respect.

At this time, I wish to bring to the attention of my colleague a newspaper editorial which appeared originally in the Korean Republic of Seoul, Korea, and which was reprinted in the Okinawa Morning Star.

This editorial was brought to my attention by Mr. William Perkins, a former resident of Grand Junction, Colo. Mr. Perkins has served the past 4 years with the United States Civil Administration in the Ryukyus. In that period of time, he has developed a very keen understanding of the local problems, and is greatly interested in the future prosperity and progress of the islands.

Mr. Speaker, the editorial follows:

[From the Okinawa Morning Star of July 27, 1957]

RYUKYUAN FREEDOM

(The following editorial is reprinted from the July 12 edition of the Korean Republic, a daily newspaper in Seoul.)

One of the first and foremost tasks of an Asian alliance would be the protection of the Ryukyus against a predatory Japan. On the fate of the Ryukyus may well hinge the future of national self-determination in this part of the world.

Japan's claims in the Ryukyus are of no more validity than its assertions to 85 percent of the property in Korea. The claims are based upon a long-continuing aggression against another country, and Ryukyuan return to the Japanese would serve as a precedent for attempts to extend the new Japanese Empire to Korea, the Philippines, Indochina, and the rest of Southeast Asia.

Ryukyu formerly was a fully soverign and highly civilized country. For a time, Chinese influence was very strong there, but the Chinese never sought to extinguish Ryukyuan nationalism. Japanese and Chinese influences clashed during the 18th and 19th centuries. Finally, in 1874, Japan swallowed up the islands in one of the first aggressions of the modern Japanese imperialistic era.

Ryukyuan nationals became second-class Japanese citizens. Their role was to raise food for the Japanese, and that was what they did. Japanese nationals controlled all business, all economic opportunity, and most property. Ryukyuan culture was ruthlessly suppressed, and higher education was denied.

When the United States achieved the total defeat of Japan in World War II, it was presumed that the Ryukyus would be dealt with as Cuba and the Philippines had after the Spanish-American War. Gen. Douglas MacArthur implied a period of democratic tutelage, such as that in the Philippines, and then a granting of complete independence. Unfortunately, some pro-Japanese Americans never accepted this; they wanted the Ryukyus returned to Japan, and undertook a propaganda campaign to persuade others that the people and islands were Japanese and therefore could not be given their freedom.

The success of this campaign has been indicated in statements by Secretary of State John Foster Dulles that Japan has residual sovereignty in the Ryukyus. Even more shocking was the declaration in the Eisenhower-Kishi communique, issued following the Japanese Prime Minister's visit to Washington, that the United States expects to return Ryukyus to Japan at some unspecified date when the danger of Communist aggression has been ended.

Asians who really believe and practice what they say about freedom and democracy can never countenance this. The Ryukyuans are not Japanese or Chinese or anything else except Ryukyuan. They cannot be given to anybody, and if the United States persists in trying to do so, it will be regarded as a colonial power giving away its possessions as though they were pawns in a game of power politics.

What the United States has failed to understand—largely because of the deceptions of the pro-Japanese Americans—is that Japan, as well as communism, has embarked upon a career of Far Eastern aggression. Okinawa is a steppingstone to Formosa, the Philippines, and southeast Asia. Once before the United States ignored Japanese advances into Korea, Manchuria, and China—and the cost of that failure was the Pacific war. The mistake must not be repeated.

An Asian alliance—starting with a nucleus of Vietnam, the Philippines, and Korea—could and should bar Japan's aggressive bid for the Ryukyus or any other piece of territory that does not historically belong to the Japanese. Such an alliance—closely linked to the United States for purposes of mutual

security—also would serve to counter Japanese propaganda and bring America back to its adamant defense of the rights of self-determination, freedom, and independence for all states and peoples.

Free Asians know that Japan cannot be trusted, and why. It is up to them to get together and—with or without American assistance—block the way to renewed Japanese aggression.

Crossroads on the Rights Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert the following article from the Washington Evening Star of August 14, 1957, entitled "Crossroads on the Rights Bill" in the CONGRESSIONAL RECORD:

CROSSROADS ON THE RIGHTS BILL—OUTLOOK FOR MEASURE VIEWED AS BEING A LITTLE LEGISLATION OR NONE AT ALL

(By Doris Fleeson)

President Eisenhower cancelled his press conference this week without explanation. An informed guess is that he has not yet found his way through the civil rights wood where the tall presidential timber is sticking up a mile.

Every informed person here now knows that if Republicans would accept a civil rights bill with a modified form of jury trial in it, that bill would be approved by Congress and on its way to the President for signature within a short time.

The battle for the civil rights groups outside Congress has been won. The National Association for the Advancement of Colored People is actively seeking approval of the Senate bill as the best available. The AFL–CIO is urging its adoption as a practical matter.

A great portion, perhaps most, of the Nation's press is relieved that a messy filibuster has been avoided, not unhappy about a jury trial in some form and praising the joint Senate effort that brought about the legislation.

In a really remarkable show of comity, the Senate leaders, Democrat LYNDON JOHNSON and Republican WILLIAM F. KNOWLAND, have joined in a warning to the national chairmen of both parties to keep hands off the situation.

The President, on the record, does not care to buck trends of this type. He has an innate distaste for purely political maneuvering, which is where the civil rights bill currently stands. It must be as clear to him as it is to everyone else that the burden of proof has shifted from the framers of the Senate bill to those who would now so act that no bill at all would be the inevitable result.

The front man for the latter group is House Republican Leader JOE MARTIN. To what extent he has in his corner the strategists who framed the first salvos against the jury trial amendment—Vice President NIXON and Acting Attorney General William P. Rogers—is not clear.

MARTIN certainly has on his side the die-hard southern Democrats of the House. This is an old coalition, and its capacity to be difficult, starting with its entrenched position on the Rules Committee, is very, very great.

It can stick to its hardnose attitude that the Senate version must go to conference with the House only if the President and Vice President allow it. The President has JOE MARTIN's ear, and so does NIXON.

As matters now stand by kind of weird justice, the Democrats are beginning to look like the civil rights party. Their southern Senators sacrificed the sacred filibuster to allow the passage of the first Federal civil rights statute since Reconstruction. It may be better or worse than it looks, but it's there.

There are Republicans, too, who can take credit, but any veteran of the congressional galleries will certify that there have consistently been more Democrats favoring civil rights legislation through the years than Republicans by a fairly wide margin. The number in Congress who have a passionate conviction about the issue is another story entirely.

The counsels now reaching the President's ear are carefully guarded from the public view and there will be no gathering of reporters to smoke them out this week.

What he has to gain, where his intense anxieties focus, is, however, clear. In an extraordinary White House meeting, he has begged 20 congressional leaders—half from each party—to support the full amount of foreign aid in the compromise bill. It is only realistic to suggest that his control of that situation is in part dependent on how carefully he treads the civil rights path with a Democratic majority in the Congress.

Foreign Aid Pipeline

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MADDEN. Mr. Speaker, the following editorial in today's Washington Daily News outlines in a comparatively few words, the reason for the action of the House of Representatives yesterday in upholding the cuts in the foreign affairs recommendation by the Appropriations Committee:

MONEY IN THE PIPELINE

President Eisenhower has a real fight on his hands in attempting to avoid deeper cuts in the appropriations for foreign aid.

Judging by his extraordinary efforts, he regards this as the biggest issue between him and Congress. He puts it virtually on a life-and-death basis.

The cuts approved by the House in a rousing battle were made in the face of the President's dramatic pleas, which included a threat to call Congress back in special session.

Despite all the fuss, the amount of the House reduction is less than Congress cut from foreign-aid requests in any year of the Eisenhower administration except 1955.

But what the House obviously had in mind was the huge backlog of foreign-aid money still in the pipelines. As of June 30, more than $6 billion previously appropriated still was unspent—enough in itself as the House Appropriations Committee pointed out, to run the program well into 1959.

Beyond this, another couple of billions will be available for assistance to other countries in foreign currencies accumulated under the surplus crop disposal program abroad.

So there is no lack of money for this program. On the contrary, there is more than can be spent, prudently or otherwise.

Both the President and some of his supporters allege that the cuts cannot be justified. But it is not the cuts which need to be justified. It is the spending of taxpayer money, for whatever purpose. The President simply has not made out a case, as the House action demonstrated. The Senate, on the same basis, should follow suit.

A Family Fights Back

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, the Parade magazine of Sunday, August 11, contains an excellent story entitled "A Family Fights Back." This story is a moving drama of life in the coastal lands of Louisiana, lands that have been recently ripped by the violent forces of the hurricane Audrey. It is of intense interest.

Aside from the fascinating interest of this article, I call the attention of this Congress to the fact that we have a Federal program of water utilization. More than the wind, in this instance the damage was done by the violence of water. Whether it be in Louisiana or elsewhere we are concerned with the proper handling of our water resources and the proper curbing of the violence and devastation which arises when elemental forces are unbridled and unchecked. I am happy over the fact that I have been able to serve for several years as President of the National Rivers and Harbors Congress and in this capacity I have had more than the average opportunity to see in proper focus our water problems, whether these problems arise out of the great deserts or arid regions of the Southwest or whether they arise along the coastal plains of the Atlantic, Pacific, or Gulf of Mexico.

The article is as follows:

A FAMILY FIGHTS BACK

(By Sid Ross)

(Rarely has the Nation been so ravaged by weather as during the first 7 months of 1957. Tornadoes crisscrossed the South and Southwest; floods smashed through Kentucky, Virginia and West Virginia; blizzards tore into 13 Midwest and Southwest States; torrential rains drenched the Pacific coast; the worst spring snowstorms in 20 years paralyzed the Rocky Mountain States. This summer the first of the year's dreaded hurricanes boiled out of the Caribbean, smashed into Louisiana's gulf coast. Called Audrey, she left havoc and a high death toll (over 600) in her wake. Headlines flashed each of these disasters—in terms of lives lost, damage done. But what about those who survived? In this 20th century of scientific wonders, what happens to man and his machines when nature explodes? And what does today's average American do when everything but the clothes on his back is swept away? To find out, Parade visited a family that lived through the nightmare of Audrey. Theirs is a story of terror, suspense and quiet heroism—and two clear conclusions: Man and his biggest works still are but puny things before the giant fist of nature. Americans—despite charges that modern living has turned them soft—still

have the gumption of their pioneering forefathers to rebuild with their bare hands what nature casually destroys.)

CAMERON, LA.—It was a day much like other days—Wednesday, June 26. Warren (Gage) Miller, 40, busied himself looking after the chicks he was raising out back. His wife, Ruby, 36, made ready to sew a new dress for their oldest daughter, Frances, 13. Their 3 other girls—Judy, 7, Karen, 6, and Donna, 4—played in the backyard.

By 10 p. m. the Millers were getting ready for bed. Staying with them that night were 8 relatives. Most had come because hurricane Audrey was bearing down on the Louisiana coast from the Gulf of Mexico and the big, 4-bedroom house was considered safe because it was on high ground.

Nobody was too worried. Extra cans of water had been put away and some candles fetched. But the Millers saw no immediate danger; the latest weather forecast said Audrey would not hit till the next afternoon, giving folks plenty of time to make the safety of inland Lake Charles, only an hour's ride away.

DECISION TO STAY

What nobody knew was that (1) Audrey had picked up speed; and (2) she was pushing ahead of her a giant tidal wave, later estimated at 9- to 20-feet high.

Before retiring, Gage Miller checked up. Outside the night was calm. He decided (because "we're used to a little wind down here") not to leave the next day for Lake Charles.

Gage hated to leave his home and property. He'd worked close to 20 years—in a cotton gin and as a farmer—before building it, mostly with his own two hands.

In the back he had a chicken house, with over 1,000 5-week-old chicks. Along one side was a row of 9 small bungalows, which he rented to transient oilfield workers (that afternoon he'd collected $80 in rent). Down the road a few hundred yards stood a filling station and grocery store, which he also rented. At 40, Gage Miller was a fairly well-to-do man.

But time had already run out for him—and his neighbors.

At midnight the Weather Bureau changed its prediction; the hurricane, it warned, would hit the coast early in the morning. Few people heard.

Like the Millers, most were asleep, their radios turned off.

But Doug Murphy was awake.

A brother of Mrs. Miller, Doug had brought some relatives to the Miller home. Worried about the storm, he lay awake with the radio turned on very low. At 2 a. m. he heard that Audrey would hit in about 7 hours.

Doug dressed quickly, woke up Gage, then drove off to pick up his mother-in-law a few miles away. Gage meanwhile sped off in the opposite direction, to awake the school janitor and have him open the new brick schoolhouse as a refuge for possible storm victims.

When Gage started out, there were a few drops of rain, a few gusts of wind. When he reached the janitor's home a few minutes later, the rain was coming down in sheets. Orvis Portie, the janitor, lost no time. Driving to the school, he kept one hand on the horn to wake people up. Some ignored the alarm, thinking there still was plenty of time for a getaway, and went back to sleep.

Within minutes after Portie opened the school, people were pushing into it. Doug Murphy dropped his mother-in-law there, then took off for the Miller house. He brought with him husky, 17-year-old Gary Primeaux, figuring help would be needed to transport the women from the home to the schoolhouse. But it was already too late.

Back home, Gage Miller had also decided that it was time to go. He helped rouse and dress the children. They were about to leave when Doug came rushing in.

His face was white. "The water's up to the running board of my truck—and it's still rising.

Gage took one look outside and saw they'd never make the schoolhouse. Waves of water—the advance guard of the tidal wave—churned at the house. A heavy tool box floated by the front door.

They saw four cars picking their way along the road toward the schoolhouse. Near the Miller home the cars stopped, unable to go any further. The people got out and raced through the storm to the Miller home.

There were 16 altogether, men, women and children. Soaking wet and frightened, the children crying, the women began apologizing for "muddying up your clean floor." Ruby Miller shushed them, made some warm milk for the children, wrapped them in blankets.

By six there was light enough to see the water as it raced through the back yard, smashing at the walls of the house. The surging, racing water was close to three-feet high; just a few inches more and it would begin pouring into the house.

Gage ducked out to the garage, brought back a stepladder. "I figured," he says "we'd need it if we had to climb up to the attic. But I never dreamed the water would get as high as it did."

WATER AND WIND

On the way Gage saw that the chicken house—and the thousands of dollars in chicks, not to mention the tiny creatures themselves—had already been washed away. An hour later he figured his house was about gone. Water, pounding with sledge-hammer force, crashed through the front windows, cascading across the floor.

Then there was a sudden jar. The water—and 120 miles per hour winds—slammed the house off its concrete blocks, knocking it back against a steel television antenna. ("Maybe that's what kept the house from being swept away like the others," says Gage.)

In a few minutes the water was pouring through the windows in a torrent. The men tore down doors and nailed them to the windows, but tons of water flipped the doors aside like matchsticks, flooding over the men.

Gage put a stepladder under the trap door and, one by one, the 30 men, women and children squirmed into the narrow stifling attic. The light from one small candle made flickering shadows against the walls.

Frightened, Ruby Miller still could plan. "I was sure the house would be smashed to pieces by the water. I told my husband that when it happened, he should grab one child while I held on to another. Then I asked a man and a woman, who didn't have children of their own, to try to hold on to our other two."

There was a crack in the attic floor. The oldest Miller girl, Frances, looked through and saw the water swirling through the house, sweeping away furniture, pots and pans, clothes, everything. And it kept getting higher and higher.

Always there was noise: the wind howled; the house creaked, groaned, shook like a leaf in a storm; the water roared; logs flung by the waves cracked against the walls.

About 8:30 a. m. there was a new sound—a grinding, ripping noise. Then, with a jarring crash, one side of the house swept away.

The women began crying hysterically, but, amazingly, the rest of the house held—for a while. At 11 there was another ripping noise; Gage saw the front porch scud away.

"I huddled the family together," says Gage, who still licks his lips nervously when he talks about it. "My wife, Frances, and myself formed a circle around the smaller children. Any moment we thought we'd be separated."

The water was now almost up to the attic floor. "We had nowhere else to go," says Gage, "since we didn't have tools to cut through to the roof. I figured if the Lord didn't help us now, we'd either drown in the attic or be washed away with the house."

Everybody prayed. A 76-year-old woman kept repeating the 23d Psalm: "The Lord is my shepherd, I shall not want * * *." A young man fell to his knees and prayed silently.

A gaping hole had been torn in the side of the attic and through it they could see the churning water rising toward them. "We all started to cry," says Frances. "But we held tight to each other. If we were going to die, I wanted us all to die together."

A few hours later—about 1 p. m.—Gage and others noticed something that gave them hope. They'd been watching the water, now over 5 feet high in the yard, inching up a telephone pole. It had stopped inching. Hopefully, prayerfully, they strained their eyes, staring at the pole. Then a boy looked through the crack at the water downstairs. "There's no more furniture," he cried happily, "but the water's going down."

By 2 p. m.—after more than 6 hours in the cramped attic—two of the men decided to risk trying to get to the schoolhouse. An hour later they were back with good news: some 30 people there, including relatives of some in the attic, had survived the storm. "We had thought," says Mrs. Miller, "that they were drowned for sure, since the schoolhouse is on lower ground."

Gage and the rest decided to set out for the schoolhouse. Carrying the women and children, they made it.

HELICOPTERS COME

On the way, they could evaluate some of the damage. "All but one of our bungalows had been swept away, just as though they were never there," says Ruby. "The Baptist Church was gone, just gone. I kept thinking: How many have died?"

In the school pantry they found food for the dazed, shocked victims. All Thursday afternoon and evening, and far into the night, they sat in various states of exhaustion.

Early the next morning Fourth Army helicopters came to evacuate those at the schoolhouse. The Millers, in the last group to leave, were brought to Lake Charles.

There, for some, were happy reunions with their families. But for others, there would never be any reunion.

Today, living rent free by courtesy of Lake Charles townspeople until he can get started again, Gage Miller looks to the future with confidence. But, he admits, he's starting from scratch.

"I got out with just $80 in my pocket and the clothes on our back," he says grimly. "I've got about $100 in the bank and that's about all. The house is a total wreck; it will have to be torn down and rebuilt. My two cars are wrecked. The bungalows are all gone, except one, and so are my chickens and the gas station. I also owe about $12,000."

Insurance will help some but not nearly enough to cover his losses, which Gage estimates at between $65,000 and $70,000.

LOOKING AHEAD

There were other costs. Neither Gage nor Ruby will ever erase the memory of Audrey from their minds. A week later, revisiting desolated Cameron, they saw nightmarish scenes that still horrify them: houses turned upside down and strewn over the marshes; bloated carcasses of farm animals; hundreds of wrecked automobiles; scores of poisonous snakes, washed out of swamps, slithering along the roads.

All this won't soon be forgotten by Gage and Ruby. He still can't speak about the storm without beads of sweat breaking out on his face. Where once she took pleasure in the cool gulf breezes, she now turns pale at the slightest sound of wind, even the soft blowing of an electric fan.

But they're going back to the gulf coast—even if it means the threat of new hurricanes. "That's my home," explains Gage, "where I was born and raised and where I hope to be buried. During the storm I promised the Lord that I'd work harder if we came through it alive. And I will. I can't wait to get started. We'll build a smaller house here, and I'll make out—some way."

He turned away and looked out toward the gulf with brimming eyes, and said quietly, "We're not licked."

A Sad View of the World

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. LANHAM. Mr. Speaker, with my own remarks I am including an editorial from the Wall Street Journal for Friday, August 16, 1957, entitled "A Sad View of the World."

This seems especially appropriate in view of our action on yesterday in sustaining the cuts made by the Subcommittee on Appropriations for Foreign Operations from the President's request for foreign-aid money.

The editorial follows:

A SAD VIEW OF THE WORLD

One does not ordinarily expect Presidents to talk of extraordinary sessions of Congress except to meet grave situations. And what is it that has provoked President Eisenhower into hinting at a special session this fall?

The provocation is Congress' action on the mutual-security program. The President asked for an authorization to spend another $3.9 billion for aid to other countries. The Congress authorized $3.4 billion, and it may appropriate less. This difference caused the President to call an impromptu press conference and warn that he may have to call Congress back.

Mr. Eisenhower offered "the really prayerful hope" that $3.4 billion would be enough, "but there is no disguising the fact that the effects of the $500 million cut will be serious." Reductions in foreign aid, he said, may put the interests of the United States in real jeopardy. Then he would have no recourse but a special session.

Now, this is grave talk indeed. It is the kind of talk that would certainly be appropriate if an irresponsible Congress had left the Government without funds for our Armed Forces; in view of the President's opinion about foreign aid, it might have been expected from him if Congress had suddenly abolished the whole program.

But this is not what happened. Three billion dollars, and more, is no small sum. And Mr. Eisenhower is not merely arguing that more would be better. He is saying that even a few millions less can be a life-and-death matter for our national interests, a question of such great urgency that it may not wait between August and January.

It is almost impossible to find this credible.

But if the President is right, if somehow that is actually the case, then it seems to us he has raised far graver questions than whether foreign aid should be $3.4 billion or $3.9 billion or some other sum.

Consider: In World War II the United States had to support its allies to the extent of something like $50 billion, over and above the billions spent on our own forces. Since World War II we have levied upon ourselves to the extent of some $60 billion—the exact figure is lost in a welter of budget categories—to give aid to other non-Communist nations.

This postwar money has gone not only to help these countries repair war-torn areas and to give them guns against a next war. It has gone also to bolster their currencies, irrigate their farms, develop their resources, and thus make them economically strong so they can be dependable members of the alliance against communism.

Yet the inescapable implication in the President's grave view of the situation is that in all of this we have not improved our position a whit. What he now says about the urgency for foreign aid is hardly altered from what President Truman said when pleading for a temporary foreign-aid program in 1947, a full 10 years ago.

This is indeed a sad view of the world. For the inescapable conclusion must be that all our treasure has bought practically nothing of value. If after all those billions our friends and allies are still so weak, or so undetermined, that they will collapse for want of some $500 million then the platform we have built is too flimsy to stand on at all. If the President is right, then the thing to question is not the $500 million but the whole thing.

Fortunately for our own peace of mind, we do not really believe that all is so dire; the tail end of congressional sessions is the season for political arguments to become ultimatums. But if the world is in so sad a shape as Mr. Eisenhower says, then a few hundred millions more of foreign aid offers no remedy.

The Role of Private Industry in the Development of Atomic Energy

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. MAY. Mr. Speaker, in its editorial of Monday morning, August 12, the Hartford Courant very clearly underlines the necessity for the strong role to be played in the development of atomic energy by private enterprise. I believe it is most pertinent, at this time, to submit this editorial for the RECORD.

The editorial follows:

A PUBLIC POWER BIAS CUT FROM THE AEC BILL

The House of Representatives has shown good judgment in amending the appropriations bill for the Atomic Energy Commission. Public power advocates had been anxious to write into it strong language directing the AEC to spend $130 million for cooperative power and to build three new experimental plants. These should be administrative decisions. The Democratic majority on the Joint Committee had insisted on forcing the issue, although some Government reactor construction envisioned in the bill had neither been sought by the administration nor approved by the Bureau of the Budget.

A minority report signed by Representative JAMES T. PATTERSON opposing the appropriations bill as originally presented commented that this was the first time the public power versus private-power fight had cropped up on funding within the Joint Committee on Atomic Energy. The efforts of the public power bloc have now been temporarily checkmated. They appeared reasonable, scattered through the bill to look like other AEC projects. But they amounted to an effort to put the Government deeply into the atomic power business, to provide construction projects for certain favored groups including Rear Adm. H. G. Rickover's technical staff, and to play down the substantial contribution being made by private power elements to the nuclear-power concept.

In one of those developments, the AEC has just announced it is ready to issue a construction permit for the Yankee atomic project in Rowe, Mass. This is the project that concerns four Connecticut utilities and means the first atomic powerplant in New England. It is concrete evidence of the progress of private agencies in bringing nuclear power to the aid of the people. It is a milestone reached despite the dragging of feet by some elements in Congress, including those who have kept a hammerlock on insurance guaranties while insisting on public development. The House has acted wisely to encourage taxpaying private industry to go ahead with the job. Let the Senate do likewise.

Delay for the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert the following article from the Washington Evening Star of August 14, 1957, entitled "Delay for the Natural Gas Bill" in the CONGRESSIONAL RECORD:

DELAY FOR THE NATURAL GAS BILL—TEXAS DEMOCRATS REPORTED DECIDING TO GIVE UP ON ACTION TILL 1958

(By Thomas L. Stokes)

In this day of soaring prices the lowly consumer should perhaps be grateful for small favors.

In this instance, the subject is the consumer of natural gas—some 40 million of him. He has been granted a stay of undetermined duration. This comes about through the decision of the Texas Democratic leadership of Congress that it will not press for action in this session on the bill to exempt natural gas producers from regulation by the Federal Power Commission.

Such exemption would almost surely cause a boost in natural gas prices. That is the view of experts.

The decision by the Texas Democratic leadership—Speaker of the House SAM RAYBURN and Senator LYNDON JOHNSON, Democratic Senate leader—is one dictated by necessity, not by any cooling of their ardor for this measure sought by the big oil companies which own the bulk of the Nation's natural-gas reserves. They hope to get the bill through at the next session of Congress.

The real reason for abandoning the bill at this session is that the Speaker made a count of noses in the House and found he was short of enough votes to put it over, though his excuse publicly was that because of the long session Members of the House

are too "unstrung" to tackle such a controversial measure. That's a new one for the book. Everything had been all set to jam the bill through. It had been approved some time ago by the appropriate legislative committee—the Interstate Commerce Committee—and had the green light from the powerful Rules Committee to go to the floor.

Speaker RAYBURN, you may remember, had some trouble in getting the House to swallow the bill in the last Congress. He had to take the floor himself, which a Speaker seldom does, and cast into the balance his prestige and the influence he wields because of his position. He turned the trick by a mere handful of votes. But he knew he had been through an ordeal.

Victory for the measure was much easier in the Senate for the other Texan, Senator LYNDON JOHNSON. Then, presto, his triumph and that of Speaker RAYBURN was spoiled by President Eisenhower, who vetoed the bill somewhat unexpectedly, but on account of the arrogance of the oil and gas lobby and not because of the principle, which he said he favors and still does.

The strategy of the Democratic leadership was to push the bill through again at this session and get it out of the way now instead of waiting until the next session of this 85th Congress, which will be just ahead of the 1958 congressional elections. Dramatizing the issue in an election year, it was feared, might hurt Democratic candidates in consumer States of the East and Middle West, even though Democrats in those areas, like Republicans, vigorously oppose the bill. Democrats are in control of this Congress and thus responsible for its record.

But now the Texas Democratic leaders have to postpone action, and thus take their chances of political repercussions. It is their hope, however, and it may have some basis, that President Eisenhower can also be saddled with the blame and thus take some of the curse off of the Democratic Party, or at least confuse the voters.

They feel sure that the President will sign the bill if Congress passes it next session.

A few weeks ago, during public hearings by the House Interstate Commerce Committee, an administration official submitted on behalf of the President two amendments designed to protect the consumer. The oil and gas industry let up a great howl of protest. Whereupon the President promptly backed down in a letter to the committee saying he was not really insisting on these amendments, but that enactment of the bill was the essential thing. Naturally the amendments were eliminated pronto, and the bill approved without them.

We might take some encouragement from abandonment of the bill for this session, though very cautious encouragement. Maybe the constant fight by consumer interests has had some effect. We can't be too optimistic, because of the tremendous power that oil exerts in each party through its campaign contributions. Not in recent years has it lost a fight in Congress. Up to now its money and its influence have spoken far louder than the consumer and taxpayer.

But we might as well enjoy this respite while it lasts—and keep our fingers crossed.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Cry at the Crossroads," found in the Tampa Tribune for Monday, August 12.

The editorial page of the Tribune is one of the most widely respected and read of editorial pages in our State. It is always enlightened and accurate. It continually provides leadership and guidance to its many readers. It has always been and is now true to its southern heritage. It does this recognizing the inevitable growth and change over the long course of history.

I hope my southern colleagues will read and reflect upon this editorial prior to the final vote on the so-called civil-rights bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CRY AT THE CROSSROADS

Southern Congressmen stand this week at a crossroads in history where both principle and the hard realities of their own sectional interest plead eloquently not for the defeat of the Senate civil-rights bill but rather for its passage.

This we declare while thumbing through the Constitution to the 15th amendment, and in looking to the past, the present, and through the haze toward the future.

The past tells us that after 1870 the southern power in the Senate blocked all civil rights bills for 87 years. The present testifies that southern Senators, although still influential far beyond their number, are no longer in absolute command; a bill shorn of its harsh provisions but appreciably implementing the right to vote has actually passed the Senate. The future warns that if this reasonable compromise is not enacted now, the time may come when compromise is no longer possible.

The Constitution declares that the right to vote may not be denied or abridged by the United States or any State on account of race, color, or previous conditions of servitude. Further, it says that Congress shall have power to enforce the article by appropriate legislation.

As the crucial week begins, southerners in the House would do themselves and their peoples a lasting disservice if they peremptorily brush aside the sharp and critically important distinctions between the amended bill now before them and the bill which the House passed earlier over their proper cries of indignation.

First and foremost, the Senate has stripped the bill of its perilous part III. This was the shotgun clause, empowering the Attorney General to file his own suits for injunction on any alleged denial of civil right. Under part III, the Attorney General could have scattered law suits indiscriminately across the South in a drive to force rapid desegregation in the schools.

Such suits inevitably would have stirred bittered dissension in direct proportion to their number, for the South is already resentful deeply troubled by the conflict between its old custom and the new interpretation of law, hard put to keep down the Ku Klux Klan and the White Citizens Councils.

Within section III lay the seeds of a discord unparalled since reconstruction. It might well have disrupted the schools instead of integrating them. It was an invitation to a rule of nightriders rather than a rule of law.

But the Senate, in its wisdom, has rooted part III out of the bill, knowing that in essence desegregation cannot be forced by a United States marshal but can come only where it is accepted in the hearts and minds of men.

As the bill stands now, the Attorney General's powers in civil law would be limited to enforcing the right to vote, and here the Senate has added a second safeguard. If a defendant is charged with criminal contempt of a court order, he may demand trial by jury.

The measure still sets up a Civil Rights Commission to investigate denials of constitutional right with power of subpena. It could not do more than hear, inquire, and recommend.

(The bill has also picked up a quiet rider not associated with its purposes. It would arrogantly provide jail or fine for public disclosure of the Commission's proceedings when secret. This threat to press freedom regrettably clutters the issue and should be stricken.)

But in essence the Senate's plan is a right-to-vote bill. It deals with the incontrovertible right in a democracy.

The South cannot quarrel with the 15th amendment nor can it deny that in some States (and in a few counties in Florida) the absence of Negro registrations defies any reasonable explanation except intimidation.

This is the right that is spelled out without question. It is not open to doubt nor is it any interpretation based on moral and sociological reasoning. It is absolute.

We do not suggest that southern Congressmen support this bill where it would mean political suicide. But if they make effective intrigue against it, in incongruous coalition with some northern liberals who would also like to kill it, they swap a temporary satisfaction for the danger of drastic measures to come.

If no civil-rights bill of any kind is passed this year, what of 1958? Next year is election year. The voice of the bloc in the galleries may be too much for the parliamentary brilliance of RICHARD RUSSELL and the cloakroom diplomacy of LYNDON JOHNSON. If nothing is passed now, there is scant hope that JOHNSON and RUSSELL can work their magic again.

We fear the consequences for both South and Nation if a harsh and punitive bill were passed because this one failed. At this crossroads in Congress and in the tense years ahead, the need is for men of both North and South who will seek a firm middle ground in a spirit of restraint and reason. The lessons of past and present, and the omens of the future, cry for honorable compromise.

Report on Far East: Part III. United States Has Been Left Holding the Bag

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. EVINS. Mr. Speaker, article III of the series of articles on the conditions in the Far East as reported by the veteran newspaper reporter, J. Lacey Reynolds, appears herewith:

[From the Nashville Tennessean of July 31, 1957]

J. LACEY REYNOLDS REPORTS: UNITED STATES HAS BEEN LEFT "HOLDING THE BAG" THROUGHOUT FAR EAST—NOW THE JAPS WANT US OUT OF OKINAWA

HONOLULU.—The American position in the Far East is a sad sight to behold. It has deteriorated rapidly and alarmingly since my last survey of the situation there 2 years ago.

Mobs such as that which demolished our Embassy and defiled our flag in Formosa last May reveal a latent hostility toward us, even among our supposed friends.

Demonstrations in Japan and the Philippines indicate we have overstayed our welcome. Friction between American personnel and native populations means the United States will have to make more and more concessions if permitted to operate bases on foreign soil.

Without so much as a polite nod, Japan and the leading commercial nations of the world are elbowing us aside, hell-bent to resume trade with Communist China.

WE'RE OUT ON THE RIM

We sit like wallflowers on the mountaintops that ring the picturesque harbor of Hong Kong, watching fat cargo ships flying the flags of almost all the world unloading into jostling junks flying the Red flag of China and the day's laundry.

The Stars and Stripes flies, not from cargo ships, but only from the masts of visiting American warships or passenger lines. They represent a conspicuous minority in all that armada of shipping.

In the eyes of many orientals, we have become the symbol of hated colonialism. It does not matter that we, as a Nation, have never attempted to wield great colonial power. Nor does it matter that our record in the Philippines is a paragon of decency and restraint in the exercise and relinquishment of colonial rule. The sins of other colonial exploiters have been visited upon us. We have been taken on a snipe hunt and left holding the bag.

THE BAN ON NEWSMEN

American newspapermen have long chafed under the State Department's ban on entry to Red China. While Washington quibbles and filibusters about lifting the ban, they sit frustrated in the press clubs of Tokyo and Hong Kong. They monitor the Peking radio (which has won no Pulitzer prize for its objectivity). More galling still, they interview European reporters who can travel in and out of China without restriction. What they have to say about the State Department—well, Secretary Dulles is just too young to hear such language.

The Japanese press is stepping up a synthetic campaign for return of the bloodbathed island of Okinawa—the most deadly American air fortress in the Far East. Within range of planes stationed there live one-fourth of the people of the world. Its air arms reach out in a great arc that extends to Borneo, Burma, Tibet, Outer Mongolia, and Vladivostok.

More than 12,000 Americans lost their lives capturing this 67-mile island in the last great battle of World War II. On the Hagushi beachhead where our plane touched down, more than 2,000 Americans died on Easter Sunday, 1945, in the initial assault wave. Ernie Pyle fell on a nearby island—the GI's favorite war correspondent. Three-quarters of a billion dollars worth of hardware has been lavished on this vital piece of ocean real estate. It bristles with arms like an aroused porcupine.

"YANKEE MONKEYS"

Yet, Japanese Premier Kishi had the temerity to suggest in his talks with President Eisenhower last month that the Japanese flag be flown alongside ours as a symbol of Japan's residual sovereignty which we have already conceded. And, as recently as July 9, demonstrators carried signs in front of the United States Embassy in Tokyo reading: "Yankee monkeys, pull out of Japan and Okinawa."

The flag matter was not mentioned in the Eisenhower-Kishi communique. The story leaked out 2 weeks later, ironically arriving in the Far East on Independence Day.

One American made this brittle observation: "Why not give the White House back to the British, now that we've fixed it up?" Representative CARROLL D. KEARNS, Republican, of Pennsylvania, with whom I was traveling as his special assistant, said if we returned Okinawa before we were through with it, we would be "Just a bunch of magnanimous fools."

We walked the ruins of the American Embassy on Formosa and saw half a roomful of busted typewriters and office machines. All day long on "black Friday," May 24, a mob had sacked and looted the building, uncontrolled by the T'ai-pei police. An American court-martial had acquitted an American sergeant on manslaughter charges for shooting a Chinese "peeping Tom."

Despite the repeated apologies of President Chiang Kai-shek and other sincerely sorry officials, the question lingered: "Why did you have to do it?—You of all people?—You whom we picked up from the dust of defeat on the mainland?"

The wonder is how much longer Chiang can cast his hypnotic spell over American Far Eastern policy. For Formosa has long been the tail that has wagged the dog of our Pacific policy. The wag seems to be becoming somewhat weaker.

Support for Academy of Public Affairs

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. YARBOROUGH. Mr. President, the bill introduced by the Senator from Montana [Mr. MANSFIELD] to fill the great void in our public affairs by creating an academy for training in foreign affairs is meeting with immediate approval from the people. I am honored to be a cosponsor of this bill.

The Beaumont Enterprise, a newspaper noted for its articulate and thoughtful editorials, commends this proposal in its lead editorial in the August 14, 1957, edition.

I am also in receipt of a resolution from the General Federation of Women's Clubs, the world's largest organization of women, which commends the proposal.

I ask unanimous consent to have printed the editorial and the women's club resolution in the Appendix of the RECORD.

There being no objection, the editorial and the resolution were ordered to be printed in in the RECORD, as follows:

CAREER FOREIGN SERVICE

The sad story of Mr. Maxwell Gluck, our new Ambassador to Ceylon, made many Americans conscious of the fact that career men are too often on the second team when it comes to diplomatic assignments.

And the man who couldn't say "Nehru" also made us realize that we should never have a shortage of persons who can—and that we should use these instead of Americans who get the jobs only because they have had successful business careers, have a lot of money, or make heavy contributions to the political campaign chests.

We fully endorse, therefore, a request to Congress to set up a special Government academy for the training of young persons for the career foreign service.

It is also gratifying to Texas to know that their own Senator YARBOROUGH is one of the cosponsors of the proposal made by Senator MANSFIELD, of Montana. It is much more significant though that Senator KNOWLAND, of California, Republican leader in the Senate, is one of the sponsors of the bill, this fact indicating that the response of the lawmakers, whatever it is, will not be based on partisanship.

As the Montana legislator says: "The time has come when we should be assured of a source of topnotch people to fill these important positions." He pointed out that the Army, Navy, Air Force, and Coast Guard now have their own schools to train future officers and said the Senate knows that "the front line of our diplomatic defense in all areas of the world is our Foreign Service personnel."

Where, we ask you, is know-how needed more?

GENERAL FEDERATION
OF WOMEN'S CLUBS,
Washington, D. C., August 15, 1957.

Senator RALPH W. YARBOROUGH,
Senate Office Building,
Washington, D. C.

DEAR SENATOR YARBOROUGH: The women of the General Federation of Women's Clubs wish to extend to you their congratulations on your forward look into the future.

Your sponsorship of a bill to set up a special Government academy to train young people for a career in the Foreign Service is in line with action taken by the general federation in 1954, through a resolution passed at annual convention:

"ACADEMY OF PUBLIC AFFAIRS

"Whereas the present situation in both domestic and foreign affairs emphasizes the need for trained men and women on every level of public life; and

"Whereas the General Federation of Women's Clubs recognizes the value of the training being offered by institutions of higher learning in the science of government; nevertheless, it has long had the conviction that highly specialized training is desirable and necessary as a means toward elevating the standards of government service on certain levels; and to that end it has advocated the establishment of a National Academy of Public Affairs; and

"Whereas the General Federation of Women's Clubs has been on record supporting the establishment of a National Academy of Public Affairs for the past 20 years: Therefore, be it

"*Resolved*, That the General Federation of Women's Clubs in convention assembled, June 1954, urges the early establishment of a National Academy of Public Affairs by the Congress of the United States."

You can count on the General Federation of Women's Clubs to throw all its influence behind your bill.

Sincerely,

Mabel Prout
Mrs. R. I. C. PROUT,
President.

Assault on Ancient American Virtue of Thrift Deplored

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, a constituent of mine, David L. Cohn, of Hopewell, N. J., is concerned—as are many others—with the current

assault on the ancient American virtue of thrift by the business community.

Until recent years, thrift was one of the outstanding characteristics of the citizens of our country. Yankee thrift was universally known and respected, as was the thriftiness of the frontiersman. Times are changing, but we should keep the good things that have been ours. Progress consists of keeping the good things as we look ahead into the future.

I include the fine letter to the New York Times, written by David L. Cohn who, in addition to his other accomplishments, is the author of The Good Old Days and The Life and Time of King Cotton:

SPENDING MORE INCOME: ASSAULT ON ANCIENT AMERICAN VIRTUE OF THRIFT DEPLORED

(The writer of the following letter, a student of American folkways, is the author of The Good Old Days and The Life and Time of King Cotton.)

To the EDITOR OF THE NEW YORK TIMES:

In his letter published August 8, Prof. Sumner Slichter blames the "present stagnation of the economy" on you and me. We are not spending enough for our own good, it would appear. "The crux of the difficulty has been the reluctance of consumers to spend their growing income."

Here government (refreshingly) is helpless. "Only business firms can persuade people to spend a larger proportion of their income," Professor Slichter's views raise some interesting questions in values.

I think of one woman—sister to hundreds of thousands of women—whom business persuaded to leave her house and take a job. Married, mother of two children, her husband's salary of $4,500 a year was just enough to permit the family to live decently through thrift. The wife cooked, cleaned the house, cared for the children until recently. Then business persuaded her to take a job.

All day, as she went about her tasks, radio and television urged her to buy this and that, as did the advertisements of newspapers and magazines she read. Soon she felt she could not face her neighbors if she did not have the gadgets they had. But since her husband's salary was insufficient for the purpose, she got a factory job.

ACCUMULATION OF GADGETS

Nowadays when the children return from school there is no mother to greet them. They are left to their own devices. The home has become a house. And when husband and wife meet at day's end, they face one another across a gulf of fatigue and dissimilar interests.

The wife, however, is buying the gadgets she wants, and in the world where Dun is a god and Bradstreet is his prophet, she doubtless has acquired a certain merit. But one may nonetheless ask at what price her contribution to prosperity has been bought.

I think of a lifelong friend in this general context. A successful small-business man in a small southern town, he was always abhorred personal debt and embraced thrift.

He owns no car. He bought his house only when he could pay for it. He keeps perishables in an oldfashioned icebox, heats his house with cordwood from his nearby farm, and when he has an extra dollar buys a gilt-edge bond. His wife and three children are admirably cared for, he is a deacon of his church, a member of the school board, a Scoutmaster, a Rotarian, and a willing worker for community betterment.

JUDGMENTS QUESTIONED

By the criteria of 2 centuries of American life he is a good man and a good citizen. But by the implied criteria of Professor Slichter he is an enemy of society. If then, one must ask, a man who is a good husband, a good father, and a good citizen, becomes an enemy of society because he stubbornly continues to practice the ancient American virtue of thrift, what is wrong with our society?

Or, to put it another way, if tomorrow we should find that 5 million Thoreaus have miraculously displaced 5 million profligate buyers of the goods sensible and nonsensical that are thrust at us, would the country be the richer or the poorer because of the transposition?

Finally, it would seem to me that the magnificent pageant of Western man for 2,000 years, with all its figures of saints and seers and lawgivers and givers of the light and makers of beauty and liberators of the chained mind, must be something more than a detour to arrive at a new-model automobile with a new tin whistle and a new easy way of paying for it. Or is that in our new catechism—the first article defines it as man's first duty to become a consumer?

DAVID L. COHN.

HOPEWELL, N. J., *August 11, 1957.*

The 3,500,000 Unemployed Don't Share Our Prosperity

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, we have heard much about the record number of Americans gainfully employed. However, little is said about the 3½ million unemployed citizens who total almost 5 percent of the entire civilian labor force. The effects of this unemployment are magnified by the fact that it is concentrated in certain distressed areas of our country. My own State of Pennsylvania has 4 major and 7 smaller labor market areas with a substantial labor surplus.

Under the State administration of Gov. George Leader, the Pennsylvania Development Commission was established for the purpose of bringing in new industry and thus creating additional jobs for our unemployed. Its efforts were outstanding despite the obstructions raised by the Republican controlled State legislature.

Liberal Democrats in Congress have been urging that action be taken on pending legislation to establish a comprehensive program of Federal assistance to economically depressed areas. We are also supporting an economic expansion program to meet the critical shortages of school classrooms, hospitals, research facilities and other public works requirements. Liberal Democrats also want our aged and retired citizens to have a better share in the Nation's increased wealth and prosperity. We want improved social security and retirement benefits, all of which will strengthen the economy and help meet the challenge of surpluses and abundance. Increased purchasing power of our needy aged and handicapped citizens will help stimulate business.

The suffering of 3½ million unemployed and their families is an indictment of hard money, high interest, and curtailment policies of the administration. Recession planners in the administration ignore human values, but they are also unrealistic in thinking that the way to get rid of great surpluses and the way to fight inflation is to lower the living levels of the American people.

Mr. Speaker, a very interesting editorial on this subject was published in the Reading Times on July 18, 1957, and an excellent letter was written to the editor by one of my constituents, commenting on the editorial. I include them in the RECORD along with my remarks:

THE 3,500,000 UNEMPLOYED DON'T SHARE OUR PROSPERITY

It was in 1945 that Henry A. Wallace, then out of a job as Vice President of the United States, an embittered man who was toying with the leftwing idea that ultimately made him the presidential candidate of the long defunct Progressive Party, wrote a book called Sixty Million Jobs. In it he looked longingly and hopelessly at an America that could provide employment for 60 million Americans. If, he argued, America could one day see that 60 million of its citizens were gainfully employed, it would have few economic worries.

Civilian employment in the United States long since has passed the 60-million mark. Secretary of Labor James Mitchell reported last week that there had been an increase of 1,300,000 jobs in June over May and that the total civilian employment roll had reached 66,500,000, a record level. The Secretary did not say so in the published reports of his announcement, but the plain fact would seem to be that employment rolls will continue to rise just as long as productivity rises, as long as the demand for goods and services continues to rise, and as long as our population rises. Only the most dire catastrophe could throw a monkey wrench into this cause-and-effect relationship.

The prospect is pleasing, as is the present fact. But there is another side of the shield that the folks in Washington choose to gloss over. They announce, it is true, that though 66,500,000 men and women are gainfully employed, 3,300,000 Americans were unemployed in June, an increase of 600,000 over May. They credit the increase to young people looking for summer or postgraduation jobs.

For the sake of argument, let's say all of the 600,000 increase for June was attributable to these reasons. That still leaves 3,700,000 men and women jobless. That still leaves a blot on the otherwise bright escutcheon. That still leaves some millions of American families on unemployment compensation, on the relief rolls, or dependent upon welfare agencies, friends, and relatives.

What to do about areas seriously blighted by unemployment? Men like Senator PAUL DOUGLAS, of Illinois, have a pretty good idea what to do, but he can't sell either the Congress or the administration on the idea. His bill for aid to blighted areas has gathered dust in committee for at least three sessions of Congress and he never has been able to persuade the Eisenhower administration to make it part of the administration's legislative program.

What the Federal Government has failed to do in this respect, some States have done, albeit with a somewhat different approach. Pennsylvania is one of these. Early in his administration, Gov. George M. Leader set up the Pennsylvania Development Commission, with the sole idea of attracting to the Keystone State industry that would not only add to the industrial product, and therefore the total prosperity of our commonwealth, but also would create jobs for Pennsylvanians. The recent legislature cut the development fund appropriation but the fund still operates and is performing a useful function.

It long has seemed to us that the huge task of creating jobs for the jobless, who now number nearly 3,500,000 throughout the United States, is everybody's job. By creating, new do not mean fashioning made jobs; we mean merely providing an economic atmosphere in which a man or a woman can perform a useful function, earn a living, and at the same time help the employer prosper. It further seems to us that we can do just this if the Federal Government and all the State governments join forces. For as long as there are some millions of unemployed Americans, our vaunted prosperity will be a mockery to just that many millions of Americans.

WRECKING CREWS

EDITOR, THE TIMES:

The editorial which appeared in the Times on Thursday was fine. I am referring to the one about the 3,500,000 unemployed in the United States. In such a case the waste of manpower is terrific. It is almost unbelievable that the administration or Congress is doing nothing about it.

The Eisenhower administration certainly should be making an all-out effort to solve the problem. The GOP mouthpieces claim about everything under the sun for the administration. But what have they done?

The Republicans have wrecked the Eisenhower program. And in Pennsylvania they have wrecked Governor Leader's program to add industry to our State. Governor Leader had an industrial development plan to bring industry into our State and thereby create jobs for unemployed citizens of Pennsylvania. But his plan was wrecked. His plan for mental health was wrecked, as was his plan to aid retarded children.

And the Republican "wrecking crew" are proud of their wrecking job which they boastingly call "holding the line on taxes." Taxes for whom? This job is called their "crowning achievement" and as usual it is at the expense of progress and the general welfare.

In order to save a few dollars for the "upper crust" of society, the general welfare is sacrificed. And eventually the general public will pay the full price in misery and suffering.

Let's face the future by looking forward and preparing for things to come. We are about to enter the atomic age and must be prepared for it. The "wrecking crews" will have no place in the new society which is now in the making. They will be cast aside, and replaced by men of vision who are not afraid to face the future.

MRS. ALICE MOORE.

READING, PA.

A Bill To Prohibit Government Agencies From Acquiring or Using the National Grange Headquarters Site Without Specific Congressional Approval, To Provide for Renovation of the Old State Department Building

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. BREEDING. Mr. Speaker, and my distinguished colleagues, I would like to rise and say a few words in behalf of a bill I introduced today to retain the National Grange Building and historical old State Department Building.

The National Grange Building, located on Jackson Place in the Nation's Capital, just one block from the White House, is in imminent danger of being demolished to make room for a Government office building. The Grange Building is the symbolic national home of many of America's farm families, and I feel, along with some 21,000 grangers from the State of Kansas, that this property should remain intact. This bill is to prohibit Government agencies from acquiring or using the National Grange headquarters site without specific congressional approval. Since we are all concerned with economy, I would also like to point out that it will undoubtedly cost the Federal Government $500,000 if this property is acquired by condemnation, and that the taxpayer will be put to the expense of wrecking the building, clearing its site and then sowing the 3,500 square feet of land to lawn. I must concur with Representative MACK that this will indeed be "some lawn."

This bill also provides authority for the Administrator of the General Services Administration to make such improvements and repairs to the old State Department Building as shall be necessary to make this building suitable for use as an office building by the President of the United States, except that any action taken shall not materially alter the exterior appearance of this building.

Tight Money Impact

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mr. JOHNSON. Mr. Speaker, even before the most recent round of increases in interest rates charged borrowers by banks and other lenders, the Thorp (Wis.) Courier noted editorially on August 8, 1957, the effect of that policy on county finances. Boosts in the cost of money for this unit of government are financed through increases in the general property tax. The editorial follows:

TIGHT MONEY IMPACT ON COUNTY PLANS

The Republican administration tight-money policy is starting to hit home and should be a serious consideration to all of us.

The increased interest rates resulting from this policy threaten future school expansion and road improvement in this county.

Interest Clark County must pay on the money it borrows for these purposes has increased 50 percent in the past 3 years under the Republican administration policy and the only recourse to finance the cost of this increased interest rate is an increase in general property tax to pay for the same.

While this is not pleasant for Clark County property owners to contemplate, the tight-money policy has brought glad tidings to some, that is, the lender who has the funds, will profit increasingly more from the policy the Republicans pursue.

Clark County is not the only area feeling the pinch. All over the country local governments have been forced to cut back their school expansion programs because of increased interest costs. Some of these communities are in desperate straits because of lack of classrooms. Their one hope for help from the Federal Government school bill was killed in the House of Representatives while the Republican President twiddled his thumbs.

The tight-money policy is supposed to halt inflation, but the Bureau of Labor Statistics latest report shows the cost of living has jumped to another all-time high.

The policy has already added billions to the cost of financing the national debt, all of which comes out of the pockets of the taxpayers. And interest rates are continuing to go up. Now, we in Clark County, can look forward to some increases in our property taxes or go without the improvements we need.

Must everything the Republicans do, be done for those who have everything already?

A Voice of Freedom: The United States Could Profit by Japan's Example of Using the Arts for Democracy's Purposes

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 7, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in the propaganda war constantly being waged by Russia and the free world for the loyalty and allegiance of the uncommitted peoples we have often been defeated but our cultural ambassadors have met with greater success.

An outstanding example of this fact was the recent tour of the Westminster Choir of Princeton, New Jersey under the auspices of the Humphrey-Thompson Act, Public Law 860, 84th Congress. This great organization was cited in the New York Times, and the Trentonian, a leading newspaper of the Fourth District of New Jersey, which I have the privilege and the honor to represent, as having whetted the appetite for liberty of Asians by means of a cultural program that serves, rather than stifles, the democratic way of life.

The president of the Westminster Choir College, John Finley Williamson, and Mrs. Williamson, have been engaged by the Government of Japan to conduct summer schools in several cities. The Japanese Government is paying for these schools and I learn that it is doing so because there are 4,000 choirs directed by Communists who are working against the Government of Japan. The Government of Japan hopes to train choral directors who can displace the Communist leaders and the Williamsons have been asked to develop a songbook to replace the Communist songbook.

I include here an editorial from the Trentonian, and an article from the

New York Times by Ross Parmenter, the discerning music editor of that paper:

[From the Trentonian of August 10, 1957]

MUSICAL DIPLOMACY

Where the loud and constant harangues between America and Russia for the allegiance of the "uncommited" nations of the world have boomed and echoed and propagandized, often with impotence, John Finley Williamson has tried a gentler and more memorable form of diplomacy—and succeeded.

The reason for his success is the universality of the idiom in which he presented his message—music. And it is music which touches the mind as well as sways the ear. For as president of Westminster Choir College of Princeton and director of the choir's recent world tour, he has channeled his students' song into a voice of freedom which has opened the way to better relations between America and Japan.

It was a case of harmony breeding harmony. As a result of the tour, the Japanese government has requested that Mr. and Mrs. Williamson return to the Orient and conduct summer schools of music at three cities there, Sendai, Osaka and Tokyo. Japan is willing to pay to out-sing the more than 4,000 Communist-directed choirs which are plaguing her with discordant indictments against her government. It is one of her efforts in the name of freedom.

Cited in the New York Times as displaying "a more far-reaching influence than some of the choirs of famous professional musicians," the Princeton choir has done more than answer the hunger in the Orient for trained choral leadership. It has whetted the foreign, liberty-seeking appetite for a cultural program that serves rather than stifles the democratic way of life.

Thus the effects of the tour are by no means limited to Japan. There are overtones, and these may be only the preface to a large-scale program of cultural exchange: A two-way interchange program has been inaugurated between Westminster College and a number of Asian countries, with Westminster students planning to attend schools in India, Okinawa, Thailand, and Pakistan. A wealthy Indian banker is expected to journey here in the spring to make arrangements to take a Westminster member back to India. Westminster aid in developing western choral music for the Karachi broadcasting station has been sought by Pakistan. And it is safe to say that the note of friendship forwarded by the choir will have a musical snowballing effect which will echo and reecho the world over.

We have learned that there is a voice for freedom in our culture as well as in our politics. It is the development and presentation of that culture that we must praise and support, as this district's Congressman, FRANK THOMPSON, JR., has said on so many occasions.

For it is not altogether unreasonable to think that the cause of freedom can be fostered more sincerely and effectively by a baton than by a gun.

[From the New York Times of July 14, 1957]

THE WORLD OF MUSIC: ORIENT SEEKS TEACHERS FROM CHOIR COLLEGE

(By Ross Parmenter)

The full effects of the foreign tours being undertaken by American artists in the exchange program of the American National Theater and Academy will not be known for years. It is probably safe to say, though, that the 4-month tour of the world made by 50 singers from the Westminster Choir College is likely to have a more far-reaching influence than some of the tours of famous professional musicians. One says this on the basis of repercussions that have already begun.

There is a hunger in the Orient for trained choral leadership. The tour, by bringing the college to the attention of people in Japan, Okinawa, Thailand, Pakistan, and elsewhere, has opened a two-way interchange. Orientals are both coming to the college in Princeton, N. J., for training here and importing college people to the Orient to give training there.

Next year, for instance, there will be 10 or 12 oriental students at Princeton, including 3 from Hong Kong. And in May a wealthy Indian banker is coming to the college to see what can be done about taking a Westminster member back to India. Okinawa is engaging a choir member to set up choral units on the island. Thailand has asked for two individuals to set up training schools for choral directors. And Pakistan has asked for a Westminster faculty man for 3 months to help the Karachi broadcasting station develop western choral music.

SCHOOLS IN JAPAN

Japan, however, is the country that has acted most decisively. It has engaged John Finley Williamson, the college president, and Mrs. Williamson to return there this summer to conduct summer schools in three cities. They will teach from August 19 to 23 in Sendai, from August 26 to 30 in Osaka, and from September 2 to 10 in Tokyo. The Japanese Government is paying for the schools and it is doing so because there are said to be 4,000 choirs directed by Communists, who are working against the Government. The idea is to train choral directors who can displace the Communist leaders. The Williamsons, too, have been asked to develop a songbook to replace the Communist songbook.

Report on Far East: Part I. The Chinese Said "So Sorry"—Part II. A Tea Party With General Chiang

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. EVINS. Mr. Speaker, no area in the world presents more problems to the future of our Nation than the Far East. In appraising the situation in the Far East, Mr. J. Lacey Reynolds, veteran newspaperman and an authority on Far Eastern affairs, has recently completed a 21,000-mile tour of the eastern Pacific area with our colleague, Congressman KEARNS, the gentleman from Pennsylvania. Mr. Reynolds served as assistant naval attaché to our Ambassador to China, Mr. Patrick J. Hurley. He covered the Asian-African Conference in Bandung, Indochina, in 1955 for various newspapers. Mr. Reynolds writes as he personally sees the situation which may not, to some, be the orthodox view. He has, following a firsthand observation of conditions in the Far East, written a series of four articles on conditions in Asia. I believe these articles worthy of review and consideration by our State Department officials and others, and I ask unanimous consent that the series of Mr. Reynolds' four articles be reproduced in the Appendix of the RECORD.

The first two of these articles appear herewith:

THE CHINESE SAID "SO SORRY" WITH A FOURTH OF JULY SALUTE—BUT WE NEVER GOT TO SEE THEIR PRISONERS—I

(By J. Lacey Reynolds)

TAIPEH, FORMOSA.—Lt. Gen. J. L. Huang, a product of Vanderbilt University and an old personal friend, was the first person on the telephone upon our arrival in this Chinese Nationalist stronghold.

"We're having a party for you tonight to celebrate your Fourth of July," he announced.

"I want your Congressman (Representative CARROLL D. KEARNS, Republican, of Pennsylvania) to sit at the head table. I want you to sit at the table of honor with Mrs. Huang."

J. L. explained that the Chinese Nationalists have long celebrated our Fourth of July on the third.

"A sort of Independence Eve celebration," he explained, "with a huge pageant depicting the points of American history. It'll be bigger than anything we ever had in our old Chungking days."

FOR A SPECIAL REASON

It was a whopper of an affair with soup and peanuts; fireworks and fanfare.

The Chinese had outdone themselves for a special reason this time. The Taipeh riots of last May had left the American Embassy and the United States Information Service office in shambles, and the American Flag trampled in the dust by the feet of an uncontrolled mob.

As a result of this surprising and serious episode, the Chiang Kai-shek regime was doubly disturbed:

First, that American resentment would lead to a cut in essential American arms and aid, and,

Secondly, that the obvious laxity of Formosa's internal security forces might spell future trouble for their own regime.

Congressman KEARNS and Lt. Col. Thomas L. Shockley, his aid, and I as his special assistant went to the affair. It was sponsored by the Taipeh American University Club, of which General Huang is chairman.

VANDERBILT A FRONT RUNNER

Six hundred Americans and Chinese who had attended universities in the United States sat around tables of ten. The hall was decorated with the pennants of American universities. The Amherst flag had the place of honor because Foreign Minister George K. C. Yeh, the main speaker, had earned his doctorate there. J. L. saw to it that the gold and black of Vanderbilt was right in the front running, directly opposite the head table.

Both officials spoke flawless English. J. L. won the Vanderbilt Founder's Day medal for oratory his senior year in 1922.

Both had most flattering words for the United States and for our previous aid and friendship. Yeh's account of the birth of the Declaration of Independence was far more scholarly and even more accurate than most of the Fourth of July speeches I ever heard.

A HATRED OF ALIENS

The Foreign Minister significantly said that some of the most valuable contributions of our early revolutionaries were due to "the acceptance of foreign ideas, foreign capital, and the tolerance of aliens." He seemed to emphasize "tolerance of aliens," directing it toward the Chinese. For one of the few facts certain among the many mysteries surrounding the Taipeh riots was an eruptive hatred of aliens, particularly American aliens.

J. L. and I did not discuss the signs that were painted by rioters on the walls of one of the Embassy building rooms:

"Friends don't kill others."

"Protesting against American disregard of human rights," and, with a touch of typical Chinese humor:

"Please don't take anything."

He apologized profusely and sincerely for the affair, as did Chinese of all echelons from Generalissimo Chiang Kai-shek on down to coolies and ox-drivers. I knew that Congressman KEARNS was working on a statement saying just as sincerely that Americans had been hurt to the quick by the infamy.

I did not mention it then, but I did give J. L. a copy when he came to the airport to see us off, just before it was released to the press.

NOT COMMUNIST INSPIRED

General Huang agreed that the riot was not Communist inspired. This was the view of all American officials on the island, from Ambassador Karl L. Rankin on down.

The mob followed acquittal by a United States court-martial of M. Sgt. Robert G. Reynolds, of Maryland (no relation), of killing a Chinese "Peeping Tom."

I suggested to General Huang that we might get at the mystery of what motivated the mob by interviewing some of the prisoners. He said this might be difficult; that it was out of his jurisdiction as director of the Government's social service program.

We never saw them. The foreign office came up with some law, prohibiting it—a law that had never been on the books in our old Chungking days.

The general was justly proud of the pageant. It was held on the spacious grounds of the Government guest house which the Japanese had occupied up until V–J Day.

"I would have put you up here if I had known you were coming," he said. This is one of his many special service hostels.

THE NATIONAL ANTHEMS

The band played the Chinese Nationalist anthem and the Star-Spangled Banner from a stand on the other side of a small lake.

An American boy trotted around the lake to the stage, riding a miniature China pony. He depicted Paul Revere, cocked hat and all.

There were salutes to the dozen or so American agencies operating on Formosa and to each of the more than 75 American colleges represented at the dinner beforehand.

The finale came with a fireworks display that surpassed those held each July Fourth on the Monument Grounds in the shadow of the Washington Monument.

"Our fireworks were made in our arsenals on Formosa," he said proudly.

Not one of them fizzled.

TIMES HAD CHANGED

The general and Mrs. Huang said their son, who went to the States for a serious leg operation in 1945, was now living on the west coast. They thanked me again and again for having expedited a visa for the boy, then 8 years old.

Times had changed since then.

General Huang had risen in the favor of the Gimo (Chiang) to higher authority.

Once a lesser official in an ocean of men and square miles on the mainland, now he was a larger official in a lake that was, comparatively speaking, hardly larger than the lake that young Paul Revere had just circled.

Great events may change the fortunes of China, but not the friendship of men.

IT WAS A MELANCHOLY TEA PARTY AT THE RESIDENCE OF GENERALISSIMO AND MME. CHIANG KAI-SHEK—II

(By J. Lacey Reynolds)

T'AI-PEI, FORMOSA.—Tea with the Chiang Kai-sheks is always an indelible occasion.

For many years, the President of the Republic of China has conducted his negotiations with foreigners over the tea table.

It was at tea that he abruptly replaced the top of his teapot, signifying the end of a dramatic World War II conference with American Gen. Joseph Stilwell.

This indicated the Generalissimo's rejection of a Roosevelt message urging appointment of "Vinegar Joe" to command all Chinese forces. Chiang did not have confidence in Stilwell, believing him to be the dupe of American Communists and fellow travelers.

Stilwell was replaced. And thus Chiang fought Vinegar with tea.

THEN AND NOW

Seeing the Chiangs again at teatime after 12 years, naturally suggested comparisons between then and now.

He has not perceptibly aged. If time has dealt unkindly with him otherwise he does not show it at 70.

Madame Chiang was as alert and alive to issues as in her heyday in 1943, when she dramatically appealed to a joint session of Congress for American aid to an embattled China.

She could have worn the same trim high-collared dress she wore on the rostrum that day. She said she had recovered from a skin infection that plagued her for so long.

I went to tea this time at the Chiangs' Shihlin Mountain residence, some 10 miles from Taipeh. It was a relatively modest home, considering the splendor with which most oriental potentates surround themselves. Compared with the mansions erected by some Texas oil tycoons, the Chiang residence is only semiprecious.

The gimo entered the room with the usual greetings to foreigners: "How! How!" * * * "How! How!" He smiled inscrutably. He wore a high-collared olive green uniform with absolutely no ribbons, stars, or stripes. Madame Chiang entered shortly, in a white print, Chinese style.

ART AND URANIUM

The small chat turned to happier days. When Madame Chiang was told that my old boss, former American Ambassador Patrick J. Hurley, had discovered uranium, she said:

"Tell him that while he was discovering uranium, I was discovering art. I've been painting for 5 years," she added, pointing to 4 or 5 of her works on the wall.

General Hurley was present at the Chungking tea party when the gimo dismissed General Stilwell.

Representative CARROLL D. KEARNS, the first Member of Congress to visit the Far East since the first of the year, got down to business. I was present as his special assistant, and Lt. Col. Thomas L. Shockley, USAF, as his aid.

Through an interpreter, the Pennsylvania Republican told the gimo that Americans had been hurt to the quick by the Taipeh riot of May 24. On that "black Friday," the American Embassy and the United States Information Service were sacked by an uncontrolled mob.

President Chiang expressed regrets as he had previously done, assuming faulty leadership on his own part. He is just about the only world leader I know who steps up bravely and takes responsibility when things go wrong.

He told the Congressman that he feared the damage that might have been done to the 100-year-old Chinese-American friendship. What he did not discuss was his concern over the way the mob got out of hand. It was angered by the acquittal by a United States court-martial of an American sergeant who shot a Chinese peeping tom.

We discussed his new bok, Soviet Russia in China * * * A Summing Up at Seventy, recently published in the United States.

Using a brush and black ink, he autographed copies we had brought with us from the States. His hand was bold and sure.

Madame Chiang joined in the conversation about condensing the book for a paperback edition for sale in America and the Far East. She had directed translation of the manuscript into English.

MAYLING SOONG CHIANG

She was quite proud of a speech which she gave to the T'ai-pei Rotary Club in April: "The Crossroad: Survival or Destruction." With a ball-point pen, she autographed a slick paper reprint as "Mayling Soong Chiang."

Recalling her schooldays at Wellesley College in Massachusetts, she asked about one of her teachers there, Mrs. RALPH CHURCH, now a Republican Congresswoman from Illinois and a colleague of Representative KEARNS.

She recalled how Mrs. CHURCH scolded her for forgetting her books:

"In springtime, my eyes and my mind just wandered out the window."

Though we conversed in English, the gimo seemed to follow the gist of what was said. She and his interpreter would prompt him occasionally in Chinese.

HE SEEMS TO UNDERSTAND

Many Americans have long suspected that he understands English readily, and merely uses the interpreter to gain time for thought before responding. His facial expressions and the timing of his faint smile indicate that he is following the English.

In many ways, it was a melancholy tea, dampened by a nostalgia for days when they sat at the peak of power, ruler over an ocean of miles and men. At his peak, in 1945, no Chinese leader had ever held greater authority over more people and territory.

Now, his domain had shrunk to 14,000 square miles populated by only 10 million native Formosans and an estimated 2 million restless refugees from the mainland. He was leader more in symbol than in actuality.

Since the first of the year, his regime has suffered trip-hammer setbacks. The T'ai-pei riots threw a chill over Sino-American relations. Europe and Japan were resuming trade with the mainland to which he hopes to return. The question was persistently arising everywhere as to whether he would ever return.

Discussing the general setting later with Spencer Moosa, the veteran Associated Press correspondent, who had followed the gimo from Chungking to Nanking to T'ai-pei, we thought he made a very impressive point:

"Don't discount his resourcefulness," Moosa said. "Remember that he has been in power longer than any other world leader of our times. All the rest are gone from the scene."

Federal Approval of Ninnescah Reservoir Should Be Approved

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 12, 1957

Mr. REES of Kansas. Mr. Speaker, under leave heretofore granted and approved by the House, I am including a resolution adopted by the Board of Commissioners of the City of Wichita. It relates to the question of providing a supply of water for the city of Wichita, one of the fast-growing and progressive cities of the Midwest. It is observed the city is ready and willing to pay for all benefits on behalf of Wichita by reason of construction of this project.

The resolution follows:

Whereas legislation has been introduced into the United States House of Representatives and Senate authorizing the construction by the Federal Government of a dam, reservoir and relating facilities at or near the Cheney site of the North Fork of the Ninnescah River, Kans., for the purpose of furnishing water for municipal, domestic,

and industrial uses, providing for the control of floods, facilitating irrigation, enhancing recreational opportunities and preserving and propagating fish and wildlife; and

Whereas the welfare of the city of Wichita requires the construction of said dam and reservoir project at the earliest possible date: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Wichita, Kans., by a unanimous vote of its members, That the members of Wichita's congressional delegation be and they are hereby respectfully requested and urged to make every possible effort to secure Federal authorization of the Ninnescah Dam and Reservoir project at this session of Congress, or as soon thereafter as is possible.

Adopted at Wichita, Kans., this 6th day of August 1957.

E. E. BAIRD,
Mayor.

Attest:

C. C. ELLIS,
City Clerk.

Report on Far East, Part IV: Shall We Let Formosa Sink?

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. EVINS. Mr. Speaker, article IV of the series of articles on the conditions in the Far East as reported by Veteran Newspaper Reporter J. Lacey Reynolds, appears herewith:

SHALL WE PULL PLUG, LET FORMOSA SINK?—WITH THE WORLD PASSING US BY, WE FACE SOME HARD DECISIONS IN THE HALF WORLD OF THE PACIFIC

(By J. Lacey Reynolds)

HONOLULU—Let's look at the great half world of the Pacific as if it were a giant weather map.

The American area of interest stretches westward from Pearl Harbor across countless waves and restless islands to the shores of Asia, and thence inland to Mandalay, Tibet and beyond the Great Wall of China. From south to north, it stretches from tropical Indonesia to frigid Siberia and Alaska.

Within this expanse of empty miles and massed humanity, the general weather outlook is depressing, from the American point of view.

Around Hawaii is concentrated what the weatherman would call a "high" where our military might has been consolidated under a single command, for the first time since the turn of the century.

It is sunny here and we can be as carefree and happy as the Hawaiian Chamber of Commerce says we should be.

INCREASING CLOUDINESS

Traveling toward Asia, we run into increasing cloudiness, with a low-pressure area centered around Formosa. New political storms, perhaps of typhoon proportions, are forming up there. The center of disturbance hovers over all of the China mainland and is being felt from Indonesia and the Philippines up to Korea and Japan.

Around Hong Kong, trade with Red China is being resumed with relish by all the major commercial nations of the world—except the United States and Japan. Even Japan is packing up her bags, and we will be left to run the empty household in lonely isolation.

Elsewhere in the Philippines, Formosa, and Japan where we were supposed to enjoy popularity, mobs and demonstrations have indicated where some people would like Americans to go—which includes home, among other places.

On the back side of these glowering storm clouds is the silver lining of our armed might.

The blue Pacific skies are embroidered by the vapor tracks of our jets; our ships crisscross the sea. The recent redeployment of our ground forces in the Far East has given us a more compact fighting force. The withdrawal from Japan relieves us of many headaches; the air buildup in Korea compensates for the Japanese withdrawal.

IT HAS A SAD SIDE

Yet, this picture of power has its sad side. We stand strong but muscle-bound—bound like Gulliver by the multiple strands of politics, economics, ideologies, racial divergencies, nationalism and historic wrongs.

Let the mighty U. S. S. *Yorktown* fire her 21-gun salute impressively as she did at noon on July 4 in Hong Kong Harbor. But the junks will resume their loading, and nonchalantly fly their Red flags and tattle-gray laundry across their bows, headed up the Pearl River for Canton.

Rattle the atom bomb and Peiping cries: "Warmongers." "Remember Hiroshima." "The Fallout Poisons Your Fish."

Militarily speaking we could silence this squawk box by dropping the bomb on the city's peaceful Temple of Heaven. But who wants to assume that awful responsibility except as a last resort? Meanwhile, we are taking an awful psychological beating.

Of course, our poor Gulliver might be unleashed by dropping a superclean H-bomb very gently to snip the silken strands that bind him. But, are we sure what would happen to poor Gulliver?

AN OMINOUS LULL

Turning to Formosa, we come upon an ominous lull. Since it became a Nationalist refuge in 1949, its strength has been more political than military.

Militarily, the island has shrunk in strategic importance. Despite all the ballyhoo, it was never quite the indispensable fortress it was cracked up to be. Some American military men (mostly retired) have gone so far as to suggest that the fall of Formosa would automatically topple Okinawa and Pearl Harbor, and expose our west coast. Yet, Formosa was of such minor strategic value in World War II that it was bypassed in the island-hopping drive toward Tokyo.

With speedier jet bombers, Formosa's position is becoming increasingly precarious. It is located too close to the mainland to allow adequate time to get its fighters into the air if the Chinese Reds made a determined mas sassault from bases only 15 flying minutes away.

The T'ai-pei riots of last May meant more than the sacking of the American Embassy and USIS office, shocking and surprising as that was, coming from alleged allies. It demonstrated the laxity of the island's internal-security setup.

A GILDED SYMBOL

Formosa once stood as a gilded symbol of last-ditch resistance to Communist aggression. It was held out as an example to the tottering governments of all free Asia. Americans were told with the fullest confidence that if we forsook Formosa, all of southeast Asia would succumb to communism.

This point of view was challenged by some delegates to the Asian-African conference held in Bandung, Indonesia, 2 years ago. To many of those delegates, the Chinese Nationalists were anathema. To those of us who covered that spectacular affair, it was repeatedly pointed out that Nationalist China had not even been invited. My most recent information is that this antipathy to the Formosan Government has increased, if anything.

Just as Formosa was bypassed during World War II, it is being bypassed politically today. If Britain's resumption of China trade was a diplomatic defeat of the first magnitude for us, it was doubly a defeat for Chiang Kai-shek.

Formosa is but a symbol of our general predicament in the Far East. Some hard decisions may be staring us in the face.

A DISCONSOLATE THOUGHT

It's a disconsolate thought, but events that are whizzing by with such rapidity may be forcing us to reevaluate our whole Far Eastern policy sooner than we think.

We may have to face up to the question of recognizing Red China as a going concern. It is getting late in the day to keep pretending that it is just the little man who wasn't there.

We may also be confronted with Red China's admission to the United Nations sooner than we think. We may find ourselves outvoted in the Assembly of the nations.

We may have to backtrack on our adamant no-trade ban, unless we want to continue standing on the corner watching all the world go by.

And then come the melancholy thoughts of what to do about Formosa. Seal it off hermetically under some sort of international trusteeship, like a faded document in a library or museum?

Or, as one GI suggested to Representative CARROLL D. KEARNS, Republican, of Pennsylvania, on his recent visit to T'ai-pei:

"I think we oughta pull the plug and let her sink."

Dr. Lovett Transformed Dream Into a Great University, Rice Institute

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. YARBOROUGH. Mr. President, one of the great educators of the Nation, and indeed, of the world, is dead.

Edgar Odell Lovett believed that institutions of higher learning were for scholarship. That was his aim. That great aim he brought to fulfillment.

Rice Institute, recognized the world over as one of the great seats of learning, was only a dream when he was chosen president in 1908. His leadership made that great school what it is today.

The Houston Post, one of the most influential organs of information and opinion in the South, pays tribute to Dr. Lovett in a very fine essay in the August 14 edition.

I ask unanimous consent that this tribute be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDGAR ODELL LOVETT TRANSFORMED DREAM OF W. M. RICE INTO REALITY

When in 1908 a group of trustees acting under the will of the late William Marsh Rice asked various university presidents to nominate candidates for president of a school they were going to build in Houston, Woodrow Wilson, then president of Princeton University, nominated Edgar Odell

Lovett, professor of astronomy at Princeton.

Dr. Lovett was chosen, and under his guidance Rice Institute was transformed from a dream into one of the world's great institutions of learning.

In the death of this distinguished educator, Houston loses a valued citizen.

Rice Institute literally was the brainchild of Dr. Lovett. For several years after he was selected as first president, he traveled the world over, studying universities and methods of teaching, making notes on prospective faculty members, and planning the architectural format. Seldom, if ever before, was so much preparatory work done in building a school. It was not until September 1912, that the doors were opened to students.

Dr. Lovett served as president until 1946, when he retired as president emeritus.

In a talk to the class of 1944 Dr. Lovett summarized his aims for the school. He said:

"We put scholarship first originally, we keep scholarship first, still. We cannot give you brains, but we can help you to improve the brains you have. We cannot give you minds, but we can help you to man and master the minds you have. We cannot make you think, anymore than you can make some horses drink, but we can make you see how wonderful a thing it is to be able to think, and be conscious of it. We cannot give you ambition, we can give you only opportunity, but we think that we can stimulate your ambition. We cannot give you physical fitness and self-discipline and the fair play of sportsmanship, we can only show you by example how important we think these things to be. We cannot even make good American citizens of you, we can only offer you the rights, duties, and privileges of citizenship right now in one of the most democratic academic communities on earth and trust that you will forever persist in the practice and promulgation of these our ideals of citizenship in a free, self-governing, representative, self-sustaining democracy."

That was Edgar Odell Lovett's idea of what a school should do. His success was unbounded.

He was not a man to seek the limelight. He was innately shy, but he had a warm spirit, a great understanding of his fellow man and a fine sense of humor. His influence with Rice students was through the school itself, rather than on a person-to-person basis. This influence, however, has been great. Rice graduates have distinguished themselves in many fields the Nation over. Through them and through the school he planned so carefully his contributions to this community and to society as a whole will endure.

James Izlar Sims

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. THURMOND. Mr. President, earlier tday I made some remarks about the late Mr. J. Izlar Sims, of Orangeburg, S. C. I ask unanimous consent at this time to have printed in the Appendix of the RECORD his biography, which was published in the Orangeburg (S. C.) Times and Democrat on April 14, 1957.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

[From the Orangeburg (S. C.) Times and Democrat of August 14, 1957]

J. IZLAR SIMS, TIMES AND DEMOCRAT PRESIDENT, DIES—CAREER SPANNED HALF A CENTURY

James Izlar Sims, president of the Sims Publishing Co. and a number of other local businesses, died at his home yesterday afternoon of a heart ailment. He was 67 years old.

A prominent figure in Orangeburg's community and business affairs since 1905, Mr. Sims enjoyed wide contacts throughout the State and was admired for his gentle modesty and philanthropy, much of which was completely unknown.

He died at 2:50 p. m., eastern standard time, in his home on Edisto Avenue.

Mr. Sims had been critically ill since Sunday night. His personal strength and tenacity pulled him through several crises, as they had in several other attacks, beginning in 1942, but in recent days his heart grew steadily weaker and the end became a matter of time.

It was said that he never met a stranger during his long business career and his door was always open to the lowest-paid employee during his direction of various businesses. His humility and sense of humor enabled him to understand people and be accepted by all, many of whom he befriended and aided through the years.

Mr. Sims was president of several local businesses, including the Sims Publishing Co., the Bank of Orangeburg, WTND, Inc., Edisto Homes, and the Orangeburg Theaters, Inc.

Surviving are his widow, the former Isabelle Wannamaker; a son, James L. Sims; two daughters, Mrs. James H. Gressette and Mrs. John B. Rembert; two brothers, Dr. Henry R. Sims, of Rock Hill, and Rear Adm. Gelzer L. Sims, of Orangeburg; one sister, Miss Georgia Sims, of Orangeburg; and numerous grandchildren, nieces and nephews.

A funeral service will be held at 5 p. m. Wednesday at the First Baptist Church. The Reverend J. Carlisle Smiley, his pastor, will officiate, assisted by Dr. Carl Caughman and the Reverend J. M. Lane. Burial will take place in Sunnyside Cemetery.

The eldest son of James Loyal Sims, who founded the Times and Democrat, and Georgia Carolina Sheridan, Mr. Sims was born November 11, 1890, at the family home at 521 Amelia Street. He attended Orangeburg City School and then Orangeburg High School. When his father became seriously ill, in 1905, Mr. Sims—then 14—left school and assumed his father's responsibilities at the newspaper.

With the newspaper tradition in both his father's and mother's families, Mr. Sims built the Times and Democrat into a modern daily newspaper. He assumed a slightly less active position with the paper in 1942, following his first heart attack. By that time he was also president of several other businesses.

Shortly after taking over management of the Times and Democrat, while only 15, he traveled to New York to learn how to assemble and operate the Mergenthaler Linotype, and returned and installed the first modern typesetting machine in this part of the State. The Times and Democrat grew from a weekly to a biweekly, then to a triweekly, and finally to a 5-day daily, in 1936, under his management. For a short time immediately after World War I the newspaper was printed seven times a week, but it later resumed triweekly publication.

On the eve of World War II it became a 6-day daily. In addition to publishing the newspaper, Mr. Sims printed part or all of as many as 25 newspapers in various towns and cities in South Carolina during the twenties. He began a theater circular business which distributed circulars throughout the United States and in foreign countries.

He entered the theater business after World War I, having operated the Reliance, Blue Bird, Carolinian, Prince, Carolina, and Edisto Theaters in Orangeburg. At one time he operated a chain of theaters, including houses at Charleston, North, Denmark, etc., and was southeastern agent for Moviephone Sound Movies.

Mr. Sims brought the first modern talking picture to Orangeburg in the late twenties and played it 7 days at the Reliance. It was Rio Rita. The latest sound equipment was installed to play it and the event was a milestone in the entertainment history of Orangeburg.

Mr. Sims promoted many community developments in his day and brought many firsts to this community. Among them were early balloon ascents, air shows, and parachute jumps. He arranged for the Times and Democrat to bring the first airplane to Orangeburg, where one of the first flights in this State was made at the old fair grounds, prior to World War I.

He was a lover of youth and sports and seldom missed any of the local ball games, even in his later years. He was president of the Orangeburg Baseball Association in this city in the early twenties and served as assistant chief of the Young American Volunteer Fire Department, serving on the committee which brought the first motor firetruck to Orangeburg—which he often drove.

During this period he also operated Sims Book Store, which sold the county's schoolbooks for many years. He applied for the first license to operate a radio station in Orangeburg, at the beginning of World War II. The application was frozen for a number of years because of the war and afterward the FCC granted the first license to another applicant. Two years later, however, WTND went on the air.

In the 1940's Mr. Sims entered several other fields of business. He became a director of the Bank of Orangeburg, becoming president in 1956. He was instrumental in bringing Paintset Fashions, a dress factory, to this city. He was the franchised builder of Gunnison Homes, and built 25 in this community in the post-World War II period.

He headed the organization which built and operated the Edisto Homes apartments.

He was actively associated with the Orangeburg County Tuberculosis Association for many years, becoming a director in 1943, serving as secretary from 1946 to 1954, and representing the county as a director of the State association. In 1956 he was TB bond chairman.

During Senator J. STROM THURMOND's tenure as governor he served as an honorary colonel on the governor's staff. He took a great interest in the history of this section of South Carolina and the South, and was widely read on all points of United States and world history. He was an active and regular participant in the meetings of the Orangeburg Historical Society in recent years.

Mr. Sims was throughout his life loyal to the ideals of the South and the traditions of the southern gentleman. He seldom raised his voice though he commanded respect from young and old. His personal life was an example in sobriety and christian simplicity. He loved people, and was never too busy to take up his time talking to anyone who sought his advice, or aid.

Hard work was his fare all his life, and there were few jobs at the Times and Democrat he could not do, or did not fill, at one time or another. Because he possessed genuine humility, and sympathy for the unfortunate or distressed, he was looked upon as a close friend by countless numbers of associates who have come and gone over the years, but who will always remember him as "the boss."

One of the community's most prominent and popular citizens, he was a member of St. Paul's Methodist Church, a Mason and Shriner, a member of the Rotary Club of Orangeburg, Woodmen of the World,

Knights of Pithias, the Junior Order of United American Mechanics and other organizations. He was not a "joiner" and when he lent his cooperation to any group or community effort it was because of genuine interest.

Active pallbearers will be W. L. Parker, of Palm Beach, Fla., Will St. Amand, of Oak Ridge, Tenn., Charlie Marahal, of Lancaster, S. C., Edward H. Sims, Hugo S. Sims, Henry R. Sims, Richard Rhame, Edward Paulling, Hampton H. Culler and Ray Linn, all of Orangeburg, Carson R. Rembert, of Beaufort, and R. E. Gressette, of St. Matthews.

President Wayne Freeman of the South Carolina Press Association last night named these representatives of the Association to attend the funeral:

S. L. Latimer, Jr., the State, Columbia; Julian Starr, the Chester Reporter, Chester; Hall T. McGee, Jr., the News and Courier and Evening Post Charleston; W. W. Smoak, the Press and Standard, Walterboro, and Herbert Hucks, Berkeley Democrat, Moncks Corner.

Unfair Drain

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting and very truthful editorial which appeared in the Chelsea Record, Chelsea, Mass., on August 14, 1957.

UNFAIR DRAIN

Massachusetts is suffering a continual drain on its resources to support Federal projects in other parts of the country, according to a study made by the new commission on the audit of State needs.

The finding is nothing new. It has been known to anyone who has had access to the figures on what we pay out in Federal taxes in this Commonwealth and what we get back in Federal projects or assistance. Lynn's own attorney, Guy Newhall, has repeatedly pointed out the outrageous lack of balance between outgo and income in Federal finances in this State.

The situation is dramatized by the second refusal of the White House only yesterday to aid us—or any part of New England, for that matter—in the drought situation. We pay and pay, but when we seek a helping hand from Uncle Sam in an emergency, Washington turns its official back on us.

This State pays $1.34 in taxes to the Federal Government for every $1 it receives in Federal funds. On the other hand, Alabama pays only 36 cents for every dollar it receives and Arkansas gets a dollar for every 31 cents.

Massachusetts ranks 10th in the Nation in Federal taxpayments. Last year we paid more than $2 billion to Washington, but we rank 37th in our return on the tax dollar. An ironic aspect of the situation is that the projects which are being built in other parts of the country with Federal funds to which we contribute are being used to build up States which are already competing with us and attempting to take away our industries, capital, and engineering and managerial talent.

Congress has been appropriating more than $500 million a year for the development of river and harbor facilities, but Massachusetts, which pays more than 3 percent of Federal taxes, gets less than one-half of 1 percent of this money.

There are a number of river and harbor projects for Massachusetts which the Federal Government has authorized, but for which Congress has so far failed to appropriate funds. Congress recently failed to appropriate funds for a flood insurance program which was strongly supported by almost every New England Representative and Senator.

In such fields as civil aviation, agriculture, and education. Massachusetts has also not received a proportionate share of Federal funds.

The solution? A more militant, more united New England delegation in Congress both in the House and Senate, to fight tooth and nail, day in and day out, on the floors of the two branches, in the committee rooms and in the cloakrooms for more funds. If we accept this unfair treatment passively, we'll continue to get it.

Gluck Just Doesn't Fit

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 6, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert the following article from the Washington Post and Times Herald of August 13, 1957, entitled "Gluck Just Doesn't Fit" in the CONGRESSIONAL RECORD:

GLUCK JUST DOESN'T FIT
(By George E. Sokolsky)

The unfortunate Gluck appointment does not lead to the conclusion that all diplomatic assignments should go to career men. Many ambassadors and ministers taken out of business and the universities have represented the United States admirably. Walter Hines Page, for instance, made one of the most distinguished records as Ambassador to the Court of St. James's. He was a book publisher.

Clare Boothe Luce surprised even her friends and admirers by her rare ability while Ambassador to Italy. Paul S. Reinsch and Jacob Gould Schurman, both out of the universities, did remarkably well in China.

One could go on and on detailing excellent representation by businessmen, bankers, lawyers and professors, many of whom made astonishingly notable careers in the diplomatic service. Others, of course, were duds.

The Gluck appointment created a furore because there was no reason for appointing him. He does not possess the background, the manner or the personality for this particular task, although that is no reflection on the man.

I am sure that the thousands who are not able to direct a symphony orchestra would not regard themselves as lesser human beings; on the other hand, if they tried to direct, let us say, Beethoven's Ninth because they had successfully earned enough money to make an excessive contribution, perhaps in violation of the Hatch Act, to a political party, they would produce catcalls and insults and possibly a strike on the part of the musicians. It is the old story of shoemaker stick to your last.

Maxwell Gluck ought not to go to Ceylon. Being an associate of Benjamin Javits will do him no good in the east of Asia. The new Asiatic countries are very proud of their achievements. Those who head their governments are educated men, often trained in British universities who speak European languages in cultured tones and whose familiarity with world affairs represents years of study. A high school education in Farrell, Pa., is not sufficient educational or cultural background for such an assignment.

The United States cannot afford to be represented in the east of Asia by a man who cannot possibly have the status essential for the task. Some of the career diplomats now in those countries are not of the best, but that is an internal problem in the State Department which John Foster Dulles said he would solve before he became Secretary of State, but he apparently has been too busy for it.

I will cite Chester Bowles as an example of what can happen. Bowles started life as a huckster and made his fortune in partnership with William Benton. But Bowles came of the distinguished Bowles family of Springfield, Mass., newspaper publishers. He studied at Yale. He had a long career as a public official during World War II and after. He served a term as governor of Connecticut and then was appointed Ambassador to India and Nepal, where he served with ususal distinction.

He became a close friend of Nehru and undoubtedly played some role in holding Nehru in neutrality at a time when personal predilection and the pressure of events in China could have driven Nehru into the arms of Mao Tse-tung, if not Stalin.

Gluck's statement that he could not pronounce the word Nehru represents sheer ignorance. Nehru is as well known to literate human beings as Roosevelt, Stalin, Churchill or even Hoffa. While it is possible for a man to sell goods and not know the word Nehru, it is impossible for him to represent his country in the east of Asia.

The fact that Gluck came well recommended by JACOB JAVITS, Benjamin Javits, and as some say, Sherman Adams, is no warrant for this particular type of appointment. He should quit. He should resign. He should do whatever is necessary to serve his country patriotically by removing himself from the temptation of embarrassing Uncle Sam in Asia.

Achievements in Agriculture—The Broiler Industry

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. LAIRD. Mr. Speaker, 20 years ago, the broiler business was a farm fringe operation. Today, it is a booming industry, supplying the market with more than a billion birds a year and representing a gross income to farmers of more than three-quarters of a billion dollars.

To a large degree, this near-revolution is the result of widespread and rapid application by farmers and the feed industry of poultry research findings from the United States Department of Agriculture, the State agricultural experiment stations, and industry.

Many scientific factors have contributed to the modern broiler farm. Scientists have bred hardy, fast-growing birds. They developed better feeds containing vitamins, minerals, and antibiotics; found ways of controlling many of the worst poultry diseases, and developed better buildings and equipment. They have improved marketing meth-

ods so that high-quality birds move rapidly from farm to consumer.

For example, today's broiler producer can turn out a 3-pound bird in 10 weeks with a little more than 8 pounds of feed. Twenty years ago it took him 12 weeks and more than 12 pounds of feed. In other words, scientists have trimmed off 2 weeks and nearly 4 pounds of feed.

Now, Federal and State poultry scientists are saying that broiler efficiency is sure to improve even more in the years immediately ahead. They are predicting that 3-pound broilers will be produced in less than 8 weeks and with less than 6 pounds of feed.

President Eisenhower: A British View

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. UDALL. Mr. Speaker, in the field of international journalism the London Economist has always held a high rank. I present today an incisive commentary on the President and his relations with Congress which appeared in the August 3 issue of the Economist.

The commentary follows:

[From the Economist of August 3, 1957]

WANTED—A PRESIDENT

WASHINGTON, D. C.—The session of Congress which is now nearing its close has not enhanced President Eisenhower's reputation. By slipshod handling of the administration's congressional business he has frittered away in a few months most of the prestige of his astonishing personal triumph at the polls last November. The collapse last week of the bill to help local authorities to build schools by providing Federal funds illustrates and reinforces the mounting exasperation in Washington at Mr. Eisenhower's lack-luster leadership.

It began when he failed to supervise adequately the drawing up of this year's budget. There is no other function which gives a President so direct an opportunity of imprinting his personality on a session of Congress. But Mr. Eisenhower seems to have been so disturbed at the size of the figures which were handed to him that he merely passed the budget on to Congress and country as if his responsibility were no more than that of a custodian. As popular reaction mounted against this huge spending by the Government, the President conceded vaguely that there were some programs he cared very much about, but that there were others which he did not mind Congress cutting. This did not sit well with Democrats who had seen him gain electoral advantage from having appropriated, as part of his modern Republicanism, reforms which they had initiated.

When, finally, with the economy drive apparently out of hand, Mr. Eisenhower was induced to defend his estimates on the country's television screens, he drew on all his reputation as a general to stress the fearful gamble that would be taken and the terrible consequences risked if the defense budget were materially cut. Then, after the clamor in the country had died down and the Senate under Democratic leadership was restoring the heavy reductions imposed by the House on military spending, the President began to undertake that trimming of his budget which might more appropriately have preceded its publication. This provoked Senator SYMINGTON to ask bitterly whether the President could any longer be taken seriously on the subject about which he was supposed to know most.

The civil-rights bill made the situation worse. It had been deliberately decided to sacrifice almost all other major legislation in the Senate during this session in order that a measure for the protection of the Negroes in the South might be passed. This was the second year in which the administration had presented a bill for this purpose. Yet, when he was first asked to comment publicly on this highly delicate subject, Mr. Eisenhower showed little knowledge of the bill's contents. On the next occasion his explanation did at least coincide with that which had been given to Congress by the Attorney General, although it was still not correct. Repeatedly in the debate Senator JAVITS, a modern Republican who both understood the original bill and believed in it, was acutely embarrassed by the latest meandering comment from the Presidential news conference.

But the President's faltering performance over the school bill was the last straw for many politicians of both parties who have attempted to work with him on those individual parts of his program with which they agree. As the economy wave gathered momentum Mr. Eisenhower became increasingly embarrassed at the apparent contradiction between his efforts to pass on to Congress the responsibility for existing expensive domestic programs and his commitment to launch a fresh program of spending on education. Moreover, after a series of regional meetings to plan ahead for the congressional elections of 1958, word came back to the White House that the Republican rank-and-file wanted the school bill to be dropped.

But in the House of Representatives a substantial bipartisan group had been working hard for several years, clearing away the obstacles to an acceptable bill. Of these there were principally two, which had brought grief to a similar Bill last year: the Powell amendment, which would antagonise the South by withholding funds from racially segregated schools; and a difference between northern Democrats, who wanted a straight distribution of Federal funds between States according to school populations, and the administration, which wanted to weight the formula so as to recognize special need and penalize lack of local effort. Since last year painstaking compromises had been worked out. Half the money was now to be distributed according to the administration's formula, half according to that of the Democrats. Liberals on the race issue agreed not to press the Powell amendment if the general bill on civil rights had passed the House before the school bill came up—as it had. Mr. McConnell, the principal Republican specialist on education in the House, and Mr. Marion Folson, the energetic "modern Republican" who heads the Department of Health, Education and Welfare, saw the President to enlist his full support for the compromise. All they got was a cold statement that the bill would be "acceptable" to him. In conversations with Republican leaders, many of whom were temperamentally inclined to bury the Bill, he enlarged principally on the details in it which he disliked.

In the House last week events moved swiftly. Although a Negro Congressman spoke against the Powell amendment, Republican opponents of the bill succeeded in attaching it to the bill for wrecking purposes. Northern Democrats tried a complicated parliamentary maneuver to save the measure, but in the end a purely destructive motion which killed the bill entirely was carried by only five votes. The majority against the Bill included three of the leaders of the President's party. Among them was Mr. Halleck, who frequently boasts of his personal loyalty to Mr. Eisenhower; it is inconceivable that he would have voted thus if the President had been taking any active interest in changing the minds of wavering Congressmen. But when this missed opportunity was explained to him at his press conference on Wednesday, Mr. Eisenhow seemed quite surprised.

There is little doubt that these incidents will have implications much wider than the measures which gave rise to them. They have caused deep resentment among Democrats who have worked hard to build up coalitions in support of what was substantially the President's program, and deep discouragement among the modern Republicans. Most unhappily Mr. Eisenhower has contrived to antagonize many of the men on whom he must rely for other important measures during his second term. In particular those who feel most let down over the school bill include some of the key figures in the critical debates that will come next year over future American policy on foreign trade.

Why does President Eisenhower seem to have lost his enthusiasm for his domestic programs? Perhaps it is because he always tended to regard mildly progressive legislation as a kind of therapeutic treatment for the Republican Party. When the party failed to win control of Congress last November, even though his name was also on the ballot papers, legislation lost much of its appeal to him. Probably it is also because Mr. Eisenhower remains a man of basically conservative instincts and no strong political, as distinct from moral, convictions. As he was reproved by his friends and business people whom he admires for the extravagance of his Government, he may have begun to doubt whether he ought not in fact to return to first principles. This would explain his recent rather wistful appeal to the States to take back their powers and the ease with which he slips into the vocabulary employed by his critics. The danger is that, if he keeps to his present course, he will be progressively shunted on to the margin of political decision—particularly since under the Constitution the Republicans are forced to find another presidential candidate for 1960.

Achievements in Agriculture—Progress in Brucellosis Eradication

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. LAIRD. Mr. Speaker, officials of the Department of Agriculture say that they are within touching distance of eradicating brucellosis—one of our most costly diseases of cattle.

Excellent progress against this disease has been made since the end of World War II, and particularly since 1954, when the Congress provided additional funds for this current campaign. My own State of Wisconsin has been the leader in this important program.

Sometimes called Bang's disease or contagious abortion, brucellosis costs our farmers at least $50 million a year.

The progress of the eradication campaign can be measured in the rapid increase of counties that have been rated modified-certified brucellosis-free—in

other words, containing less than 1 percent infected cattle and less than 5 percent infected herds. In September 1954, at the beginning of the accelerated campaign, 341 counties including 3 States—North Carolina, New Hampshire, and Maine—were modified-certified free. Now as of March 31, 657 counties, including 3 more States—Washington, Wisconsin, and Delaware—have this status. By June 30, the Department of Agriculture estimates that the total number of modified-free counties will have grown to nearly a thousand. Although in New York State only two counties are modified-certified brucellosis free, good progress is reported and many other counties are expected to gain this status in the near future. We in Wisconsin are proud of the fact that we were the first State to be certified under this program.

Much of the success of the campaign is due to the close working relationships that exist between the research and the regulatory people in the Department's Agricultural Research Service. Many years of scientific study and especially the development of an effective vaccine and of accurate, rapid methods of testing for the disease, form the foundation for this eradication effort. It is to the credit of Department organization that regulatory officials have been able to apply research findings with such practical and beneficial results.

A Plan To Break the Suez Bottleneck

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 13, 1957

Mr. HOSMER. Mr. Speaker, moving ships across dry land in giant tubs rolling on 12-inch ball bearings may sound fantastic, but it seems sensible the way Henry E. Tweed, Richmond, Calif., businessman and engineer who devised the plan explains it. A tub carrier, 1,000 feet long by 100 feet wide, would accept ships at sea level in the same manner as ordinary canal locks. Then it would move out of the water onto dry rails, traveling on ball bearings and pulled by diesel-powered tractors which operate on sprocket gear wheels along sides of the roadbed leading overland to another deepwater port. The ship is secured to the tub carrier by cables, never leaving water during the transit. Further details of the plan were given in the San Francisco Call-Bulletin of August 10, as follows:

AN IDEA: DRY LAND SHIP ROUTE

A novel plan for supplementing or even supplanting the Suez and Panama Canals has been presented to the United States State Department by a San Francisco Bay area engineer.

He is Henry E. Tweed, 68-year-old Richmond businessman and onetime drainage and irrigation engineer in the Northwest.

Tweed's plan, basically, provides for moving ships across dry land in huge electronically controlled carriers filled with water.

He told the Call-Bulletin that he has submitted his designs to the State Department after consultation with consular officials of Mexico, Israel, France, and Great Britain.

MEXICO PLAN

The idea of moving ships across dry land is not new, Tweed said, and 9 years ago the Mexican government was considering the possibility of such a portage across the Tehuantepec isthmus.

The one big obstacle, however, was the objection of marine insurance carriers who were fearful of hull damage when ships were removed from the water.

Tweed then hit upon the idea of transporting ships without removing them from the water, and devised his present plan after discussions with Dr. J. J. Polivka, an engineer now lecturing at Stanford; J. W. Wig, former head of the United States Bureau of Standards, and University of California Prof. H. A. Einstein, a hydraulics expert and son of the late Dr. Albert Einstein, world-renowned physicist.

ROLLER BEARINGS

Tweed's concept calls for the construction of huge rectangular tub carrier ships, filled with water, which would move on steel roller bearings along steel rails extending the length of a walled cut.

Such a cut, he pointed out, could be constructed in Israel, extending from the Gulf of Aqaba to the eastern Mediterranean at a point near Gaza.

Similarly, in his view, one could be built across the Tehuantepec isthmus in Mexico, from the Gulf of Mexico to the Pacific.

The tub carrier, according to his plan, would be 120 feet wide by 1,000 feet long, and could accommodate vessels up to 950 feet in length.

HOW IT WORKS

Here's how the Tweed plan would work, as he has designed it:

A ship first would move into a water lock at a terminus of the rail canal.

Then, through the gates of the lock, it would move into the carrier itself, filled with water. The rear gates of the carrier would be closed, the water would be pumped from the lock, and the carrier then would be ready to move, carrying the ship.

Motive power for the carrier would be provided by diesel-powered tractors, or "mules," operating on sprocket gears along the sides of the rail canal.

OIL NEEDED

On the bottom of the carrier would be spring-cushioned roller bearings, each bearing a 12-inch steel ball surrounded by 2-inch satellite bearings, lubricated by oil pumped to the bearings under pressure.

Tweed figures that there should be 2,475 sections of 16 balls each for 1 carrier. The balls would roll along the tracks much as a train wheel, for instance, moves along railroad tracks.

According to Tweed's plan, such a rail canal would be a two-way transit, with provisions for switching the carriers at either end.

He figures that the speed of a carrier would range between 7 and 20 miles an hour.

NINETY-SIX SHIPS A DAY

Allowing for the operation of the canal locks and gates, he figures that the Israel canal, built according to this plan, could handle 96 ships entering and leaving the canal every 24 hours.

Tweed, who last month filed descriptive and mechanical plans of his canal project with the Department of Commerce Inventors' Council, said he has no idea how much such a project would cost.

"It would take a survey crew in the field and a corps of engineers on ground inspection with complete research material, to put all the facts together for a preliminary estimate," he said.

He pointed out, however, that plans for a comparable dry run across Mexico, which would be 157 miles in length, placed the estimated cost in 1948, at $240 million.

BRACED ON CARS

This plan involved bracing ships on mammoth flatcars which would move over a 20-track rail line.

Tweed suggested that an Israeli canal, such as he has in mind, could be financed by the maritime powers using the canal through 50-year revenue bonds.

Postal Wage Increase Justified

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the possibility of a Presidential veto on the bill to increase salaries of postal workers prompts me to place in the RECORD additional evidence of support for the legislation. The very fine editorial from the Oregon Journal of August 10—states that the postal pay increase is justified and indicates that Congress and this administration will be doing an injustice to the postal workers if a pay adjustment is not provided in the current session of the Congress.

The overwhelming vote for the increase clearly indicates that the big majority of my colleagues in the House share this belief.

Under the unanimous consent of my colleagues I insert the editorial in full:

WAGE INCREASE JUSTIFIED

Congress and the administration will be doing an injustice to a large group of Government employees if a pay adjustment for postal workers is not provided at the current session.

The House passed a pay increase measure by a vote of 379 to 38 and the measure now rests in a Senate committee. This bill provides a $546 across-the-board increase. With this increase a Portland clerk or carrier who has put in 7 years and worked himself to the top civil service grade for his position still would be making less than $5,000 a year gross income.

The postal service is a big operation. In all, some 518,000 workers across the country would be affected by this bill and the total annual cost would be in the neighborhood of $318 million.

The administration has opposed these measures on two grounds—first, that such an outlay would be inflationary and, second, that Congress should consider legislation to provide prevailing pay scales for Government workers in different localities or that an allowance system, such as the one used in the Army and diplomatic service, be provided.

The first argument is valid only in the sense that any new expenditure is inflationary. But from an overall standpoint, postal workers have been the victims, not the cause of inflation.

Their last wage increase was in 1951. The inflation which has occurred in the interim cannot be blamed on them. In his budget message President Eisenhower said that any wage increases—private or Government—must be reasonably related to improvements in productivity.

On the basis of pieces of mail handled, postal clerks show a 43.6 percent increase in

productivity between 1945 and 1957. The second reason is valid only if some reasonable effort is made to implement one or the other of the suggestions.

To date no such effort has been made and postal workers should not be asked to continue at substandard wages while Congress decides whether some alternative might work.

Considerable has been said about wages in relation to the post office deficit. It is true that postal rates should more nearly meet costs, but again this problem is not directly related to wages.

The workers are entitled to a living wage and it is up to Congress to decide whether these services should be paid for by the taxpayer or by the user of postal services.

On the Girard Case

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the National Amvet publication for August 1957:

[From the National Amvet of August 1957]

ON THE GIRARD CASE

Capping a series of highly controversial decisions which had the effect of setting two convicted murderesses free and giving new trials to convicted Communists, the Supreme Court decided that the Federal Government did have the right to turn Specialist William Girard over the the Japanese for trial.

The Court ruled, as it must, on one very narrow point of constitutional law. In doing so it ignored the hard facts of the case. The deceased woman was a trespasser on United States Army property. She and her neighbors who scavenged for brass shellcasings on the firing range had been warned off the area many times.

Girard was assigned to guard a machinegun and other equipment. The Government attorney admitted that he was on official duty.

Whether or not Girard enticed the woman within range of his post is not in point. Nor is the question of a fair trial pertinent. We might assume he will get one considering the bright light of public interest now focused on the case.

It should be made clear here that we of Amvets do not condone Girard's act nor do we believe he should go unpunished for it. The point that should be considered is this: Shall the State and Defense Departments have the authority to surrender for foreign trial American servicemen who are accused of crimes while on duty?

The foundation for this authority rests on a series of status-of-forces agreements negotiated with nations in which American troops are stationed. Although each differs from the other in some aspects, most provide that primary jurisdiction over an American offender in an on-duty case can be waived if one of the parties to the agreement so requests. None of the status-of-forces agreements were ratified by the Senate since they were entered into under the powers of the Chief Executive. The Supreme Court confined itself to ruling that the President did have this authority.

A great deal of mention has been made of the many cases where American servicemen have been tried by foreign courts. But these statements ignore the very fundamental fact that in almost every case the offender was off duty at the time of the crime.

That is why the public is outraged over the treatment accorded Girard. He was on official duty. He would have been court-martialed had he not been where as was when the shooting occurred. If he had been off post and off duty there would have been no question but that he should have been given over to a Japanese court.

The impression the American public has been given since the introduction of the status-of-forces agreements was that they would apply only to off-duty, off-post crimes. If that had been the actual case, then there would be no clamor over Girard's case now.

A vicious pattern has been set. We are now seeing it repeated in the Philippines where Filipinos are reported to be rioting for the return of two servicemen accused of causing auto accidents. And it may well be repeated in every nation where we have troops stationed.

There will be an accident in which an American is involved. We may desire to retain jurisdiction. But then there will be threats of violence. The gentlemen in striped pants will yield to this vile form of blackmail and instruct the men in olive drab to surrender another American to avoid an undesirable situation.

AMVETS primary objection to the Girard decision is that it now is possible to use American troops as political pawns to be offered as diplomatic sacrifices whenever some well-insulated and well-protected but not well-known individual decides the situation demands it.

Like every other veterans' organization, AMVETS has been solicited to aid in the recruiting of servicemen. It is difficult to see how we can induce young men to join the Armed Forces when it is now apparent that they will be abandoned when expediency and not justice indicates.

There is a saying that, "The Army takes care of its own." It rings rather hollow in the case of young Girard. That is why delegates to the national convention are urged to consider and adopt a resolution even stronger than that passed 3 years ago when we asked that the status-of-forces agreements be revised to avoid such an incident as the Girard case.

The administration and its congressional supporters in this issue must be shown that much firmer ground than a Government functionary's opinion must be found before we discard fundamental justice.

Public opinion is a powerful instrument. It's time it was crystallized and employed in the protection of the individual rights of America's servicemen throughout the world.

It Has Been a Long Time Since Egg Money Was "Pin Money"

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, as a result of my campaign against the depression-low egg prices, I have received one of the largest mails I have had this year on any subject, and from many parts of the country. Egg producers all over the country, as one correspondent puts it "invest lots of money and back-breaking hours to produce that egg that someone gets more for than we do—just for the handling." This seems to me the height of inequity.

Under unanimous consent I insert a number of these letters in the RECORD:

COLFAX, ILL., *August 13, 1957.*

Mrs. COYA KNUTSON,
Democratic Congresswoman, Minnesota.

DEAR MADAM: I am writing this letter to thank you for your championship of the farm woman and her egg money. This wonderful prosperity we hear of sounds pretty hollow to we farm women. We invest lots of money and back-breaking hours to produce that egg that someone gets more for than we do just for the handling. Seems to us a case of someone profiting from our hard work.

Thank you again.

Mrs. CLARENCE HARNES.

AMES, IOWA, *August 11, 1957.*

Mrs. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR Mrs. KNUTSON: Thank you for your comments about the egg prices for the farm women. Since Senator MARTIN from my own State made the inane remark about farm women needing good egg prices for their "pin money" I have been mad about the whole thing. If every Senator and Representative had to live on what the average farm flock brings in they would soon do something about the price of eggs. It has been a long time since the egg money was pin money. It never was in my house. Your comments were exactly right. How the money is spent is so true. You could have included car servicing, music lessons, school lunches, etc.

Again, thank you.

Sincerely,

DOROTHY MATHER
Mrs. L. H. Mather.

MINNEAPOLIS, MINN., *August 12, 1957.*

Representative Mrs. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR Mrs. KNUTSON: The reports in the press of your special efforts in behalf of the American farm women for more egg money is of especial interest, and certainly needs more attention from the Government in Washington.

All last winter and spring eggs were selling at 20 to 22 cents per dozen by the farmer (or about one-third of what the city housewives were paying in our larger cities). When we consider the present value of the dollar this means that the farmer's wife selling eggs this past year was actually getting 10 or 11 cents based on 1940 money values. At the same time, feed and all the costs of production of eggs are higher than ever. This means the egg prices have been below depression prices in actual values.

Poultry farmers have not asked for support on prices and for various reasons the consumption of eggs has actually declined per person in recent years. Eggs are still one of the very best food products, and as such the Government should expand its use of eggs in diverting surpluses to school hot lunch programs and through welfare channels. Incidentally, some of the school cooks should be told various ways to prepare eggs so that they are attractive and not as they look and taste like scrambled yellow plastic bubbles.

Keep after any promotion you can of more Government help for use of eggs. I am sending copies of this letter to our Senators THYE and HUMPHREY because we know full well their interest in promoting eggs and poultry. I am sure that they will go along with you in supporting any programs that

will influence greater egg consumption to boost the present egg prices on the farms.

Thank you again for your efforts.

Sincerely yours,

HILLTOP LABORATORIES, INC.,
FRED H. MOORE, *President.*

GERMANTOWN, OHIO, *August 12, 1957.*

DEAR MRS. KNUTSON: Truer words were never spoken than the statement you have made about the egg market for farm wives. At 25 cents per dozen (which I have been getting from the egg market in Dayton and a little grocery in Germantown) we can't afford to feed the hens.

Some grocers refuse to buy eggs direct from farmers.

They say they have to be graded and Government inspected.

We have to sell to the egg market, they go through a process of grading. (We never sold the small eggs; used them at home.)

Then after a month or more the grocer gets the same eggs, supposed to be fresh, with a grade A stamp, Government inspected. It's funny, but so disgusting.

The manager of the Kroger grocery where I used to trade and sell eggs, told me he had customers who came to buy our eggs. Since he can't sell them any more, they don't buy eggs at Kroger's.

Someone is getting the egg market tied up. Farm wives won't be allowed to sell eggs only at the markets if someone don't speak up. You are in a place to do it. More power to you. "Let 'em have it, but good."

Too much profit is made off those eggs, from the farms to the consumer. Eggs come from Canada to the egg market here in Dayton—that is a long way to ship eggs—when we only get 25 cents per dozen and almost have to beg to sell them for that.

I guess you know by now how I feel about selling eggs to get "pin money." We don't have much left for pins.

Sincerely,

Mrs. WILLARD H. IORNS.

THE NEW INN,
Okoboji, Iowa, August 11, 1957.

Hon. COYA KNUTSON,
United States House of Representatives,
Washington, D. C.

DEAR MRS. KNUTSON: Power to you in your crusade for more egg money for the farm woman. I honestly believe that you are the foremost farm expert in Congress.

You are so right in what the egg money means to the farmwife. It is the money the family uses to eat from, buy the clothes, and educate the children with. It certainly influences the gross sales of the merchants.

What has happened to the rest of our people in Congress who used to be in there fighting for the farmer? Certainly the farm problem is not solved and the next time it comes to haunt us it may be too late.

Business here in the Midwest is poor. Very few businessmen seem to realize that the farmwomen's price they are getting for eggs compared to what you have to pay at the grocery for them makes a lot of difference.

If there is any way I can help in your crusade, please let me know. As you know my first and last thoughts are with the farm situation. In closing I believe the price of eggs and the farmwoman exerts more influence on the future of the Nation than atomic energy.

Yours very truly,

CECIL MALONE,
Atlantic, Iowa.

MENTOR, MINN.

Hon. COYA KNUTSON,
House of Representatives,
Washington, D. C.

DEAR MRS. KNUTSON: A couple of weeks ago we were getting 21 cents top grade eggs then 15 cents B-grade and down to 12 and 15 cents for 5 grades. These folks went to Peterson Riddick and asked 4 dozen top grade eggs. They charged 42 cents just double so they bought 4 dozen B-grade instead at 36 cents again double and they never even got that grade as they said not one had a good shell and 2 had holes and 4 with such dark yolks had to be thrown away. Last week a young couple was here from Grand Forks. They were paying 60 cents a dozen for eggs. Here they were 32 cents. Thank you so much.

Mrs. CORA BASSLER,

HAWLEY, MINN.,
August 14, 1957.

DEAR MRS. KNUTSON: Thanks for the boost you've been giving the farmwoman's eggs. We need it.

Sincerely,

Mr. and Mrs. HERBERT C. CARLSON.

Sentiment in North Shifts on Civil-Rights Legislation

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Sentiment in North Shifts on Civil-Rights Legislation," written by Raymond Moley, and published in the Houston Chronicle of August 12, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENTIMENT IN NORTH SHIFTS ON CIVIL-RIGHTS LEGISLATION

(By Raymond Moley)

Since both Vice President NIXON and Senate Majority Leader LYNDON B. JOHNSON are concerned with the fine art of politics—and who in public office is not?—it seems to me that the man from Texas has definitely the better of their argument about the jury-trial amendment to the civil-rights bill. For not only is this turn toward moderation pleasing to the South, but it is, in my judgment, agreeable to a great majority of the sensible people of the rest of the Nation. I greatly fear that the Vice President, usually as sensitive to the atmosphere of public opinion as is a morning glory to the rising sun, is missing a very important shift in northern sentiment which has been underway for some years and which has quite evidently crystallized this year.

Surely I am willing to admit that when anyone ventures a guess about so broad a matter as public opinion he should, with or without Gallup, indicate that he has some concrete evidence to back up his opinion. In my case, I can claim some sense of public sentiment because I have within 2 months crossed the Nation from coast to coast. I have talked with plenty of people, including shrewd newspapermen. And I have found a pronounced and prevalent inclination toward moderation in any civil-rights legislation.

NARROW APPRAISAL

To be sure, if one is calculating on swinging enough Negro votes in strategic sections of northern cities, he will see political advantage in a drastic civil-rights act. But this is a somewhat narrow way to appraise political advantage. For there are millions of people other than these minorities whose sentiments about coercing the South have greatly changed in the past decade or two. The simple reason for this is that the northern cities have acquired some valuable lessons in the problems involved in creating equality by law. They have learned that the South has a serious problem which cannot be solved except by moderation, gradualism, or what you will. And as Americans these northerners are not inclined to engage in an attempt to hurry the process of evolution by any means that suggests the abandonment of strict constitutional guaranties.

When opponents of a guaranty of jury trial claim that southern juries will not convict white people for a denial of suffrage to Negroes, and that to meet this failure of justice there should be no juries, they are taking on a very serious assumption. They are assuming that it is wise public policy to enact legislation that is objectionable to at least a quarter of the population of the Nation. We have a program here involving an ancient principle, "the consent of the governed." In a careful effort to define this principle in a book, I wrote this:

"What, then, is consent? Is it mere resignation to the inevitable? Is it agreement secured under duress? Is it agreement obtained as the result of promises that, under proof, can be shown to be deceitful and fraudulent?

"Consent is real when those involved freely, knowingly, willingly, and with a part in creating the decision, enter into the benefits and responsibilities involved in carrying out the decision."

NORTHERN DISCRIMINATION

The North has had some experience with attempting to create consent by mere majority power. It still recalls the era of prohibition. It sees also, every day, in every one of its cities, the theory of racial equality denied by the fact of discrimination.

I am aware that an immediate answer to this is the assertion that the Negro has given no consent to the denial of his right to vote by the State and local governments of the South. That is true. But the expressed objective of this legislation—that the Negro be allowed to vote—can be attained only by having the people of the South agree upon a method through which that end can be attained.

Therefore, I believe that Senator JOHNSON is speaking not only for the South but for a massive proportion of northern and western opinion when he derides the Vice President's assertion that the passage of the jury-trial amendment marked "a sad day for the Senate."

I believe, further, that Senator JOHNSON could get a majority vote of the people of the North for his proposition that "this bill represents an advance in the field of civil rights."

Achievements in Agriculture—The Meat-Type Hog

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 15, 1957

Mr. LAIRD. Mr. Speaker, agricultural research has shown hog producers how to meet consumer demand for lean pork and to cut the fat surplus at the same time. Scientists in the United States Department of Agriculture in cooperation with State experiment stations have shown that meat-type hogs can be produced within any breed by selecting the right breeding stock.

These streamlined, meaty hogs dress out 50 percent or more of the preferred lean cuts, compared with 44 percent in the lard-type hogs that have been grown in this country for many years. This means an extra 13 or 14 pounds of good lean meat with a corresponding decrease in the amount of fat. Furthermore, these hogs produce just as big litters, which grow just as fast and just as economically as the old-fashioned lardy hogs do. Farmers can collect an extra dividend of as much as $5 a head for the extra pounds of lean cuts.

Between 15 and 20 percent of the hogs going to market these days are meat-type hogs, and the number is increasing as the advantages show up all along the line. Some packers are paying a differential for leaner hogs and others are discounting the price for fat hogs. Market grades have been established to help buyers identify hogs with the most desirable weight and degree of fatness.

Every man, woman, and child in this country is benefiting from the research that has made it possible for farmers to give us the kind of pork we want and need for best nutrition. It looks now as if our scientists will be able to do the same thing for beef. They are working hard to develop beef animals that will produce steaks and roasts that are tender and juicy without the large amount of fat consumers no longer want or need. They are making progress and deserve our full support.

Refugees From Responsibility

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HAYS of Arkansas. Mr. Speaker, I had the honor of attending a meeting of the National Council of the Boy Scouts in Philadelphia on July 12, at which time I heard Dr. A. L. Sachar, president of Brandeis University, make a brilliant address on the need for greater emphasis on individual responsibility in community life. He had a message that I believe would help all men and women in public life. I hope we can provide him with sufficient evidence that we in the Congress are diligently searching for the fulfillment of the very ideals that he mentions are the sinews of a vital democracy.

Under leave to extend my remarks, I should like to include his speech as follows:

The longer I go on in public service, the firmer becomes my conviction that we must focus some very heavy artillery on the so-called good people of every community—the indifferent, the slothful, the oversensitive, the cynical, the tired liberals, the refugees from responsibility. Some years ago, Bertrand Russell wrote a provocative essay which he titled "The Harm That Good Men Do." He was not primarily concerned with the patent scoundrels and fakers—the malicious, the evil, the predatory; we have been alerted to their menace, and we have built up defenses to ward them off or to hold them in check. Russell was more troubled by the respectable elements, the pillars of society, the smugly righteous who would be outraged if they were bracketed with the antisocial elements. Yet it is these who wear out the patience and the courage and the vision of those who, with great dedication, devote themselves to the service of their community. I have often thought of encouraging some young graduate student to write his doctoral thesis on this phenomenon. He would then list these good people in the scientific categories where they belong. Perhaps he would give them forbidding Latin labels, and these might waken them to the obloquy which they merit.

The first group should be titled "Genus Cynicum." These are the good people whom Walt Whitman once excoriated as men with hearts of rags and souls of chalk. They find the world beyond repair and wish to retire to their ivory towers. They believe that we are now so overwhelmed by forces which we cannot control—vast, impersonal economic, political, and military forces—that there is no point in trying to fight back. No one can really any longer shape his personal destiny, they say. We are all mere cockleshells now. We have been trapped by the iron vice of inevitability. So why resist at 2 minutes to midnight? This morbid spirit has captured many campuses where despairing youngsters, certain that the times are out of joint, retire to the mourners' bench. What is the good of study, where is there any relevance in application to history or philosophy, the humanities or the creative arts, when tomorrow you are to be siphoned out to devote the best young years of life to the sterility of militarism? Paul Valery has summarized the mood of this Genus Cynicum in a memorable phrase. He said, "The trouble with our times is that the future is not what it used to be."

There is a second, much more numerous company. This group, not at all cynical or defeatist, is just unwilling to be tempted into any kind of aggravation. Perhaps the proper identification here should be genus tranquillum. These are the people who above all seek peace of mind. This quest, which normally is worthy and wholesome, has become an overwhelming fetish. We are flooded with prescriptions on how to escape from anxiety, and the best-seller lists burgeon with guides to the Shangri-La of ease and serenity. The fashionable code word seems to be relax. We have virtually a national movement to evade any personal responsibility that may affect the blood pressure.

Some years ago, one of my old friends, the late gifted Rabbi Joshua Loth Liebman, wrote a book which he felicitously called Peace of Mind. It sold many millions of copies. Most of the people who bought the book probably never read it. They thought they were buying a prescription to happiness, an elixir which would magically help them to cope with the exasperating problems of concontemporary living. Peace of Mind to them meant the sloughing off of all responsibility. But Dr. Liebman meant nothing of the sort. He was calling for determination to face up to problems, not to run away from them; to link living with perspective, to release anxiety through understanding. Dr. Liebman substituted the conviction of solvability for the dogma of inevitability, and found the truest peace of mind in such maturity.

One of the most meaningful dispatches of our generation was written many years ago by Leland Stowe, a gifted American correspondent. He was describing an interview with a desperately wounded Finnish soldier in a hospital in Helsinki during the first Russo-Finnish War. The soldier said to him, "Do you know what troubled us most as we lay desperately wounded in the subzero weather of the Arctic? Not the parachute troops which came down upon us in such bewildering numbers, used experimentally by Russia for the first time in the Finnish War. We developed a defense against them. Not even the 40-ton tanks which were also tried out for the first time on a large scale by the Soviet forces. We were able to develop a defense against them. What troubled us most as we lay so desperately wounded was the fear that we might succumb to the temptation of falling asleep. The pain was so intense that we courted the blessed oblivion of sleep. We didn't have to be physicians to recognize that when pain disappears, death is near."

The dispatch made a lasting impression on me. I have often thought of it in the neo-isolationist tides that periodically sweep our country. Woe be to us if we are ever tempted to court the anodyne of sleep because of the multiplicity of our problems. Too many of us look back nostalgically to our earlier history when we did not have to worry about billions in taxation in order to buttress the tottering structures of European societies; when we could forget for the moment who would be the new prime minister of France or what the outcome was likely to be in an Italian election; when the relationship of the Tachens or the Pescadores or Formosa to our national security was a footnote in a history book. This is an understandable nostaglia. But we cannot forget that America now has attained primacy in the world. When one of our statesmen drops an indiscreet statement, as he usually does, the chancelleries of the world react at once, for every public utterance in America has an impact everywhere. Of course, our isolationists hold fast to our primacy. They are proud that the map of the world has been colored American in such a large part, economically as well as in military control. But they recent the aggravations that walk hand in hand with greatness. Individuals are often that way, too. Some people, when responsibility increases for them, grow. And some people merely swell. America will never be worthy of its heritage if patriotism condones flight from responsibility, if chauvinism crowds out responsible service. Today, charged with the responsibility of protecting our Judeo-Christian civilization against one of history's most resourceful and dangerous enemies, it is craven to glorify the escape from obligation as a worthy national aspiration.

There is a third group which may be properly labeled as genus dejectum. These men are not cynics, nor do they seek escape from responsibility. Indeed in the first flush of their idealism they court responsibility, they are anxious to give themselves to public service. They come out of university halls not only prepared to win honorable and secure places in business and the professions but eager to participate in the institutional life of the community. They soon discover that nothing gets done by will alone. There is discussion, persuasion, then opposition, discord, and conflict. Motives are questioned. There is abuse and insult and vituperation. Then one day these eager idealists take stock. They ask themselves, "What do I need all of this for? I have a family that I neglect habitually in the interest of meetings and conferences and campaigns. I am giving the most precious leisure hours to philanthropy, to education, to public service. I am not asking for gratitude. But at least I am entitled to respect. Instead, all I get is grief and headache and affront. I must give dreary hours to collaborate with demagogs and egomaniacs and charlatans and they have no holds. It is painful to wade around in muck. It is humiliating to be continuously smeared. Yes, what do I need all of this for? I want out." And so these most precious of our leadership assets withdraw.

Have you often wondered with me why, in so many areas of public service we get the fantastically inept kind of leadership that has become so common? We listen to their banalities; we shudder at their antics. And we ask, "How did they ever get there? We are not a nation of morons, and surely we do not deliberately choose such lunkheads and nincompoops to represent us?" In truth they are there because they have had the stamina which the more sensitive have lacked. They hang on for dear life no matter how the currents swirl about them. But the oversensitive move out. They resign and leave the field to the men whom they despise. And in this way we get the survival of the unfittest.

The painful lesson which must be learned is that along with idealism there must be large reservoirs of abdominal fortitude. Good intentions must be linked with stamina. Idealism cannot function in a vacuum. Unless our good people are willing to fight for their convictions, to slug it out, toe to toe, with the primitives and the Neanderthal men, their well-phrased intentions will remain only to mock and shame them. Real progress cannot come from the flashy verbalizers who speak brave words but whose timidity and impatience in relation to the tedious techniques of fulfillment lead in the end to futility and impotence.

There is time for but one other category, which I shall call Genus Vituperosum. This is the group of belittlers who sit in the seats of the scorners. They themselves would never get into the market place or into the arena. They have no stomach for the patient drudgery and the unglamorous plodding and grubbing which public service so often entails. But how quick they are with their criticism. Every political figure is a potential grafter, and of course he has his price. Every trustee of a philanthropic institution is seeking glory or authority. Or perhaps he does not have a sufficient outlet at home and his nights in smoke-filled board rooms are really a sublimation of domestic inadequacy. Every educational administrator is really a Babbitt; else why does he lay so much stress on budgets and campaigns and the weary problems of teachers' salaries and curricular standards? Why must he be so obsessed with statistics of growing enrollments and the need for buildings? This must be because he suffers from an edifice complex. Do you recognize these Monday-morning quarterbacks, these artists in denigration, who dip their pens in gall and shave with their tongues? They are never within earshot when volunteers are called up for vital community tasks. But they are everywhere available when the opportunity opens to drive barbed shafts into the motives of those who never spare themselves in the community interest.

As voices are again raised to follow a dangerous neoisolationism, look for the cynics who form the vanguard. As respect for democratic processes lessens, look for the bankrupt liberals, exhausted volcanoes whose idealistic lava has congealed. As doubts are thrown over the heroic efforts of progressive teachers and administrators to use education for the release of capacity, look for the escapists and the defeatists who can smell out failure even before an effort is made.

Fortunately, the field is not abandoned to these self-righteous people. There are enough men and women of real moral stamina in each community who continue to hold the line. They are our best hope for international peace, for good government, for the fulfillment of social justice and, of course, for the kind of schools and teaching that are the sinews of a vital democracy. For they are anchored to the conviction that the most honorable objective for a going society is not ease; it is adequacy. It is not serenity; it is fulfillment.

Real Progress in Civil Rights

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, August 16, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial entitled "Real Progress in Civil Rights," by Dorothy Thompson, an outstanding observer of the national and international scene, which appeared recently in the Washington Evening Star.

The article highly compliments the excellent manner in which the civil rights legislation was handled by the Senate. Miss Thompson's analysis of the situation is an excellent one indeed, and I recommend its reading to all Members of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REAL PROGRESS IN CIVIL RIGHTS: SENATE ACTION ON BILL SEEN RELIEVING ADMINISTRATION OF IMPOSSIBLE TASKS

(By Dorothy Thompson)

Intervention of the Federal Government to enforce the civil rights of southern Negroes was sought by the Eisenhower Republican administration on the assumption that these rights were being violated.

But exactly what the rights are was in serious dispute. Despite the Supreme Court decision, most southerners believe with intense conviction that there is nothing in the Constitution that prohibits the education of the races in separate schools; that the Court's decision was not made on constitutional grounds but out of unprovable sociological considerations; that it was a usurpation by the Federal Government of powers never granted it, which it would take a constitutional amendment to obtain; and that the Supreme Court decisions have been successfully challenged in the past.

The right, however, of every American citizen to register and vote under whatever qualifications are equally applicable to all, is constitutionally assured, and is the law of every State. It was charged that this right is de facto violated in certain communities, and that, patently, it was the duty of the Federal Government to hear and judge such complaints.

The question then arose whether judgments against defendants in such cases constituted civil or criminal contempt.

Now this is a very interesting question indeed, depending, basically, upon a social intention.

The object of a sentence for civil contempt is to cause the culprit to desist from practices of which he has been found guilty.

The object of a sentence for criminal contempt is punitive—to "throw the fear of God" into the defendant.

In the fascinating debate in the Senate the issue eventually revolved around the question of what authority could judge crime. Southerners, in unexpected alliance with Western liberals, insisted that sentences for criminal contempt must go before before a jury if defendants were not to be deprived of their civil rights.

The administration has maintained that southern juries would never convict, assuming an irradicable prejudice that would frustrate the law.

It seems to me that this unprovable assumption, if accepted, would challenge the very concept of trial by jury. Everyone alive has prejudices. Very righteous people (according to the late Clarence Darrow) are harder on those accused of wrongdoing than are those who have been subjected to similar tempatations. Every juror—and every judge—brings himself into court. Yet the assumption is that 12 citizens are capable of weighing the facts and deciding, despite temperaments and prejudices on the basis of law and evidence.

It is not true that southern all-white juries have never convicted a white man nor upheld a Negro complainant. They have often done so. And the mere fact that a complaint of injustice in election matters can be brought before a Federal judge will incline local officials and citizen groups to watch their steps.

The South feels from remembered experience the danger of antisouthern zeal to punish—with partisan eyes upon the colored vote.

What is needed is justice and reconciliation.

The President should be grateful to the Senators who have made real progress in civil rights possible, and relieved his administration of impossible tasks whose exercise would further sectionalize the Nation and embitter its races.

Letter From Lloyd Godley

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, August 16, 1957

Mr. GATHINGS. Mr. Speaker, many letters are received daily by those of us who are privileged to serve in this body. These messages are largely well written and convey the attitude and observations of the writer. Occasionally an exceptional and an outstanding letter is received.

Such is that which came to me from Mr. Lloyd Godley, of Osceola, Ark., under date of August 13. He deals with the farm dilemma and its effect on farmers.

Mr. Godley is an able administrator of the Mississippi County, Ark., Production Credit Association, and a successful businessman. He has testified many times before congressional committees on various farm proposals. His views are worthy of the attention and consideration of the membership of the Congress and of the Nation.

Mr. Godley's letter follows:

OSCEOLA, ARK., *August 13, 1957.*

Hon. E. C. (TOOK) GATHINGS,
House of Representatives,
Washington, D. C.

DEAR TOOK: Very likely there is not a thing in this letter of which you are not already aware, but I do grow so tired of seeing our farm programs sabotaged by those who are supposed to fight our battles that I must unburden to someone—so, it might as well be you.

This administration is to say the least, unique. It is the first time in the history of our great Nation that we have had a Secretary of Agriculture who spends all his time degrading the people and the programs that he is supposed to represent. At this

time of severe farm price deflation coupled with rampant general business inflation is when a farmer needs a friend, but he doesn't have it in the Secretary of Agriculture.

He set out to strengthen the farmer's "moral fiber," but instead he is breaking his spirit. It is my contention that if a farmer's bank account is strong, his "moral fiber" will take care of itself.

In my opinion, no one should ever accuse Mr. Benson of failure to do his best at the job he was hired to do. Evidently the task assigned him was the complete liquidation of our farm programs. All that has kept him from fulfilling his mission is the Congress. May it always be controlled by a party that considers human beings more important than corporate wealth.

I was just checking through my files this morning and I ran across a statement of a tractor that I bought in 1945. That tractor was paid for with the gross proceeds of nine bales of cotton. Today that same tractor would cost the gross proceeds of 20 bales of cotton. No doubt this same price relationship will apply to any major farm commodity.

When we must buy in a subsidized, controlled, price administered market and sell on a free speculative market over which we have no control, we must have adequate supports to survive.

We have read the propaganda line "that support prices caused the surplus", so often that some of us would come to believe it if it were not for the historical fact that our greatest surplus problems have been in times when farm prices had almost reached the vanishing point and support prices had never been in effect.

Now on top of our low prices and high consumer cost comes higher and higher interest rates. They tell us that rates must go up and up and up to control inflation of which we farmers haven't had any except on what we buy. They say it is to keep the business boom from getting out of control.

There is a great question in my mind as to the real motive back of the constant increase in the cost of money. I have checked the record and I find that in the period from 1923 to 1933 Federal Intermediate Credit Bank interest and discount rate averaged about 5 percent and on December 15, 1931 it was 5½ percent. Now that was more than 2 years after the start of the great depression. Stopping a business boom certainly could not have been the reason for the extremely high interest rate at that time.

Shortly after the start of the Roosevelt administration, the Federal Intermediate Credit Bank interest and discount rate dropped below 3 percent—at times, too, as low as 1½ percent and it never went above 3 percent again until November 1, 1955. It has constantly gone up since that date and is now at about 4½ percent.

Another thing that gripes farmers no end is the constant threat of program discrimination against a farmer because he is successful. Farmers are just people and most people want to get ahead. That is what has made the United States of America the envy of the world.

Most all little farmers long to be big farmers and most every little businessman longs to expand his business. Even General Motors, I understand, has expanded quite a little the past few years.

This thing of limiting any type of farm program because of the size of a man's operation is not in accord with the traditions of our country and such discrimination is not imposed upon any other segment of our society.

I haven't heard of an oil man failing to get depletion allowance on his income tax because he is big. I haven't heard of a corporation that has been denied tariff protection because of its size.

The thing that disturbs us most is that some of our good friends in Congress seem to have fallen for the idea of discrimination. That's the so-called soil bank. We don't think much of it, but if, as its proponents claim, it was set up for the purpose of reducing planted acres, then an acre taken out of production on a plantation would reduce as much surplus as would an acre taken out of a 40-acre operation.

If by such rank discrimination as is now in practice and which has been proposed continues and becomes more intensified, many of the strongest farm leaders may become so disillusioned that they will lose all hope and interest. If that happens then those who have worked so long to destroy all that you, your Committee, and your friends have fought for these many years will have fully succeeded.

With best wishes, I am,

Sincerely yours,

LLOYD GODLEY.

Capper's Farmer—GTA Daily Radio Roundup

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 16, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the GTA Daily Radio Roundup for August 14, 1957, on the subject "Farmers Union Grain Terminal Association, St. Paul, Minn."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, AUGUST 14, 1957

Many of you folks are familiar with Capper's Farmer. It's one of the leading commercial farm magazines. It's usually chuckfull of advertisements appealing to farmers to buy, and it carries article after article on how to farm more efficiently. Capper's Farmer has, at long last, discovered there's more to farming than efficient production. It has discovered there is a trend of events in Washington that's not good. And it's alarmed—it's actually in the air about what it has found. It runs its analysis under a headline that says: "They are trying to kill price supports—Efforts to arouse public resentment against Government supports are endangering the whole farm program."

It's easy to see that Capper's Farmer has joined GTA, the Farmers Union, and others who are fighting to save the farm program. Here are some of the key point suggestions that the magazine makes: "Farm price supports you've known since the war are in danger of being eliminated completely. Supports gradually have been discredited to the overwhelming majority of nonfarming Americans. It could be only a matter of time until the program's back is finally broken." The editors say they've been studying the official actions and statements of Secretary Benson and his associates for the past 5 years. And the only conclusion that they can come to is, of course, that Mr. Benson's real aim is to wreck the whole price-support program to tear the whole thing down.

They go through his actions, step by step, and they find that "Secretary Benson's request for the full 0 to 90 percent of parity flexibility is the latest evidence" of what's afoot. Furthermore, they find that the Secretary has no constructive program for the future. In short, Capper's Farmer, a magazine founded by the late Arthur Capper, a leading and long-time Republican Senator, is alarmed at what's happening to farm programs. It says that, "We think there is much evidence that the drive to kill price supports could succeed." Its editors say they fear the timing couldn't be better to wreck price supports because the farm bloc is completely disorganized.

So Capper's Farmer calls on farmers to do something—to fight back. Here are its words: "It's time to speak up. Capper's Farmer doesn't want to see the loan program killed before we have some better plan for the improving of farm income. Such action would be disastrous to agriculture, and dangerous to our whole economy. Now is the time for you, as a farmer, to speak out in your own behalf. If you want a sound workable farm program, it's high time to say so. Silence may be interpreted by Congress as disinterest."

Those are words of good advice, in line with GTA's unrelenting efforts to save and strengthen the price-support programs for farmers. Market your grain through GTA, the co-op way, and you can help win that fight.

Lake Washington Illustrates Federal Policy of Water Pollution Control Is Ineffective

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 16, 1957

Mr. PELLY. Mr. Speaker, under unanimous consent to extend my remarks I should like to say it was most heartening to read a press dispatch of August 10, 1957, from Hershey, Pa., to the effect that jointly a group of State governors and Federal officials had tentatively agreed to recommend that the several States take over five programs, all or parts of which are presently financed by the Federal Government. This was, of course, a sequel to President Eisenhower's suggestion of a study looking toward return of functions to the States and relinquishment of areas of income in order that any such projects could be adequately financed.

According to the newspaper article the group of distinguished leaders meeting in Hershey tentatively agreed to urge as a trial that certain excise taxes be relinquished on the national level, and as a starter consideration be given to transferring full responsibility back to the States for five programs. In particular I was pleased to see that control of water pollution was 1 of the 5 programs suggested. This was because I firmly believe the need of water pollution control is urgent, and the only way to adequately and properly solve that problem is by the States themselves accepting full responsibility for a solution. My interest and information in this one particular subject stems from the situation in my own State of Washington and a critical example which unfortunately exists in my own congressional district in Seattle. I want to refer to this particular example because it demonstrates convincingly

hat in this field our Federal program is adequate and can be wasteful and ineffective—that it cannot solve overall ollution problems.

Briefly, the problem I cite has to do ith Seattle's backyard and concerns ake Washington and its drainage area. ight now a comprehensive sewer surey of this metropolitan area is in progss, and competent engineers on the asis of previous studies already point o that the solution is impossible unless l cities in an enitre drainage basin onsolidate into one united plan and rogram. Our State has authorized such consolidated plan.

Anyone who watched television last unday and saw the Seafair festival and e gold cup hydroplane races held on ake Washington will have obtained an ea of a great city of more than 500,000 eople expanding across and encircling beautiful, deep fresh lake 12 miles ng and a few miles across. What was ot visible was the effect of sewage disosal in the drainage basin of this lake hich up to now has been an unsurassed water and boating recreation ea. How tragic pollution is to this eautiful spot cannot be put into words. he drainage area of the lake is rapidly ing urbanized, it should be emphaized, and any plan for sewerage treatent or any other public service must ontemplate the continued population rowth. In 1954 there were about three uarters of a million people living in the ea, and sewer problems today must be udied on the basis of the future with n estimated 2 million population durg the expected life of any comprehenve sewer disposal program.

Today in the lake's drainage basin, an ea of about 480 square miles, the peoe entrust 19 city councils in that many ties and commissioners of 21 sewer istricts to protect their health and solve e problem of sanitation. Thus there e 40 separate authorities to cope with e respective community problems, and this connection 18 different municipal eatment plants are presently operated, us 8 private sewer systems and plants. ut these 26 separate systems or others en added will not prevent pollution the lake.

After the gold cup races were over, if e watched television one saw the mainance crew of the winning boat and driver jubilantly jump into the water, d swimmers were in evidence earlier. t actually Lake Washington is conminated and unsafe for swimming. is great deep beautiful lake, lined with ely homes, as I previously mentioned about 12 miles long and a few miles de. Engineers say the only way to ve the water from becoming unsafe to im in, or as has been said, from being rned into a cesspool, is by diverting sewerage affluent into Puget Sound to e west of the city, where the waste uld be processed before it was disarged into the salt water and was disrsed by tidal action. In other words ere is no scientific longrange means discharging treated sewage waste into e lake that will provide uncontamited water.

Yet each one of the 40 different communities on Lake Washington with sewer systems can qualify for Federal funds, and much money would be spent; yet the net result would not save the lake's beauty and freshness from excessive algae growth due to over-abundance of nitrogen and phosphorus.

Mr. Speaker, in the area I have described are thousands of homes where the occupants depend upon septic tanks. It is said 6,000 new private septic tanks are installed each year. Thousands of these tanks do not work properly, and much untreated sewage, in spite of increasing legal restrictions, flows into the waters around Seattle. Besides Lake Washington there is a bad pollution situation to the south of Seattle, in the drainage basin of the Duwamish River which flows into Seattle harbor. Industrial waste here is such that the river's oygen content will barely support fish life.

Now the point I desire to bring out is that with both the drainage areas mentioned, as industry develops and population increases the only solution is diversion of all sewage direct to salt water and into Puget Sound. Seattle's cost in such a program will run into millions and millions of dollars. The Federal aid program to assist in financing sewer disposal is too limited to help Seattle, but it might encourage smaller neighboring cities to install the very individual plants which do not contribute to a solution of the overall situation.

I want to point up this fact—the real road to control of pollution lies in area collaboration, in interstate compacts, and vast sewer districts both interstate and intrastate in nature.

Central consolidated treatment plants represent an economy, too. I have seen it stated that with a 100-million-gallon capacity, primary treatment, the costs run $8 per million gallons per year; whereas with a 10-million-gallon capacity, primary treatment, the per million gallons cost per year is almost 3 times higher—or $23 per million. For 1-million-gallon capaciy the annual cost would be $58 per million.

So in the case I have given as an example, it would be more economical for all cities in the drainage area to join in financing the construction of 1 or 2 large plants rather than for each city, even with the present 30 percent Federal assistance or $250,000, whichever is smaller, to go it alone. The yearly users' cost, not the first construction cost, is what represents the important factor. Still more important is the overall result, and to achieve area pollution control it may well be desirable to completely abandon existing installations.

The solution of other problems such as transit and parks may likewise be resolved in a similar way. The State of Washington passed recently what is called the metropolitan council law. It authorizes a form of government to handle metropolitan services.

Of course, Federal aid could conform to such area programs and planning, but my feeling is that large cities, in all fairness, should be entitled to benefit on the basis of their proportionate tax contribution. Actually, by a sewer use tax, any community can finance its own system. The incentive Federal pollution-control law meanwhile is obviously inadequate, unfair, and worst of all, encouraging individual rather than area treatment which can be unnecessary, ineffective, and wasteful.

So, Mr. Speaker, as I said earlier, the suggestion of returning the function and financing of water-pollution control to the local level is sound, and deserves the fullest support.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Daily Digest

HIGHLIGHTS

Senate passed two bills on atomic energy.

House passed sundry tax bills and adopted conference report on poultry inspection bill.

Senate committees approved numerous bills and nominations.

Chamber Action

Routine Proceedings, pages 13645–13659

Bills Introduced: 6 bills were introduced, as follows: S. 2804–2809. Pages 13646–13647

Bills Reported: Reports were made as follows:

S. 2720, to increase the authorization for the fisheries loan fund established under Fish and Wildlife Act of 1956, with amendment (S. Rept. 982);

H. Con. Res. 172, to establish a joint congressional committee to investigate matters pertaining to the growth and expansion of the D. C. metropolitan area, with amendments (S. Rept. 983)—referred to Committee on Rules and Administration;

H. R. 7825, private bill (S. Rept. 984);

H. R. 8256, to amend the D. C. Income and Franchise Tax Act of 1947, with amendments (S. Rept. 985);

S. 2438, to amend the D. C. Business Corporation Act, with amendments (S. Rept. 986);

H. R. 7458, to amend the Fair Labor Standards Act of 1938 to restrict its application in certain overseas areas, with amendments (S. Rept. 987);

H. R. 7467, relating to citizenship and residence qualifications of the directors or trustees of certain D. C. companies (S. Rept. 988);

H. R. 8892, to extend the time within which a minister may elect coverage as a self-employed individual for social-security purposes, with amendments (S. Rept. 989);

S. 2722, to amend laws relating to enforcement of masters on vessel documents (S. Rept. 990);

H. J. Res. 370, to extend the time limit to sell certain war-built vessels for utilization on essential trade routes 3 and 4 (S. Rept. 991);

H. R. 9023, relating to Indian hospitalization payments to Bernalillo County, N. Mex. (S. Rept. 992);

H. R. 6456, amending the Federal Food, Drug, and Cosmetic Act relative to disposition of certain imported articles which have been seized and condemned (S. Rept. 993);

S. 2254, relating to vocational rehabilitation programs in the States, with amendment (S. Rept. 994);

S. 395, to encourage expansion of teaching and research in education of mentally retarded children, with amendment (S. Rept. 995);

H. R. 8076, relating to termination of Veterans' Education Appeals Board (S. Rept. 996);

S. 655, a private bill (S. Rept. 997);

H. R. 787, authorizing exchange of certain lands between U. S. and California (S. Rept. 998);

H. R. 2816, conveyance of Esler Field to parish of Rapides in Louisiana (S. Rept. 999);

H. R. 3025, conveyance of certain rights of access by Navy Department to city of New York (S. Rept. 1000);

H. R. 3246, relating to exchange of lands between Puerto Rico and U. S. (S. Rept. 1001);

H. R. 7914, to amend the Career Compensation Act of 1949 to provide incentive pay for human test subjects (S. Rept. 1002);

H. R. 8531, providing an interim system for appointment of cadets in the U. S. Air Force Academy (S. Rept. 1003);

H. R. 9188, authorizing Secretary of the Navy to transfer certain property to Massachusetts (S. Rept. 1004);

S. 1732, to readjust equitably the retirement benefits of certain individuals on the Emergency Officers' Retired List, with amendment (S. Rept. 1005);

S. 2305, to define service as a member of the Women's Army Auxiliary Corps as active service under certain conditions, with amendments (S. Rept. 1006);

S. J. Res. 96, to establish the U. S. S. *Enterprise* in the Nation's Capital as a national shrine, with amendments (S. Rept. 1007);

H. R. 6952, to authorize the transfer of naval vessels to friendly foreign countries, with amendment (S. Rept. 1008);

Appendix

A Time for Decision in Foreign Policy

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful and provocative address delivered to the Montana State Press Association by our acting majority leader, the junior Senator from Montana [Mr. MANSFIELD]. I highly commend the address to the attention of all Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TIME FOR DECISION IN FOREIGN POLICY

(Address of Senator MIKE MANSFIELD, of Montana, convention of Montana State Press Association, Great Falls, Mont., August 17, 1957)

Some Members of the Senate read the New York Times. And some read the Chicago Tribune. But all Members of the Senate read the newspapers from home. Whatever may be the fate of your circulations, therefore, you can at least count on my loyal patronage.

There is a reason for this devotion. Newspapers from home are the flowers of the grassroots. Newspapers constitute the ground to which the ear of an elected official is bent. What he hears may sometimes bring a smile of pleasure to his face. And sometimes it may bring a frown of displeasure. One in a while what he hears is not even fit to print. Pleasant, unpleasant, or unprintable, however, you may be sure that your words do not fall on deaf ears—at least as far as your Senator is concerned.

Looking back, I find that I owe my years in Congress largely to the guidance of the press of the State, largely to you ladies and gentlemen. The Democratic editors here tonight—I hope that there are at least 2 or 3—have kept me advised of the needs of the people of Montana. The Republican editors have informed me of the needs of President Eisenhower and the Republican Party. And the independent editors have reminded me that there is a bridge upon which the Democratic and Republican train can occasionally meet. I am sure that you editors of Republican persuasion will be perturbed by the knowledge that you have helped to elect a Democrat. You may take some comfort, however, in the fact that in the process you have also contributed either to my enlightenment or to the height of my blood pressure.

This is the first time that we have all been together and I want to take the occasion to thank you for your help whether it was given wittingly or unwittingly. For, in all seriousness, out of your criticisms, your comments and your wisdom on the public issues which have confronted the State and Nation has come much of the guidance for the course I have tried to pursue as a Representative and Senator of all of the people of Montana.

Having listened to all you for 15 years, I think there is a kind of just retribution in your having to listen to me for 15 minutes tonight. The subject to which I shall address myself is one on which the Republican-Democratic twain can and ought to meet. There is also plenty of room on the bridge for the independents. That subject is foreign policy.

When I say that we can meet, I mean that we can agree on the objectives of foreign policy. There may be some differences, however, as to how these objectives are to be achieved.

The objectives of foreign policy, I believe, are reasonably clear to all of us. We do not and ought not to maintain the Department of State wih its thousands of employees all over the world merely because it is the stylish thing to do. We have not or ought not to have spent some $60 billion of public funds in aid to other nations during the past decade simply because we had nothing better to do with this money. We did not spend hundreds of billions of dollars, as we have done in these postwar World War II years—we ought not to spend most of the tax money collected this year, as we shall do, to maintain an Army, Navy, and Air Force so that we may be entertained with air shows and naval exercises and parades on appropriate civic occasions.

We do or ought to do these things and others in inter-related fields of foreign relations and national defense with one overriding objective in mind. We ought to do them because they are necessary for the safety and well-being of the people of the United States.

I do not believe anyone in this room would take exception to that observation on the purpose of foreign policy and defense. With the objective of doing what is necessary for the safety and well-being of the Nation there is no dissent from any responsible quarter in this country. There is not a Democratic position, as distinct from a Republican position, as distinct from an independent position.

We can agree on this objective because, bound up in it, are the common interests, the common hopes and the common fears of all Americans. Just as we live our individual and family lives within the common framework of the State and the Nation, our national life is lived within the common framework of a world of many nations. What happens in the world, what we do or fail to do in foreign policy affects the Nation. And what affects the Nation affects each of us. If foreign policy helps to keep the Nation safe, prosperous and at peace, if it helps to reduce the cost of defense, all of us gain from it. If foreign policy produces the opposite results, all of us suffer in consequence. That is why it is possible for us to agree on the broad objective of foreign policy.

The differences arise among us when we attempt to realize the objective in practice. The differences arise when we seek to define what is necessary in foreign policy for the Nation's safety and well-being. They arise, too, when we try to determine how we are going to do the necessary even if we can agree on what it is.

It has sometimes been said that I am a critic of the administration in matters of foreign policy. I do not know whether that description is valid or not. It is true that I have commented frequently and at length and sometimes with considerable vigor on the course which this Nation has pursued in our relations with other nations. In all of these comments, however, I have had no difference with President Eisenhower or Secretary Dulles over the objectives of our foreign policy. I have never doubted that both of them had only one purpose in mind. They have sincerely tried to do what they believe is necessary for the safety and well-being of the country. They have tried to do it in the best way that they know.

If I have had differences with the administration they are over the questions of what it is that is necessary in foreign policy and how it ought to be done. I have certainly differed with the administration in my belief that the extent and the cost of the official activities in which we are presently engaged abroad is excessive. I have certainly differed with the administration on the way in which these activities are being pursued in some areas.

On the basis of what I have read in the newspapers, heard over the radio and seen for myself, moreover, I have sometimes differed with the administration's general interpretation of the international situation and the general course which we have followed in dealing with it.

To summarize, I have not differed with the objectives of the administration in foreign policy or questioned its patriotism. I have been at odds, however, with the methods which have sometimes been employed in seeking to reach these objectives.

That has been the case, when the administration has persisted in policies—often the policies of the previous Democratic administration—which seem to me to have outlived their usefulness. It has been the case when the administration seemed to me to be trying to do with dollars in foreign policy what can only be done with clear purpose, new ideas, initiative and effective diplomacy. It has been the case when I believe that the administration of policy is wasteful of public funds and manpower. It has been the case when foreign policy has borne the stamp of a boisterous of excessive public relations. It has been the case when the administration, instead of speaking to the world on behalf of this country with one stable and forthright voice has seemed to speak with a babble of many voices. It has been the case when policy has seemed to me to stray from the traditions of courage and compassion, and faith in freedom which underlie the greatness of the United States.

Some may believe that it is best for Members of the Congress and the public to stay entirely out of foreign policy. They may believe that it is best to rely exclusively on the President, the Secretary of State, and the executive bureaucracy to set an effective course in foreign relations. They may see the role of Congress as merely that of tagging along in these matters.

That is a point of view which can be defended; but I do not happen to agree with it. I have been in Washington long enough to know that all wisdom—in foreign policy as in other matters—is not concentrated in the executive branch of the Government. I know that that branch—regardless of whether it is headed by a Republican or a Democratic administration—sometimes loses sight of the forest for the trees in foreign policy. As all of us do, it sometimes makes errors of understanding and judgment. It sometimes takes the path of inertia, on the

mistaken theory that if all apparently goes well today it will also go well tomorrow. It sometimes seeks to expand in power, in size and in cost whether or not the interests of the Nation actually are advanced by such expansion.

Our system of government—the system of checks and balances—was devised precisely to restrain these unhealthy tendencies in Government. That system, I believe, has great validity not only in domestic affairs but also in question of foreign policy. That is why I do not agree that the Congress and the public should automatically defer to the President, the Secretary of State and the executive branch in foreign relations. The leadership of course must come from the President, and the President and Secretary of State must conduct these relations, but the Congress and the public can contribute a great deal that is constructive. They can do so by the process of free discussion of the issues, and, when necessary, free dissent. Out of this process can come a constant and up-to-date evaluation of international developments and new ideas for meeting them. Out of this process can come change which is as essential to survival and progress in our relations with the rest of the world as it is in our daily lives.

It seems to me, therefore, that all who have public responsibilities—and that certainly includes the press of the Nation—must keep a close and continuing watch, an independent watch, on the international situation and on the policies that are pursued in dealing with it. You ladies and gentlemen of the press have as much right to criticize the decisions of the President and the Secretary of State as you have to criticize the decisions of a Senator. I would be delighted to have you exercise this right with respect to their decisions with the same enthusiasm as you have sometimes shown with respect to mine.

The questions of foreign policy may seem remote from the daily interests of the citizens of the State. Yet none which engages the attention of the Federal Government is of greater importance to each of us. The state of our foreign relations accounts for the preponderance of the taxes we pay. It has a deep effect on the prosperity and progress of our economy. In a nuclear age, it can determine whether or not future generations, if not this generation, shall live in a recognizable civilization, even perhaps in an inhabitable world. That is the reality which confronts us today whether we are prepared to face it or not. All of the issues—management-labor relations, schools, roads, public health, power—all of these domestic issues which are of the highest importance to us fall under the shadow of this reality.

As for a Senator, if he is going to discharge his responsibilities to the people who have entrusted him with public office, he cannot neglect the domestic questions which affect his state. At the same time he cannot ignore the international issues which confront the Nation. He can only seek to inform himself as best he can on these issues and make what contribution he is able to make to their solution.

In this connection, I can say without in any way desiring to flatter you that I have found the press and the radio of the Nation and the able correspondents which they maintain at home and abroad of prime importance. They provide an independent and timely source of information and ideas that is of the greatest utility in understanding the international problems of the day. It is almost amusing sometimes, as a member of the Committee on Foreign Relations, to attend secret briefings by executive branch officials on aspects of the international situation only to find that 80 to 90 percent of the ground covered behind the closed doors of the committee will have already been covered days before in the press. That is a tribute to the astuteness and the alertness of American journalists. It is, at the same time, a commentary on what is a necessary use but which becomes, on occasion, an excessive and often unfounded use of the secrecy label in Government.

I have also found it helpful to go abroad to make personal observations on the international situation. I have done so many times in may countries during the past few years and I have issued reports on the journeys. The observations which they permit have enabled me to form independent judgments. When I have agreed with the administration I have said so. I did not, for example, hesitate to comply with the invitation of the President and the Secretary of State that I serve as a delegate to the SEATO Conference in Manila in 1954.

At times, however, I have reached conclusions as to the course of foreign policy, at variance with those of the executive branch. That was the case in connection with the Indochina situation. It was the case with the foreign aid program, with the Suez crisis and many other issues. And when I have differed with the administration I have spoken out on the differences as I believe it is my public duty to speak out. And on occasion, it has been gratifying to see subsequent shifts in the position of the executive branch, shifts which I believe have been in the direction of a more effective and less costly policy.

In the same vein, I speak out tonight. Again, let me stress that I intend in my remarks no criticism of the personal motives of the President and the Secretary of State. It goes without saying that they are honorable men who seek what you seek and what I seek in foreign policy. They seek to develop and to maintain a policy that does what is necessary for the safety and well-being of the country.

They have done many things aimed at that objective. Yet I do not believe anyone can say that we have yet achieved an effective policy. We cannot say it when two-thirds of the taxes of the people of the United States—over $40 billion a year—must still go for purposes of defense. We do not have an effective policy when the situation in the Far East and the Middle East are still not far from the brink of war. We do not have an effective policy when sudden nuclear extinction still threatens not only Soviet communism, not only American democracy, but all mankind.

I realize fully that this country did not make these vast international problems and others which press in upon us. I realize fully that alone, we cannot unmake them, no matter how effective our policies may be. This administration, like its predecessor, has had to contend with a dangerous and provocative Communist totalitarianism in many parts of the world. It has had to deal, like its predecessor, with great and dynamic changes in what were formerly the colonial areas of Asia and Africa. It has had to tackle, like its predecessor, many vexing problems in connection with the survival of freedom in Europe—the birthplace of Western civilization and liberty and, in two world wars, almost their graveyard.

It is not easy to deal day after day with an international situation as complex as the one in which we live and I have a deep awareness of the burden of decision that is carried by the President and the Secretary of State. I have supported their efforts in the past whenever it has been possible to do so in good conscience.

I shall continue to extend that support in the future. By the same token, however, I shall continue to think independently on foreign policy. Whenever I reach the conclusion that policy, in concept and administration, veers from a course that is not as fully in accord with the best interests of the State and the Nation as it might be, I shall not hesitate to say so.

Since the Suez crisis last fall, I believe there have been improvements in both the general international situation and in the policies which we are following in dealing with it. As for the international situation, changes are taking place within the Soviet bloc which promise a greater national independence from Moscow for the satellites than has heretofore been the case. Even within the Soviet Union, there are apparently internal pressures at work which may impel that country toward a more rational approach to the rest of the world. Western Europe shows signs of moving in the direction of greater unity, an essential development, it seems to me, for both peace and for the survival and growth of freedom. The situation in the Far East may well be entering into a period of major transition due to obscure pressures in China as well as to the resurgence of an economically powerful and independent—or weak and dependent—Japan. In the Middle East, the tendencies toward a violence that contains the seeds of world war III have been curbed, at least for the moment.

There is general agreement that these changes are taking place. What, however, are their implications? Do the changes means that the chances for peace will brighten or are they merely a prelude to a new period of heightened international tensions which may give way to war?

It seems to me that these changes are not leading automatically in the direction of either of these alternatives. What they foreshadow, I believe, is a moment in history when the nations of the world will cast the die clearly for peace or for war; they suggest that a time of great decision is at hand. It will be a time when nations will determine whether or not to turn back from the edge of catastrophe on which they have stood for so long and walk on the surer ground of more stable relations with one another. It will be a time to determine whether the present tenuous grip on peace—this holding action for peace—can be made firmer. It will be a time to determine whether the present truce based on a fear of mutual extinction can be replaced by agreements of mutual restraint which will provide greater security for all nations. It will be a time to see whether the words of peace which echo from all lands can be translated into the actualities of peace.

Let me make clear that I do not believe that the problems which plague mankind are going to dissolve overnight. There are no miracles in foreign policy. There are no wonder drugs for the ills of international relations. A broad summit conference, for example, which produces more glittering generalities on peace may serve only to obscure the hard realities of peacemaking.

When I say that we may be approaching an hour of great decision, the only point I wish to make is this: There are indications that the international situation which is never static may now be in major transition. The changes that are taking place may open an opportunity for the world to begin the long ascent to a durable peace.

Mankind, of course, is not going to make that ascent unless all the principal nations—certainly the Soviet Union among them—are prepared to make it. I do not know whether recent political developments in the Soviet Union suggest that the Russians—in their own interest—are prepared for a new approach to the world's problems. I do not know whether friendly nations in Europe and elsewhere are prepared for it. I do know, however, that unless all nations are ready to exercise the mutual forbearance which alone will make peace possible, the world shall move irrevocably into a path which can only lead to a devastating conflict. It will not matter then, that we have managed in the year 1957 to cling to an illusion of peace. In the end, this illusion, this delicate balance on which the fate of hu-

manity rests will be upset by some miscalculation, perhaps by some act of madness. In the end this truce of mutual terror will give way to the terror of a war of mutual extinction.

The time for dawdling with peace, in short, is running out. The chance for moving to consolidate it may be soon or never. I do not know what course other nations may take in these circumstances. I do know that if a genuine opportunity does develop which promises to reduce the present dangers of a nuclear catastrophe to all nations, if there is an opportunity to build greater international stability, it must not be lost through inertia or other shortcomings in our own policies.

It must not be lost, because a reliable peace—I emphasize the word reliable—is in the interests of the people of this state, in the interests of the people of the Nation and of all humanity. That kind of peace is essential if a significant reduction in the cost of Government is ever going to be made. It is essential if the ominous cloud of impending doom which now hangs over civilization is ever to lift. It is essential if the people of this country and of all countries are ever going to be reasonably certain that what they build today is not going to be blasted into eternity tomorrow.

Let me say that I believe we have been moving in recent months in the direction of a policy which will enable this country to seize the opportunity to strengthen peace if it should be present. The Eisenhower-Dulles policy of expanding commercial and other contacts with Poland, for example, may offer a greater promise of increased independence in Eastern Europe than the pattern of sympathetic words and bold words but no action that was followed in Hungary. And greater independence in Eastern Europe, in my opinion, is essential to peace on that continent. In recent months, we have also seen the Eisenhower doctrine, as amended by the Senate, act to bring a measure of temporary stability to the Middle East. This measure is an expensive and not very satisfactory stopgap. While it has by no means dealt with the basic difficulties in that region, it has at least bought time in which to deal with these difficulties. In the interests of our own peace, we have had no choice but to sustain this so-called doctrine. Unless the administration uses the time that has been bought, however, uses it effectively to tackle the basic problems of our relations in the Middle East, we shall be asked to go on paying an ever higher price and in the end be no closer to stability in that region.

In recent months, finally, we have also had the base laid for improvements in the foreign-aid program and the information program, both very important instruments of foreign policy. The changes in these programs, initiated largely by the Congress, have already resulted in the saving of hundreds of millions of dollars of public funds. They have also shown the way to a more effective use of these programs.

Despite these and other improvements, however, I believe much remains to be done before we obtain a policy that is well adjusted to the realities of the present world situation, the kind of policy that best serves the interests of the people of the United States. We have yet to take fully into consideration, for example, the problems and possibilities inherent in the emergence of a common market in Western Europe and the institution of Euratom for the common development of nuclear energy in that region. We have yet to develop an adequate diplomacy and other substitutes for what promises to be the endless funneling of hundreds of millions of dollars in public funds into the Middle East under the Eisenhower doctrine. We have yet to face up fully to the implications of the different directions in which the forces of liberation are acting in Eastern Europe—in Yugoslavia, in Hungary, in Poland, and elsewhere. We have yet to recognize fully that disarmament, however desirable, lies at the end of the road to peace, not at the beginning. We have yet to take the initiative in attempting to move down this road by slow and careful steps, by gradually bringing armaments under firm control, by gradually breaking down the wall of human fears and suspicions built by a lack of civil contact between ourselves and other peoples.

We have yet to recognize, finally, that changes of deep and long-range significance are taking place in the Far East while the policy of this Nation remains wedded to the fears and distortions of the past. If I digress on this point it is because the far eastern question has special significance for you ladies and gentlemen here tonight.

In the situation that is developing in Asia, it seems to me highly desirable that the activities of American newsmen be extended as far as possible. As it is now the public information which comes to us from China amounts either to official press handouts of our own Government and the Chinese Communists or the reports of journalists of other countries. As one who prefers the press of this Nation to that of other nations, as one who has often found a greater accuracy in the American press than in government press releases, I am opposed to any policy which seeks to curb the activities of the press or the free movement of its legitimate representatives.

I recognize the difficulties of the Secretary of State in attempting to determine whether press representatives should be allowed to go to China. Since it is the policy of the Department of State not to permit Americans generally to go to China—and I am in accord with that view—newsmen ought not, in the view of the Department, to go either. I believe that that position is now changing because it is untenable. In matters related to informing the people of the United States, the press is in a special position, clearly safeguarded by the Constitution.

Even thought the executive branch may change its position, the issue remains and it is much larger than the question of whether or not a handful of reporters shall be allowed to enter China. The issue is whether the press shall play in matters of foreign policy the same role that it plays in domestic questions. To put the question bluntly: is the press in matters of foreign policy an instrument of policy or an independent check on policy, an independent enlightener of the people of the United States?

It seems to me that under our system of government the press must exercise, in foreign policy, the same independence as it does in domestic matters. Under our system of government, it is not for the Congress and certainly not for the executive branch to decide where legitimate representatives of the press shall go to get the news. If they are alert newsmen they will go wherever they can. If they are willing to take the real risks of unsanctioned travel in dangerous regions abroad they are performing a very real and courageous service for the people of the Nation. They most certainly ought not to be subject to punishment or threat of reprisal from the Government or any of its officials for their courage. It is bad enough, as you well know, when other governments place obstacles in the path of legitimate news gathering abroad. It is indefensible when those obstacles arise from the policies and actions of our own Government.

Before concluding, I should like to turn to one other shortcoming which I believe must be corrected if this country is going to have the kind of foreign policy that fully serves the interests of the people of the United States. It is, in some respects, the most fundamental, the most costly and, in the last analysis, the most dangerous shortcoming of present policy.

I refer to the tendency within the executive branch to base the international actions of this country almost exclusively on fear of the Russians. Fear as a factor in international relations is not much different than it is in human relations. If it is excessive, if it is out of proportion to the danger which induces it, fear may produce unnecessary and excessive action and, in some instances, it will prevent reasonable and necessary action.

For years, I have listened in Congress to officials of the executive branch, under both Democratic and Republican administrations—officials of the Department of Defense, the Department of State, the Voice of America, and countless other agencies—justify their requests for ever-increasing appropriations. Many of these requests have had high constructive merit in terms of the interests of the United States and I have not hesitated to vote for them. Yet, increasingly, the element of fear has been brought in to justify these requests. These justifications have sometimes reached a point where it has seemed that the executive branch has been acting in foreign policy preponderantly on the basis of two fears: Fear of what the Russians might do in the world and fear of what Congress might do to appropriations if there were no Russians to fear.

Certainly this country must maintain a healthy concern with the threat which communism poses to freedom. Certainly there are continuing dangers to the peace and well-being of this country and other countries in the totalitarian power of the Soviet Union and in the erratic, unpredictable and frequently ruthless behavior of its rulers.

There is also a danger, however, in the tendency on the part of the executive agencies to inflate this fear, whether the inflation derives from an eagerness to insure appropriations or from simple miscalculation. This inflation can only lead as it has been leading to a costly and futile effort to build absolute security in a nonexistent fortress free world. It can also lead, as it has also been leading among the people of the United States, to a revulsion with these excesses and to the unwarranted expectation that we may be able to obtain absolute security more cheaply in a fortress America.

There is no likelihood, in my opinion, that this country or any country will find absolute security regardless of what course is pursued, regardless of how much is spent or done to that end. There are, however, degrees of insecurity and I believe that an effective foreign policy can lower the degree of insecurity. It can reduce the international dangers under which we all live and labor. It can do so at the same time that it lightens the burden of Government expenditures all of us sustain because of these dangers.

Foreign policy can act in this fashion, however, only if the judgments of the international situation on which it is based are not distorted by a stimulated and excessive fear. It can do so only if the actions which are pursued under that policy are effectively adjusted to the real situation, the actual dangers that confront the Nation.

That is why I emphasize tonight that I believe it is time for the executive branch to put aside the excess of fear that has underlain much of our policy in recent years. It is time to recognize that if Russia is strong in a material sense, this Nation is and can remain stronger provided it is united and properly led. It is time to recognize that if there are dangers to freedom in the ideology of communism, there are even greater dangers to communism in the doctrines of liberty.

What I am suggesting, in short, is that foreign policy if it is to serve fully the interests of the people of this country, must be based less on fear and more on faith.

I do not speak of faith in the Russians or even of excessive faith in allies. I speak rather of faith in ourselves, in the intelligence, the courage and the steadfastness of the people of this country and faith in the power and in the ultimate triumph of freedom throughout the world. It is on that faith that this Nation has grown to greatness. It is on that faith that we must depend, that we can depend, to find the way to a just and enduring peace.

Christian Missionary Activity in Japan

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a message to his congregation sent from Japan by Dr. Folkemer, pastor of the Lutheran Church of the Reformation, Washington, D. C., dated August 18, 1957.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

A MESSAGE FROM DR. FOLKEMER, PASTOR, LUTHERAN CHURCH OF THE REFORMATION, WASHINGTON, D. C.

Our pastor is at present on a tour of the Far East, and in a letter received by Pastor Prigge this week, he enclosed the following message to the congregation:

"Living 10 days in Japan at the pace we lived it gives you a pretty good glimpse of that beautiful and fascinating country. You can't possibly miss the graciousness and charm of the Japanese people. They are quick, intelligent, pleasant, and unusually industrious. It becomes evident very soon that one of the reasons for the rapid Westernization and modernization of Japan is the vigor and enthusiasm with which the people, in general, enter into things. I should say that Japan is one of the most hopeful and fruitful areas for Christian missionary activity. Though the number of Christians is relatively small, they are a forceful and sometimes quite influential group. Though Christians number only ½ of 1 percent of the total population of Japan (91 million), they are sometimes discovered in key positions of government and Japanese society. For example, approximately 24 of the members of the Japanese Diet (Congress) are Christians. The Chief Justice of the Supreme Court is a Christian and other members of the judiciary system. I took a sleeper from Tokyo to Kyoto, and my traveling companion in the compartment, in the upper berth, was the mayor of Kyoto, a city of 1,200,000 people, a Christian, member of the Congregational Church, which was one of the denominations that entered into the Kyodan or the United Church in Japan.

"I attended the Lutheran service of our mission in Tokyo at the Lutheran Theological Seminary, and at the close of the service brought a brief message and personal greeting from all the members of Reformation Church to the Lutheran Church of Tokyo. I told them that we had rejoiced in the fact that we at Reformation could contribute in a special way to the work of the Japanese mission.

"In Kyoto, Japan, I spent 3 days meeting with Christian leaders, and also prominent Buddhist and Shinto leaders of that city. Comparisons are always difficult and dangerous to make, but I should say that Kyoto is more like Washington and Tokyo more like New York. Kyoto is a beautiful city, situated right in the center of the mountains. It is the center of much of historic Japanese tradition and religion. It should be a key city for our missionary work.

"Hong Kong is a fantastic place. It is, as every tourist knows, a shopper's paradise. And I hate shopping. But more than that, it is the melting pot of the Orient and one of the most cosmopolitan, yet difficult places to understand. One of the tragic conditions of Hong Kong is the terrible refugee problem. I took a number of pictures of conditions here and hope that they turn out well. The city now is trying to care for about 1 million refugees from Communist China and other places of the Orient. Our contributions to Lutheran World Action are helping to meet the problem, and fortunately I was able to see some of the families which are being helped through that means. It is not a pretty picture to see—this refugee picture—and it may turn some sensitive stomachs, but Christians cannot turn away their hearts, even if they must turn their eyes. Families are living on rooftops by the hundred thousands, on the sides of cliffs under cardboard roofs, and even on the sidewalks. Five adults—and this is something of a recent luxury—are living in an area equivalent to a 10 by 12 rug in your living room. Jesus Christ and the ministry of the Christian Church is needed more than ever in the Far East as in our own land."

Pennsylvania Gas Resources

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is now much discussion all over the United States relative to the production of gas because of the so-called gas bill now being considered in the House.

Natural gas has been produced and used in western Pennsylvania for almost three-quarters of a century. The history of it is a most interesting story. By reason of better producing methods, we now produce in western Pennsylvania more gas than we did 30 years ago. However, our section is a greater user of gas than any part of the United States, and it is necessary for us to import large quantities every year.

The Pittsburgh Sun-Telegraph of August 14 contained a very interesting editorial on this subject, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR GAS RESOURCES

Those who believed that western Pennsylvania's natural-gas resources were about exhausted may change their opinion in view of the big new gas well which has been brought in about 8 miles east of Apollo in Armstrong County.

It was producing 11 million cubic feet a day before being capped.

Another new gas well of equal productive capacity recently was drilled in Mount Pleasant Township, Westmoreland County.

Pittsburgh's consumption of natural gas now is so great that to meet the demand gas is piped into the area from distant States.

Probably the supply in the ground nearer home always will remain inadequate but it is gratifying to learn that it is far from exhausted.

New methods have produced fresh supplies of petroleum from western Pennsylvania wells which seemed to have been pumped dry. And it may be that new methods and exploration at different depths underground will disclose unsuspected gas reserves.

The subject is of peculiar interest to Pittsburgh because of the pioneer work done in the development of natural gas.

The history of natural gas contains many interesting stories.

On his first trip to Fort Duquesne, George Washington camped at a spring in the mountains. An ember from his campfire dropped into the bubbling water of the spring and it burst into flame.

East Liverpool was using natural gas for street lighting as early as 1860 but the first gas utility to reach Pittsburgh did not arrive until 1883 when the Penn Fuel Gas Co. ran a line from the Murrysville field to 16th Street.

The name of George Westinghouse, Pittsburgh's famous inventor, figures prominently in the story. Becoming interested in natural gas, in 1884 he drilled a well at his home near Thomas Boulevard, between Murtland and Lang Avenues.

It was a heavy producer and soon was being used for domestic purposes in the Westinghouse home. As more gas was coming from the well than the Westinghouse household could consume, a standpipe was erected to pass off the excess.

The waste gas was lighted with a mighty roar and flame. Many people were attracted to this first public exhibition of burning natural gas.

Subsequently, Mr. Westinghouse organized the Philadelphia Co., which became the largest gas utility serving Pittsburgh.

Natural gas has passed through many vicissitudes in the Pittsburgh area since then. It replaced coal as a fuel for heating homes and revolutionized manufacturing methods in various industries.

It would be a sad day for Pittsburgh if we were to be deprived of this clean, inexpensive fuel with whose development the city's history has been so closely linked for three-quarters of a century.

Hence the discovery of heavy gas-producing areas in nearby counties is interesting.

Wisconsin University Teaches Consular Officials All Over the World

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. WILEY. Mr. President, I was pleased to note a news dispatch concerning a pioneering program by the University of Wisconsin's extension division, which is inaugurating correspondence courses toward better training of consular officials of the United States State Department throughout the world.

I believe that my colleagues are familiar with the fact that our university at Madison has become the No. 1 center for training courses by mail for the Armed Forces throughout the world.

It is appropriate, therefore, that the State Department should now avail itself likewise of this fine extension teaching facility.

I send to the desk the text of an editorial which was carried in the Friday, August 16 issue of the Milwaukee Journal describing this program. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF WISCONSIN TEACHES OUR CONSULAR OFFICIALS ALL OVER WORLD

The famed teaching-by-mail activities of the University of Wisconsin continue to expand. Now 840 State Department employees in farflung posts across the world are learning from Madison how better to handle visa and immigration matters.

Five Foreign Service officers have assembled in Madison from posts in England, Egypt, Brazil, Greece, and Canada to guide the correspondence students under general direction of the university extension division and its bureau of government.

Until recently American consular officials have pretty much had to learn on the job. This didn't encourage uniformity. Washington was constantly flooded with requests for information, guidance, and policy decisions. This meant delay.

Now new officers get a 9-week course in the Foreign Service Institute. The thought of freshening the minds of the older hands through correspondence courses came to mind. This was thought particularly necessary because of the McCarran-Walter Act, which created new and complex immigration law.

Wisconsin was the only place in the running when it came to selection of the place to prepare and administer the course. Robert J. Cavanaugh, the Foreign Service officer in charge, explained that the university had the experience, the organization, and the methods. So the State Department made a contract with the university, the courses were outlined by Department experts, the organization was established in Madison, and in the not distant future there should be more uniformity in American visa and immigration procedure than ever before.

This should mean an improved consular service. It should cut down on time-consuming requests to Washington. It should win friends for Uncle Sam among citizens and foreigners who make use of the service. And it should save money.

If all works out well—and there is no expectation that it won't—there are thoughts that the present correspondence course will be a forerunner of like courses for Foreign Service people dealing with passports, citizenship, and like matters.

What Do Senators Read?

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. NEUBERGER. Mr. President, on July 14, 1957, I contributed an article to the book review section of the New York Times. The article analyzed the reading habits of some of my colleagues in the United States Senate. My article mourned the fact that all of us have so little time to keep pace with the worthwhile literature and publications of our era. A thoughtful editorial has now been written about that article by the editors of the Eugene Register-Guard under the title "What Do Senators Read? Very Little." This editorial was published in the Register-Guard of August 9, 1957, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT DO SENATORS READ? VERY LITTLE

A Senator, by definition and somewhat by tradition, is a grand old man, learned and wise. He is an oracle, a prophlet, a seer, and a fount of all wisdom. This has been so since the ancient Roman Senator, in striped toga and red shoes, established the tradition. But in practice in America today the Senator is not so learned and wise, and that may be no fault of his. So laments Oregon's junior Senator, RICHARD L. NEUBERGER. In a valuable contribution to our understanding of how Congressmen keep up, the Senator has written an article on senatorial reading habits for the New York Times book review.

He points out that one of the books that truly changed American history was a mediocre novel called Uncle Tom's Cabin. Presumably some Senators, in the tense years before the Civil War, read that volume. But if such a work were to appear today (or if such a one has appeared) the Senators would quite likely be unaware of it. They just don't have time to read books.

They read, to be sure. They read tremendous stacks of stuff. Government reports, statistical studies, letters from home, piles of big-city and hometown newspapers, and the CONGRESSIONAL RECORD. But few have time to keep up with the more important periodicals. And almost none reads books—at least not so many books as the literate, interested American who is not a Senator.

Senator NEUBERGER himself, he wrotes, gets up at 6:30 a. m. to spend an hour with the New York Times, the Washington Post, and the CONGRESSIONAL RECORD. He reads reports and studies and mail. But when he finds time for book reading, he succumbs to the human temptation to use reading as an escape. He like books about the West and about the outdoors. And who can blame him for that?

"Probably the most literate man in the Senate, PAUL DOUGLAS, of Illinois, complained that he, too, found reading possible only at the expense of sleep. But read he does, or tries to do. Before breakfast the Illinois Senator goes through the New York Times, Washington Post and CONGRESSIONAL RECORD. At noon he skims the St. Louis Post-Dispatch, Chicago Sun-Times, Chicago Daily News, Wall Street Journal, Christian Science Monitor, and five downstate Illinois papers. Evenings he spends with the New Republic, New Leader, Progressive, America, Commonwealth, Unitarian Register, Friends Journal, Manchester Guardian, London Observer, and London Economist. In addition he's pecking away at five books—C. Van Woodruff's Reunion and Reaction, Santayana's Three Philosophical Poets, the Beidens' So Fell the Angels, Bacon's Essays, and Bertrand Russell's Portraits from Memory. No other Senator testified to a reading program nearly so extensive."

None quoted by Senator NEUBERGER indicated he had time to read Harpers, Atlantic, the Luce magazines, Christian Century, Farm Journal, New Yorker, Reporter, Saturday Review, U. S. News & World Report, or the college quarterlies. None said he was able to keep up on the new books, either the very good new books or the very popular new books that are shaping the thinking of Americans everywhere.

Senator NEUBERGER, we think, is very sincere in his concern. And, as an American whose destiny is affected by the behavior of all Members of Congress, we share the Senator's concern. Congressmen, we'd like to think, are not only up on the day's news, but also filled in on the background and perspective that one can obtain only from the more leisurely journalism of magazines and books. Also, we'd like to think, Congressmen with concern for their souls would have time to sit down, as Senator WILEY, of Wisconsin, says he does, to listen for an hour or two to the hi-fi. A modest diet of fiction, drama, and poetry belong in the fare of every educated man.

Senator NEUBERGER didn't say why Congressmen don't have time to read but we surmise it is because they spend so much time talking to constituents, writing letters, fighting among themselves, entertaining visiting voters at lunch, running errands for the home folks and running for reelection. It's probably a revolutionary suggestion, but it might be a good idea if we'd field two teams of Congressmen—one to be on the field passing laws while the other is back in the dugout reading and thinking. Every few months they could switch places.

Common Market in Western Hemisphere

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. SMATHERS. Mr. President, I ask uanimous consent to have printed in the Appendix of the RECORD an article entitled "Six Latin Nations Push Common Market Plan," which appeared in this morning's Washington Post and Times Herald. The article demonstrates that the delegates to the Buenos Aires convention are taking a very practical approach toward seeking a solution to and toward working out their common problems with respect to economic questions, and I am sure every Member of Congress wishes them the highest success in their endeavors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIX LATIN NATIONS PUSH COMMON MARKET PLAN

(By Joseph Newman)

BUENOS AIRES, August 18.—Six South American countries—Argentina, Brazil, Chile, Bolivia, Paraguay, and Uruguay—are preparing the groundwork in Buenos Aires for the first major common market in the Western Hemisphere.

These countries, adjoining each other, represent the greater part of the South American continent.

In area, their common market would constitute the largest in the world. In volume of trade it would be the second after the common market being established by six West European countries.

Finance ministers and economic experts of the six Republics, using the occasion of current economic conference in Buenos Aires, are meeting privately to advance their common market project.

These meetings, if successful, could produce more concrete results than those which

are likely to emerge from the overall conference of the 20 American Republics.

Without specifying the scope of the area, Krieger Vasena and Jose Maria Alkmin, finance ministers of Argentina and Brazil, publicly declared their governments in favor of a common market.

Chilean Finance Minister Eduardo Urzua Merino is expected to follow suit Monday.

The project is supported by a study prepared by experts of the Organization of American States in Washington.

The study envisages the eventual creation of three common markets in Latin America—the southern part of South America, the northern part including Colombia, Equador, and Venezuela and finally, Central America.

Central American Republics already have taken steps to secure clearance from the Secretariat of the General Agreement on Tariffs and Trade for the creation of a common market.

A common market in South America is likely to bring important changes in trade between the United States and this continent, possibly harming some North American exporters while opening new opportunities for North American investment.

Oil Wells Do Fade Away

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. MARTIN of Pennsylvania. Mr. President, there is much talk about oil reserves and the expense of finding new reserves. We now have the information that in every exploration the average cost is $123,000 a well. Only 1 out of 44 wells produces enough oil to fill the American demand for just 4 hours.

I ask unanimous consent that an editorial in the Oil City Derrick of August 15, which very interestingly discusses this subject, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OIL WELLS DO FADE AWAY

Lewis W. Douglas, who has held top positions both in private industry and in Government, recently related some sober facts behind the search for oil.

The oil driller, Mr. Douglas pointed out, must now invest an average of $123,000 in every exploration well he drills, yet only 1 out of 9 of these wildcat wells produces oil. And only 1 out of 44 wells finds an oilfield big enough to produce the equivalent of American demand for just 4 hours. The odds against a find big enough to supply that demand for a week are long, indeed—966 to 1.

But that, as Mr. Douglas pointed out, isn't all. The shallow sands where oil is found most easily have already been tested for the most part. So the searcher for oil must send his wells deeper and deeper. This means that drilling and exploration costs are now about 400 percent higher than they were 25 years ago, and they continue to rise.

Then, to quote Mr. Douglas directly, "unlike a factory which can produce at a constant rate for many years, an oil well dies a little each day. Finally it stops producing altogether; in other words, it becomes depleted."

There is the reason for the depletion allowance given oil producers. It simply recognizes the fact that oil wells "die a little each day" and must be replaced—at ever-higher cost. It applies to production only, not to the industry's other activities.

Soil and Water Problems of Nebraska's First District

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. WEAVER. Mr. Speaker, there is a significant development taking place in Nebraska about which I want to comment. It has to do with the conservation of the soil and water resources of our great State. During the past few years the people of the First Congressional District have become keenly interested in the watershed approach to their soil and water problems.

This watershed approach is a community approach in which all of the interests in a small watershed get together to bring their efforts as a group to focus on the installation of needed conservation measures for farmland and water-control structures on the small streams. This coordinated effort has developed as the people become more and more aware of the need for water conservation. It has become apparent to them that the conservation of our water and soil must go hand in hand.

In many communities within my district town and farm people alike have banded together into watershed groups to do an effective and permanent job of soil and water conservation. Construction work is already under way in some communities. In other communities they are in the planning stage. And in still other communities they are currently getting organized for this kind of a job.

As an example of what is being done I am pleased to state that construction work is moving ahead rapidly in the Dry Creek watershed in Frontier and Red Willow Counties, in the upper Salt Creek watershed in Lancaster County, and in the Indian Creek watershed in Gage and Lancaster Counties.

Watershed planning is currently in process in the Soap Creek watershed and Mud Creek watershed in Gage County, in the Plum Creek watershed in Gage and Pawnee Counties, and in the Brock tributaries watershed in Nemaha County.

In planning and installing this watershed work these local communities are getting valuable assistance from the soil and conservation agencies of the Department of Agriculture. Other communities have asked for help and are now waiting their turn for the Department of Agriculture to get to them. This is the case with the Bowman-Spring Branch watershed in Thayer County, the Buckley Creek watershed in Jefferson and Thayer Counties, the Big Indian Creek watershed in Jefferson and Gage Counties, and the Bear-Pierce-Cedar watershed in Gage County.

In Nebraska the State and county ASC committees have cooperated with local soil conservation districts, watershed associations, and local citizens in furthering this watershed work. They have cooperated magnificently in using the cost sharing resources available through the agricultural conservation program to install the soil and water conservation measures needed on farmland and required by law as an integral part of the community effort. As a result, there has been a significant increase in the establishment of many permanent soil and water conservation practices such as terracing, contour farming, waterway development, constructing diversions and ponds, channel improvements, and tree planting. I am proud of this progress in Nebraska.

The local people in my district have been pointing out to me the need for more resources to move ahead faster for this real, permanent type of soil conservation work. For the country as a whole, on the other hand, it has been reported that in 1955 from 50 to 60 percent of the ACP funds were used on temporary, short-term practices that tend to increase crop production.

It is my opinion, Mr. Speaker, that during this period of crop surpluses, now is the time to concentrate the use of ACP funds on permanent soil and water conservation measures such as those presently being carried on in the area of Nebraska that I represent.

Mr. Speaker, I want to commend Ervin L. Peterson who is assistant in charge of soil and water conservation programs for the Department of Agriculture along with his many associates for the outstanding job that they are doing in directing the Federal Government's part of the national soil and water conservation effort. I congratulate them on their desire to improve on the use of funds made available to the Department of Agriculture for helping farmers with soil and water conservation work through the agricultural conservation program.

Tribute to Public Service of Mrs. Jane Yelvington McCallum

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957

Mr. YARBOROUGH. Mr. President, last Wednesday, August 14, there passed away in Austin, Tex., the most distinguished lady ever to serve the people of Texas. Mrs. Jane Y. McCallum served as secretary of state of the State of Texas, and was the moving force in the adoption of an amendment to the constitution of Texas that enfranchised the women of Texas.

Mrs. Jane Y. McCallum was likewise the leader in the ratification by Texas of the 19th amendment to the Constitution of the United States. The amendment was ratified by Texas on June 28, 1919, Texas being the ninth State in the Union to ratify the women's suffrage amendment.

In addition, she exercised a beneficial influence on the lives of more Texans than any other woman who has ever lived in the entire history of Texas.

The Austin-American Statesman, one of the leading journals of information and public opinion in Texas, published a touching tribute to Mrs. McCallum in the August 16 edition of that newspaper. Mr. Charles E. Green, the independent and courageous editor of this newspaper, has also written a fine tribute to this great woman in his well-known column, entitled "The Ninth Column."

The Austin-American, in its issue of August 16, 1957, published a fine tribute to Mrs. Jane Y. McCallum, under the caption "Notable Public Service This Texan's Monument."

I ask unanimous consent that the editorial and articles be printed in the Appendix of the RECORD.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

NOTABLE PUBLIC SERVICE THIS TEXAN'S MONUMENT

The Yelvington family has been prominent in education, literary, and public affairs in Texas for more than a century. It remained for a daughter, Mrs. Jane Yelvington McCallum, to establish new records in Texas for women's service in government, and in leadership which brought women into full rights of citizenship.

Mrs. McCallum's death in Austin, at the age of 79, brings to public attention her career of achievement on behalf of her sex. It emphasizes the remarkable change in the public attitude toward women as citizens which has taken place within the span of one lifetime.

While political parties compete to confer political favors on racial minorities, women had to achieve their rights to full citizenship by their own toilsome effort.

Women came to vote, by statute, in a Democratic primary for the first time in 1918. In that year a woman for the first time was elected to State office. Texas had pending submission of a constitutional amendment to confer general voting rights on women when the 19th amendment to the United States Constitution was ratified and went into effect. There were many more battles to be fought and won, culminating only recently when the last barrier in the State constitution to equality of citizenship, the right and duty of jury service was removed.

Mrs. McCallum was a leader in the long suffrage fight. Later, she was an organizer and the chairman of what was termed the "petticoat lobby," an organization representing numerous women's clubs and organizations, crusading for social, moral, and welfare legislation and for removal of the many discriminations against women.

In her later years of semi-invalidism, while she was writing books which will be part of Texas literary heritage, she continued as the counselor and guide to others who carried on the crusade for clean government and better citizenship.

Mrs. McCallum was 1 of 2 women who have served as secretary of state of Texas. She is the only woman to have held that office more than 1 term, and in the administrations of 2 State governors. She served first under appointment by Gov. Dan Moody, then through the administration of Gov. Ross S. Sterling.

She survived for many years her husband, distinguished Superintendent N. McCallum of the Austin public school system.

When her children reached adulthood, Mrs. McCallum followed the precedent she so often had urged upon other women, that of giving one's time and effort to public affairs, better government, reshaping of obsolete laws that permitted, and the fashioning of new laws that prohibited the gross discriminations against her sex and against groups of Texas citizens.

A disappointment this woman leader expressed in her later years was that women had not followed up and made use of the broadened field of service in government and public affairs which found its greatest expression soon after women finally achieved the ballot.

In those years, Texas had the first woman governor elected by an American State, and had a woman superintendent of public instruction; women secretaries of state; a woman commissioner of labor; women on administrative and governmental boards; an all-woman special supreme court. Texas has had 1 woman senator, but not more than 1 at a time, for most of 20 years. It has had as many as 6 women members of the house of representatives at 1 time. It now has 1 woman senator and two women representatives, and women members of college, institution and other boards.

Mrs. McCallum deplored the lessening of interest by women citizens in public office for themselves, at the same time emphasizing their decisive power at the polls.

Hers has been a life useful to her State. Her name will be among those at the top of the list in the history books, so long as history preserves the record of the long and hard and gradually successful battle for equality of citizenship.

THE NINTH COLUMN

A very grand person has just died. Those who have moved here during the past 10 or 12 years will know her only by name, and the headlines they read. But Jane Y. McCallum will be a living name when the vast majority of us are hardly a memory. The good she did cannot be measured. She and a handful of others began something that grew and is still growing: Woman's fight for emancipation.

She called herself a suffragette in those days. She was not. She was a woman with courage, backbone, and sweetness. She could have been anyone's mother, and whoever that person was, he would have been proud to call her so.

If she called me once in the old days, she called me a thousand times. One day she started to apologize for the time she was taking. I stopped that right quick. In the sad, black days when it seemed the Nation might be coming apart at the seams, she was the inspiration that kept a great number of us young ones in hope.

She never wasted anybody's time.

Jane Y. McCallum was a dedicated person, but she was not a bore. She thought life was the most important gift that God could give. She could not understand those who held life lightly, their own, or that of those around them.

She was not a do-gooder or a crusader, yet she was eternally in the good fight to improve man's lot on this globe. Man, of course, being a general term for people. She read voraciously, she sought out interesting people, and she was a most interesting woman.

She was, in the true sense of the word, a liberal. She was against abuse. She believed that the Democratic Party best represented the interests of the Nation, and the section in which she lived. She did not think the Democratic Party a perfect party. She was not afraid to fight the abuses within her own party.

When times became lush and most anyone could find or join a country club, it did not add much to your standing to admit to being a Democrat. Jane Y. McCallum never withdrew into the shadows. She did not join this or that or call herself this or that.

She remained a Democrat.

She was a lovely person, with charm and good manners. She was a most vital woman. When she came in to see you her talk was concise without being brusque. When she left she generally left a little of herself behind. You could feel it in the room. It was a nice feeling. Especially with those who deal so much with phonies, pretenders, people who try to palm off utterly selfish ideas in the name of community welfare. The intellectually dishonest, and their names are legion.

Jane McCallum was a very honest person.

The last time she called me she said, "Charles, I'm getting old and garrulous. But worst of all, I'm sick * * *."

Without being told I knew what she meant. She meant it was the beginning of the end. She was not bitter, she was not complaining. She was stating a fact. And she was thinking that a woman of her vitality, her energy, her love of freedom—her love of these things also embraced freedom from affliction.

And that is always so in people of accomplishment.

She, who never gushed, would not want her friends to gush over her.

So we end this with the thought:

You who did not know her, some fraction of your life is better because she once lived, once worked in this community. She made everyone who worked in her vicinity a better person—and thus her accomplishments went even beyond her own personal enterprises.

She was a grand person, a fine lady. She had courage, backbone, and sweetness.

STATE AND CITY TO HONOR MRS. JANE Y. MCCALLUM—FUNERAL TRIBUTES SCHEDULED

Mrs. Jane Y. McCallum will be honored Friday by the State and city she served so long and faithfully when the flags on Austin's City Hall and on the State capitol will fly at half-mast.

Final tributes will be paid the widow of A. N. McCallum, superintendent of the Austin public schools for 39 years, at 11 a. m. Friday at the Weed-Corley Funeral Home. Dr. Frank Jewett, longtime neighbor and friend of the McCallums, will conduct the service assisted by Rev. E. Otis Moore, associate pastor of the First Southern Presbyterian Church.

Her body will lie in state at the funeral home throughout the morning Friday.

Burial will be in Oakwood Cemetery beside the grave of her husband.

Death came Wednesday night to the well-known writer and public figure, who served as Texas' first woman secretary of state and the only secretary of state to serve under two governors. She was first appointed by Gov. Dan Moody, then served again during the administration of Gov. Ross Sterling.

Zollie Steakley, the present secretary of state, Thursday pointed out the continuing influence of Mrs. McCallum on the office.

"She reorganized the corporation files in the secretary of state's office in a manner that served as a pattern for succeeding administrations," he said. During her administration she found the original Texas Declaration for Independence moldering away in an old file and through her influence, it was restored for future Texans.

Mrs. McCallum's service to the city of Austin (she was a member of the city planning commission for 7 years) was noted at the city council meeting Thursday when the council members stood in respect for her.

A quiet and gentle lady in the old southern tradition, Mrs. McCallum yet was a sturdy and dedicated worker for women's rights and was a leader in the suffragette movement in Texas.

In her later years, Mrs. McCallum spent many hours tending her garden at 613 West 32d Street and in studying and writing about Texas history. She recently prepared for the permanent files of the Austin public schools the story of her husband's life and his service to Texas education.

She was active in Theta Sigma Phi, woman's journalism fraternity. She was married when she was 18, before she had the opportunity to attend college. After

she had her children, she entered the University of Texas and earned her degree.

Mrs. McCallum once wrote a column, "Suffrage Corner," for the Austin American and later was a staff member of the Austin Statesman. She was author of a book "Not All Texans Are Men," in which she wrote about prominent and notorious women in Texas history.

She was a member of the First Southern Presbyterian Church.

Those desiring may make memorial contributions to the A. N. McCallum Scholarship Fund, care of the administrative offices, Austin Public Schools, 701 East 11th Street.

Survivors include her 5 children. They are 1 daughter, Mrs. John L. Morley, of Austin; 4 sons, A. Y. McCallum, of Corpus Christi; A. N. McCallum, Jr., of Austin; Brown McCallum, of Alice; and Henry D. McCallum, of Tyler; 1 sister, Mrs. E. Rex Tarver, of Laredo; 1 brother, Rev. Jesse L. Yelvington, of San Antonio; 8 grandchildren, and 1 great grandchild.

Labor Leaders Parrot Democrat Line and Overlook the Rank and File

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 19, 1957

Mr. SHEEHAN. Mr. Speaker, I noticed from an Associated Press dispatch on August 14 and from newspaper articles the following day that the AFL–CIO executive council branded the Eisenhower administration's economic policies as "designed to hasten a recession," and characterized the Republican administration's fiscal policies as "blundering," "confused," and "self-defeating."

At first when I read the news articles and the Associated Press dispatch, I thought it was the spokesman of the Democrat Party talking because of the closeness of the line which both the labor leaders and the Democrat politicians have been following.

It would seem to me that the self-perpetuated leaders of the labor movement in the country would be more interested in the maintenance of the value of the dollar so as to protect the interests of the salary workers, pensioners, and people who live on fixed savings, all of whom are just as much members of the labor unions as other sections of the unions.

The Republican administration's desire to protect the interests of all Americans is certainly far more praiseworthy than the stand of the union leaders and the resultions coming out of the Chicago meeting which seem to prove the fact that the union labor leaders are but an arm of the Democrat Party.

On Friday, August 16, I received a letter from a former union man who bitterly protests the action of the union leaders and who speaks of the big problem of inflation which every serious minded citizen wants to control but about which the union leaders apparently are not concerned as evidenced by their blatant criticism of the administration's desire to bring inflation under control.

In order to prevent any labor union leaders from putting pressure on the writer of this letter, I am purposely withholding his name.

The letter is as follows:

GREEN VALLEY, ILL.,
August 14, 1957.

DEAR CONGRESSMAN SHEEHAN: I would like to see H. R. 5551 defeated because I do not want to pay any income taxes from my railroad retirement benefits. I want my insurance and other incomes to be worry free. My Government has no money to give except the taxes it collects.

Inflation is a problem especially for the worker who received $6,000 to $7,000 annually and not has only retirement. Could we legislate for him? Our benefits are only a stop gap.

Our union leaders through Labor seeks to discredit President Eisenhower, Senator DIRKSEN, and the Republican Party. They try to wheedle dollars for the Railway Political League and then give the money to the Democrats to defeat our candidates.

I want our party to always work for the good of the whole country and not put one man against another for the sake of a vote.

Yours respectfully.

The writer of the letter enclosed the Saturday, August 10, issue of Labor and as he so well pointed out, this paper seems to take special pains to discredit the Republican administration and Republicans in general and serve as a spokesman for the Democrat Party. It is my firm belief and knowledge that the rank and file members are able to make up their own minds. However, in all fairness, papers which espouse labor's cause should bring both sides of the question and not serve as a rubber stamp for the Democrat Party and ignore the wishes and thoughts of a great number of the rank and file of union members.

Hoover's Service Under Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 19, 1957
